Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			this objective are also recorded as uncertain, as the actual effects will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.
42519233	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. * Development will put even more stress on the already stretched local health and education services. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th527rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a</p>

		<p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1: DISAGREE-- Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: DISAGREE-- Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE</p>	<p>water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>Th528rooforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a</p>

		<p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10: DISAGREE-- should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p>	<p>significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain</p>

42540865	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1: DISAGREE-- Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p>	<p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th539rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as</p>

		<p>SA Objective 2: AGREE</p> <p>SA Objective 3: DISAGREE-- Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p>	<p>uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>Th540rooforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect</p>

42586305	Annex 1	<p>TONBRIDGE AND MALLING BOROUGH COUNCILCONSOLTATION ON REGULATION 18 LOCAL PLANOBJECTIONS TO PROPOSED SITE 59494, THE LAKES, ME20 6GZINTRODUCTIONI am writing to object to the inclusion of Site 59494 at The Lakes, Larkfield, ME20 6GZ, within the TMBC Local Plan.My wife, three children and I have lived at No.33 The Lakes since the house was first built in 2004. Two of my children are now at secondary school in Maidstone, one of whom has mobility difficulties due to cerebral palsy.Berkeley Homes built The Lakes estate under strict planning permission conditions which included creating improved amenity for the local community by opening up access to the adjacent gravel lakes accompanied by significant investment in the associated local environment. The resulting Leybourne Lakes Country Park has flourished over the last 20 years it has been in existence, and the wider community is benefiting as intended.A large attraction of the development to us was the open nature of the estate itself with plots spaced in a way that maximises a feeling of airiness. The development's design was very much conceived with the large landscaped grass 'village green' at its centre. Everyone who visits us at the estate for the first time always comments on how wonderful it is.A significant reason for us moving to The Lakes was because the no.71 bus to Maidstone had a terminal bus stop on the estate at Site 59494. This made it convenient for my wife who doesn't drive to get our three children to and from school in a sustainable way. This was particularly important given my disabled daughter has mobility difficulties. However, the bus service was unfortunately discontinued by Arriva from the estate several years ago, and the bus shelter removed. My family now have to walk the extra distance over to Tesco's bus stop via the spine road in front of Site 59494, and so their safety is of utmost concern to us in the face of Site 59494's potential development.The proposed building of 20 houses / flats on this grass 'village green' area, completely removes the 'heart' of our estate, and would bring with it multiple disadvantages which I set out further in my objections below:MATERIAL PLANNING CONSIDERATIONSThe TMBC planning portal sets out matters which are taken into account when considering planning applications. I have used the stated sub-headings to structure my response below.Local, strategic, regional and national planning policies and any previous planning decisions:The land at Site 59494 was always intended by the developers Berkeley Homes as an area of visual and recreational amenity for The Lakes estate. In the intervening 20 years, there has been no intention whatsoever of development on the site which is still owned by Berkeleys. The inclusion of Site 59494 within the new Local Plan as a place for new houses would completely renege on the premise of the original planning consent, and ignores the substantial</p>	<p>Site 59494 is incorrectly recorded as containing a designated open space, as it slightly overlaps Leybourne Lakes Country Park to the north east. In the next iteration of the SA Report, the site will receive a minor positive effect only, as it is adjacent to the County Park and so people will have easy access to it. Although the site comprises an area of open land, this is not designated an open space and so the next iteration of the SA Report will not acknowledge the site as comprising open space.</p> <p>The SA is one of many factors that feed into the plan-making process. It does not specifically identify which sites should come forward through allocations in the Local Plan but provides an objective assessment of their sustainability.</p> <p>Site 59494 is within 800m of a railway station and so it receives a significant positive effect in relation to SA objective 10: climate change mitigation, which covers public transport.</p> <p>The SA is too high-level to consider traffic volumes and access to car parking, so the Council will commission additional evidence on matters such as this.</p> <p>With regard to the natural environment, the site receives an uncertain minor negative effect as it is within 250m of Leybourne Lakes Country Park and Local Wildlife Site</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>local amenity enhancements already achieved at Leybourne Lakes Country Park, made possible in the first place through the funding generated partly by home-buyers on the estate such as myself. Whether the proposed use is a suitable one for the area, taking into account noise, smell, disturbance resulting from the use: There would clearly be an increase in noise and disturbance on the estate by shoe-horning 20 additional homes into its centre. Significantly, traffic, parking and safety of pedestrians are major factors, covered by my responses under the appropriate sub-headings below. Design, appearance, materials, layout and density of buildings: The layout and density of any proposed design incorporating 20 houses / flats onto Site 59494 would instigate a considerable change of use of the land, one for which the estate was not originally planned. The loss of the central 'village green' would transform its appearance for the worse, and inevitably create a feeling of over-crowding. The loss of the substantial grassed area could create additional surface run off, and together with the additional wastewater loading from the properties, could overload the existing drainage and wastewater system, which was unlikely to have been designed for this eventuality. Also, construction of additional access for the properties on to the estate's principal spine road will impose major change to the current configuration with detriment to wellbeing, health and safety of current residents. Significant overshadowing, overlooking or loss of privacy: The loss of the central 'village green' at Site 59494 to houses or flats would clearly cause overshadowing, overlooking and loss of privacy to all existing surrounding properties. This completely goes against the original architecture of the estate which was based on properties built around and facing on to the 'village green'. Highway safety, parking, access and traffic generation: Any development at Site 59494 would have an enormous negative impact on highway safety, parking, access and traffic. The road arcing around the periphery of Site 59494 is the principal spine road providing access to all vehicles entering / leaving the estate for the entire 310 existing properties. The road is also used for parking by many residents, meaning it is frequently necessary to weave around parked cars with only room for single-file traffic. At present, drivers have a clear view across the 'village green' in both directions which eases this situation, enabling vital visual communication between drivers, so that vehicle blockages are avoided. Likewise, pedestrians and other road users also benefit from this open visibility. Construction of 20 houses / flats on Site 59494 would inevitably block this vital visibility, with detriment to the safety of road users and pedestrians. Also, the additional vehicular access on to the spine road for the new houses or flats would exacerbate the safety risks and likely reduce the existing parking capacity available along the spine road. Additionally, it is unlikely that sufficient off-road car parking would be generated for the new 20 houses / flats, putting yet more pressure on roadside parking. The resulting bottleneck would create permanent frustration, and could hinder access for the local council waste collection services, emergency response services, and also larger delivery vehicles that have become a regular part of ordinary life. Clearly, the overall impact</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>would be significantly detrimental to the wellbeing and health and safety of existing residents and visiting road users. My family is personally affected as my children, including my disabled daughter, use this route daily to walk to the Tesco's bus stop to get to and from school. Visual effect on the landscape, nature conservation, loss of trees or hedgerows: The grass area at Site 59494 is used by many residents as a place to relax, their children to play, and provides general visual amenity to passers-by. Residents contribute through monthly estate management fees to its upkeep, and significant effort is invested to maintaining the landscaping of the area for the benefit of all. The visual impact of constructing 20 houses / flats on Site 59494 and resultant loss of the 'village green' for the estate would be considerable, transforming the feel of the estate from one of openness to one of over-crowding. As already mentioned, the change of use of the land would lead to loss of permeable grassed surface, and could exacerbate loadings of surface water runoff putting further pressure on drainage systems which in turn could cause flooding both on the estate or further afield. Effect on a conservation area or any historic buildings and local archaeology: No effect that I am aware of. Size and location of proposed advert signs: Not relevant. SUMMING UPI have set out above my objections to the inclusion of Site 59494 in the new Local Plan. The benefits of the proposed development for the occupants of the additional 20 houses / flats are completely outweighed by the detrimental effect on the wellbeing and safety of the occupants of the 310 existing properties on the estate, members of the public passing through the estate, the wider community, and local amenity. Site 59494 must not be included in the new Local Plan. Richard Money 33 The Lakes Larkfield Aylesford ME20 6SJ</p>	
42587393	Annex 1	<p>Green Belt Land</p> <p>The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development "that protects areas of particular importance", which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?</p> <p>**Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.</p> <p>It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of</p>

		<p>** Rather all other options should be considered first.</p> <p>Best Most Valuable Agricultural Land (BMV)</p> <p>There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.</p> <p>** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.</p> <p>The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.</p> <p>** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p> <p>Site Specific Comments with regard to BMV</p> <p>SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%.</p> <p>SITE 59721: Grade 2 land makes up at least 50% of the site.</p> <p>SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%.</p> <p>SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site.</p> <p>**This has the effect of considerably diluting the % of grade 2 land on the combined "site". I contend that "site" 59805 is not a true single site</p>	<p>Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 receives an uncertain significant negative effect, as it is unknown whether it comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		as it is bisected by a road. In theory the further enlarging OF sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.	
42588929	Annex 1	I should like to comment on the following sites;-59645 Outside of the village boundry59699 Lack of facilities, i.e no GP, no room in schools59714 Within Greenbelt or on Greenfield or Top Grade agricultural Land59716 Close to a conservation area and historical place of interest	<p>Site 59645 is incorrectly recorded in the SA as not located near any settlements when it is adjacent to a settlement, and so incorrectly receives an uncertain significant negative effect. This is due to the fact there was no percentage overlap between it and the settlement. In the next iteration of the SA Report, site 59645 will receive an uncertain minor negative effect in relation to SA objective 6: landscape and townscape.</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However this GP surgery is now closed. In the next iteration of the SA Report, the proformas for the sites affected will be updated. Site 59699 will therefore receive a minor positive effect in relation to SA objective 1: health and wellbeing, instead of a significant positive effect.</p> <p>With regard to school capacity, the site assessment criteria in Appendix D of the Interim SA Report for SA objective 3: education acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>The SA acknowledges under SA objective 9: soil that site 59714 is greenfield and contains a significant proportion of Grade 3 agricultural land. The effect is recorded as uncertain, as it is unknown whether the Grade 3 agricultural land is Grade 3a (high quality) or 3b (not classed as high quality).</p> <p>In the SA, site 59716 receives a significant negative effect in relation to SA objective 7: heritage, as it is located within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7 are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p>
42589121	Annex 1	The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they	Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th555rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this</p>

The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>
42589889	Annex 1	<p>Site ID: 59720.I strongly object to this development, the proposed entrance at Fen Pond Road is unsuitable due to the followinga. Fen Pond Road is too narrow and speed that vehicles travel down the road</p>	<p>The SA is too high-level to consider site-specific access points, road width and pavements. The SA does, however, consider access to public transport under SA objective 10. Site 59720 receives a minor</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		would increase the potential for accidents. b. There is no pavement or walkways to the centre of the village, schools or transport links.c. The development of 198 houses could create c400 cars, Fen Pond Road is unsuitable for that volume of vehicles.d. The development is surrounded by Woodland and is within an AONB.	<p>positive effect in relation to SA objective 10: climate change mitigation, as it is within 400m of a bus stop.</p> <p>The SA gives consideration to green infrastructure assets and Ancient Woodland under SA objective 5: biodiversity and geodiversity, and the AONBs under SA objective 6: landscape and townscape. Site 59720 receives a significant negative effect in relation to SA objective 5, as it contains green infrastructure assets in the form of woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Site 59720 also receives a significant negative effect in relation to SA objective 6, as it is within the AONB. The effect is recorded as uncertain, as the effects on landscape and townscape will depend on the design, scale and layout of development.</p>
42590337	Annex 1	Site 59613Accessibility is poor, with narrow roads and sharp blind bends.The area identified is higher than the surrounding roads and properties. When we had the Christmas flooding in the village, this entire site area was a 'lake ' for want of a better word. The Snoll Hatch Road had become the river- impassable. If this site was used all that water that was held back would have caused greater flooding damage to the surrounding houses and into the village centre. Bearing in mind this has been an issue twice more then this is more than a 1 in 30 year occurrence.	<p>The Urban Capacity Study (July 2022) was used to inform appraisals under SA objective 2: services and facilities. As site 59613 is recorded in the Urban Capacity Study as falling within the Fair Accessibility Band, it correctly received a minor negative effect in relation to SA objective 2. The SA is too high-level to consider road width, dangerous bends and topography.</p> <p>The SA acknowledges that site 59613 is at risk from flooding, under SA objective 8: water. The site receives a significant negative effect (as part of a mixed effect) in relation to this objective, as it contains land with a 1 in 30 year risk of surface water flooding.</p>
42609057	Annex 1	The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:· 59685· 59690· 59693· 59721· 59805· 59809I object to any development on these sites, for the following reasons:1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.2) They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.3) The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.4) Local food production is made more important by the effects of climate change.5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.7) Development will lead to a significant loss of biodiversity.8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.9) Development will put even more stress on the already stretched local health and education services.10)	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.Dealing with each site in turn:Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREESA Objective 3: DISAGREE-- Should be rated as NEGATIVE· The site is NOT within 800m of an existing secondary or primary school.SA Objective 4: AGREE with MINOR POSITIVE· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE· Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.SA Objective 7: AGREESA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10: DISAGREE-- - should be rated as NEGATIVE· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREESite 59690 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility· Although public footpaths cross the site, development would destroy their value.SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE· The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and</p>	<p>and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA</p>

This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site</p>	<p>Th564rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in</p>

42643873	Annex 1	<p>These comments specifically refer to Green Belt and BMV agricultural land sites 59693, 59721, 59685, 59805, 59809, 59690, but may be applied more generally.</p> <p>REGARDING AFRICULTURAL LAND:</p> <p>* There should be a clearer statement in the Sustainability Appraisal, Sustainability Objectives and Targets against the development of ALL Best, Most Valuable Land as defined by DEFRA. This should include grade 3A land as well as grades 1 and 2. The above sites include, along with grades 1 and 2 land, some grade 3A land which is regularly farmed and which the farmer considers productive. The Placemaker scoring system ignores the presence of grade 3A land.</p> <p>* The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%.</p> <p>SITE 59721: Grade 2 land makes up at least 50% of the site.</p> <p>SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%.</p> <p>I am very concerned that these sites have been amalgamated with the larger Grange Farm (59690) site to make "site" 59805. This has the effect of considerably diluting the % of grades 1 and 2 land on the combined "site". I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging OF sites in this way to reduce the % of grades 1 and 2 land on them could enable all grade 2 land to be developed. THIS WOULD BE A</p>	<p>the borough. In the next iteration of the SA, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 receives an uncertain significant negative effect, as it is unknown whether it comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>
42643873	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th568rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is</p>

		<p>secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I</p>	<p>considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>Th569rooforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as negative Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59693 (Residential) SA Objective 1: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubb--up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59721 (Residential) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this currently unfarmed land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from this site has added to that from adjoining sites and previously caused serious</p>	<p>walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain</p>

		<p>flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE
 Site 59805 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE Practical access to most parts of the site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane, Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE
 Site 59809 Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA</p>	<p>minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE	
42659905	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn:Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th572rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3:</p>

Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59809 Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR</p>	<p>and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE</p>	
42712801	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS</p>	<p>Th581rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in</p>

42716961	Annex 1	<p>SITE 59825-- MIXED USEWithin AONB, the Green Belt and adjacent to the Shipbourne Conservation area.SA Objective 1-- Shipbourne Common and the extensive Public Rights of Way leading from the Shipbourne Conservation Area out across the fields and woodland of the AONB to the National Trust and Forestry Commission land, set within the Openness and Permanence of the Green Belt, provide many visitors with an essential well-being and recreational resource. Those unable to access field paths, due to young age or infirmity, tend to enjoy the Common and walk down Upper Green Road and along Back Lane, enjoying the open views to Fairlawne and out to the Forestry of Point Wood/Kiln Wood. Many enjoy the wealth of significant historic houses still set in their plots around the Green emphasising permanence. Mixed Use Development would destroy the views and this openness of the Green Belt and AONB valued by so many, and lead towards urbanisation together with the loss of the night sky enjoyed by many.SA Objectives 8 and 14-- The foul sewer in Back Lane is frequently blocked and overflows into the ditch (last event 3pm 24 Oct 22). Greater impermeable areas due to development will require surface water sewers and may contribute to flooding down-stream. There is no gas in Shipbourne, existing heating is by oil. New development of the scale suggested would need electric</p>	<p>The SA acknowledges site 59825 as being within the AONB and for this reason, receives a significant negative effect in relation to SA objective 6: landscape and townscape. All adverse effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA acknowledges site 59825 as falling within 250m of heritage assets, including Shipbourne Conservation Area, and so receives a significant negative effect in relation to SA objective 7: heritage. All effects against SA objective 7 are recorded as uncertain, as they depend on factor such as the design of development and whether there are lines of sight between the development site and nearby heritage assets.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>heat pumps, car charging points, street lighting, requiring new electric mains supply. Water supply is by the old village Estate mains of small diameter. The A227 / Back Lane junction would need upgrading to safeguard the School. These enabling works will greatly disrupt the highways and costs will be very high. Reg 18 Consultation Doc 1:6:1 states that it is crucial that potential sites are realistically deliverable from a financial perspective...because unviable development means much needed homes will not be delivered...SA Objective 4 - Given the lack of electrical power infrastructure, drainage etc; the rural nature of the lanes off the A227; impact on landscape; business (employment) and housing estate development is totally inappropriate on this site.SA Objective 5 - The Green Belt Study 2016, page 53, clearly and correctly recognises the area designated as AONB, with its ancient woodland, local wild life, TPO's. The Common supported by these open fields and surrounding woodland is host to much bio-diversity. The land is best retained for UK food production following Brexit and need to reduce imports.SA Objective 6 - Mixed development would be contrary to the sub-objective to protect landscape character and quality and cannot be mitigated by design.SA Objective 7 - The Shipbourne Design Statement identifies a number of buildings dating from the 16th century. So far the village is un-marred by Developers Pastiche architecture. Development would be contrary to the sub-objective to protect and enhance historic buildings...landscape.SA Objectives 10 to 12 Any development of this scale would greatly increase traffic movements and be contrary to the Sub-Objective to encourage walking and cycling.</p>	<p>SA objective 1: health and wellbeing looks at the proximity of sites to existing healthcare facilities and areas of open space, in addition to walking and cycling paths, play areas and sports facilities. Site 59825 is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). This is due to the fact it partially overlaps the neighbouring Shipbourne Common open space. In the next iteration of the SA Report, the site will receive a minor positive effect only in relation to SA objective 1. This is due to the fact it is adjacent to this area of open space and within close proximity of walking paths, which will have beneficial effects on new residents health and wellbeing.</p> <p>The SA acknowledges the site as located within 500m of the AONB under SA objective 6: landscape, where the site receives a significant negative effect. All adverse effects against this objective are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Site 59825 does not fall within Flood Zones 2 or 3, and is also not at risk of surface water flooding using data from the Environment Agency. Therefore, the site correctly received a negligible effect in relation to SA objective 8: water. Specific consideration in these site appraisals is not given to foul sewage. The SA is too high-level to consider the gas network, but things like this will instead be considered at planning application stage.</p> <p>SA objective 14 covers housing delivery and as this site would deliver fewer than 100 homes, it receives a minor positive effect. The effect is recorded as uncertain, as the site is proposed for mixed-use development and so it is unknown how much will be designated to residential development as opposed to other uses.</p> <p>SA objective 4 relates to the delivery of employment opportunities and as the site could deliver employment development smaller than 5ha in size, it receives a minor positive effect in relation to SA objective 4: economic growth. The effect is mixed with a negligible effect, as the site is not located near to a train station, bus stop or cycle path.</p> <p>SA objective 5: biodiversity and geodiversity covers the natural environment, not the Green Belt. Green Belt is a policy designation and not an environmental or sustainability designation. The SA incorrectly records the site as containing green infrastructure assets when it does not. This is due to the fact it partially overlaps a green infrastructure asset (Shipbourne Common). The site is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to SA objective 5. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect. The site is located between 250 and 1km of some areas of Ancient Woodland, as acknowledged in the SA. The SA does not give consideration to TPSSs.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			The SA is too high-level to give consideration to traffic movements, and so the Council will commission additional evidence on this.
42718401	Annex 1	<p>These comments cover Site IDs 59735, 59798, 59801, 59835 and 59804. Site IDs 59735, 59798, 59801, 59804 and 59835 cover a unique area of greenbelt land which sits between Tonbridge, Hildenborough and Shipbourne and has many bridleways and footpaths and so is accessed and enjoyed by horse-riders, cyclists and walkers. Development on these sites would have a devastating impact on the openness and permanence of the greenbelt land between Coldharbour Lane and Horns Lodge Lane. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes. Sites 59801 and 59798 correctly have SA2 assessed as '-' and as such are flagged as least suitable for development. Sites IDs 59735, 59835 and relevant parts of 59804 should be equally scored '-' for SA2 and as such should also be ranked amongst the least suitable. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), climate change (SA11) and local air quality (SA12). Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community. Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>4 Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>6 Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development. Previous application to move a Dutch barn for stables on to site IDs 59798, 59835 and equivalent section of 59804 was rejected due to impacting the openness of the greenbelt.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>
42720609	Annex 1	<p>Re Local Plan - Site Number 59811 We are residents of TMBC and are formally commenting on the above site which is listed as part of the Local Plan consultation. From the key objectives set out in the Local plan and the Sustainability Appraisal you have carried out for the site, I cannot see how this should even be considered. Just using your own evaluation criteria: - (SA5, SA6, SA7, SA8, SA9) The site would have a devastating impact on the countryside and an extremely biodiverse</p>	<p>The SA is one of many factors that feed into the plan-making process. It does not specifically identify which sites should come forward through allocations in the Local Plan but provides an objective assessment of their sustainability, to help inform Council decisions. Site 59811 receives uncertain significant negative effects in relation to</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>area. It will have a major loss in existing agricultural land and major negative impact on water resources which are already under significant pressure in the l-cal area - (SA2, SA3, SA10) The site is not connected to any existing s-ttlement - the road access all around the site are extremely poor and could not cope even with a small increase in traffic. There are no schools within walking distance, no bus services and no other facilities which could support it. This would lead to a major increase in car traffic, further negatively impacting the GHG impact of the site. Aside from being a large site (which in my view is very negative given all the above), there seems to be no positive impa-t at all - even the economic benefit is shown as negligible as there is nothing in the surrounding area (in fact this will take away existing agricultural employment) We are very opposed to this site for the reasons above and while we cannot believe this is being considered, wanted to make sure we made formal position on this. Happy to provide more context but hopefully the above (and the work you have already done) is clear enough. Kind regards</p>	<p>SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 8: water and 9: soil.</p> <p>The SA acknowledges that the site is not connected to any existing settlement under SA objective 6: landscape and townscape.</p> <p>The SA is too high-level to consider site-specific access points and traffic, and so the Council will commission additional evidence on this.</p> <p>The SA acknowledges that there are no schools within walking distance of the site, bus stops or other relevant services.</p>
42720801	Annex 1	<p>I do not agree to the following sites 59842, 59686, 59637 and 59638 being used for housing. The village of Hadlow does not have the infrastructure to support the increase in housing. Also, by increasing the housing, the main road A26 is already congested with traffic and adding further housing will only add to this congestion. These sites are also green belt. Hadlow has wonderful walks which would be lost if housing were to be built. Not only would it change the vistas and views of Hadlow, but it would impact the environment. The plots in particular provide a collection for ground water both from the surrounding fields, which have flooded in the past and goes against your 'Objective 8. Protect and advance quality of water features'. The function of these sites and utility is also of importance. It feels as if someone looked on Google, saw a village, a few plots of land and said why not build there to accommodate the pressure from government to build more housing. Protect the environment, don't destroy it!</p>	<p>The SA is one of many factors that feed into the plan-making process. It does not specifically identify which sites should come forward through allocations in the Local Plan but provides an objective assessment of their sustainability, to help inform Council decisions.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on this.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Consideration has been given to the effects of development on landscape and townscape, under SA objective 6. Site 59637 receives an uncertain significant negative effect in relation to SA objective 6, as it is not located near any settlements in a rural location, whilst sites 59842 and 59686 receive uncertain minor negative effects as they are located on the edge of a settlement, and so development may be more easily integrated into existing development. Site 59638 is incorrectly recorded as not located near any settlements in a rural location and so incorrectly receives an uncertain significant negative effect. In the next iteration of the SA, the site will receive an uncertain minor negative effect.</p> <p>All sites with the exception of 59686 receive significant negative effects in relation to SA objective 8: water, as they contain land with a 1 in 30 year risk of surface water flooding. Some of these effects are recorded as uncertain as some of the sites contain water bodies but it is uncertain at this stage what the actual effect development will have on these.</p>
42722017	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use) SA Objective 1: –DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3:–DISAGREE - Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:–DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:–DISAGREE - Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8:–DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable</p>	<p>Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: educ588roof</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE	
42729569	Annex 1	<p>Site-59071SA1 - I do not see how turning 10ha of orchards into an industrial estate improves human health and well-being. Postern Lane is a popular local footpath for the residents of east -onbridge - much more popular since the Residents' Association installed a bollard to stop cut-through traffic, so that it is much safer for pedestrian use. The pleasure of walkers would be much diminished by bordering the lane with an industrial estate. SA4 - economic growth is only achievable if the site is accessible. This would require substantial infrastructure investment in terms of a link to the A26. There are significant level changes to overcome, as the site slopes steeply. The site may not be deliverable at all. SA5 - orchards are a strong contributor to biodiversity and so the loss of such a large area would have significant negative impact. There is no rational basis for saying that the effect is uncertain; the site's environmental value cannot possibly be conserved, let alone enhanced, by turning it from orchards to industrial use. SA6 and 7 - developing this site would have a significantly negative impact both on the townscape and on cultural heritage. It is critical to understand that because the site slopes, the northern section is prominently visible and developing it would thus have a notable effect. As to cultural heritage, this development would be a grotesque wound to inflict on the area. There are three listed buildings within 250 metres of the site, one of which (The Postern) is Grade 2* listed and has gardens which are classified as a Formal Garden Monument. Another is Postern Forge, listed Grade 2 and dating from the 15th century. According to KCC Heritage Records it "may have been built in 1480 by Thomas Willard, iron master, and was certainly associated with the iron trade for many generations. The forge dam adjoins the house." (Not far to the north lies the remains of Rats Castle Forge, a listed Monument thought to be the second of two medieval iron forges recorded in 1574 and constructed by David Willard. Postern Lane thus has strong historic associations with the medieval Wealden iron industry, which is well-recognised as being of special importance for conservation in the Low Weald.) There are 6 other Grade 2 listed buildings within half a mile. As the above very brief summary shows, Postern Lane is a little corner of the Low Weald which is extraordinarily rich in heritage; Pevsner calls it "A charming and remote-seeming hamlet, though only a mile from Tonbridge. The handsome brick houses of the early C18 make it memorable" ("Pevsner Architectural Guides - The Buildings of England: West Kent and the Weald" (John Newman) (1980) p576). This description is as accurate today as it has been for three centuries. But if this proposal proceeds, the effect will be to bring the urban edge of Tonbridge right up to the edge of the lane and to destroy its historic character forever. Postern Lane will in effect become the new eastern boundary of Tonbridge. The damage would be irreversible and this would be shoddy and unthinking town planning. SA9 - the land has been in productive agricultural use for over half a century. SA10 - developing the site will cause more car and lorry traffic, and more congestion on the A26 which is already forecast to be at saturation</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>The SA is too high-level to give consideration to site-specific access points and the topography of individual sites.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is incorrectly recorded as containing green infrastructure assets and therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. This is due to the fact the site overlaps some neighbouring green infrastructure assets and so the GIS analysis recorded the site as containing green infrastructure assets. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective, as it is within 250m of a Local Wildlife Site (East Tonbridge Copses and Dykes and River Medway) and Ancient Woodland. The data used to inform the SA does not identify an orchard. All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Further to this, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>The site receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, due to the fact it is on the edge of a settlement and so development may be more easily integrated into existing built development, compared to more rural and isolated sites.</p> <p>With regard to SA objective 7: heritage, the SA acknowledges the site as being within 250m of heritage assets, as recorded in the Kent Historic Environment Record. For this reason, the site receives a significant negative effect. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight.</p> <p>With regard to SA objective 9: soil, the SA acknowledges the site as greenfield and containing a significant proportion of Grade 3 agricultural land. The uncertainty acknowledges the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality).</p> <p>SA objective 10: climate change mitigation looks at proximity to public transport and as the site is within 400m of a bus stop, it receives a minor positive effect in relation to SA objective 10. We note that this is only part of the much bigger picture. It is also acknowledged that the</p>

		point. It is obvious, therefore, that development will cause an increase in greenhouse gases. There is no rational basis for the SA to conclude that developing this site is a minor positive in terms of greenhouse gas reduction simply because it is within 400m of a bus stop.The Postern Lane Residents Association submitted a detailed report from the Rural Planning Practice on the last local plan covering this site and the points developed in it remain valid.	actual use of sustainable transport modes will depend on people's behaviour. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.
42729569	Annex 1	Site 59834(The map shows this as including Site 59661 at its eastern edge. I do not know if this is an error or whether the landowners are co-operating. I repeat my comments on Site 59661.)This is a large greenfield site lying entirely within the Green Belt. It is also entirely within flood zone 3 and includes numerous lakes and ponds following gravel exploitation by previous land owners. It is a very significant wildlife habitat. There is no road access (the only road boundary being through Site 59661 onto Postern Lane; Postern Lane is a single track private lane with no access from Vale Road). The map shows an access through the north across the Medway using the route used for gravel extraction; it is not known if the landowner of the access route has agreed to this use. Following that route would mean the construction of a new bridge across the Medway.As a matter of joined-up planning, note that the eastern edge of Site 59834 extends almost as far as the western edge of the new town being proposed by TWBC at Tudeley. If that new town proceeds, then granting permission to Site 59834 would result in Tonbridge all but merging with the new-town.SA4 - economic benefit only flows if the access difficulties can be overcome; they would require massive infrastructure investment.SA5 - destruction on this scale of green belt habitat so rich in wildlife would be an act of gross environmental irresponsibility. Surely this cannot be permitted?SA6 - how could this conceivably be anything other than highly negative for the borough's landscape character and quality? Agricultural land, ancient woodlands and river margin habitat would all be lost.SA8 - destroying a floodplain/river margin habitat is obviously highly detrimental to the quality of water features and resources.SA9 - building on grade 3 agricultural land will not conserve or enhance soil resources.SA10 - on any realistic view this site is remote from public transport and will be entirely dependent on car use; it is bound to increase greenhouse gas emissions.	Site 59661 has been appraised separately to site 59834. Site 59834 contains site 59661 to its south west. The SA acknowledges the fact that site 59661 is greenfield, under SA objective 9: soil. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. The SA also acknowledges the site as within Flood Zone 3 under SA objective 8: water and for this reason, in addition to the fact it contains a watercourse, receives a significant negative effect. The effect is recorded as uncertain, as the effects on water quality are uncertain at this stage, as they depend on construction techniques and the use of SuDS within the design. The site receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains green infrastructure assets and a Local Wildlife Site (East Tonbridge Copses and Dykes and River Medway), and is within 250m of Ancient Woodland. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, appropriate mitigation may avoid adverse effects and may even result in beneficial effects. The SA is too high-level to give consideration to site-specific access points. The site is incorrectly recorded in the SA as not located near any settlements in a rural location, when it is on the edge of a settlement. Therefore, the site incorrectly receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. In the next iteration of the SA, the site will receive an uncertain minor negative effect. This is due to the fact sites adjacent to existing built development may be more easily integrated into existing built development, compared to more rural and isolated sites. All adverse effects against this objective are recorded as uncertain, as actual effects will depend on the design, scale and layout of development, which may help mitigate adverse effects. With regard to the Agricultural Land Classification, the site contains a less than significant proportion of Grade 3 agricultural land. Therefore, it receives a minor negative effect in relation to SA objective 9: soil.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			The site is within 400m of a bus stop and so received a minor positive effect in relation to SA objective 10: climate change mitigation. We note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.
42746209	Annex 1	<p>Some general points of concern</p> <p>* Inconsistency: Some sites have been give different assessments but the commentary is exactly the same.</p> <p>* Access: It is stated that access to schools or public transport are within a specific distance of the designated sites but this cannot be the case for the whole area of the site.</p> <p>* Local knowledge: Equally, access to a school site may be via a woodland or for public transport to a bus stop with limited services – there is no way that all new residents would use these services.</p> <p>* Health: There is now no GP service in West Malling, the closest is Kings Hill or Leybourne. The Sustainability Objective also conflates health facilities with access to sporting facilities/playgrounds!</p> <p>* Highways: Sustainability Appraisal objectives do not include impact on the local road system.</p> <p>Specific points of concern (by Sustainability Appraisal objective)</p> <p>59594 – 34 houses</p> <p>* Objective 10: We question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59602 – 19 houses</p> <p>* Objective 3: We question if this is within 800m of a primary or secondary school.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>The GP surgeries data used to inform the Interim SA Report does not acknowledge that West Malling GP surgery will be closed in the future. In the next iteration of the SA Report, the GP surgery will be removed from the GIS data and the proformas for the sites affected updated.</p> <p>There is considered to be a lot of crossover between access to healthcare facilities and areas of open space and sports facilities, as these can encourage more physical activity with beneficial effects on people's health. The site assessment criteria for SA objective 1: health and wellbeing are considered suitable and appropriate.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The proformas for each site accurately state whether they are within 800m of a primary school or not.</p> <p>The appraisal of site 59603 does not double-count site 59602, which it encompasses. Each of these sites has been appraised separately.</p> <p>With regard to SA objective 9: soils, site 59602 comprises brownfield land. In the next iteration of the SA, the GIS analysis will be updated to reflect this.</p> <p>Due to an error, justification text was not provided for the effect site 59716 is expected to have against SA objective 1: health and wellbeing. In the next iteration of the SA, the justification text will be</p>

		<p>* Objective 10: Majority of site not within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59406 – 20 houses</p> <p>* Objective 2: This should be the same as for site 59596 ie significant negative, as it is immediately next door.</p> <p>* Objective 3: Stated that this is within 800m distance walking but this would be through woodland, dark at each end of a Winter's day and very muddy if weather is inclement. It is also inconsistent – the site across the road (59648) is classified as a minor negative.</p> <p>* Objective 9: We question if this is all brownfield land.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59596 – 23 houses</p> <p>* Objective 3: Stated that this is within 800m distance walking but this would be through woodland, dark at each end of a Winter's day and very muddy if weather is inclement. It is also inconsistent – the site across the road (59648) is classified as a minor negative.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59648 – 17 houses</p> <p>* Objective 9: We question if this is all brownfield.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59649 – 9 houses</p> <p>* Objective 3: This should be the same as site 59648, ie negative?, as it is immediately next door.</p> <p>* Objective 9: We question if this is all brownfield.</p> <p>* Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42746401	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685, 59690, 59693, 59721, 59805, 59809. I object to any development on these sites, for the following reasons: 1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. 2) They consist of productive, Best Most Valuable agricultural land (Grades 1, 2, 3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. 3) The importance of domestic food production has been highlighted by the recent food shortages caused by Climate Change and the war in Ukraine. 4) Local food production is made more important by the effects of climate change. 5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. 6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. 7) Development will lead to a significant loss of biodiversity. 8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. 9) Development will put even more stress on the already stretched local health and education services. 10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. 11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use) SA Objective 1: –DISAGREE - Should be rated as NEGATIVE. Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: –DISAGREE - Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE. Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: –DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE. Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: –DISAGREE - Should be rated SIGNIFICANT NEGATIVE. Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: –DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE. Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor</p>

		<p>significant negative impact on the landscape and townscape.SA Objective 7: AGREESA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10:-DISAGREE - This should be rated as NEGATIVE· Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59721 (Residential)SA Objective 1:-DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREESA Objective 3:-DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative.SA Objective 4: AGREESA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this currently unfarmed land WILL significantly diminish biodiversity.· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREESA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10:-DISAGREE - This should be rated as NEGATIVE· Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59805 (Mixed use)SA Objective 1:-DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility.· Although public footpaths cross the site, development would destroy their value.SA Objective 2-AGREESA Objective 3: DISAGREE - Should be rated as NEGATIVE· Practical access to most parts of the site is NOT within 800m of an existing secondary or primary school.SA Objective 4: AGREE but should be MINOR POSITIVE· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local</p>	<p>Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in</p>

		<p>facilities.SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· The site-IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on Higham Lane, Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10: DISAGREE - This should be rated as NEGATIVE· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59809 Mixed use)SA Objective 1:-DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility· Although public footpaths cross the site, development would destroy their value.SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.SA Objective 10:-DISAGREE - This should be rated as NEGATIVE· Bus services are inadequate for current needs and any development on this site would</p>	<p>relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE</p>	
42776289	Annex 1	<p>On behalf of our client, CEMEX UK Properties Ltd, please find enclosed representations to Tonbridge & Malling Borough Council's (hereafter referred to as 'the Council') Regulation 18 Local Plan (the 'Local Plan').</p> <p>CEMEX supports the decision to bring forward a new Local Plan as the importance of creating a Plan-led approach to planning for development cannot be understated given the Council's adopted Local Plan predates the National Planning Policy Framework ('NPPF'). A new Local Plan is therefore required to ensure the future needs of residents and businesses across the Borough can be met through the sustainable development of sites.</p> <p>These representations are consistent with those made to the previous iteration of the Local Plan that was withdrawn on 13th July 2021 and included submissions to the Regulation 18 (The Way Forward) in November 2016 and the Regulation 19 draft in November 2018. As part of the initial stage of the emerging Local Plan, the three sites as set out below were also submitted to the Council's first Call for Sites exercise in February 2022.</p> <p>CEMEX is a global building materials company and leading supplier of cement, ready-mixed concrete and aggregates. In the UK, CEMEX owns sites and land that have ceased to be in operational uses and where appropriate, these are now promoted for alternative uses some of which are in Aylesford and the extent of their ownership is shown on the plan below and is split into three sites:</p> <p>Site A – extends to approximately 8.2ha;</p> <p>Site B – extends to approximately 9.7ha; and</p> <p>Site C – extends to approximately 0.6ha.–</p> <p>To note - the plan showing the location of the sites are included within the submission sent to the Council (localplan@tmbs.gov.uk (mailto:localplan@tmbs.gov.uk)).</p> <p>DEVELOPMENT POTENTIAL</p> <p>As part of the adopted Development Plan, the area around Eccles was designated as within the Bushey Wood Area of Opportunity - Core Strategy Policy CP16 and this stated:</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report. This means that each reasonable alternative development site option is appraised on its physical constraints only. This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>With regard to the respondents comments on SA objective 1: health and wellbeing, housing provision is dealt with separately under SA objective 14: housing. Although the respondent has said that development will incorporate areas of public open space, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p> <p>With regard to SA objective 2: services and facilities, sites 59766 and 59763 are recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band and therefore receives a significant negative effect against this objective.</p> <p>With regard to SA objective 3: education, site 59766 receives an uncertain minor negative effect for the reasons outlined in the proforma. Although the respondent has said that financial contributions would be made to mitigate any likely impact of the site in respect of education provision, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, sites 59766 and 59763 receive uncertain significant negative effects as they form part of a Regionally Important Geological Site (Aylesford Pit) and are within close proximity of a locally designated site (Eccles Old Pits Local Wildlife Site). Although the respondent has said that the sites would deliver at least a 10% net gain in biodiversity, these are 'policy-off' appraisals that do not take into consideration mitigation. With regard to SA objective 6: landscape, sites 59766 and 59763 are recorded as uncertain significant negative because they are not located within or on the edge of a settlement. The uncertainty is due to the fact the actual effect will depend on the final design, scale and layout of development. Although the respondent has said that there would be a robust landscaping strategy, these are 'policy-off' appraisals that do not take into consideration mitigation.</p> <p>With regard to SA objective 7: historic environment, these are 'policy-off' appraisals that do not take into consideration mitigation. Sites 59766 and 59763 receive uncertain significant negative effects in relation to this objective because they contains and are located within</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>"Land at Bushey Wood is identified as an Area of Opportunity containing land with potential for meeting residential needs in the post 2021 period, or earlier if there is any significant shortfall in strategic housing provision. Land will only be released for housing development within the Area of Opportunity through the preparation of an Area Action Plan. In the meantime, development will not be proposed in the LDF or otherwise permitted within this area which might prejudice its long-term development potential."</p> <p>In consideration of the position set by the Core Strategy, the withdrawn Local Plan had continued with land at Eccles/Bushey Wood forming part of the preferred spatial approach for development and within the associated evidence base, CEMEX's landholding (as set out above) were included as part of the Strategic Land Availability Assessment ('SLAA') reference 199 – Bushey Wood. This Report concluded that Bushey Wood was:</p> <p>"located in a sustainable location, with good access to services. The site is a mixture of greenfield and previously developed land, and any development should seek to maximise PDL opportunities. The majority of the site is identified as an Area of Opportunity in the adopted development plan for residential development post 2021, and therefore the principle of development in this location is already established. The scale of the site would enable a range of infrastructure, open space, and affordable housing to be provided on-site to meet a range of local plan and sustainability appraisal objectives over the medium to long term, as well as potential for further development beyond this plan period".</p> <p>As set out in previous representations and repeated through the 2022 Call for Sites, in consideration that each of the sites are deliverable in that they are available (single landowner), suitable (conclusions of previous Sustainability Appraisal/SLAA) and achievable (realistic prospect that housing will be delivered within five years), it is considered that they should be allocated in the emerging Local Plan/form part of the strategic extension to Eccles.</p> <p>Further, with the current planning application (22/00113/OAEA) which includes land that would adjoin Sites B and C, in order for the Council to maximise the delivery of housing at sustainable locations (as confirmed through the previous evidence base), we suggest both sites (B and C) should be allocated in the emerging Local Plan.</p> <p>The Sites are assessed under references 59766 (Site A), 59763 (Site B) and 59768 (Site C) and there are some parts of the Interim Sustainability Appraisal Site Assessments that we agree and support,</p>	<p>close proximity of numerous heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, site 59766 receives an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. Further to this, the site partially overlaps a water body in Bushey Wood and therefore development of the site could have an adverse effect on water quality, although this is uncertain. Site 59763 also receives an uncertain significant effect as it is within an area with a 1 in 30 year risk of surface water flooding. The site does not contain a water body or watercourse, but partially falls within Source Protection Zone 3. Although the respondent has said that the scheme could include SuDS and other mitigation, these are 'policy-off' appraisals that do not take into consideration mitigation. With regard to SA objective 10: climate change mitigation, although the respondent has said that there could be opportunities to deliver a new bus service, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>whilst others we consider incorrect. Our comments on the relevant objectives (that we do not agree with) are outlined below.</p> <p>Site A: 59766</p> <p>SA Objective 1:</p> <p>To improve human health and well-being</p> <p>The proposal would facilitate improved health and well-being by providing much needed housing, and in particular affordable housing which helps to reduce deprivation and social inequalities.</p> <p>As set out within these representations, the Site was also within a previously assessed 'Area of Opportunity' and concluded to be sustainable by the Council (as part of the evidence base of the last Local Plan.</p> <p>In terms of the development of the Site, it would include areas of public open space in accordance with planning policy. It is also relevant to note that should the planning application (22/00113/OAEA) be approved, there would be opportunities for residents to use the associated areas (alongside the development of Site A providing contributions to enhance further and/or deliver additional services/facilities in the local area).</p> <p>There would also be opportunities to improve connections to a wider network of green spaces to promote healthy lifestyles through connecting people with nature and promoting high standards of Green Infrastructure.</p> <p>We therefore suggest the Site is scored '++' (significant positive effect likely) rather than + (minor positive effect likely).</p> <p>SA Objective 2:</p> <p>To improve equality and access to community facilities and services</p> <p>Given the Council's assessment in respect of SA Objective 1 and our subsequent re-assessment, we suggest the Site is scored '+' (minor positive effect likely) rather than - (significant negative effect likely).</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 3:</p> <p>To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>The necessary financial contributions would be made to mitigate any likely impact of the Site in respect of education provision.</p> <p>We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (-?) Uncertain minor negative.</p> <p>SA Objective 5:</p> <p>To protect and enhance biodiversity and geodiversity</p> <p>In accordance with the emerging Local Plan alongside the legislation within the Environment Act, the development of the Site would need to deliver at least a 10% net gain in biodiversity.</p> <p>As part of bringing forward the biodiversity net gain strategy/plan, in accordance with the NPPF (paragraph 180), it would also be necessary to apply the avoidance strategy. This will ensure biodiversity and geodiversity is protected and enhanced.</p> <p>We therefore suggest the Site is scored '++' (significant positive effect likely) rather than (--?) Uncertain significant negative.</p> <p>SA Objective 6:</p> <p>To protect and enhance the borough's landscape and townscape character and quality</p> <p>Whilst the character of the Site would change (development of a greenfield site), with a robust landscaping strategy and careful layout, it is suggested that the long-term impact would be minimal/negligible.</p> <p>We therefore suggest the Site is scored '-' (minor negative effect) rather than (--?) Uncertain significant negative.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 7:</p> <p>To protect and enhance the cultural heritage resource</p> <p>Ensuring the setting of the Romano-British villa, Anglo-Saxon cemetery and associated remains at Eccles would not be harmed would form a key component of the layout of the Site.</p> <p>It is suggested with the intervening Bushey Wood alongside additional mitigation that would be incorporated into the development, the heritage asset would not be affected.</p> <p>We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (--?) Uncertain significant negative.</p> <p>SA Objective 8:</p> <p>To protect and enhance the quality of water features and resources</p> <p>None of the Site is within Flood Zone 3, rather, the entirety is within Flood Zone 1 – the area with the lowest probability of flooding. The area to the west also benefits from flood defences.</p> <p>As part of the development of the Site, a strategy would be developed that ensured the surrounding area would not be affected. This could include SUDs and other mitigation on-site.</p> <p>We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (--) Significant negative/ (--?) Uncertain significant negative.</p> <p>In light of the above, we consider the Interim Sustainability Assessment Report scores for the Objectives as listed above should be higher than that set out within the assessment. We therefore request the Interim Sustainability Appraisal for Site A is reviewed by the Council and amended in accordance with the above.</p> <p>Site B: 59763</p> <p>SA Objective 1:</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>To improve human health and well-being</p> <p>The proposal would facilitate improved health and well-being by providing much needed housing, and in particular affordable housing which helps to reduce deprivation and social inequalities.</p> <p>As set out within these representations, the Site was also within a previously assessed 'Area of Opportunity' and concluded to be sustainable by the Council (through the previous Local Plan).</p> <p>In terms of the development of the Site, it would include areas of public open space in accordance with planning policy. It is also relevant to note that should the planning application (22/00113/OAEA) be approved, there would be opportunities for residents to use the associated areas (alongside the development of Site A providing contributions to enhance further and/or deliver additional services/facilities in the local area).</p> <p>There would also be opportunities to improve connections to a wider network of green spaces to promote healthy lifestyles through connecting people with nature and promoting high standards of Green Infrastructure.</p> <p>We therefore suggest the Site is scored '++' (significant positive effect likely) rather than + (minor positive effect likely).</p> <p>SA Objective 2:</p> <p>To improve equality and access to community facilities and services</p> <p>Given the Council's assessment in respect of SA Objective 1 and our subsequent re-assessment, we suggest the Site is scored '+' (minor positive effect likely) rather than – (significant negative effect likely).</p> <p>SA Objective 3:</p> <p>To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>The necessary financial contributions would be made to mitigate any likely impact of the Site in respect of education provision.</p>

Uncertain significant negative.</p> <p>SA Objective 10:</p> <p>To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Whilst the Site is more than 800m from a railway station and 400m from a bus stop, with the critical mass that may come forward (in this area), there could be opportunities (in discussions with the local bus provider) to deliver a new bus service.</p> <p>We therefore suggest that the Site is scored '?' (Likely effect uncertain) rather than (-).</p> <p>In light of the above, we consider the Interim Sustainability Assessment Report scores for the Objectives as listed above should be higher than that set out within the assessment. We therefore request the Interim Sustainability Appraisal for Site B is reviewed by the Council and amended in accordance with the above.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site C: 59768</p> <p>Given the size and proximity of Site C, we have not provided a re-assessment.</p>	
42784385	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: –DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3:–DISAGREE - Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:–DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:–DISAGREE - Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: educ609roof</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8:</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: -DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as negative Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59693 (Residential) SA Objective 1: -DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREESA Objective 3:-DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and</p>	<p>water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus610roof</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not</p>

		<p>Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regul-ly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59721 (Residential)SA Objective 1: - DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3:-DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative. SA Objective 4: AGREE SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this currently unfarmed land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59805 (Mixed use)SA Objective 1: - DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3:-DISAGREE - Should be rated as NEGATIVE Practical</p>	<p>located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. 		(BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE	
42784417	Annex 1	<p>59731</p> <p>Comment for Objection to inclusion of site 59731 (& 59707)</p> <p>The key objections are based on:</p> <ul style="list-style-type: none"> * Development on Green Belt land resulting in urban sprawl without evidence of extraordinary circumstances required to do so. Green belt exists to check the unrestricted sprawl of large built-up areas and prevents neighbouring towns merging into one another. It is also required to safeguarding the countryside from encroachment. * Development within an Area of Outstanding Natural Beauty. * Development would affect the openness and visual amenity of and across the location would be severely compromised. This site offers extensive views across the AONB. * The Green Belt setting preserves the setting and special character of a historic settlement: The Conservation Area extends into the Green Belt, and the AONB also helps serve this function. * Overdevelopment of an existing community and services, increased traffic and demand on existing services. <p>Planning Policy to support the above objections</p> <p>NPPF 2021 Section 13 Protecting Green Belt land</p> <p>The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.</p> <p>Paragraph 137</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA gives consideration to the AONBs and if a site is within 500m of an AONB, it receives a significant negative effect in relation to SA objective 6: landscape and townscape. The effect is recorded as uncertain, as the actual effect will depend on the design, scale and layout of development, which may help mitigate any adverse effects. Sites 59731 and 59707 therefore receive uncertain significant negative effects in relation to SA objective 6.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1: services and facilities do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to school capacity, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA is too high-level to give consideration to traffic and so the Council will commission additional evidence on this.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+)</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Green Belt serves five purposes:</p> <ul style="list-style-type: none"> * to check the unrestricted sprawl of large built-up areas; * to prevent neighbouring towns merging into one another; * to assist in safeguarding the countryside from encroachment; * to preserve the setting and special character of historic towns; and * to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>Paragraph 147</p> <p>Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>Paragraph 148</p> <p>When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations.</p> <p>Paragraph 149</p> <p>A local planning authority should regard the construction of new buildings as inappropriate in the Green Belt. Exceptions to this are:</p> <ul style="list-style-type: none"> * a) buildings for agriculture and forestry; * b) the provision of appropriate facilities (in connection with the existing use of land or a change of use) for outdoor sport, outdoor recreation, cemeteries and burial grounds and allotments as long as the facilities preserve the openness of the Green Belt and do not conflict with the purposes of including land within it; <p>NPPF 2021 Section 3, 16a A legal requirement of the plan is that a site should be prepared with the objective of contributing to the achievement of sustainable development</p>	<p>effect is recorded for site options that would provide fewer than 100 dwellings". As site 59731 is proposed for 100 dwellings or more, it receives a significant positive effect in relation to SA objective 14: housing.</p> <p>With regard to the natural environment, site 59731 receives a minor negative effect as it is within 250m and 1km of Halling to Trottiscliffe Downs SSSI, two Local Wildlife Sites (Wrotham Hill and Wrotham Downs) and an area of Ancient Woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to the historic environment, site 59731 receives a significant negative effect as it is within 250m of a heritage asset, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The score for this site is negative, Further consideration of the objectives will reduce this score further,</p> <p>Objective 3 (++)-To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>-The local primary schools (in Wrotham and Borough Green) are currently close to capacity and regularly have waiting lists for admissions. Both the primary school sites have traditionally constructed buildings that have been expanded over the years and would need significant changes to accommodate more pupils.</p> <p>- The local secondary school is frequently oversubscribed pupil numbers have already increased from 140 (in 2016) to 190 (in 2021).</p> <p>- There is a specialist school local to the area, although admission is limited to children with a KCC care plan and is fully subscribed.</p> <p>- Nursery/childcare facilities in the locality all have long waiting lists (often in excess of twelve months for pre-school children)</p> <p>- No further educational facilities are available outside of the local secondary school.</p> <p>Multiple housing developments are proposed in the locality, it will not be possible for them to utilise these facilities.</p> <p>NPPF 2021 Section 8 Promoting healthy and safe communities paragraph 95</p> <p>It is important that a sufficient choice of school places is available to meet the needs of existing and new communities. 		<p>the countryside from encroachment. Development within an Area of Outstanding Natural Beauty. Development would affect the openness and visual amenity of and across the location would be severely compromised. This site offers extensive views across the AONB. The Green Belt setting preserves the setting and special character of a historic settlement: The Conservation Area extends into the Green Belt, and the AONB also helps serve this function. Overdevelopment of an existing community and services, increased traffic and demand on existing services. Planning Policy to support the above objections NPPF 2021 Section 13 Protecting Green Belt land The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. Paragraph 137 Green Belt serves five purposes: to check the unrestricted sprawl of large built-up areas; to prevent neighbouring towns merging into one another; to assist in safeguarding the countryside from encroachment; to preserve the setting and special character of historic towns; and to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Paragraph 147 Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. Paragraph 148 When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations. Paragraph 149 A local planning authority should regard the construction of new buildings as inappropriate in the Green Belt. Exceptions to this are: <li a) buildings for agriculture and forestry; <li b) the provision of appropriate facilities (in connection with the existing use of land or a change of use) for outdoor sport, outdoor recreation, cemeteries and burial grounds and allotments as long as the facilities preserve the openness of the Green Belt and do not conflict with the purposes of including land within it; NPPF 2021 Section 3, 16a A legal requirement of the plan is that a site should be prepared with the objective of contributing to the achievement of sustainable development The score for this site is negative, Further consideration of the objectives will reduce this score further, Objective 3 (++)-To improve levels of educational attainment and skills and training development for all age groups and all sectors of society -The local primary schools (in Wrotham and Borough Green) are currently close to capacity and regularly have waiting lists for admissions. Both the primary school sites have traditionally constructed buildings that have been expanded over the years and would need significant changes to accommodate more-pupils. - The local secondary school is frequently oversubscribed pupil numbers have already increased from 140 (in 2016) to 190 (i- 2021). - There is a specialist school local to the area, although admission is limited to children with a KCC care plan and is fully sub-cribed. - Nursery/childcare facilities in the locality all have</p>	<p>The SA gives consideration to the AONBs and if a site is within 500m of an AONB, it receives a significant negative effect in relation to SA objective 6: landscape and townscape. The effect is recorded as uncertain, as the actual effect will depend on the design, scale and layout of development, which may help mitigate any adverse effects. Sites 59731 and 59707 therefore receive uncertain significant negative effects in relation to SA objective 6.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1: services and facilities do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to school capacity, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA is too high-level to give consideration to traffic and so the Council will commission additional evidence on this.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". As site 59731 is proposed for 100 dwellings or more, it receives a significant positive effect in relation to SA objective 14: housing.</p> <p>With regard to the natural environment, site 59731 receives a minor negative effect as it is within 250m and 1km of Halling to Trottscliffe Downs SSSI, two Local Wildlife Sites (Wrotham Hill and Wrotham Downs) and an area of Ancient Woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this</p>

		<p>long waiting lists (often in excess of twelve months for pre-school children) - No further educational facilities are available outside of the local secondary school. Multiple housing developments are proposed in the locality, it will not be possible for them to utilise these facilities. NPPF 2021 Section 8 Promoting healthy and safe communities paragraph 95 It is important that a sufficient choice of school places is available to meet the needs of existing and new communities. Local planning authorities should take a proactive, positive collaborative approach to meeting this requirement, and to development that will widen choice in education. Objective 14 (++) To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and –enures. - The density of housing proposed on this site will not provide high quality housing proportionate to the character and or scale of the existing settlement abutting the proposed site. This is contrary to clause (5.9.20) The affordable housing necessary is not met. NPPF 2021 Section 20d) Conservation and enhancement of the natural, built and historic environment, including landscapes and green infrastructure, and planning measures to address climate change mitigation and adaptation. This site is located within The Green Belt, within an “Area of Outstanding Natural Beauty”, has the highest grade of agricultural land (grade 1) and falls outside of the rural settlement of Wrotham and it is open countryside. The plan describes a requirement to “safeguard green spaces”, a development in this location does not protect, or conserve the natural asset of the environment or heritage of the surrounding conservation area. A development on this site will ruin the visual amenity of the area. Exceptional circumstances are not applicable to this site. The number of properties could be accommodated in other locations. The development of 105 houses is not sufficient justification to build on this land. Other objections to the proposals Kent Downs AONB Management Plan 2021-2026 An Area of Outstanding Natural Beauty (AONB) is exactly what it says it is: a precious landscape whose distinctive character and natural beauty are so outstanding that it is in the nation's interest to safeguard them. The historic settlement pattern remains an important distinctive component of the AONB. <ol Major development should avoid the Kent Downs AONB in line with NPPF guidance. Where it is decided that development will take place that will have a negative impact on the landscape character, characteristics and qualities of the Kent Downs AONB or its setting, mitigation and or compensatory measures appropriate to the national <ol start="2</p> <p>Aside from these grand and dominant historic sites and structures, the multitude of smaller cultural and historic features also help characterise the landscape of the AONB. These are the traces of ordinary people who have worked the land for centuries and have shaped its special character. Networks of ancient, often ‘laid’ hedgerows which still provide enclosure for livestock; wood and field banks which marked boundaries between different manors or estates, picked out with pollarded or ‘stubbed’ ancient trees; field patterns and lynchets revealing ploughing patterns from centuries ago; hollow ways and sunken lanes, now often byways, carved into the land by</p>	<p>strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to the historic environment, site 59731 receives a significant negative effect as it is within 250m of a heritage asset, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>millennia of passing feet and hooves; and dene holes (deep excavations into the chalk) and borrow pits where rock and minerals were excavated by hand The historic environment helps shape new development in the AONB and its setting and contributes to a distinctive sense of place. This will be achieved by ensuring that the heritage is considered from the earliest stages of project development. PPG2 PPG2: Green Belts – this sets out the Government’s policy for Green Belts which is to maintain their openness. It indicates that Green Belt boundaries should endure for the long-term and that there is a presumption against inappropriate development within Green Belts I It is possible to find alternative locations for developments of this size, throughout the borough without compromising the AONB.</p>	
42784705	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: –DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3:–DISAGREE - Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:–DISAGREE - Should be rated as definite SIGNIFICANT</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: educ620roof</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA</p>

		<p>NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: -DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as negative Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site</p>	<p>Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus621roof</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3:</p>

		<p>motor transport for travel to work and to use local facilities. SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: -DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as negative Bus services are inadequate for current needs and any development on this site would</p>	<p>frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths.</p>

SA Objectives 11,12,13: AGREE Site 59809 Mixed use) SA Objective 1: – DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5:-DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and</p>	<p>unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8:-DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10:-DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREEGreen Belt LandThe Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.** Rather all other options should be considered first.Best Most Valuable Agricultural Land (BMV)There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p>	<p>take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p>
42803233	Annex 1	<p>Comments in relation to site 59641. SA Objective 1: agree, as only minor positive.SA Objective 2: significant negative. Poor accessibility. SA Objective 3: significant negative due to poor accessibility, distance, low capacity, need to rely excessively on private</p>	<p>Proximity to schools is covered under SA objective 3: education, not SA objective 2: services and facilities. Site 59641 receives a minor negative effect in relation to SA objective 3, as it is not within 800m of a primary or secondary school. The effect is uncertain, as new</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>transportation and as a result increased traffic and pollution. The site is far off existing secondary school and primary schools, their existing capacity already below what is required. Primary school-age children will need to be driven significant distance to schools with existing capacity. The commute may affects their performance and social life (ability to mix with fellow school children after classes). It increases traffic and pollution. Even if local primary school places became available, walking will not be an option for young children. Older children may attempt walking to the local secondary schools but there are no pedestrian pathways; the only option is along a narrow and windy single-file car lane, which is dangerous for the traffic, and unlit, making it largely unsuitable. For older children attaining secondary schools further away, commute will be substantive, and involve a long walk or ride to the nearest bus stops/Tonbridge railway station, all of which are significant distance away. Increased reliance on private transportation will increase pollution, and make already unsafe road considerably more unsafe, for either walking or driving. SA Objective 4: negative. Due to poor accessibility economic/development benefits are doubtful. Development would impact the existing green belt and thus impact long-term economic benefits of the wider area. SA Objective 5: significant negative. Essential facilities are also limited or missing, and extending them from the urban area would cause environmental effects along the way. Amongst other, there are no sewage mains. If not extended (at the said risk), the alternative solution are local installations, like septic tanks, that are riskier in environmental terms and higher maintenance/less efficient. SA Objective 6: significant negative. The site is next to protected area. Extending communications/essential facilities (as above) will impact landscape. SA Objective 7: significant negative. As above. SA Objective 8: significant negative. As above. SA Objective 9: significant negative. As above (the effects of extending the existing remote or installing new facilities). SA Objective 10: significant negative. As above, increased traffic and-pollution - irrespective of children's educational needs, significant reliance on private transportation will be inevitable, due to poor accessibility and absence of public transportation facilities in the proximity.</p>	<p>residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities rather than access to employment opportunities. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59641 receives a minor negative effect against SA objective 5: biodiversity and geodiversity, as it is within 250m of a Local Nature Reserve (Haysden Nature Reserve). All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>Site 59641 receives a significant negative effect against SA objective 6: landscape and townscape, as it is not located near any settlements in a rural location. All adverse effects against this objective are recorded as uncertain, as actual effects on landscape and townscape will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The site also receives a significant negative effect in the SA in relation to the historic environment. The site is within 250m of heritage assets, as recorded in the Kent Historic Environment Record, and so receives a significant negative effect in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The site receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding and contains a watercourse. The effect is recorded as uncertain, as development could affect water quality, although this is dependent on construction techniques and the use of SuDS within the design.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>The site receives a significant negative effect in relation to SA objective 9: soil, as it is greenfield and contains Grade 3 agricultural land. The effect is recorded as uncertain, as it is unknown whether the Grade 3 agricultural land is Grade 3a (high quality) or 3b (not classed as high quality).</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. Site 59641 receives a negligible effect in relation to this objective, as it is not within close proximity of a railway station or bus stop, but is close to a cycle path. The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p>
42812385	Annex 1	Regarding site 59803, no part of the site is within 800m (as the crow flies) from the only vehicle/pedestrian entry to the station car park (from Bow Road), and less than 2% of the site area is within 800m of the pedestrian entrance from the car park to the station platforms (again, as the crow flies). As entry to the station premises can ONLY be gained from Bow Road it is disingenuous to state that the site is within 800m of the station, since a distance considerably in excess of 800m must be travelled to the Bow Road entry point (even for a crow). When considering that it is not possible to walk in a direct straight line to the station, the distance from the extremity of the site to the station ticket machine and platforms is circa 1900m. Therefore please adjust the SA10 assessment for this site accordingly.	As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distance from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.
42828769	Annex 1	The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685, 59690, 59693, 59721, 59805, 59809. I object to any development on these sites, for the following reasons: 1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. 2) They consist of productive, Best Most Valuable agricultural land (Grades 1, 2, 3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. 3) The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine. 4) Local food production is made more important by the effects of climate change. 5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. 6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. 7) Development will lead to a significant loss of biodiversity. 8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. 9) Development will put even more	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p>

		<p>stress on the already stretched local health and education services.10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.Dealing with each site in turn:Site 59685 (Mixed use)SA Objective 1– DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREESA Objective 3– DISAGREE - Should be rated as NEGATIVE· The site is NOT within 800m of an existing secondary or primary school.SA Objective 4: AGREE with MINOR POSITIVE· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE· Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.SA Objective 7: AGREESA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10– DISAGREE - should be rated as NEGATIVE· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREESite 59690 (Mixed use)SA Objective 1– DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility· Although public footpaths cross the site, development would destroy their value.SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6– DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· The sit– IS located next to</p>	<p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in</p>

		<p>existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10- DISAGREE - This should be rated as negative· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59693 (Residential)SA Objective 1- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREE SA Objective 3- DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of an existing secondary or primary school.SA Objective 4: AGREE SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this agricultural land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10- DISAGREE - This should be rated as NEGATIVE· Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59721 (Residential)SA Objective 1- DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREE SA Objective 3- DISAGREE - Should be rated as NEGATIVE· Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative.SA Objective 4: AGREE SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE· Loss of this currently unfarmed land WILL significantly diminish biodiversity· This has been confirmed by a previous biological survey,</p>	<p>the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu632roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with</p>

Loss of absorbent land will exacerbate this effect.SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.SA Objective 10– DISAGREE - This should be rated as NEGATIVE· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE</p>	<p>objective 10: climate change mitigation as it is within 400m of a bus stop.</p>
42834945	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:• 59685• 59690• 59693• 59721• 59805• 59809I object to any development on these sites, for the following reasons:1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.2) They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.3) The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.4) Local food production is made more important by the effects of climate change.5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.7) Development will lead to a significant loss of biodiversity.8) Development will irrevocably alter the open, semi-rural, low-density</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE• The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE• Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.SA Objective 9: AGREE STRONGLY• The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.SA Objective 10- DISAGREE - This should be rated as NEGATIVE• Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59721 (Residential)SA Objective 1- DISAGREE - Should be rated as NEGATIVE• Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREE SA Objective 3- DISAGREE - Should be rated as NEGATIVE• Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative.SA Objective 4: AGREE SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE• Loss of this currently unfarmed land WILL</p>	<p>incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu636roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated</p>

		<p>significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE. There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE. Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY. The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10- DISAGREE - This should be rated as NEGATIVE. Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59805 (Mixed use) SA Objective 1- DISAGREE - Should be rated as NEGATIVE. Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective -: AGREE SA Objective 3: DISAGREE - Should be rated as NEGATIVE. Practical access to most parts of the site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE but should be MINOR POSITIVE. Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE. Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE. The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE. Water run-off from fields on this site has previously caused serious flooding on Higham Lane, Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY. The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE - This should be rated as NEGATIVE. Bus services are inadequate for current needs and any development on</p>	<p>sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site</p>

		<p>this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Site 59809 Mixed use)SA Objective 1- DISAGREE - Should be rated as NEGATIVE• Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value.SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE• Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE• Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE• The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE• Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.SA Objective 9: AGREE STRONGLY• The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.SA Objective 10- DISAGREE - This should be rated as NEGATIVE• Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.SA Objectives 11,12,13: AGREE Green Belt LandThe Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt? Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply. Rather all other options should be considered first.Best Most Valuable Agricultural Land (BMV)There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications. This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the</p>	<p>59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 receives an uncertain significant negative effect, as it is unknown whether it comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>

		<p>economic necessity of food production at home. The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site. It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land. ** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site. Site Specific Comments with regard to BMV SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%. SITE 59721: Grade 2 land makes up at least 50% of the site. SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%. SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site. ** This has the effect of considerably diluting the % of grade 2 land on the combined site. I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging of sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.</p>	
42835361	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809. I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use) SA Objective 1:- DISAGREE - Should be</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3:</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3- DISAGREE - Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6- DISAGREE - Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10- DISAGREE - should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking</p>

		<p>DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10- DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59805 (Mixed use)SA Objective 1:- DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3- DISAGREE - Should be rated as NEGATIVE Practical access to most parts of the site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane, Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10- DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59809 Mixed use) SA Objective 1:- DISAGREE - Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any</p>	<p>and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As</p>

		<p>development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10- DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREEGreen Belt LandThe Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development "that protects areas of particular importance", which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.** Rather all other options should be considered first.Best Most Valuable Agricultural Land (BMV)There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site</p>	<p>outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 receives an uncertain significant negative effect, as it is unknown whether it comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.Site Specific Comments with regard to BMVSITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%.SITE 59721: Grade 2 land makes up at least 50% of the site.SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%.SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site. **This has the effect of considerably diluting the % of grade 2 land on the combined site. I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging of sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.	
42812385	Annex 1	Regarding site 59803, no part of the site is within 800m (as the crow flies) from the only vehicle/pedestrian entry to the station car park (from Bow Road), and less than 2% of the site area is within 800m of the pedestrian entrance from the car park to the station platforms (again, as the crow flies). As entry to the station premises can ONLY be gained from Bow Road it is disingenuous to state that the site is within 800m of the station, since a distance considerably in excess of 800m must be travelled to the Bow Road entry point (even for a crow). When considering that it is not possible to walk in a direct straight line to the station, the distance from the extremity of the site to the station ticket machine and platforms is circa 1900m. Therefore please adjust the SA10 assessment for this site accordingly.	As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distance from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.
42171937	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu644roof.</p>

		<p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:– DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p>	<p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. 42438113	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:– DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p>	<p>is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu655roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is</p>

		<p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p>	<p>incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated</p>

Loss of absorbent land will exacerbate this effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 10- DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42441857	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p>	<p>SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu667roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity</p>

		<p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p>	<p>within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not</p>

Loss of absorbent land will exacerbate this effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p> <p>SA Objective 10- DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42448545	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. * Development will put even more stress on the already stretched local health and education services. * There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. * These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p>	<p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. 		<p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p>	<p>consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural</p>

SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this</p>

		<p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p>	<p>instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school</p>

Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <ul style="list-style-type: none"> · Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. · The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. <p>SA Objective 9: AGREE STRONGLY</p> <ul style="list-style-type: none"> · The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <ul style="list-style-type: none"> · Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. <p>SA Objectives 11,12,13: AGREE</p> <p>Site 59690 (Mixed use)</p> <p>SA Objective 1– DISAGREE - Should be rated as NEGATIVE</p> <ul style="list-style-type: none"> · Site is NOT within 800m of existing healthcare facility. · Although public footpaths cross the site, development would destroy their value. <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p>	<p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42519233	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu710roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

42260449	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. * Development will put even more stress on the already stretched local health and education services. * 10)There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. * 11)These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. <p>Dealing with each site in turn:</p>	<p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu722roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). 		<p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p>	<p>consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural</p>

		<p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p> <p>SA Objective 10- DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42479393	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685 * 59690 * 59693 * 59721 * 59805 * 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu738roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3:- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p>	<p>and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA</p>

		<p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p>	<p>objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly</p>

		<p>* The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p> <p>SA Objective 10- DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42540865	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p>	<p>wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu749roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss</p>

		<p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p>	<p>of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent</p>

		<p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6- DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p>	<p>instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p> <p>Site 59690 (Mixed use)</p> <p>SA Objective 1:– DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>* Although public footpaths cross the site, development would destroy their value.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p> <p>SA Objective 4: AGREE but should be MINOR POSITIVE</p>	<p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths.</p>

		SA Objectives 11,12,13: AGREE	
42609057	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> · 59685 · 59690 · 59693 · 59721 · 59805 · 59809 <p>I object to any development on these sites, for the following reasons:</p> <ol style="list-style-type: none"> 3) 1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. 2) They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. 3) The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine. 4) Local food production is made more important by the effects of climate change. 5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>7) Development will lead to a significant loss of biodiversity.</p> <p>8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>9) Development will put even more stress on the already stretched local health and education services.</p> <p>10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1– DISAGREE - Should be rated as NEGATIVE</p> <p>· Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <p>· The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p>	<p>The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu770roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to</p>

		<p>· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>· Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>· Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>· Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p>	<p>SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in</p>

42627009	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>59685</p> <p>59690</p> <p>59693</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59721</p> <p>59805</p> <p>59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.</p> <p>Local food production is made more important by the effects of climate change.</p> <p>They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>Development will lead to a significant loss of biodiversity.</p>	<p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). 		<p>Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10- DISAGREE - should be rated as NEGATIVE</p>	<p>Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>* The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p>	<p>instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative</p>

42659905	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p>	<p>SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to</p>

		<p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6- DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p>	<p>buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths.</p>

		<p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p> <p>SA Objective 10- DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42712801	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685 * 59690 * 59693 * 59721 * 59805 * 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu819roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p>	<p>considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p>	<p>and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain</p>

		SA Objectives 11,12,13: AGREE	
42718433	Annex 1	<p>Green Belt Land</p> <p>The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?</p> <p>**Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.</p> <p>It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.</p> <p>** Rather all other options should be considered first.</p> <p>Best Most Valuable Agricultural Land (BMV)</p> <p>There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.</p> <p>** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.</p> <p>The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.</p> <p>** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 receives an uncertain significant negative effect, as it is unknown whether it comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>land leads to the deduction of varying balance points depending on the % of such land on a site.</p> <p>Site Specific Comments with regard to BMV</p> <p>SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%.</p> <p>SITE 59721: Grade 2 land makes up at least 50% of the site.</p> <p>SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%.</p> <p>SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site.</p> <p>**This has the effect of considerably diluting the % of grade 2 land on the combined site. I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging of sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.</p>	
42722017	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p>	<p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in</p>

		<p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42401697	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p>	<p>within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a</p>

		<p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p>	<p>minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking</p>

		<p>roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p>	<p>mitigation. TSA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this</p>

		<p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p>	<p>instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school</p>

42362881	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu868roof.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:– DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p>	<p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in</p>

With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with</p>

		<p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p> <p>Site 59690 (Mixed use)</p> <p>SA Objective 1:– DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>* Although public footpaths cross the site, development would destroy their value.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p>	<p>a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA</p>

		<p>SA Objective 4: AGREE but should be MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated as SIGNIFICANT NEGATIVE</p> <p>* The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p>	<p>objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p>

		<p>SA Objective 10- DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p> <p>Green Belt Land</p> <p>The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?</p> <p>**Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.</p> <p>It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.</p> <p>** Rather all other options should be considered first.</p> <p>Best Most Valuable Agricultural Land (BMV)</p> <p>There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.</p> <p>** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.</p> <p>** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p>	
42802017	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p>	<p>mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school</p>

		<p>market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p> <p>Site 59690 (Mixed use)</p> <p>SA Objective 1:– DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>* Although public footpaths cross the site, development would destroy their value.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p> <p>SA Objective 4: AGREE but should be MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p>	<p>(Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?</p> <p>**Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.</p> <p>It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.</p> <p>** Rather all other options should be considered first.</p> <p>Best Most Valuable Agricultural Land (BMV)</p> <p>There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.</p> <p>** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.</p> <p>The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.</p> <p>** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42746401	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> · 59685 · 59690 · 59693 · 59721 · 59805 · 59809 <p>I object to any development on these sites, for the following reasons:</p> <ol style="list-style-type: none"> 3) 1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. 2) They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. 3) The importance of domestic food production has been highlighted by the recent food shortages caused by Climate Change and the war in Ukraine. 4) Local food production is made more important by the effects of climate change. 5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>7) Development will lead to a significant loss of biodiversity.</p> <p>8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>9) Development will put even more stress on the already stretched local health and education services.</p> <p>10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1– DISAGREE - Should be rated as NEGATIVE</p> <ul style="list-style-type: none"> · Site is NOT within 800m of existing healthcare facility. <p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <ul style="list-style-type: none"> · The site is NOT within 800m of an existing secondary or primary school. 	<p>The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. TSA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to</p>

The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in</p>

		<p>market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - should be rated as NEGATIVE</p> <p>· Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p> <p>Site 59690 (Mixed use)</p> <p>SA Objective 1– DISAGREE - Should be rated as NEGATIVE</p> <p>· Site is NOT within 800m of existing healthcare facility.</p> <p>· Although public footpaths cross the site, development would destroy their value.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p> <p>SA Objective 4: AGREE but should be MINOR POSITIVE</p> <p>· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>· Loss of this agricultural land WILL significantly diminish biodiversity.</p>	<p>relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		SA Objectives 11,12,13: AGREE	
42784705	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. * Development will put even more stress on the already stretched local health and education services. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu905roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p>	<p>The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu906roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to</p>

42784385	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685</p> <p>* 59690</p> <p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p>	<p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu917roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as</p>

		<p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p>	<p>uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu918roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect</p>

We observe that grade 3A land is also classified as BMV.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 10– DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42712801	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <p>* 59685 * 59690 * 59693 * 59721 * 59805 * 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p>	<p>Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu929roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3:</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6- DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home</p>	<p>education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered</p>

42835361	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. * Development will put even more stress on the already stretched local health and education services. * There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: edu940roof.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor</p>

		<p>* These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3- DISAGREE - Should be rated as NEGATIVE.</p> <p>* The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a</p>	<p>positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source</p>

		<p>wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6- DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>* Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>* The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV.</p> <p>SA Objective 10- DISAGREE - should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p>	<p>Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in</p>

		<p>SA Objectives 11,12,13: AGREE</p> <p>Site 59690 (Mixed use)</p> <p>SA Objective 1:- DISAGREE - Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>* Although public footpaths cross the site, development would destroy their value.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p> <p>SA Objective 4: AGREE but should be MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5- DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6- DISAGREE - Should be rated as SIGNIFICANT NEGATIVE</p> <p>* The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.</p>	<p>relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 8– DISAGREE - Should be rated as SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV.</p> <p>SA Objective 10– DISAGREE - This should be rated as NEGATIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p> <p>Green Belt Land</p> <p>The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?</p> <p>**Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.</p> <p>** Rather all other options should be considered first.</p> <p>Best Most Valuable Agricultural Land (BMV)</p> <p>There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.</p> <p>** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.</p> <p>The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.</p> <p>** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p> <p>Site Specific Comments with regard to BMV</p> <p>SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%.</p> <p>SITE 59721: Grade 2 land makes up at least 50% of the site.</p> <p>SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site.</p> <p>**This has the effect of considerably diluting the % of grade 2 land on the combined site. I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging of sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.</p>	
42828769	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> · 59685 · 59690 · 59693 · 59721 · 59805 · 59809 <p>I object to any development on these sites, for the following reasons:</p> <p>3) 1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>2) They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>3) The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine.</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The proforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>4) Local food production is made more important by the effects of climate change.</p> <p>5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>7) Development will lead to a significant loss of biodiversity.</p> <p>8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>9) Development will put even more stress on the already stretched local health and education services.</p> <p>10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1– DISAGREE - Should be rated as NEGATIVE</p> <p>· Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3– DISAGREE - Should be rated as NEGATIVE.</p>	<p>covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bu954roof.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural</p>

		<p>· The site is NOT within 800m of an existing secondary or primary school.</p> <p>SA Objective 4: AGREE with MINOR POSITIVE</p> <p>· Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>· Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>· This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6– DISAGREE - Should be rated SIGNIFICANT NEGATIVE</p> <p>· Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8– DISAGREE - Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>· Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect.</p> <p>· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request.</p> <p>SA Objective 9: AGREE STRONGLY</p>	<p>land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on</p>

43545921	Annex 1	<p>Site 59678 – West Lake, Aylesford Quarry (west of Bull Lane)</p> <ul style="list-style-type: none"> • Objective 2 – the site is on a bus route and within walking/cycling distance of Aylesford and Eccles with existing footpaths/PROW in situ • Objective 5 – there is no existing green infrastructure asset within the site – currently minerals being extracted but there is the potential to significantly enhance biodiversity and ecology in the future, 	<p>Proximity to bus stops is considered under SA objectives 4: economic growth and 10: climate change mitigation. Site 59678 is recorded in the SA as being within 800m of a railway station, which overrides the fact it is also within close proximity of bus stops. The site receives significant positive effects in relation to SA objectives 4 and 10.</p> <p>Proximity to walking and cycling routes is considered under SA objective 1: health and wellbeing. As the site is within close proximity</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>however it should also be noted that the site is located within the Bushey Wood Area of Opportunity</p> <ul style="list-style-type: none"> • Objective 6 – the site is within walking/cycling distance of Aylesford and Eccles with existing footpath connection. There will be no loss of designated open space (as no public access exists) currently but it is a possible opportunity in the future • Objective 7 – there is significant existing landscape and separation between site and heritage assets which will be retained and enhanced resulting in no adverse harm or impact • Objective 8 – the site is in Flood Zone 1 • Objective 12 – site is in proximity to an existing SW Waste Water Treatment Installation • Objective 13 – The site is within a safeguarded minerals area but viable reserves are currently being extracted and due for completion within 6 - 12 months 	<p>of open space and walking paths, it receives a minor positive effect in relation to SA objective 1.</p> <p>The site does contain a green infrastructure asset, and so it correctly receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity. The site comprises Aylesford Pit Regionally Important Geological Site.</p> <p>Site 59678 receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is not located near any settlements in a rural location. Proximity to walking and cycling paths is dealt with separately under SA objective 1: health and wellbeing. Sites adjacent to the existing urban edge can be more easily integrated into existing built development than sites outside of settlements. The proforma states that the site is not located near any settlements in rural locations <i>and/or</i> would result in the loss of designated open spaces. In this instance, development of the site would not result in the loss of designated open spaces. All adverse effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Site 59678 receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. This is a 'policy-off' appraisal and so consideration is not given to mitigation. All effects against SA objective 7 are recorded as uncertain, as actual effects depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the proforma for the site states that it is within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site is within an area with a 1 in 30 year risk of surface water flooding. Additionally, it contains a large water body.</p> <p>SA objective 12 relates to air quality, not waste water treatment. The site receives a negligible effect in relation to SA objective 12 as it is not within 100m of an Air Quality Management Area.</p> <p>With regard to SA objective 13: material assets and waste, the SA at this stage does not take into consideration mitigation and so even if the site will be extracted prior to development, the effect should remain as it is. This is because information like this may not be available for other sites and so they would not all be appraised on a consistent basis.</p>
43545921	Annex 1	<p>Site 59676 – East Lake, Aylesford Quarry (east of Bull Lane accessed off Rochester Road)</p> <ul style="list-style-type: none"> • Objective 1 – the site is not an area of public open space or outdoor sports facility – accordingly there cannot be any loss (if none exists 	<p>Site 59697 is incorrectly recorded as containing an existing open space. This is due to the fact it slightly overlaps an existing open space and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site</p>

		<p>currently), however opportunities exist to create significant new public open space/water activities and public access</p> <ul style="list-style-type: none"> • Objective 4 – there are currently employment uses on site but less than 5 hectares – the site however does have the potential for employment uses in excess of 5 hectares • Objective 5 – there is currently no existing green infrastructure asset within site, however the proposed development will offer significant biodiversity and ecological habitat enhancement • Objective 6 – as part of the pre-application and post submission discussions, it has been agreed with TMBC officers (Eleanor Hoyle/Emma Keefe/William Allwood/Robin Gilbert/James Bailey/Nigel de Wit) that the site is considered to be a sustainable location • Objective 7 – it has been agreed by Debbie Salter (TMBC Conservation Officer) that significant material changes in circumstances on site address heritage issues raised in planning appeal (APP/H2265/W/18/3209279) • Objective 8 – the site is in Flood Zone 1 • Objective 11 – the proposed later living community development is positively planned and will endeavour to exceed current building regulations in terms of climate change and construction • Objective 13 – KCC Minerals & Waste consultation response to the current planning application confirms that no objection to the development proposals on Mineral Safeguarding grounds – the site has been extensively worked and there are no safeguarded minerals on site – ubiquitous material (hoggin) is found to the north. • Objective 14 – the current planning application can both support the TMBC housing land supply and address a specifically identified need for age related housing and care accommodation. 	<p>will receive a minor positive effect only in relation to SA objective 1. The sites have been appraised on a 'policy-off' basis and so consideration is not given to mitigation (e.g. open space provision).</p> <p>SA objective 4: economic growth relates to the provision of employment space. As site 59676 is proposed for mixed use development, it will provide employment space. Therefore, it correctly receives a significant positive in relation to SA objective 4.</p> <p>The site does contain a green infrastructure asset, and so it correctly receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity. The site comprises Wagons Pit Aylesford Regionally Important Geological Site. The site has been appraised on a 'policy-off' basis and so consideration is not given to mitigation (e.g. biodiversity and ecological habitat enhancement).</p> <p>SA objective 6 relates to the landscape and townscape. The site is correctly recorded as having an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is on the edge of a settlement. Sites adjacent to the existing urban edge can be more easily integrated into existing built development than sites outside of settlements. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Site 59676 correctly receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as effects will also depend on the design of development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the proforma for the site states that it is within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site is within an area with a 1 in 30 year risk of surface water flooding. Additionally, it contains a large water body.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>Site 59697 receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste as it is within a Minerals Safeguarding Area. Although the site promoter states that the site has already undergone aggregate abstraction, this level of information is not available for most of the sites. So as to ensure consistency, all</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>sites within a Minerals Safeguarding Area are recorded as having an uncertain minor negative effect in relation to this objective.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p>
43545921	Annex 1	<p>Site 59670 - Area E, Aylesford Quarry (Land north of Lodge Cottages)</p> <ul style="list-style-type: none"> • Objective 1 - the site is not an area of public open space or outdoor sports facility – accordingly there cannot be any loss (if none exists currently) • Objective 3 – the lawful use of the site is Class F1 (formerly Class D1) as a training facility for power workers with associated open storage and vehicle parking. • Objective 4 – the site is within immediate proximity of a bus route along Bull Lane and within the Bushey Wood Area of Opportunity • Objective 5 – the site comprises made ground and is not within 250m of a designated biodiversity or geodiversity sites and there is currently no existing green infrastructure asset within site, however the opportunity exists to offer significant biodiversity and ecological habitat enhancement • Objective 6 - the site is within walking/cycling distance of Aylesford and Eccles with existing footpath connection. There will be no loss of designated open space (as no public access exists) • Objective 7 – there is significant existing landscape and separation between site and heritage assets which will be retained and enhanced resulting in no adverse harm or impact • Objective 13 – the site is not within a Minerals Safeguarding Area and comprises made ground from historic inert quarrying overburden. 	<p>With regard to SA objective 1: health and wellbeing, site 59670 is not recorded as containing an open space. The site receives a minor positive effect in relation to SA objective 1, as it is within 800m of existing areas of open space, in addition to walking paths.</p> <p>SA objective 3: education looks at the proximity of sites to primary and secondary schools. As the site is within 800m of a primary school, it receives a minor positive effect. The effect is uncertain as school capacity is unknown.</p> <p>Proximity to bus stops is considered under SA objectives 4: economic growth and 10: climate change mitigation. Site 59670 is recorded in the SA as being within 800m of a railway station, which overrides the fact it is also within close proximity of bus stops. The site receives significant positive effects in relation to SA objectives 4 and 10.</p> <p>The site does contain a green infrastructure asset, and so it correctly receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity. The site comprises Aylesford Pit Regionally Important Geological Site. The site has been appraised on a 'policy-off' basis and so consideration is not given to mitigation (e.g. biodiversity and ecological habitat enhancement).</p> <p>SA objective 6 relates to the landscape and townscape whereas walking and cycling paths are dealt with separately under SA objective 1: health and wellbeing. The site is correctly recorded as having an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is on the edge of a settlement. Sites adjacent to the existing urban edge can be more easily integrated into existing built development than sites outside of settlements. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Site 59670 correctly receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as effects will also depend on the design of development and whether there are lines of sight between the development site and nearby heritage assets.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Site 59670 does fall within a Minerals Safeguarding Area. Although the site promoter states that the site comprises made ground from historic inert quarrying overburden, this level of information is not available for most of the sites. So as to ensure consistency, all sites within a Minerals Safeguarding Area are recorded as having an uncertain minor negative effect in relation to this objective.</p>
43545921	Annex 1	<p>Site 59674 – Area I, Aylesford Quarry (land south of High Street/Bull Lane)</p> <ul style="list-style-type: none"> • Objective 1 – the site is not an area of public open space or outdoor sports facility – accordingly there cannot be any loss (if none exists currently) • Objective 4 – the site is not an existing employment site and is accessible to both the train station and immediate proximity to an existing bus route which runs along High Street/Bull Lane • Objective 5 – the upper part of the site comprises made ground and is not within 250m of a designated biodiversity or geodiversity sites and there is currently no existing green infrastructure asset within site, however the opportunity exists to offer significant biodiversity and ecological habitat enhancement • Objective 6 – the site is within 200m of Aylesford village centre with pedestrian access via the existing footpath immediately opposite the site entrance • Objective 7 – there is significant existing landscape and separation between site and heritage assets which will be retained and enhanced resulting in no adverse harm or impact • Objective 8 – the lower part of the site is within Flood Zone 2. The upper part of the site (the developable area) with direct access onto High Street/Bull Lane is within Flood Zone 1. There are significant level differences across the upper and lower parts of the site with dense woodland/landscaping at the lower level • Objective 10 – the site is also immediately adjacent to a bus route on High Street/Bull Lane • Objective 13 – the site is not within a Minerals Safeguarding Area 	<p>With regard to SA objective 1: health and wellbeing, site 59674 is not recorded as containing an open space. The site receives a minor positive effect in relation to SA objective 1, as it is within 800m of existing areas of open space, in addition to walking paths.</p> <p>SA objective 4: economic growth relates to the provision of employment space. As site 59674 is proposed for mixed use development, it will provide employment space. It is also within 800m of a train station. Therefore, it correctly receives a significant positive in relation to SA objective 4.</p> <p>The site does contain a green infrastructure asset, and so it correctly receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity. Additionally, it is within 250m of some SSSIs. The site has been appraised on a 'policy-off' basis and so consideration is not given to mitigation (e.g. biodiversity and ecological habitat enhancement).</p> <p>SA objective 6 relates to the landscape and townscape whereas walking and cycling paths are dealt with separately under SA objective 1: health and wellbeing. Site 59674 is recorded in the SA as being within 800m of a railway station, which overrides the fact it is also within close proximity of bus stops. The site receives significant positive effects in relation to SA objectives 4 and 10.</p> <p>Site 59674 correctly receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as effects will also depend on the design of development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, more than 25% of the site is within Flood Zone 2. It also abuts a watercourse and is within Source Protection Zone 3. Therefore, it correctly receives an uncertain minor negative effect in relation to SA objective 8.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Proximity to bus stops is considered under SA objectives 4: economic growth and 10: climate change mitigation. Site 59674 is recorded in the SA as being within 800m of a railway station, which overrides the fact it is also within close proximity of bus stops. The site receives significant positive effects in relation to SA objectives 4 and 10.</p> <p>Site 59670 does fall within a Minerals Safeguarding Area. Therefore, it correctly receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste.</p>
43545921	Annex 1	<p>Site 59675 – Northern Fields (land north of Aylesford Quarry/east of Bull Lane)</p> <ul style="list-style-type: none"> • Objective 1 – the site is not an area of public open space or outdoor sports facility – accordingly there cannot be any loss (if none exists currently) • Objective 2 – the site is within 300m of Eccles and connected via an existing footpath and is within walking/cycling distance of Eccles and Aylesford as well as being immediately adjacent to the allocated land at Bushey Wood which is subject to a live planning application for a significant mixed-use development (TM/22/00113/OAEA) • Objective 4 – the site is not an employment site in excess of 5 hectares but the site is within 400m of a bus stop/route along Bull Lane • Objective 5 – the site is not within the stated distance of a designated biodiversity or geodiversity site • Objective 6 – the site is within 300m of Eccles, is adjacent to the allocated land at Bushey Wood (see above) and there is no designated open space on the site (so there cannot be any loss) • Objective 7 – the site is not within 250m of a heritage asset • Objective 8 – the site is within Flood Zone 1 • Objective 9 – the site is not identified as being grade 1 or 2 agricultural land (as referenced on DEFRA MAGIC Maps) • Objective 10 – the site is within 400m of a bus stop/route along Bull Lane • Objective 13 – the site is not within a Minerals Safeguarding Area as the site contains hoggin reserves which is a ubiquitous material 	<p>With regard to SA objective 1: health and wellbeing, site 59675 is not recorded as containing an open space. The site receives a minor positive effect in relation to SA objective 1, as it is within 800m of existing areas of open space, in addition to walking paths.</p> <p>SA objective 2: services and facilities is informed by the Urban Capacity Study (July 2022). As the site is recorded in the Urban Capacity Study as falling within the Poor Accessibility Band, it correctly receives a significant negative effect in relation to SA objective 2.</p> <p>SA objective 4: economic growth relates to the provision of employment space. As site 59675 is proposed for mixed use development, it will provide employment space. Therefore, it receives a significant positive effect in relation to SA objective 4.</p> <p>The site comprises Wagons Pit Regionally Important Geological Site and is within 250m of other biodiversity and geodiversity assets. Therefore it receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>SA objective 6 covers landscape and townscape, not biodiversity. Biodiversity is dealt with under SA objective 5. The site receives an uncertain significant negative effect in relation to SA objective 6, as it is not located near any settlements in a rural location. Sites adjacent to the existing urban edge can be more easily integrated into existing built development compared to more rural and isolated sites. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>With regard to SA objective 7: heritage, the site is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, it correctly receives an uncertain significant negative effect in relation to SA objective 7.</p> <p>With regard to SA objective 8: water, the proforma for the site states that it is within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site is within an area with a 1 in 30 year risk of surface water flooding.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>With regard to SA objective 9: soil, the site comprises grade 2 agricultural land. Therefore, it correctly receives a significant negative effect in relation to SA objective 9.</p> <p>With regard to SA objective 10: climate change mitigation, although there are bus stops on Bull Lane, this is more than 400m from the site. The site is correctly recorded as having a minor negative effect in relation to SA objective 10.</p> <p>Site 59675 does fall within a Minerals Safeguarding Area. Therefore, it correctly receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste. The effect is uncertain, as the actual effect will depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p>
42779233	Annex 1	<p>[comments in the context of site reference 59700 and 59845]</p> <p>With regards to SA objective 1 - 'To improve human health and well being'.</p> <p>The sites may well be close to healthcare facilities, but with many more houses built, there will not be enough space in the healthcare facility to take all the additional people on and so people will have to drive to other facilities. Health will be affected as we already have one of the worst air polluted roads in Kent and more houses will mean much more pollution for us.</p> <p>With regards to SA objective 3 - The schools will not have space for all the children that these houses will bring with them and therefore the children will have to go elsewhere</p> <p>With regards to SA objective 6 - To protect the boroughs landscape.</p> <p>This proposal will destroy our one and only view of the Medway valley.</p> <p>With regards to SA objective 9 - It is a Greenfield site and as stated, it contains a significant proportion of Grade 1 and/or 2 agricultural land. This cannot be taken away as these sites are diminishing gradually all over the country and we need these for the health of the world and the people living in it.</p> <p>With regards to SA Objective 12 - TO PROTECT AND IMPROVE AIR QUALITY.</p> <p>It is stated that these sites are not within 100m of an AQMA, but building these houses here will probably turn it into one of them eventually. As I have previously stated, we have one of the WORST air polluted roads in Kent and this will make it so very much worse.</p> <p>Please do not permit this planning application to go through.</p>	<p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Site 59700 receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is on the edge of a settlement. Site 59845 is incorrectly recorded as having an uncertain significant negative effect in relation to SA objective 6 when it should have an uncertain minor negative effect, as it is also on the edge of a settlement. In the next iteration of the SA Report, site 59845 will receive an uncertain minor negative effect in relation to SA6. As set out in the site assessment criteria, "Site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. However, the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects".</p> <p>With regard to SA objective 9: soil, the respondent agrees with the findings of the SA.</p> <p>With regard to SA objective 12: air quality, sites 59700 and 59845 have been appraised in line with the site assessment criteria. As neither site is within 100m of an AQMA, both receive a negligible effect.</p> <p>Please note that this is an SA, the purpose of which is to provide an objective assessment of the sustainability of numerous sites across the Borough thereby informing Council decisions on which sites to allocate or not allocate in the new Local Plan. The SA is one of many factors that feed into the plan-making process and has no relationship to planning applications.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
43485921	Annex 1	<p>[with reference to site 59740]</p> <p>Section B Critique of Site Against Sustainability Assessment Objectives and Sub Objectives</p> <p>Using the visual representation scheme of the Interim Sustainability Appraisal (SA), BAG's review of this site would be as follows:</p> <p>[a table showing different appraisals against the sustainability objectives to that published in the SA-differences SA1- significantly negative SA3- negligible negative SA4 minor positive SA10 minor negative SA12 minor negative]</p> <p>The above assessment is based on extensive research into what is known about the site. TMBC's published sustainability assessment is given below for ease of comparison:</p> <p>The colour codes follow those given in the SA as follows:</p> <p>In broad terms, even though TMBC's assessment of the site is not favourable on most of the SA objectives, BAG believes that, due to the significant amount of information already known about this site, it should have an even poorer scoring. This leads to a conclusion that as Site 59740 fails to meet the majority of indicators to deem it suitable for sustainable development, it should be excluded from the new Local Plan going forward.</p> <p>Details of BAG's assessment are given below:</p> <p>SA Objective 1: To improve human health and well-being</p> <p>BAG Assessment: Significant negative (--) SA Assessment: Minor positive (+)/Uncertain significant negative (1)</p> <p>Taking into account an evaluation of what is known about the site, BAG believe the assessment on this Objective should be a "Significant negative", taking the following into account:</p> <p>The SA report suggests that the negative effectives of the loss of open space which would be lost as a result of development are uncertain. These effects are not uncertain as the open countryside and farmland of the site, and the public's access to it, will only be harmed by development. Any development will affect the open vistas and well being benefits of the area. The report mentions that the site is within "800m of an existing healthcare facility or open space". At 112.74 hectares this site is vast, 1.3 km from west to east and just under 2km from north to south and although it may be true that some of the site is within 800m of an existing health care facility, not all of it is and primary health care in the area is known to be under great stress. For example, 5 the allocated space for a GP surgery at Leybourne Grange was eventually re-purposed after laying empty for several years as no GP practice was found to take it on and also, the MP for the area, Tom Tungendhat, even wrote to the West Kent Clinical Commissioning group asking them to confirm their objection to the proposal for 900 + houses on the site due to the lack of primary care security in this part of Kent. Additionally, BAG would support its classification of the site as</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>The SA does acknowledge the heritage assets within 250m of the site (including within the site). For this reason, the site receives a significant negative effect in relation to SA objective 7: heritage. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA also acknowledges the fact the site is greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land. For this reason, the site receives a significant negative effect in relation to SA objective 9: soil. It is not possible to exceed Grade 1 or 2 best and most versatile agricultural land.</p> <p>This is a 'policy-off' appraisal and so the site is appraised on its physical merits only. This ensures all reasonable alternative development site options are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>In LUC's SA, all reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, the site is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1. With regard to the respondent's point on uncertainty, if a site is recorded as containing a designated open space it receives some uncertainty, as it is unknown whether the open space will be lost or not, or integrated into development. With regard to healthcare facilities, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 2: services and facilities, site 59740 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>"Significant negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To improve access to health and social care services Given the information presented there is no information presented to support this. • To promote healthy lifestyles, including equitable access to recreational opportunities such as open space, children's play areas and the countryside. Any development of this area would harm the promotion of healthy lifestyles for current residents and visitors alike. There is a very well used and inter-connecting network of rural footpaths and Quiet Lanes connecting West Malling, East Malling and Kings Hill. It is currently possible to travel on foot or cycle through countryside, farmland and Quiet Lanes between these settlements. This important green space, with its rural footpaths, is used for leisure and is enjoyed by those seeking a healthier lifestyle and would be negatively impacted. • To reduce levels of anti-social behaviour. Residents of Kings Hill and its Parish Council have seen a worrying increase in antisocial behaviour in recent years. Given that any substantial new housing on this site is likely to replicate the essence, at least, of the Kings Hill model, it follows that there could well be an increase in antisocial behaviour, not a reduction. • To encourage safety by design The very location of the site within the Quiet Lane network and the known existing black spots on the A228 does not encourage "safety by design". At least 3 people have been knocked down at the pedestrian crossing on the A228 by vehicular traffic. • To promote healthy lifestyles through connecting people with nature and promoting high standards of Green Infrastructure. Developing this site would only impact negatively on the existing green spaces of the site so consequently the connection with nature already enjoyed by those who use the site could only be negatively impacted. <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>BAG Assessment: Minor Negative (-) SA Assessment: Minor negative (-)</p> <p>BAG has been unable to verify the definition of a "Fair Accessibility Band" in this instance but would agree that it could be reasonably anticipated that an area which has open access to all at the moment would be negatively impacted by development so also suggests an assessment of "Minor negative".</p> <p>6</p> <p>Additionally, BAG would support its classification of the site as "Minor negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p>	<p>to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, all mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59740 is 5ha or more, it receives a significant positive effect in relation to this objective. The fact it is also within 800m of a train station also contributes to this significant positive effect.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlements of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the fact the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<ul style="list-style-type: none"> • To tackle homelessness more effectively BAG is unaware of any evidence that a development such as this would tackle homelessness more effectively nor any evidence that the AFFORDIBILITY ISSUE would be addressed for TMBC residents all the time there is such a financial advantage to moving out of London and its suburbs. • To improve access to cultural and leisure facilities There is no evidence that such access would be improved. • To promote the use of more sustainable modes of transport & • To encourage walking, cycling and the use of public transport. <p>The establishment of the communities at Kings Hill, Leybourne Grange etc have proven that road traffic is only getting worse in this area of Kent. The reality is that the most convenient form of transport for people, where they have a choice, is usually their own car and although any new development might “promote” or “encourage” more sustainable ways of moving around and undertaking daily tasks, is there actually any proof that a development such as this would achieve these given the complexities of everyday life for most people?</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>BAG Assessment: Negligible SA Assessment: Uncertain minor positive (+?)</p> <p>The SA narrative regarding this site refers to the site being within 800m of a primary or secondary school (not both). However the nearest local secondary school (The Malling School) in East Malling, is, we understand, oversubscribed. There is no access from the site to the school and as the site is so large, only a small proportion is within half a mile of the school itself.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>BAG Assessment: Uncertain minor positive (-?) SA Assessment: Significant positive (++)</p> <p>The narrative for the site states that it is within 800m of a train station and that 5 Ha have been proposed for business deployment. As the plans for the site have not been published it is not possible to verify whether the 5 Ha deployed for business use are actually within 800m of the station or not.</p> <p>TMBC are encouraged to re-examine the original zonal use plans for Kings Hill and determine the proportion of business use sites for which have been re-allocated for housing as the old airfield site evolved. The outline plan may well include business and other commercial space but the reality is that experience points to the fact that developers can and do apply for change of use from commercial to housing which makes the SA designation against this criterion uncertain. Residents, workers and visitors to Kings Hill will all remember the many years that units in the “town centre” area of</p>	<p>With regard to SA objective 13: material assets and waste, the minor negative effect is recorded as uncertain as although the site is within a Minerals Safeguarding Area, the actual effect will depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p> <p>The respondent has not provided a reason as to why they consider the uncertain minor positive effect against SA objective 14: housing unreasonable. Site 59740 is proposed for a mix of uses but it is unknown what percentage of the site will e provided for housing, hence the uncertainty.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Kings Hill around Queen Street lay empty. It is thought that the underuse of these</p> <p>7</p> <p>commercial spaces could be directly attributed to high lease costs and not due to lack of interest in the business space. Therefore, although a strong retail and commercial hub for Kings Hill was envisaged at the planning stage, this was not delivered as anticipated and parallels can be read into the potential development of Site 59740.</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To diversify employment opportunities • To increase employment opportunities • To encourage economic growth <p>No information has been found in the SA paperwork for this site to support these statements.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>BAG Assessment: Significant negative (--) SA Assessment: Uncertain significant negative (--?)</p> <p>The rich biodiversity of this site has been well documented and TMBC are in possession of information to support this, not least from the responses from Consultees, BAG and others in relation to Berkeley Homes' planning application for Broadwater Farm (TM/21/02719). It is therefore thought that the SA assessment for this site should be "Significant negative" rather than "Uncertain significant negative". Annex E gives the Wildlife Sub-Committee Report BAG submitted regarding this site which supports this assertion, however particular attention is also drawn to Ecological Advice Service comments submitted to TMBC in relation to application TM/21/02719 on 21 March 2022. Additionally, BAG would support classification of the site as "Significant negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To protect and enhance designated sites of nature conservation importance The New Barns & Broadwater Farm Conservation Area would be impacted. • To protect and enhance wildlife especially rare and endangered species. The site as a whole currently provides habitats for both resident and migratory red-listed species. • To protect and enhance habitats and wildlife corridors As the West Kent Badger Group highlighted in their response to TM/21/02719 and given as Appendix F, any development of this site would damage habitats not "protect and enhance". • To provide opportunities for people to access wildlife and open green spaces. Any development would restrict and limit the existing opportunities for people to access wildlife and open green spaces. 	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<ul style="list-style-type: none"> • To increase biodiversity net gain. This site currently provides a range of rich wildlife habitats, including meadows, orchards, hedgerows and wooded areas. • To protect and enhance priority species and habitats of conservation importance that contribute to reversing the trend of ecological decline. Development of this area would not protect and enhance priority species (see Wildlife report Annex E). <p>8</p> <ul style="list-style-type: none"> • To protect, enhance and expand ecological networks and their interconnectivity. There is no current evidence to support this achievement of this objection, in fact the opposite is apparent. • Conservation of biodiversity, including priority habitats and species, under the NERC Act (S41). • To protect and enhance sites designated for geodiversity. The Broadwater area is an area of geological interest, highlighted by the area's names such as "Broadwater" and "Well Street", which would neither be protected nor enhanced by development. <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>BAG Assessment: Significant negative (--) SA Assessment: Uncertain significant negative (--)</p> <p>BAG considers the impact of developing this area would not be uncertain but would lead to actual significant harm to the landscape's character and quality. As mentioned previously, the consultation process for application TM/21/02719 elicited a large body of information regarding the negative impact of developing the Broadwater area. The landscape character and quality is currently derived through its unique mix of natural features (rolling open vistas, the Cwylla which is an historic Anglo Saxon monument) and important historic buildings, many of them both listed and protected by their positions within Conservation Areas. For example the New Barns and Broadwater Farm Conservation Area was designated as such, in part, due to the quality of views into, out of and across the area between the New Barns hamlet and the Broadwater Farmstead with substantial oast house complexes at either side, completing a quintessentially Kentish landscape. Any further development in this area would certainly significantly encroach on these features. Any building proposed within view of the Conservation Area would contravene the reason for Conservation Area status being granted in 1993. Additionally, BAG would support classification of the site as "Significantly negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To protect and enhance landscape character and quality. Features are protected currently, development of the area would harm them rather than further enhance or protect them. 	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<ul style="list-style-type: none"> • Protect and enhance the integrity and quality of the borough's urban and rural landscapes, maintaining local distinctiveness and sense of place. BAG believes this sub-objective to be of particular importance for Broadwater as not only is the rural landscape "distinct" it is also unique containing the only listed instance of a "Cwylla" and is encompassed by a network of ancient sunken roads or hollow ways which are designated now as "Quiet Lanes". • To protect and enhance AONBs within the borough and their settings. Although situated to the edge of an AONB rather than within it, further development would harm the setting of the Kent Downs AONB. <p>9</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>BAG Assessment: Significant negative (--) SA Assessment: Uncertain significant negative (--)</p> <p>BAG considers the impact of developing this area would not be uncertain but would lead to actual significant harm to its cultural heritage resource. As mentioned previously, the consultation process for application TM/21/02719 elicited a large body of information regarding the negative impact of developing the Broadwater area. The cultural heritage of this corner of Tonbridge and Malling is well documented and currently enjoys various statutory protections through its many listed buildings and Conservation Areas. BAG's Sub-Committee Heritage submission in relation to Planning Application TM/21/02719 (Appendix G) gives more detail. Additionally, BAG would support classification of the site as "Significantly negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To protect and enhance historic buildings and sites. Within this area are numerous listed buildings including The Barracks and Derbies on Well Street, East Malling which are Grade2* listed. This shows they are of particular national historic interest, in this case with strong links to the English Civil war. • To protect and enhance historic landscape/townscape value. With reference to the New Barns and Broadwater Farm Conservation Area in particular, the historic landscape is currently protected. The views across and into and out of this area were particularly important in the Conservation Area designation and the associated visual amenity would undoubtedly be significantly harmed through further development, • Cultural Heritage As referenced above, the cultural significance of the area reflects not only the hop farming heritage which endures through the proliferation of oast buildings across the site, but also goes back to the English Civil War and beyond a thousand years. <p>SA Objective 8: To protect and enhance the quality of water features and resources</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>BAG Assessment: Significant negative (--) SA Assessment: Significant negative (--) / Uncertain significant negative (--)</p> <p>BAG strongly believes that development in this area would have a significant negative effect with regard to this objective. The report on the Hydrogeology of this area is attached as Annex A to provide further details but essentially this shows the existence of aquifers. It is these underground water courses which feed the ancient Cwylla, contribute greatly to the productivity of Broadwater Farm and also give rise to what becomes the Ditton Stream which actually rises at Well Street. Development of this area would cause damage to these water features. The narrative associated with this SA Objective does, of course, highlight the importance of protecting the aquifers as they are within a Source Protection Zone 1 and BAG believes that significant harm would certainly be caused by developing this area for example through certain hydrocarbon pollution and so the designation should be definitive and not "uncertain".</p> <p>10</p> <p>Additionally, BAG would support its classification of the site as "Significant negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To protect and enhance ground and surface water quality. The Broadwater area is, as the name confirms, rich in ground and surface water resources, development would not enhance its quality and the best way to ensure its protection would be to keep the area in its current largely undeveloped state. • Reduce the risk of flooding to existing communities and ensure no new developments are at risk. BAG is seriously concerned that should any developer attempt the mitigation of flood risk, this would lead to serious harm to the Anglo Saxon Cwylla, which, as has been stated previously, is a KCC listed monument. Mitigation would, additionally, affect the water which has been accessible to the historic properties of Well Street and Broadwater Road since the area was first populated centuries ago. The water flow to the Ditton Stream would be impacted also. Due to being situated lower in the landscape than the surrounding area, the houses on the west of the New Barns hamlet would be at risk of flooding from any development to the south which interrupts the natural surface water drainage flows. • To protect and enhance water quantity, such as through high standards of water efficiency. The quality of the water which rises in Well Street is currently being investigated as a potential source of potable water by the local water authority, development of the area would introduce pollutants which could seriously affect this. <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>BAG Assessment: Significant negative (--) SA Assessment: Significant negative (--)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The SA assessment highlights the greenfield nature of this site and BAG agrees with the determination of “Significant negative” against this SA Objective. As confirmed in the soil report in Annex B more than 49% of land at Broadwater is Grade 1 or Grade 2 with 100% being Grade 3 and above i.e. Best and Most Versatile. The northern part of the site (formerly Eden Farm) was shown to have 90% grade 2 and above. BAG therefore agrees with the assessment of this Site as “Significant negative” and would further added the following comments on the sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To reduce the amount of derelict, contaminated, and vacant land. None of the land involved is of this type so this objection is not met. • To encourage development of brownfield land where appropriate. Only a small proportion of the land where the current farm buildings are situated could be classed as brownfield so this objection is largely unmet. • To protect soil functions and quality. Developing this land would remove actively farmed land so this objective cannot be met. • Avoid development of ‘best and most versatile’ soil. Grade 3 soil is designated as “Best and most versatile”, 100% of the soil at Broadwater Farm is at this level or even higher grade so its development should definitely be avoided. <p>11</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>BAG Assessment: Minor negative SA Assessment: Significant positive (++)</p> <p>BAG disagrees that there is evidence to suggest that a 112 hectare development would reduce greenhouse gas emissions and would suggest this Objective should be classified as a “Minor negative” at best. BAG would like to see TMBC undertake a real-world analysis of the travel and domestic hydrocarbon use of Kings Hill. The increase in traffic in to and out of Kings Hill during the twice daily rush hour and the steady flow into and out of the area at other times does not support the assessment of this criteria as “Significant positive”. The only support given for this assessment is that the site is within 800m of a railway station. There is no evidence of whether there would actually be any housing or businesses within this distance of the station as less than, approximately, 30% of the site that is within 800m of West Malling station. As has been commented on previously, developments of the proposed scale of Site 59740 actively encourage people to move from more expensive areas (London) to realise more home for their money, however new residents then typically need to extend their commutes to work. The Assessed Housing Need of 15,741, a thirty percent uplift, could only be fulfilled from people moving into the area and it is difficult to understand how this would or could reduce greenhouse gas emissions given the reality of normal every-day lives. Additionally, BAG would support its classification of</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the site as “Minor negative” with these comments on the sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To reduce greenhouse gas emissions. • To increase energy efficiency and require the use of renewable energy sources. • To reduce the use of energy. • To promote the use of more sustainable modes of transport. • To reduce the use of private car. • To encourage walking, cycling and the use of public transport. • Encourage the uptake of ICT. <p>Other than approximately (just) one third of the site being within 800m of a railway station, no other information is given to support an assessment of “Significant positive” against any of these sub-objectives.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>BAG Assessment: Negligible (0) SA Assessment: Negligible (0)</p> <p>BAG is unaware of any information to support or challenge this assessment.</p> <p>12</p> <p>SA Objective 12: To protect and improve air quality</p> <p>BAG Assessment: Minor Negative SA Assessment: Negligible</p> <p>Although the site is not within 100m of an AQMA, BAG considers that TMBC should consider the establishment of an AQMA for the A228 from the south of Kings Hill through to Leybourne. There are significant traffic build-ups almost every working day and there are many more houses yet to be built in the vicinity which already have permission. It should also be noted that when the Reserved Matters for application TM/18/03034/OAEA were considered at Area 2 Planning Committee earlier this year, a significant concern of the Councillors was the proximity of the proposed playground site to the A228 and the potential risk from pollution. This confirms that TMBC are aware of and are sensitive to air quality issues in the vicinity of the western portion of this site. Additionally, BAG would support its classification of the site as “Minor negative” with these comments on the following sub-objective:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To protect and improve local air quality. Given the site is mainly green fields, orchard, hedgerows and trees, it is difficult to see how air quality could be improved by development. <p>SA Objective 13: To protect material assets and minimise waste</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>BAG Assessment: Minor Negative SA Assessment: Uncertain minor negative (-?)</p> <p>The vast amount of building sand which would be needed to develop a site of this size would need to be sourced locally, possibly from sites in Ryarsh, Borough Green or other local sites. Therefore although the material assets of Broadwater Farm may not be significantly impacted, materials would still have to be extracted locally having a harmful effect on the material assets elsewhere within Tonbridge and Malling .</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an approximate mix of sizes, types and tenures</p> <p>BAG Assessment: Uncertain minor positive (+) SA Assessment: Uncertain minor positive (+)</p> <p>No new evidence has been provided as to the mix of housing sizes, types and tenures, however based on the known housing mix proposed by Berkeley Homes for the land covered by this site, an assessment "Uncertain minor positive" does not seem unreasonable.</p>	
42544833	Annex 1	<p>SA Objective 2 - there are two major roads bordering this parcel of land, importantly providing ver easy access to the main M20/M25 links. it is likely that the A228 seven mile lane will require upgrading to allow for the additional traffic from the developments in and around Paddock wood so allowing for the transport link to be signifiacntly improved.</p> <p>SA Objective 9 - The land immediately adjacent labeled as mount pleasant farm is very poor agricultural land (Grade 3/4) and therefore with some reconsideration of the boundary the amount of Grade 1 land lost would be reduced.</p>	<p>SA objective 2 looks at people's access to services and facilities, and is informed by the Urban Capacity Study (July 2022). Although site 59806 may have good access to the main M20/M25 links, it has relatively poor access to everyday amenities and by more active and sustainable transport modes. Therefore, it is correct that the site receives a significant negative effect in relation to SA objective 2: services and facilities. Further to this, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. upgrades to the road network).</p> <p>The SA provides an appraisal of site 59806, not the adjacent Mount Pleasant Farm. Therefore, the SA does not contain an appraisal of this area.</p>
42687745	Annex 1	<p>Plan number 59770</p> <p>I am writing to OBJECT most strongly to the proposal to build on the site at Rectory Lane, Ightham.</p> <p>I am a resident.</p> <p>My objections to the proposals are as follows:</p> <p>Objective 1 mentions that it is within 800m of an existing healthcare facility.</p> <p>There is only one medical centre in the area - Borough Green Medical Practice. This surgery serves not only Ightham, but Borough Green, Wrotham and many of the outer villages such as Stansted and Fairseat. The practice already has in excess of 15,000 patients and last year there were over 96, 000 appointments on top of flu jab clinics and Covid injection clinics.</p> <p>It is already stretched to the limit and cannot sustain any more growth in the area.</p> <p>Objective 2.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The Urban Capacity Study (July 2022) was used to inform the assessments against SA objective 2: services and facilities. Public transport facilities are dealt with separately under SA objective 10: climate change mitigation.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report state "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils. New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage" [emphasis added].</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect. All effects against this objective</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is placed within the Fair Accessibility Band as there is access to the A25. However, public transport facilities are limited.</p> <p>Objective 3</p> <p>The site is not well placed for secondary schools in the area. Whilst there is a primary school, this is already at capacity. Whilst new developments can stimulate the provision of more education facilities, this cannot be relied upon.</p> <p>Objective 4</p> <p>The location of this site will not directly influence sustainable economic growth or the delivery of noticeable employment opportunities in the area.</p> <p>Objective 5</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect would be adverse, as it would not be possible to conserve this.</p> <p>Objective 6</p> <p>The site is within 500m of the AONB of the area. It is not located near any settlements and would result in the loss of designated open spaces.</p> <p>Objective 7</p> <p>The site is located within 250m of a heritage asset. Development would impact adversely upon this.</p> <p>Objective 8</p> <p>The site is either entirely or largely ($\geq 25\%$) within Flood Zone 3, within a 1 in 30 year risk of flooding. There are no provisions to deal with this</p> <p>Objective 9</p> <p>The site is a greenfield site, and contains agricultural land which needs to be preserved. It is also surrounded by GREEN BELT. It should therefore be conserved as such.</p> <p>Objective 10</p> <p>Any development will lead to more greenhouse gas emissions, not less.</p> <p>Objective 11</p> <p>The location of this development will not affect an objective to improve climate change.</p> <p>Objective 12</p> <p>The site is not within 100m of an AQMA. (Air Quality Management Area) so this objective could not be measured.</p> <p>Objective 13.</p> <p>The site is within a minerals safeguarding area and as such should be preserved.</p>	<p>are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>With regard to SA objective 8: water, these are 'policy-off' appraisals and so consideration is not given to mitigation. If the sites are allocated in the Local Plan via policy that contains mitigation measures, they will be appraised on a 'policy-on' basis.</p> <p>With regard to the respondent's comment on the Green Belt, the Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, site 59770 has been appraised in line with the site assessment criteria. As the site is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>With regard to SA objectives 4: economic growth, 6: landscape and townscape, 7: heritage, 9: soil and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 14</p> <p>As yet, the proposals for the development of this land are unknown. However, if there is to be a substantial amount of housing, the area cannot sustain facilities for the housing or the infrastructure to support it. It cannot therefore be classed as a suitable site for providing high quality housing of a suitable mix of type and tenure.</p> <p>The development would increase the number of cars on this road, and the existing infrastructure of schools, medical facilities and drainage cannot sustain it.</p> <p>The A25 is already a major bottle neck in the area for all through traffic from the M26 to and from Sevenoaks. A development of this size will only further add to the congestion and pollution in the area.</p> <p>I object most strongly to PLAN 59770</p>	
42687457	Annex 1	<p>I am writing to OBJECT most strongly to the proposal to build in excess of 37 dwellings on Ismays Road, Ightham.</p> <p>I am a resident.</p> <p>My objections to the proposals are as follows:</p> <p>Objective 1 mentions that it is within 800m of an existing healthcare facility.</p> <p>There is only one medical centre in the area - Borough Green Medical Practice. This surgery serves not only Ightham, but Borough Green, Wrotham and many of the outer villages such as Stansted and Fairseat. The practice already has in excess of 15,000 patients and last year there were over 96, 000 appointments on top of flu jab clinics and Covid injection clinics.</p> <p>It is already stretched to the limit and cannot sustain any more growth in the area.</p> <p>Objective 2.</p> <p>The site is placed within the Poor Accessibility Band. There are no public transport facilities within easy reach of this site</p> <p>Objective 3</p> <p>The site is not well placed for secondary schools in the area. Whilst there is a primary school, this is already at capacity. Whilst new developments can stimulate the provision of more education facilities, this cannot be relied upon.</p> <p>Objective 4</p> <p>The location of this residential site will not directly influence sustainable economic growth or the delivery of employment opportunities in the area.</p> <p>Objective 5</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect would be adverse, as it would not be possible to conserve this.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The Urban Capacity Study (July 2022) was used to inform the assessments against SA objective 2: services and facilities. Public transport facilities are dealt with separately under SA objective 10: climate change mitigation.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report state "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils. New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage" [emphasis added].</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects</p> <p>With regard to SA objective 8: water, these are 'policy-off' appraisals and so consideration is not given to mitigation. If the sites are allocated in the Local Plan via policy that contains mitigation measures, they will be appraised on a 'policy-on' basis. Site 59608 received a mixed uncertain minor negative and negligible effect, as although it is not within Flood Zones 2 or 3, it partially falls within Source Protection Zone 3.</p> <p>With regard to the respondent's comment on the Green Belt, the Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 6</p> <p>The site is within 500m of the AONB of the area. It is not located near any settlements and would result in the loss of designated open spaces.</p> <p>Objective 7</p> <p>The site is located within 250m of a heritage asset. Development would impact adversely upon this.</p> <p>Objective 8</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1. There are no provisions to deal with this</p> <p>Objective 9</p> <p>The site is called a brownfield site, but it is surrounded by GREEN BELT. It should therefore be conserved as such.</p> <p>Objective 10</p> <p>Any development will lead to more greenhouse gas emissions, not less.</p> <p>Objective 11</p> <p>The location of this development will not affect an objective to improve climate change.</p> <p>Objective 12</p> <p>The site is not within 100m of an AQMA. (Air Quality Management Area) so this objective could not be measured.</p> <p>Objective 13.</p> <p>The site is within a minerals safeguarding area and as such should be preserved.</p> <p>Objective 14</p> <p>The site will produce fewer than 100 dwellings. It cannot therefore be classed as a suitable site for providing high quality housing of a suitable mix of type and tenure.</p> <p>Ismays Road is very narrow. The impact on the environment of lorries and deliveries in such a confined space would be detrimental, even dangerous to the already eroding roadside edges and existing residential properties. The development would increase the number of cars on this road, and the existing infrastructure of schools, medical facilities and drainage cannot sustain it.</p> <p>I object most strongly to PLAN 59608</p>	<p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, site 59608 has been appraised in line with the site assessment criteria. As the site is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>With regard to SA objectives 4: economic growth, 6: landscape and townscape, 7: heritage, 9: soil and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p>
42687457	Annex 1	<p>Plan number 59770</p> <p>Dear Sir/Madam,</p> <p>I am writing to OBJECT most strongly to the proposal to build on the site at Rectory Lane, Ightham.</p> <p>I am a resident.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The Urban Capacity Study (July 2022) was used to inform the assessments against SA objective 2: services and facilities. Public</p>

		<p>My objections to the proposals are as follows:</p> <p>Objective 1 mentions that it is within 800m of an existing healthcare facility.</p> <p>There is only one medical centre in the area - Borough Green Medical Practice. This surgery serves not only Ightham, but Borough Green, Wrotham and many of the outer villages such as Stansted and Fairseat. The practice already has in excess of 15,000 patients and last year there were over 96, 000 appointments on top of flu jab clinics and Covid injection clinics.</p> <p>It is already stretched to the limit and cannot sustain any more growth in the area.</p> <p>Objective 2.</p> <p>The site is placed within the Fair Accessibility Band as there is access to the A25. However, public transport facilities are limited.</p> <p>Objective 3</p> <p>The site is not well placed for secondary schools in the area. Whilst there is a primary school, this is already at capacity. Whilst new developments can stimulate the provision of more education facilities, this cannot be relied upon.</p> <p>Objective 4</p> <p>The location of this site will not directly influence sustainable economic growth or the delivery of noticeable employment opportunities in the area.</p> <p>Objective 5</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect would be adverse, as it would not be possible to conserve this.</p> <p>Objective 6</p> <p>The site is within 500m of the AONB of the area. It is not located near any settlements and would result in the loss of designated open spaces.</p> <p>Objective 7</p> <p>The site is located within 250m of a heritage asset. Development would impact adversely upon this.</p> <p>Objective 8</p> <p>The site is either entirely or largely ($\geq 25\%$) within Flood Zone 3, within a 1 in 30 year risk of flooding. There are no provisions to deal with this</p> <p>Objective 9</p> <p>The site is a greenfield site, and contains agricultural land which needs to be preserved. It is also surrounded by GREEN BELT. It should therefore be conserved as such.</p> <p>Objective 10</p>	<p>transport facilities are dealt with separately under SA objective 10: climate change mitigation.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report state "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils. New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage" [emphasis added].</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>With regard to SA objective 8: water, these are 'policy-off' appraisals and so consideration is not given to mitigation. If the sites are allocated in the Local Plan via policy that contains mitigation measures, they will be appraised on a 'policy-on' basis.</p> <p>With regard to the respondent's comment on the Green Belt, the Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, site 59770 has been appraised in line with the site assessment criteria. As the site is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential</p>

A development of this size will only further add to the congestion and pollution in the area.</p> <p>I object most strongly to PLAN 59770</p>	
42036737	Q7 of the questionnaire	<p>"We do not agree with the findings of the strategic policy option assessments as set out in table 5.1 in the Sustainability Report as they relate to site 59604 at Addington. We would comment as follows:</p> <p>SA2: Disagree. Expanding the settlement of Addington would allow for new facilities and services to be provided to the benefit of new and existing residents.</p> <p>SA5: Disagree. The land is pasture and is hemmed in between the A20 and the railway. Its development would have a negligible affect upon biodiversity and geodiversity. Indeed, its development and the implementation of a comprehensive landscaping scheme could well enhance biodiversity</p> <p>SA6: Disagree. The land is poor pasture and is hemmed in between the A20 and the railway. Its development would have a negligible effect upon the boroughs landscape. Indeed, through judicious landscaping it could improve it!</p> <p>SA7: Disagree. The development of the site would not impact upon cultural resources. The nearest listed building, Milestone is more than 500m away. The Addington Conservation Area is more that 700m away and the ancient monuments at Addington Long Barrow are more than 1200m away.</p> <p>SA9: Disagree: The site comprises poorly managed pasture. It is hemmed in by the A20 to the north and the railway line to the south. It does not form part of a larger agricultural holding. The land to the west is in residential use whilst to the east is woodland.</p> <p>SA13: Disagree. The land is hemmed in between the A20 and the railway. It is too small a site to be valuable for mineral exploitation.</p> <p>For some reason our submission under site refence 59606 (Employment Site) has not been recorded under table 5.2 in the Sustainability Report."</p>	<p>Table 5.1 in the Interim SA Report shows the effects each reasonable alternative development site option is likely to have in relation to the SA objectives. It does not present the findings of the strategic policy options assessments.</p> <p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 2: services and facilities, although the expansion of the settlement of Addington has the potential to allow for the provision of new facilities and services, the site is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. Therefore, it receives a minor negative effect in relation to SA2.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, development of the site has the potential to adversely effect the three areas of Ancient Woodland located within 250m of the site, e.g. through recreational disturbance. Although a landscaping scheme could enhance biodiversity within this site, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape, the site has been appraised in line with the site assessment criteria.</p> <p>With regard to SA objective 7: heritage, the site is located within 250m of two heritage assets, as recorded in Kent County Council's Historic Environment Record.</p> <p>With regard to SA objective 9: soils, the site has been appraised in line with the site assessment criteria. Please refer to the Agricultural Land Classification for further information on this.</p> <p>With regard to SA objective 13: material assets and waste, the site has been appraised in line with the site assessment criteria.</p> <p>Site 59606 is a duplicate of 59604. 59604 is the definitive reference number for this site.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
25390689	Q7 of the questionnaire	<p>"How can building near a station be the sole criteria for measuring the impact of a development on Climate Change? The loss of large areas of green field and the use of large amounts of concrete will also have an impact.</p> <p>The loss of habitat and habitat connectivity are more than a minor negative impact. The health of the planet depends on a healthy environment."</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>The SA is limited in how it can appraise the sustainability of reasonable alternative development site options, as it relies on the physical characteristics of an area and the data available to measure the sustainability effects that development might have. Proximity to railway stations is considered a reasonable proxy for helping to identify whether a site may reduce reliance on the private car and associated emissions. The SA acknowledges where greenfield land may be lost to development, in addition to surface water runoff.</p> <p>The SA framework comprises a set of 14 SA objectives. SA objective 5 seeks "To protect and enhance biodiversity and geodiversity". In the site assessment criteria presented in Appendix D of the Interim SA Report, sites that are within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites, receive an uncertain significant negative effect. Sites that are between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or that are within 250m of locally designated sites, receive an uncertain minor negative effect. Sites containing an existing green infrastructure asset that could be lost as a result of new development also receive an uncertain significant negative effect.</p> <p>In the next iteration of the SA Report, the criteria for SA14 will be updated so that sites receive an uncertain significant negative effect when they contain a locally designated site.</p>
42342977	Q7 of the questionnaire	<p>"My No above is not absolute.</p> <p>My principle concern is that I have not found a commitment to a Brownfield first policy. This issue is a vital strategic sustainability Option but not without its own problems of viability and perversely often biodiversity complications.</p> <p>Apart from my comment above my answers, to the Quantum Options is agreed.</p> <p>To the Spatial Options I think SA 6 for Option 1 should be moved to Significant Negative Effect Likely. The Landscape in the northern part of the Borough is dominated by the view from the AONB and development in the part of the view unprotected by AONB or Green Belt should be preserved</p> <p>I do not have sufficient knowledge of Tonbridge to comment.</p> <p>I think that the Anti Coalescing Options are right but in Option 14 we should give weight to adjusting the Green Belt to accommodate brownfield sites in the green belt and move the Green Belt out to compensate. I also don't feel that we should underrate the need to provide village accommodation for those who want to live in a rural environment rather than a town created by coalescing villages."</p>	<p>With regard to brownfield land, it is not the purpose of the SA to set out policy constraints, rather it is the purpose of the Local Plan</p> <p>Support noted, with regard to the appraisal of Quantum Options.</p> <p>With regard to SA objective 6: landscape and townscape, it is acknowledged that the landscape in the northern part of the Borough is dominated by the view from the AONB. Spatial Option 1 is considered to have an uncertain minor negative effect in relation to SA objective 6, as unlike the other Spatial Options, there is a specific focus on ensuring that any development is located outside of the AONB. The SA acknowledges that some adverse landscape impacts may still occur (paragraph 4.25).</p> <p>With regard to the respondent's comment on the Green Belt, the Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42387809	Q7 of the questionnaire	<p>"For Options 4 and 5, SA1 does not take into account that these are rural areas so any development is going to be within reach of a footpath or open space but will reduce the wellbeing of residents by removing that countryside. Cycle tracks do not exist and roads are narrow lanes and unsafe for walking as a form of transport so health and wellbeing are not enhanced except for recreational purposes using tracks and muddy footpaths.</p> <p>SA3 does not consider the actual distance to any schools, only line of site which is many times less in some places.</p> <p>SA5, 6, 7, 8, 10, 12 in rural areas, such as considered for development in Options 4 and 5 there can be no positive environmental result from any large development,</p> <p>SA10 takes account of distance to bus stop but not the frequency of buses or useful routes so no real world measurement of use. Most developments on Options 4 or 5 would result in 2 cars per household in order to get to schools, work, shops etc.</p> <p>SA14 takes no account of rural areas where it costs a lot in terms of transport to get to work or school so making it unaffordable for less well off to live there.</p> <p>Options 1,2,3 all assume that necessary infrastructure, often on a large scale, will be forthcoming. in view of the lack of money in either local or national government budgets this seems unlikely.</p> <p>SA8 Water quantity is not considered, only quality and overall quantity is fully stretched at present and climate change is likely to exacerbate this.</p> <p>SA 10,11,12 Greenhouse gas emissions are only considered with respect to traffic, not the effects of heating homes."</p>	<p>Spatial Options 4 and 5 do not solely support development in rural areas. They also support development on sites within and adjacent to urban and rural service centres. These options would not necessarily result in the removal of substantial areas of countryside.</p> <p>The spatial options are too high-level to consider distance to schools. However, the distance individual site options are to primary and secondary schools is considered in Chapter 5 of the Interim SA Report, as well as Annex 1 which contains the proformas for each reasonable alternative development site option.</p> <p>The SA does not record any positive effects against SA objectives 5: biodiversity, 6: landscape, 7: heritage and 8: water. Minor positive effects are recorded in relation to SA objectives 10: climate change mitigation and 12: air quality because including larger settlements ensures that residents have a reduced need to travel to access services and facilities, and will most likely have better access to sustainable transport links. This will reduce air pollution associated with use of the private car. These positive effects are, however, coupled with negative effects. Spatial Options 4 and 5 and expected to have significant negative effects in relation to SA objectives 10 and 12 whereas Spatial Options 1, 2 and 3 are expected to have minor negative effects in relation to SA objective 10 and 12.</p> <p>Due to the high-level nature of the spatial options, specific reference is not given to proximity to bus stops or bus service frequency. However, the proximity of reasonable alternative development site options to bus stops is considered in Chapter 5 and Annex 1 of the Interim SA Report. With regard to the reasonable alternative development site options, SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>SA objective 14 seeks "To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures". Transport is instead covered under SA objectives 2: services and facilities and 10: climate change mitigation. In the next iteration of the SA, the cost of living crisis will be acknowledged in the baseline information section of the SA.</p> <p>With regard to SA objective 8: water, the baseline information section refers to water quantity.</p> <p>SA objectives 10 and 11 refer to greenhouse gas emissions in general, which includes emissions associated with buildings. The appraisal of spatial options is too high-level to give consideration to emissions associated with buildings.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42446049	Q7 of the questionnaire	<p>"I think that the sustainability appraisal report is overly-optimistic in its appraisal of both options, and does not appear to have been based on any hard evidence e.g. traffic surveys, air quality monitoring. I do not believe that any meaningful dialogue can have taken place with local healthcare commissioners or providers, given that the report says</p> <p>""As with healthcare, this extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities"" . This is naive and unrealistic in the current financial climate. How are these new services to be funded? Securing one-off capital for a token new GP surgery will not address the chronic shortage of hospital beds, operating theatres, maternity delivery rooms, local health and social care community services or mental health services, for which significant additional revenue funding will be required. To ignore this will simply result in adverse impacts on the quality and availability of healthcare for local residents.</p> <p>Similarly, the report is over-optimistic in relation to transport. It states that both options ""are likely to provide investment into sustainable transport improvements within the borough, which may reduce the share of trips that are taken by private car by residents'. All we have seen recently is a reduction in the availability of bus transport. Our trains do not provide useful services across T&M, with most lines running into London, and quite infrequently. Cycling is dangerous on the overcrowded A roads on which T&M relies."</p>	<p>The SA utilises a precautionary approach and is therefore not overly-optimistic in its appraisal of the Regulation 18 Local Plan.</p> <p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>To inform plan-making, the Council will commission additional evidence on matters including traffic and air quality.</p> <p>Due to the high-level nature of the quantum options, it is common to make assumptions regarding sufficient critical mass to support the delivery of new essential services and facilities.</p> <p>With regard to transport, there is potential for masterplanning of large sites to secure opportunities and investment to support sustainable transport provision/improvements.</p>
42443169	Q7 of the questionnaire	<p>The overall assessment of impact is too positive, regardless of option. The overriding assumption is that present health care and general infrastructure is sufficient in meeting this housing need. It is not. Where is there and NHS dentist locally, when we're wait times to see a GP less than 2 weeks. I could go on. The point is that any increased development will have a negative impact. Objective 10 will never be positive as any build will increase our carbon footprint as the building industry is not operating at net zero The technologies are not developed to do so. There is no uncertainty about this. Objective 14 has nothing to do with sustainability but everything to do about suitability of the possible developed housing stock. It should therefore be excluded.</p>	<p>The SA utilises a precautionary approach and is therefore not overly-optimistic in its appraisal of the Regulation 18 Local Plan.</p> <p>Due to the high-level nature of the quantum options, it is common to make assumptions regarding service capacity. The SA acknowledges that delivering growth beyond assessed needs has potential to cause capacity issues if existing healthcare facilities remain at current levels (paragraph 4.6 of the Interim SA Report). However, additional growth would be expected to deliver infrastructure provision/improvements to support it. Quantum Option 1 is recorded as having a minor positive effect in relation to SA objective 1: health and wellbeing, whereas Quantum Option 2 is recorded as having a mixed minor positive and uncertain negative effect in relation to SA objective 1.</p> <p>Although the quantum options receive minor positive effects in relation to SA objective 10: climate change mitigation, they are also expected to have negative effects as "New housing growth in the borough is likely to result in increased transport movements to access workplaces, and services and facilities day-to-day. A significant proportion of these trips are likely to be taken using private car given that a greater percentage of individuals in the borough commute to work using private car when compared to the national average" (paragraph 4.8). Further to this, the SA states "In the case of Option 2, the negative effects identified are potentially significant as going beyond assessed needs has particular potential to cause increased congestion on key routes within the borough". Although the SA does</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>not reference building emissions here, this would not alter the effects already recorded for both Options in relation to SA10.</p> <p>Housing provision is considered a sustainability issue and therefore SA objective 14: housing should be retained.</p>
42562465	Q7 of the questionnaire	There is no legend or explanation for the scoring marks of this section so it is unclear what the summary means without having to read all of 4.6-- 4.10. However, I cannot see how any of the objectives (except 4 & 14) can possibly be achieved in an existing built-environment by adding yet more additional building.	<p>Table 2.1 in Chapter 2 of the Interim SA Report provides a key to the symbols and colour coding used throughout the SA.</p> <p>The SA objectives provide a framework against which the effects of the Local Plan will be assessed. The SA objectives and sub-objectives act as a starting point for the identification of effects and the appraisal work considers wider issues as appropriate.</p>
42616929	Q7 of the questionnaire	I neither agree or disagree in one sense (I couldn't untick the no -to put a neutral answer)-- the initial sustainability assessment for each site is specific to that sites and appears to be a good start on each place. The overall set of assessments (ch 4 of the sustainability appraisal) is quite complex and I would not feel fully qualified to comment on it. (eg colour coding I am not sure is clearly explained?)	Noted.
42641409	Q7 of the questionnaire	I have answered 'no' here as I do not believe the 'findings' of the strategic policy options assessments are meaningful being simply a series of pluses, minuses and in some cases zeros often accompanied by a question mark. The broad thrust is that any development would strengthen economic opportunities while putting strains on infrastructure and being detrimental to the character and natural sustainability of the Borough. To me the analysis is simply too vague to merit endorsement.	<p>Table 2.1 in Chapter 2 of the Interim SA Report provides a key to the symbols and colour coding used throughout the SA.</p> <p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p>
42649601	Q7 of the questionnaire	SA objectives 5-- 13, the extra 10% housing would definitely be more detrimental to biodiversity, geodiversity and greenhouse gases. I can see no reason why air quality would not be detrimentally effected by greater housing density, as more people means more transport which is particularly important as a large proportion of the population work outside of the borough and there are a limited number of over congested A roads in the borough.	<p>Quantum Options 1 and 2 both receive an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity because there is potential for them to cause loss of habitats and habitat connectivity.</p> <p>Quantum Option 2 receives a significant negative effect in relation to SA objectives 10: climate change mitigation and 12: air quality whereas Quantum Option 1 receives a minor negative effect in relation to these two objective. As such, the SA does reflect the fact that the higher the number of new homes, the more adverse effects there are likely to be in relation to air quality. The SA states "In the case of Option 2, the negative effects identified are potentially significant as going beyond assessed needs has particular potential to cause increased congestion on key routes within the borough" (paragraph 4.8).</p>
42713473	Q7 of the questionnaire	<p>"Site 59761</p> <p>By developing this site every one of the below sub objectives will be significantly negatively impacted upon.</p> <p>Destroying the woodland which destroy biodiversity, it will destroy locaql wildlife including endangered species-- bats, newts, owls, and rare birds.It will destroy wildlife corridors and will take away open space used for sports (objective 2)</p>	The quantum options, spatial options, future development of Tonbridge options and the options to prevent merging of settlements in the north-east of the borough are appraised against the SA Framework provided in Chapter 3 of the Interim SA Report, which contains numerous sub-objectives. The reasonable alternative development site options are appraised against the site assessment criteria contained within Appendix D of the Interim SA Report.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Sub-Objectives</p> <p>To protect and enhance designated sites of nature conservation importance.</p> <p>To protect and enhance wildlife especially rare and endangered species.</p> <p>To protect and enhance habitats and wildlife corridors.</p> <p>To provide opportunities for people to access wildlife and open green spaces.</p> <p>To increase biodiversity net gain.</p> <p>To protect and enhance priority species and habitats of conservation importance that contribute to reversing the trend of ecological decline.</p> <p>To protect, enhance and expand ecological networks and their interconnectivity.</p> <p>Conservation of biodiversity, including priority habitats and species, under the NERC Act (S41).</p> <p>To protect and enhance sites designated for geodiversity"</p>	<p>Site 59761 is recorded in the Interim SA Report as likely to have an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity due to the fact the site contains Ancient Woodland and is within 250m of a Local Wildlife Site (Mereworth Woods) and some additional areas of Ancient Woodland.</p>
25205729	Q7 of the questionnaire	<p>"See comment on the quantum options above.</p> <p>In terms of options the sustainability appraisal cannot make any detailed assessment because of the lack of knowledge on what area of the borough would be impacted-- as evidenced by the large number of question marks on the appraisal grid. I don't see this as a productive exercise at this stage.</p> <p>I am also unclear on the weighting to be given to the various sustainability objectives to enable comparisons between options to be properly evaluated-- a 250 page sustainability report, and even an 80 page 'non-technical summary', does not make it easy to assess the process or provide effective commentary."</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>The quantum options have been appraised on the basis that they would have a wide range of effects across the SA objectives. However, it is recognised that there is considerable uncertainty depending on the eventual location of housing development. As such, a number of the effects are recorded as uncertain.</p>
42443361	Q7 of the questionnaire	<p>"+ There are inaccuracies in the Sustainability Appraisal for various strategic & individual sites.</p> <p>+ For example, the train station indicated at Watlingbury is NOT in Tonbridge & Malling Borough but in Maidstone.</p> <p>+ Further, the Station is in Green Transport/walking/cycling distance of only a very few areas/sites. The Station has a very small Car Park (shared with the local School)</p> <p>+ In the case of some site assessments has been inaccurately considered-- one INDICATIVE example is Appendix B Site 59803 stated as within 800m of the station when in fact only a very small remote corner of the site may be within a arc as the crow flies."</p>	<p>The railway station the respondent refers to is located within the boundaries of Tonbridge and Malling Borough. However, even if the railway station were located within Maidstone Borough, residents living within Tonbridge and Malling would still likely access it.</p> <p>With regard to the respondent's comment on site 59803, the SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater."</p>
42720577	Q7 of the questionnaire	<p>"Under SA objective 6 there should be reference to protection of the Green Belt. The National Planning Policy Framework states that the fundamental aim of Green Belt policy is to prevent urban sprawl and</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>is characterised by openness and permanence, and that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified.</p> <p>As stated in Table 1, Spatial Portrait, Tonbridge and Malling is rural in character, therefore many residents depend on private cars because the option to use public transport is either minimal or non-existent. As a result the SA objectives should include improvements to highway infrastructure to reduce traffic congestion, this would improve air quality and reduce emissions."</p>	<p>SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The sub-objective "To minimise traffic congestion" has been added to the SA framework under SA objective 10: climate change mitigation.</p>
42721729	Q7 of the questionnaire	<p>"I don't believe that removing green spaces meets objective 5</p> <p>I don't believe that adding more traffic to the roads, more human need for services that will not be met and removal of green spaces will meet objective 1"</p>	<p>The SA objectives provide a framework against which the effects of the Local Plan will be assessed. The SA objectives and sub-objectives act as a starting point for the identification of effects and the appraisal work considers wider issues as appropriate.</p> <p>SA objective 5 seeks to protect and enhance biodiversity and geodiversity and the Interim SA Report appraises each aspect of the Regulation 18 Local Plan (September 2022) against this objective. In Chapter 4 of the Interim SA Report to which this comment relates, the quantum and spatial options all receive significant negative or minor negative effects in relation to SA objective 5 due to the land take on mostly greenfield land for housing and employment development.</p> <p>With regard to the future development of Tonbridge options, the first of these two options seeks to optimise densities on sites within the town centre and therefore minimises the overall release of greenfield land and for this reason, receives a minor positive effect against SA objective 5. The second of these two options seeks to conserve densities on sites within the town centre and therefore increases the need for the release of greenfield land for development and so receives a minor negative effect.</p> <p>With regard to the options to prevent merging of settlements in the north-east of the borough, two of these three options receive a minor positive effect in relation to SA objective 5 as they offer protection to greenfield land from development. The remaining option receives a minor negative effect as it is likely to result in development coming forwards on greenfield land.</p> <p>SA objective 1 seeks to improve human health and well-being but does not specifically look at traffic. It is acknowledged in Chapter 4 of the Interim SA Report that growth in the borough has the potential to support the delivery of new services and Quantum Options 1 and 2 would provide the critical mass needed to support provision of health and wellbeing related infrastructure. For this reason, both quantum options receive minor positive effects in relation to SA objective 1. However, Quantum Option 2 also receives a minor negative effect in relation to SA objective 1, as the SA acknowledges that delivering growth beyond assessed needs has the potential to cause capacity issues with service provision.</p> <p>The SA does not specifically look at traffic levels but to inform plan-making, the Council will commission additional evidence on traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42443041	Q7 of the questionnaire	Difficult to understand what you mean by this question but my view of the Sustainability Appraisals is that they are very crude and in some places state either 'strong positive or strong negative' which is completely useless, and also they have rated being within 800m of a bus service as a strong positive without looking at: how to reach the bus stop? how often the bus runs? where it goes? and how much does it cost? Rural bus services are EXTREMELY expensive and therefore only really of use to secondary school children and those who are in receipt of a free bus pass. They are certainly not an alternative to travelling by private car which remains far cheaper if you live far away from a town.	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distance from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>The cost of living crisis is now acknowledged in the baseline information section of the SA.</p>
42729633	Q7 of the questionnaire	<p>"Option 4 has scored relatively badly against the other 4 options considered by TMBC. However, it is considered that it should score more positively in the SA, particularly because impacts arising from this strategy cannot be assessed until sites have been selected. With specific regard to SA objective 4 "To encourage sustainable economic growth, business development, and economic inclusion across the borough" the distribution of development through site allocations across the borough can encourage sustainable development and growth in a variety of areas where it is needed rather than specifically in and around larger settlements that may already be sustainable. Equally this objective specifically refers to "across the borough" so a strategy of this nature – supporting sustainable growth of a variety of businesses including viticulture, does meet this objective.</p> <p>Further comments will be provided in relation to the SA at a later stage of the plan when proposed site allocations are set out to reflect the various growth strategies."</p>	The Spatial Options have been appraised on the basis that they would have a wide range of effects across the SA objectives. It is recognised that there is considerable uncertainty depending on the eventual location of housing development. As such, a number of the effects are recorded as uncertain.
42768289	Q7 of the questionnaire	No. As a policy analyst, the qualitative projections are meaningless. For instance quantum option 2 (with 10% increase) scores the same -- as option 1 despite the fact that it projects a further 10% increase. In the spatial options, how do options 1-3 score positively on objectives 1-3 but +/- on 4 and 5?	<p>Due to the high-level nature of the quantum options, qualitative analysis is utilised. Although Quantum Option 2 proposes meeting the assessed housing need plus 10%, Quantum Option 1 often receives the same effects as Quantum Option 2 as the SA utilises a precautionary approach. Further to this, the eventual location of housing development for both options is not yet known.</p> <p>The reason why Spatial Options 1 to 3 receive minor positive effects against SA objectives 1: health and wellbeing, 2: services and facilities and 3: education, and Spatial Options 4 and 5 receive mixed minor positive and minor negative effects against these objectives is because Options 1 to 3 direct development towards the larger settlements within the borough where there is a wider range of key services and facilities available. Although Spatial Options 4 and 5 also direct development towards the larger settlements, they also direct</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			development towards the rural settlements in the borough and so residents in these areas may have poorer access to key services and facilities.
25351073	Q7 of the questionnaire	<p>"The SA lacks sufficient evidence on Green Belt and climate change.</p> <ul style="list-style-type: none"> Without a comprehensive Green Belt study across all the LPAs in the Housing Market Areas (HMA) affecting T&M which identifies areas where GB functions are most and least important, development of the options and then choice of an option is premature in advance of this study. Please refer to responses under Q40 and 41. There is no climate change evidence base or topic paper. This would have indicated the patterns of growth that would be most efficient in reducing the existing carbon footprint and providing the lowest impact for the future. The Sustainability Appraisal (SA) (Appendix C) is not detailed enough for this to be reliably accurate. Without a climate evidence base, the Sustainability Appraisal scores on the impact of each option on the carbon footprint is meaningless. Therefore this consultation does not give consultees the opportunity to choose an option that demonstrates the lowest carbon footprint, except in a very superficial way." 	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to climate change, the Council has commissioned evidence on this topic to support development of the Local Plan and this will feed into the baseline information contained within the next iteration of the SA.</p> <p>It is important to note that the SA findings are not the only factors taken into account when determining a preferred option to take forward in a plan. Factors such as public opinion, deliverability and conformity with national policy are also taken into account by plan-makers when selecting preferred options for a plan.</p>
42736321	Q7 of the questionnaire	<p>"In respect of the spatial assessment, as set out in table 4.2:</p> <p>For options 4 and 5, it seems more likely that SA Objectives 2 and 3 would be negative. The use of a multitude of sites which would require a large number of different facilities and education establishments to be expanded or improved. In reality (budget, space and practical constraints) it is unlikely this would result in improvements to the many facilities, but only a few meaning that the majority are left without improvement needed to support the new developments. Many villages (e.g. Ightham, Offham) have minimal community facilities or services and a larger number of individuals trying to access and use them is unlikely to result in improvements or equality for all.</p> <p>For example, developments in Ightham couldn't result in an increase in school places as the school lacks the physical space to be able to increase any intakes. Pupils would therefore be required to travel outside the village and further spread across surrounding schools to the detriment of others (with a domino affect)."</p>	<p>Spatial Options 4 and 5 are recorded as having minor negative effects in relation to SA objectives 2: services and facilities and 3: education for the reasons set out in Chapter 4 of the Interim SA Report, although these effects are coupled with minor positive effects. Paragraph 4.2 of the Interim SA Report states "Options 4 and 5 also set out that growth will be directed to the urban areas and rural service centres and therefore minor positive effects are identified for these strategy options in relation to SA objective 1, 2 and 3. However, these strategy options will also focus growth to other rural settlements in the borough, which may result in some residents having poorer access to key services and facilities. As a result, minor negative effects are also identified for Options 4 and 5 in relation to SA objectives 1, 2 and 3".</p> <p>Due to the high-level nature of the SA, it is common to make assumptions regarding sufficient critical mass to support the delivery of new essential services and facilities.</p>
42651521	Q7 of the questionnaire	<p>"Table 4.1</p> <p>In terms of table 4.1 and options 1-3, it is not agreed that "delivering growth beyond assessed needs has more potential to cause capacity issues" as providing in all likelihood by less housing the Council will largely continue trends of concealed households and people either sharing houses or living at home for longer – but it's not considered that this leads necessarily to a change in the impact on healthcare or education provision. Indeed, if people are in crowded living conditions then there may be adverse effects in terms of mental and physical health, leading to a greater strain on healthcare facilities.</p>	<p>Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Quantum Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1 to 3.</p> <p>With regard to SA objectives 10: climate change mitigation and 12: air quality, providing more housing as proposed under Quantum Option 2 is likely to increase the number of cars on the road and associated emissions. As Option 2 proposes more development than Option 1, it is expected to have more significant effects than Option 1.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>New development will of course deliver funding or new facilities, and thus it is unclear why it is considered that additional requisite capacity would not be provided.</p> <p>In terms of objectives 10 and 12, relating to air quality and greenhouse gas emissions – providing more housing provides greater choice and opportunity for people to live near work or family. As such it is not considered that more housing will have an adverse effect in this regard and it may indeed be better to deliver more housing options for people in sustainable locations – particularly where rail travel can be facilitated.</p> <p>Table 4.3</p> <p>The assessment needs to reflect better the significant impact that over-densification could have on the townscape of Tonbridge, and the delivery of large quantities of housing that are not market-facing in the post-pandemic world.</p> <p>There is of course a place for flats and redevelopment of brownfield land, but there needs to be opportunities for people to grow families within the principal town by delivering a mix of housing on greenfield sites that can deliver new services and facilities and enhance access to and the enjoyment of the countryside as part of development.</p> <p>We would also highlight a concern that under objective 4, there may be significant pressures on less valuable uses to be redeveloped for residential – which could lead to the loss of jobs and services in the town through new development."</p>	<p>Without knowing where housing development will be located, it is difficult to reflect the effect Quantum Options 1 and 2 will have on the landscape. For this reason, both options are recorded as having mixed minor positive and uncertain minor negative effects in relation to SA objective 6: landscape and townscape.</p>
42776289	Q7 of the questionnaire	<p>"No – Option 2 provides the scenario that will deliver the required Objectively Assessed Housing Need ('OAHN') (839 dpa) +10%. Whilst the additional mass could put local services/infrastructure under pressure, this could be mitigated through financial contributions from the developers and a robust and clear infrastructure delivery strategy that supports this level of growth. As set out in the response to Question 6, the OAHN should be a minimum and through the emerging Local Plan, there is an opportunity to ensure local services/infrastructure are enhanced and deliver what is required to support growth in a sustainable manner – this includes the enhancement to local services/infrastructure.</p> <p>In respect of Objective 10 (to reduce greenhouse gas emissions) and 12 (to improve air quality) – whilst providing over and above the OAHN, as set out in the Sustainability Appraisal, development is "likely to provide investment into sustainable transport improvements within the borough, which may reduce the share of trips that are taken by private car by residents" .</p> <p>Therefore, to support the Local Plan, it is vital that the Council brings forward an Infrastructure Delivery Plan ('IDP') to identify the infrastructure/local services required to support the growth scenario chosen (either Option 1 or Option 2). In the expectation that an IDP is brought forward alongside the preference for growth to be</p>	<p>Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Quantum Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>With regard to SA objectives 10: climate change mitigation and 12: air quality, providing more housing as proposed under Quantum Option 2 is likely to increase the number of cars on the road and associated emissions. As Option 2 proposes more development than Option 1, it is expected to have more significant effects than Option 1.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		distributed across the Borough, we do not consider Option 2 should be scored less positively than Option 1."	
25369441	Q7 of the questionnaire	<p>Although we have answered 'no' in most cases the option assessments are supported and the findings appear reasonable and logical.</p> <p>We do however query the assessment provided in Table 4.2 under criteria SA9 "9: To conserve and enhance soil resources and guard against land contamination".</p> <p>Here Options 1, 3, 4 and 5 are all listed as likely to result in 'Significant negative effects' whilst Option 2 is listed as "mixed significant negative and minor positive effects". There does not appear to be any relevant evidence to justify the more positive categorisation of Option 2 in this regard.</p> <p>We submit that Option 2 should be categorised alongside the other options under this heading"</p>	<p>Noted.</p> <p>As stated in paragraph 4.26 of the Interim SA Report, "For Option 2, a minor positive effect is also identified in relation to SA objective 9 as the greater focus on the larger urban areas in the borough may encourage a higher share of previously developed land that comes forward for development".</p>
42822561	Q7 of the questionnaire	<p>This chapter is very complex and not easy to follow, but as an example, SA Objective 3 uses distance to a school as one of its positives, whilst acknowledging that a whole range of other factors (such as school capacity) haven't been taken into consideration. Distance can only be a positive if a school is both appropriate and has capacity. The same applies to SA2, SA4, SA10 (access to buses is a myth-- there may be bus stops, but services have been slashed) etc. Air Quality and climate change need to be specifically addressed. Maybe the SA objectives could come with the imposition of regulations (e.g. planning regulations) which enforce compliance.</p>	<p>The Spatial Options are too high-level to consider distance to schools. However, the distance individual site options are to primary and secondary schools is considered in Chapter 5 of the Interim SA Report, as well as Annex 1 which contains the proformas for each reasonable alternative development site option. As stated in the SA (paragraph D.14 of the Interim SA Report), all effects against SA objective 3: education are recorded as uncertain, as they depend on there being capacity at schools to accommodate new pupils.</p> <p>With regard to SA objective 2: services and facilities, the spatial options have been appraised in terms of generalised access to services and facilities. They are too high-level to consider the capacity of specific services and facilities.</p> <p>SA objective 4 relates to economic growth and due to the fact that all spatial options will deliver housing and employment land within the borough, which will provide a range of housing types and employment opportunities for residents, they are expected to have significant positive effects against SA4. These significant positive effects are coupled with minor negative effects for Spatial Options 1, 4 and 5. Option 1 may be too constrained in its focus on growth in the north-east of the borough and within Tonbridge, whilst Options 4 and 5 include smaller rural settlements and so may result in development coming forward that is poorly connected to the main employment locations.</p> <p>The five spatial options are expected to have negative effects in relation to SA objective 10: climate change mitigation, as they may cause increased congestion on key routes within the borough, as there is a strong reliance on private car within the borough. They also support development in locations that could exacerbate existing air quality concerns, as there are numerous AQMAs in the borough. Spatial Options 4 and 5 are recorded as having significant negative effects in relation to SA10, as they direct growth towards rural settlements and new settlements where there is lower service and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>facility provision, and may therefore encourage private car travel. The negative effects for all five spatial options are coupled with minor positive effects, as they all incorporate larger settlements where residents will have a reduced need to travel to access services and facilities, and will have access to sustainable transport links. All effects are uncertain as they are dependent on the exact location of new development.</p> <p>The spatial options are too high-level to consider distance to bus stops. However, the distance of individual site options to bus stops is considered in Chapter 5 of the Interim SA Report, as well as Annex 1 which contains the proformas for each reasonable alternative development site option. With regard to the reasonable alternative development site options, SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>It is not the purpose of the SA to impose regulations. The SA objectives provide a framework against which the effects of the Local Plan will be assessed. Chapter 6 of the Interim SA Report does, however, list indicators for monitoring the performance of the Local Plan.</p>
42824737	Q7 of the questionnaire	<p>"While we agree with the general conclusions in respect of the 'Spatial Options' set out in Chapter 5 of the 'Interim Sustainability Appraisal Report' (Aug 2022) ('ISA'), we do not agree wholly with the 'Quantum Options' being tested and the scoring of Option 2 as well as some of the scoring for 'Options to prevent merging of settlements in the North-East of the Borough'.</p> <p>Quantum Options</p> <p>As set out in our representations, an option should be tested where the Council seek to meet the uncapped standard method figure plus a buffer for non-delivery. As aforementioned, a cap is applied in the standard method to help ensure the minimum local housing need figure is as 'deliverable as possible' but does not 'reduce housing need itself' (PPG ID:2a-007). The ISA needs to test this option to fully account for the true level of housing needs in the Borough.</p> <p>Notwithstanding, we agree that there is no option considered for going below the capped standard method figure given the local housing pressures and Government objectives.</p> <p>Scoring of the Quantum Options</p>	<p>Support noted, regarding the spatial options.</p> <p>The quantum options subject to SA were identified by TMBC. It is reasonable, as a starting point, for one quantum option to be the assessed need generated by the Government's standard method. Quantum Option 2 is the assessed need + up to 10% therefore providing a buffer.</p> <p>Delivering growth beyond the assessed housing need (Quantum Option 2) could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the SA utilises a precautionary approach and therefore both options are expected to have a significant negative effect. There is uncertainty regarding the eventual location of housing development and so the effects are recorded as uncertain. Although new developments can achieve net gains in biodiversity, the overall amount of development proposed is likely to result in adverse effects on biodiversity and geodiversity.</p> <p>With regard to SA objectives 4: economic growth and 14: housing, the uncertain minor negative effects recorded for the first two options to</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>In respect of Objectives 1, 2 and 3 we disagree with the scoring for Option 2. For all three objectives, the option is scored as potentially having a minor negative effect due the potential to cause capacity issues. However, new developments – particularly more comprehensive schemes – can deliver new facilities or contribute to the provision of upgraded ones. The conclusion that there may be a minor negative effect assumes that there would not be a commensurate upgrade in facilities.</p> <p>We also disagree with the conclusions in respect of Objective 5 for both Options 1 and 2. New developments can achieve significant biodiversity net gains. Developments can also appropriately mitigate landscape and heritage impacts.</p> <p>Options to prevent merging of settlements in the North-East of the Borough?</p> <p>Finally, we note that the three options to prevent the merging of settlements in the North-East of the Borough. We agree that extending the green belt (option 1) or implementing a gap policy (option 2) would have negative effects in meeting Objectives 4 (encouraging sustainable development) and 14 (providing suitable supply of high-quality housing). However, we would conclude that both options would have significant negative effects on both objectives and should be scored with “- -” instead of “-”.</p>	<p>prevent merging of settlements in the north-east of the borough, are considered sufficient.</p>
25361537	Q7 of the questionnaire	<p>In respect of Objective 6-- To protect and enhance the borough's landscape and townscape character and quality, the AONB unit agree that both Growth Options have potential to have significant negative effects and that this may be particularly significant under option Two as a result of the higher amount of land take/growth. In respect of the five proposed Spatial Options we generally agree with the assessment and associated commentary (and caveats) provided in paragraph 4.25, although would raise some concerns that potential impacts on AONB setting may be underassessed (see our comment on D22 of Objective 6 in Appendix D of the Interim SA).</p>	<p>Support noted, with regard to the appraisal of quantum options.</p> <p>With regard to the spatial options, all but one of them (Options 1) receive a significant negative effect in relation to SA objective 6: landscape and townscape. There is uncertainty regarding the eventual location of housing development and so the effects are recorded as uncertain. Spatial Option 1 receives an uncertain minor negative effect in relation to SA objective 6, as unlike the other spatial options, there is a specific focus on ensuring that any development is located outside of the AONB. The SA acknowledges that some adverse landscape impacts may still occur (paragraph 4.25) and this includes on the setting of the AONB.</p>
42714529	Q7 of the questionnaire	<p>It is not clear what is meant by 'agree with the findings'.... if you want me to say: yes, I agree with 'Option X' t=in order to indicate that I would like Option X, then NO, I don't agree with any of the options.</p> <p>However, YES I do agree with many of the findings of the Sustainability Appraisal Report, including:</p> <p>QUANTUM OPTIONS:</p> <p>Table 4.1</p> <p>BOTH options will have Significant Negative Impact on:</p> <p>5. Biodiversity & Geodiversity,</p> <p>6. Character of landscape and townscape character & quality</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>Support noted, with regard to the appraisal of quantum and spatial options.</p>

This is acknowledged in the Interim SA Report.
43635649	Q7 of the questionnaire	<p>"Coalescence of Communities</p> <p>We would encourage policy decisions to prevent coalescence of the separate and differing communities of West Malling, East Malling, Kings Hill and hamlets such as those at New Barns, Mill Street etc.</p> <p>The Broadwater Farm area with its bridleways and footpaths acts as a green wedge between East and West Malling, Larkfield and Kings Hill – all very different communities with their own local heritage and character.</p> <p>Any development in this area would sever the continuity of landscape and irrevocably alter the nature, ambience and quietude of the surrounding environment, to the lasting detriment of existing communities.</p> <p>High Grade Farmland</p>	<p>Chapter 4 of the Interim SA Report provides an appraisal of three options for preventing the merging of settlements in the north-east of the Borough.</p> <p>The SA gives consideration to the Agricultural Land Classification under SA objective 9: soil.</p> <p>The SA provides an appraisal of two quantum options: (1) Meeting Assessed Housing Need; and (2) Meeting Assessed Housing Need + up to 10%. There is no reference to a 30% increase in housing allocations.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>At a time when we are being urged to consider nature, conserve farming and food production ... and yes, save the planet ... we should be protecting our high grade agricultural lands at Broadwater and Eden Farms</p> <p>Increase in Housing Allocation</p> <p>Challenge the 30% increase TMBC's housing allocation from 56096 to 72000+</p> <p>From every angle, an increase in housing allocation can only be viewed as a strange madness. The increased volume of housing and attendant infrastructures threaten to utterly destroy the character, and crucially, the viability of this already overburdened part of our Kentish borough.</p> <p>Spread of Development</p> <p>Where development is deemed both appropriate and necessary, we believe it needs to be spread more fairly and evenly across the borough."</p>	
42832833	Q7 of the questionnaire	<p>"Option 2 provides the scenario that will deliver the required Objectively Assessed Housing Need ('OAHN') (839 dpa) +10%. Whilst the additional mass could put local services/infrastructure under pressure, this could be mitigated through financial contributions from the developers and a robust and clear infrastructure delivery strategy that supports this level of growth. As set out in the response to Question 6, the OAHN should be a minimum and through the emerging Local Plan, there is an opportunity to ensure local services/infrastructure are enhanced and deliver what is required to support growth in a sustainable manner – this includes the enhancement to local services/infrastructure.</p> <p>In respect of Objective 10 (to reduce greenhouse gas emissions) and 12 (to improve air quality) – whilst providing over and above the OAHN, as set out in the Sustainability Appraisal, development is “likely to provide investment into sustainable transport improvements within the borough, which may reduce the share of trips that are taken by private car by residents”.</p> <p>Therefore, to support the Local Plan, it is vital that the Council brings forward an Infrastructure Delivery Plan ('IDP') to identify the infrastructure/local services required to support the growth scenario chosen (either Option 1 or Option 2). In the expectation that an IDP is brought forward alongside the preference for growth to be</p>	Noted.

		distributed across the Borough, we do not consider Option 2 should be scored less positively than Option 1."	
43779649	Q7 of the questionnaire	<p>"Berkeley generally agrees with the findings for the strategic options. The findings and associated scores in the Interim Sustainability Assessment Report (SA) suggests that Option 1 is the more favourable Quantum Option, outscoring Option 2 in 6 separate SA Objectives (Objective 1,2,3,10,12 and 14). However, a buffer would allow further flexibility and resilience to the housing supply within the Local Plan. As the plan progresses, the SA may benefit from further review and a more positive score could be considered for Quantum Option 2.</p> <p>As discussed within question 4, Berkeley's preferred spatial strategy option is Spatial Strategy Option 3. This is because this option enables development of both previously developed and greenfield land whilst focusing such development around towns and rural service centres that have the infrastructure to support growth.</p> <p>The SA findings for the Spatial Options within the SA scored SSO 2 and 3 as the highest scoring spatial strategy options. Option 3 directs development towards the urban areas and rural service centres within the borough respectively, where there is a wider range of key services and facilities. This is likely to provide residents within developments with opportunities to easily accessible services."</p>	<p>It is noted that a buffer could allow further flexibility and resilience to housing supply.</p> <p>Noted.</p>
24986657	Q7 of the questionnaire	<p>"The SA lacks sufficient evidence on Green Belt and Climate change. Without a comprehensive Green Belt study across all the LPAs in the Housing Market Areas (HMA) affecting T&M which identifies areas where GB functions are most and least important, development of the options and then choice of an option is premature in advance of this study. Please refer to responses under Q40 and 41.</p> <p>There is no climate change evidence base or topic paper. This would have indicated the patterns of growth that would be most efficient in reducing the existing carbon footprint and providing the lowest impact for the future. The Sustainability Appraisal (SA) (Appendix C) is not detailed enough for this to be reliably accurate. Without a climate evidence base the Sustainability Appraisal scores on the impact of each option on the carbon footprint is meaningless and based on guess work. Therefore this consultation does not give consultees the opportunity to choose an option which demonstrates the lowest carbon footprint, except in a very superficial way."</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>With regard to climate change, the Council has commissioned evidence on this topic to support development of the Local Plan and this will feed into the baseline information contained within the next iteration of the SA.</p>

43629217	Q7 of the questionnaire	"Gladman broadly agree with the findings of the strategic policy option assessments in Chapter 4 of the Interim Sustainability Appraisal Report (ISA), however, have some concerns regarding the methodology. Harm being assessed as minor or significant whilst also being a determined 'potential' suggests a nuance that has not been fully explored. It is not robust to determine the scale of a harm that may or may not occur, whilst referencing that there is the potential for mitigation. Gladman recommend the ISA is reviewed before the next round of consultation to ensure that it is clear how the conclusions have been reached. This will allow the preferred options to be suitably assessed."	SA is a high-level tool used to help identify the likely sustainability effects of a plan. It is therefore normal for the SA to include references to "potential" issues and effects.
44236769	Q7 of the questionnaire	<p>"● Para. 4.38 Options to Prevent Merging of Settlements in the North-East of the Borough covers the area bounded by East Malling, West Malling and Kings Hill, i.e. Broadwater Farm.</p> <ul style="list-style-type: none"> ● Options 1 and 2 maybe essential policy options for the North-East of the Borough, but we wholeheartedly disagree that already built up areas should be further densified. ● Adoption of "no special protection" Option 3 would lead to significant harm, ● Expansion North of Kings Hill would contribute to the coalescence of communities. In direct contravention of the stated preferred strategy of the Local Plan. ● Expansion of buildings from East Malling through to West Malling by the building on 40 Acres and Winterfield would be in direct contravention of the stated preferred strategy not to coalesce communities." 	<p>The Interim SA Report identifies three options to prevent merging of settlements in the north-east of the Borough: (1) Extend the outer edge of the Green Belt; (2) An anti-coalescence/strategic gap policy; (3) No change to the existing Green Belt boundary and no gap policy.</p> <p>With regard to densifying existing built up areas, it is assumed that this comment instead relates to the two options for future development of Tonbridge. The SA provides an appraisal of these different options to help the Council establish a way forward regarding future development.</p>
42684641	Q7 of the questionnaire	No I don't agree with the Interim Sustainability Report Chapter 4 as TMBC in 4.19 want to make a case to use Greenbelt. A case may be made for west Malling , Borough Green and Hildenborough as these towns have a rail station BUT only on sites close to the rail stations/ industrial sites or poor land would need to be identified.	Paragraph 4.19 of the Interim SA Report refers to greenfield land, not the Green Belt – although this option is likely to include some Green Belt land. Greenfield is a land use classification whereas Green Belt is a policy designation. The Green Belt contains both greenfield and brownfield land.
44274145	Q7 of the questionnaire	<p>"The Council sets out its intention that it will need to consider the use of greenfield sites, within and beyond existing built up areas rather than just previously developed land just around Tonbridge. This assertion is wholeheartedly endorsed and it is considered that this will ensure that a sufficient distribution of housing development can be provided across the plan period.</p> <p>When considering the Council's analysis of Option 4, it is not considered that the apparently computer generated assessment is</p>	<p>The appraisal of Spatial Option 4 has not been computer generated.</p> <p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is. It is recognised that there is considerable uncertainty depending on the eventual location of housing development. As such, a number of the effects are recorded as uncertain.</p> <p>A number of effects in the site-specific appraisals are also recorded as uncertain, as they are dependent on various details that will be</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>balanced. The ability of more intimate objectives to be discerned, cannot be undertaken on a strategic basis. The implications of biodiversity, cultural heritage, water feature impacts, air quality factors to name but a few, can only be analysed on a site-specific basis rather than at a strategic level, as each individual site will be different. The inclusion of a question mark, which deciphers as 'likely effect uncertain' in the vast majority of the objective outcomes beyond 5, does not promote confidence in the summary analysis and highlights this.</p> <p>When cross referencing the objectives back to the site specific analysis, further uncertainties are still identified, providing an even further lack of confidence in the process. It is maintained that Option 4 has been considerably underestimated and disparagingly 'marked' by the overall analysis. The negative impacts identified and marked as uncertain, are disputed. The ability to provide sites in a distributed way across the borough does not automatically mean that negative impacts will occur in terms of strategic objectives 5,6,7,8,9,10,11,12 and 13 as this will be site specific."</p>	<p>confirmed at planning application stage. Further to this, they are 'policy-off' appraisals and so consideration is not given to mitigation, which could resolve some of the uncertainty. If any of the sites are allocated in the Local Plan via policy that contain mitigation measures, they will be appraised on a 'policy-on' basis.</p>
44275681	Q7 of the questionnaire	<p>"Whilst we note that the SA acknowledges at para 4.5 that 'the Council considers that any option which did not deliver as a minimum the identified housing need does not constitute a reasonable alternative', and agree with that statement; we are, as set out above, somewhat confused as to whether the SA has in fact tested the effects of delivering the LHN figure + 10% or a supply that is 10% above the HLN which is a different scenario.</p> <p>11</p> <p>With the above in mind, we fail to see why table 4.1 suggests that Option 1 (LHN) scores a minor positive for objectives 1, 2 and 3, yet Option 2 (LHN+10%) scores a mixed minor effect for all three. Option 2 in providing more housing has the ability to help to address the issue of affordability and thus improve the health and well-being of those in housing need, especially the homeless (SA objective 1). Para 4.6 appears to totally ignore the issue of affordability and its effects on health or indeed the fact that housing actively contributes to the delivery of health services. Likewise Option 2 has the greater ability to improve equality and access to community facilities and services (SA objective 2) than Option 1, given its ability to address the issue of homelessness and affordability which we note is a sub objective of objective 2 according to p70 of the SA. Furthermore, Option 2 would definitely help address the need to provide a suitable supply of high quality housing, including an appropriate mix of sizes, types and tenures (SA objective 14). Why Option 2 scores a significant positive (likely effect uncertainty) when Option 1 also scores a significant positive is truly bizarre. Whilst we note that para 4.9 of the SA suggests that the scale of housing delivery associated with Option 2 is 'in excess of what the local housing markets have supported over the past decade, as demonstrated by the Housing Market Delivery Study', and that as a result there is 'uncertainty attached to this option as there is a question mark around its deliverability'; this is not in our</p>	<p>The SA has tested the effects of delivering: (1) assessed need; and (2) assessed need + up to 10%, therefore providing a buffer.</p> <p>Delivering growth beyond the assessed housing need (Quantum Option 2) could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>Quantum Options 1 and 2 will both provide a significant amount of new housing and therefore both receive a significant positive effect in relation to SA objective 14: housing. In terms of Quantum Option 2 delivering more housing than Quantum Option 1, the SA acknowledges in paragraph 4.9 that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents" [emphasis added].</p> <p>Although the significant positive effect for Quantum Option 2 against SA objective 14 is recorded as uncertain, this is not a reduction to its score as suggested by the respondent. Uncertain significant effects are still considered as likely significant effects in the SA. The SA states in paragraph 4.9 (see above quote) that Quantum Option 2 has a particularly significant positive effect. The reasoning behind the uncertain effect is appropriate.</p> <p>Spatial Option 3 does perform very strongly in relation to the SA objectives compared to the other options, as does Spatial Option 2. It is important to note that SA is a high-level tool used to identify the likely sustainability effects of a Local Plan, and is one of many factors that feed into the plan-making process.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>opinion a reason for the SA to reduce the score attributed to Option 2. Deliverability is an issue for the planning authority in determining the spatial strategy – not the SA. To this end we note that the Housing Market Delivery Study (HMDS) examines past delivery rates and use these to make assumptions as to the capacity of the area to deliver homes in the future. Whilst helpful to understand the rate at which homes have been delivered in the past, we would argue against whether this should</p> <p>be used as an indication of future delivery rates. The ability of an area to support housing growth will relate principally to the range of sites allocated through the chosen spatial strategy rather than an innate capacity in the market as to the amount of growth that can be achieved. The Council should not be seeking to limit growth on the basis of what has been achieved in the past.</p> <p>The Assessment of the Spatial Options</p> <p>Reviewing table 4.2 spatial Option 3 (Development focused on sites within as well as adjacent to defined urban and Rural Service Centre settlements) appears to attain the most positive scores, with equal top scores in respect of SA objectives 1, 2, 3, 4, 5, 7, 8, 10, 11, 12, 13 and 14, and second equal on SA objectives 6 and 9. On this basis it would appear to us to be the option that most closely meets the SA objectives, and it is surprising that the SA does not actually say this explicitly.</p> <p>In addition to the above we are, we have to say, somewhat perplexed as to how spatial Option 1 scores so highly on SA objective 2 (to improve equality and access to community facilities and services) when, by directing most growth towards the northern part of the Borough it will not address the affordability issues in the southern part of the Borough, which given the southern part of the Borough's location within the WKHMA and thus the amalgam of the 3 least affordable Boroughs/ district in the county, would suggest anything that directs growth away from this area should obtain a much lower score. To this end we note that para 4.18 of the SA highlights the fact that there is a significant amount of self-containment in terms of the movement of people and activity on a regular basis within the HMA's and that a sustainable pattern of development should seek to address the need where it arises, i.e. within each HMA. Spatial Option 1 simply would not do this and would exacerbate the affordability issue within the southwestern part of the Borough, where it is at its most acute.</p> <p>12</p> <p>With regard to the Future Options of Tonbridge, Section 11 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes and other uses and paragraph 124 sets out key considerations that should be taken in this regard. Furthermore, NPPF paragraph 125 states: "plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination"</p>	<p>The Council is not considering a brownfield alone approach, as there would not be enough land to provide the housing needed. As such, this approach is not considered a reasonable alternative.</p> <p>Affordability is not addressed under SA objective 2: services and facilities, and is instead addressed under SA objective 14: housing. Affordability is an issue across the Borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It then follows that, the optimisation of densities on development sites within Tonbridge (Option 1) is recognised on the basis that the best use of previously developed land clearly scores well in SA terms.</p> <p>However, this does not mean that a brownfield alone approach should be taken given that an insufficient amount of sites within the urban area have been identified to accommodate the growth within the Urban Capacity Study and notwithstanding the complexities that can arise with brownfield sites that can affect delivery rates. It is essential that a sufficient amount and variety of land can come forward where it is needed in accordance with NPPF paragraph 60. It should also be noted that the delivery of Brownfield land can be longer due to the risks of complications during construction given the nature of the previous use."</p>	
44309601	Q7 of the questionnaire	<p>"Chapter 4 appears to try to compare options with no specific conclusions. 44336545	Q7 of the questionnaire	<p>"Yes. We largely agree with the findings of the strategic policy options which demonstrates Option 2 and Option 3 are the most sustainable. However, we recommend Option 3 is the preferred option and should be pursued as part of the spatial strategy, for the following reasons:</p> <ul style="list-style-type: none"> • Option 3 promotes sustainable development in the Borough. It directs development towards Tier 1 (Urban Areas) and Tier 2 (Rural Service Centres) settlements which have the best range of key services and facilities. • Option 3 ensures a dispersed pattern of growth. It spreads development across 10 settlements in the Borough and ensures a balanced distribution of development. • Option 3 ensures a wider range of types of sites and development will come forward. • Option 3 provides a balanced distribution of development across the two Housing Market Areas ('HMA's'). • Option 3 would likely only require minor alterations to the Green Belt and Exceptional Circumstances exist in order to do so. • Option 3 provides less / no-reliance on larger strategic sites to achieve development needs. Larger sites can often be slow to deliver and can cause delays to meeting housing needs in full. <p>3.75 Based on the above reasons (which are discussed in detail within our response to Question 4), we recommend the findings of the Interim Sustainability Appraisal ('SA') are used to inform the spatial strategy. As we discuss at Question 3 and 4, spatial strategy Option 3 is pursued as part of the new Local Plan, with Option 4 as the second favourable option. Options 1, 2 and 5 should be dismissed. These are also the least sustainable against the objectives of the SA."</p>	Noted.
44403137	Q7 of the questionnaire	<p>"No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p>	SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>The same principle applies with provision of new essential services and education and training facilities, with an assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions."</p>	
44406689	Q7 of the questionnaire	"Assessment assumes that defined Urban Areas have the services and infrastructure to support further expansion. West Malling and Kings Hill transport infrastructure, medical facilities are unable to support existing number of residents and dwellings. Major expansion of North East TMBC would cause coalescence of communities, in direct contravention of the stated preferred strategy of the Local Plan."	Noted.
24927329	Q7 of the questionnaire	<p>"28. The assessment of strategic policy options in the SA provides some assistance as to the difference in environmental effects between the options, but it is clearly a very high level analysis and based on subjective judgment without any detail and with a great level of uncertainty. Nor are any of the various SA objectives weighted therefore a comparison between the options is problematic. There is also a great deal of uncertainty expressed within the options, making comparisons between options problematic at this stage. It is assumed that this will be addressed through further refinement of the SA process.</p> <p>29. For example, the difference between the Housing Quantum strategic options (providing for assessed need or providing for assessed need +10%) indicates some greater negative potential effects of a higher level of growth (for example, or air quality) although with uncertainty attributed to most objectives. The provision of the additional 10% will result in greater benefits to Objective 14 (providing for housing) and Trenport would advocate that this objective must be given substantial weight in the overall analysis.</p> <p>30. In terms of the Spatial Options, clearly this is a 'policy off' analysis and therefore ignores the impact of each of the options on the Green Belt. Whilst Options 2 and 3 would appear to perform better in terms of the SA objectives, they would result in a much greater and unjustified level of Green Belt release."</p>	<p>Due to the high-level nature of the strategic policy options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p> <p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>The Interim SA Report provides an appraisal of five different spatial options, none of which refer to development in the Green Belt.</p>

This is acknowledged in the Interim SA Report.</p>
44460673	Q7 of the questionnaire	<p>"3.6 Whilst the Interim Sustainability Appraisal Report provides an assessment of options for future housing need, it is concerning that TMBC has not identified how employment needs will be addressed at this stage of the Local Plan process. Further work should be undertaken in this regard to ensure that the Sustainability Appraisal has tested the environmental impact of various quantum options for employment need.</p> <p>Spatial options</p> <p>3.7 It is considered that a combined approach of Options 4 and 5 should be progressed to meet the development needs of the Borough to ensure that sustainable growth in urban and rural areas is supported through a combination of spatial options."</p>	<p>The employment evidence available at Regulation 18 stage did not take into account supply and so the SA did not appraise options for future employment need. Further work is underway and once available, different options for future employment need will be appraised to inform the Local Plan.</p>
44417409	Q7 of the questionnaire	<p>"a) The Assessment of the Quantum Options</p> <p>7.1 Whilst we note that the SA acknowledges at para 4.5 that 'the Council considers that any option which did not deliver as a minimum the identified housing need does not constitute a reasonable alternative', and agree with that statement; we are, as set out above, somewhat confused as to whether the SA has in fact tested the effects of delivering the LHN figure + 10% or a supply that is 10% above the LHN which is a different scenario.</p>	<p>The SA has tested the effects of delivering the LHN figure + 10%, not a supply that is 10% above the LHN.</p> <p>Delivering growth beyond the assessed housing need (Quantum Option 2) could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>Quantum Options 1 and 2 will both provide a significant amount of new housing and therefore both receive a significant positive effect in relation to SA objective 14: housing. In terms of Quantum Option 2 delivering more housing than Quantum Option 1, the SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>7.2 With the above in mind, we fail to see why table 4.1 suggests that option 1 (LHN) scores a minor positive for objectives 1, 2 and 3, yet option 2 (LHN+10%) scores a mixed minor effect for all three. Option 2 in providing more housing has the ability to help to address the issue of affordability and thus improve the health and well-being of those in housing need, especially the homeless (SA objective 1). Para 4.6 appears to totally ignore the issue of affordability and its effects on health or indeed the fact that housing actively contributes to the delivery of health services. Likewise option 2 has the greater ability to improve equality and access to community facilities and services (SA objective 2), than option 1 given its ability to address the issue of homelessness and affordability, which we note is a sub objective of objective 2 according to p70 of the SA. Furthermore, option 2 would definitely help address the need to provide a suitable supply of high quality housing, including an appropriate mix of sizes, types and tenures (SA objective 14). Why option 2 scores a significant positive (likely effect uncertainty) when option 1 scores a significant positive is truly bizarre. Whilst we note that para 4.9 of the SA suggests that the scale of housing delivery associated with option 2 is 'in excess of what the local housing markets have supported over the past decade, as demonstrated by the Housing Market Delivery Study', and that as a result there is 'uncertainty attached to this option as there is a question mark around its deliverability'; this is not in our opinion a reason for the SA to reduce the score attributed to option 2. Deliverability is an issue for the planning authority in determining the spatial strategy – not the SA. To this end we note that the Housing Market Delivery Study (HMDS) examines past delivery rates and uses these to make assumptions as to the capacity of the area to deliver homes in the future. Whilst helpful to understand the rate at which homes have been delivered in the past, we would against whether this should be used as an indication of future delivery rates. The ability of an area to support housing growth will relate principally to the range of sites allocated through the chosen spatial strategy rather than an innate capacity in the market as to the amount of growth that can be achieved. The Council should not be seeking to limit growth on the basis of what has been achieved in the past.</p> <p>b) The Assessment of the Spatial Options</p> <p>7.3 Reviewing table 4.2 spatial option 3 (Development focused on sites within as well as adjacent to defined urban and Rural Service Centre settlements) appears to attain the most positive scores, with equal top scores in respect of SA objectives 1, 2, 3, 4, 5, 7, 8, 10, 11, 12, 13 and 14, and second equal on SA objectives 6 and 9. On this basis it would appear to us to be the option that most closely meets the SA objectives, and it is surprising that the SA does not actually say this explicitly.</p>	<p>acknowledges in paragraph 4.9 that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents" [emphasis added].</p> <p>Although the significant positive effect for Quantum Option 2 against SA objective 14 is recorded as uncertain, this is not a reduction to its score as suggested by the respondent. Uncertain significant effects are still considered as likely significant effects in the SA. The SA states in paragraph 4.9 (see above quote) that Quantum Option 2 has a particularly significant positive effect. The reasoning behind the uncertain effect is appropriate.</p> <p>Spatial Option 3 does perform very strongly in relation to the SA objectives compared to the other options, as does Spatial Option 2. It is important to note that SA is a high-level tool used to identify the likely sustainability effects of a Local Plan, and is one of many factors that feed into the plan-making process.</p> <p>Affordability is not addressed under SA objective 2: services and facilities, and is instead addressed under SA objective 14: housing. Affordability is an issue across the Borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>7.4 In addition to the above we are, we have to say, somewhat perplexed as to how spatial option 1 scores so highly on SA objective 2, (to improve equality and access to community facilities and services) when, by directing most growth towards the northern part of the Borough it will not address the affordability issues in the southern part of the Borough, which given the southern part of the Borough's location within the WKHMA, and thus the amalgam of the 3 least affordable Boroughs/ district in the county, would suggest anything that directs growth away from this area should obtain a much lower score. To this end we note that para 4.18 of the SA highlights the fact that there is a significant amount of self-containment in terms of the movement of people and activity on a regular basis within the HMA's and that a sustainable pattern of development should seek to address the need where it arises, i.e. within each HMA. Spatial option 1 simple would not do this and would exacerbate the affordability issue within the south western part of the Borough, where it is at its most acute.</p> <p>7.5 We have no comments on the Future Development of Tonbridge Options or the Options to Prevent Merging of Settlements in the North-East of the Borough."</p>	
44471521	Q7 of the questionnaire	<p>"No – Option 2 provides the scenario that will deliver the required Objectively Assessed Housing Need ('OAHN') (839 dpa) +10%. Whilst the additional mass could put local services/infrastructure under pressure, this could be mitigated through financial contributions from the developers and a robust and clear infrastructure delivery strategy that supports this level of growth. As set out in the response to Question 6, the OAHN should be a minimum and through the emerging Local Plan, there is an opportunity to ensure local services/infrastructure are enhanced and deliver what is required to support growth in a sustainable manner – this includes the enhancement to local services/infrastructure.</p> <p>In respect of Objective 10 (to reduce greenhouse gas emissions) and 12 (to improve air quality) – whilst providing over and above the OAHN, as set out in the Sustainability Appraisal, development is "likely to provide investment into sustainable transport improvements within the borough, which may reduce the share of trips that are taken by private car by residents".</p> <p>Therefore, to support the Local Plan, it is vital that the Council brings forward an Infrastructure Delivery Plan ('IDP') to identify the infrastructure/local services required to support the growth scenario chosen (either Option 1 or Option 2). In the expectation that an IDP is brought forward alongside the preference for growth to be distributed across the Borough, we do not consider Option 2 should be scored less positively than Option 1."</p>	Noted.
44459553	Q7 of the questionnaire	"No – in relation to Quantum of development. No comments are raised in relation to the spatial options.	SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.

		<p>No – in relation to the Quantum of development. The ISA assessment seems to be based on unevidenced assumptions. For example, the ISA tests Option 1 (meeting development needs) and Option 2 (meeting development needs plus 10%).</p> <p>A minor positive effect is identified for both Option 1 and Option 2 in relation to ISA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than Option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under Option 1.</p> <p>The same principle applies with provision of new essential services and education and training facilities, with an assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>In Fernham Homes' view - in terms of quantum of development - the ISA looks unreasonably negatively on growth and development rather than looking in an impartial manner or a basis for opportunity. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p> <p>No comments are raised in relation to the findings for the spatial options. It is noted that Options 2 Urban and 3 Urban and RSCs perform most strongly – which are reflective of Fernham Homes' conclusions in relation to the most appropriate strategy as outlined above."</p>	
44514401	Q7 of the questionnaire	<p>"Chapter 4 sets out the sustainability appraisal findings for the strategic policy options that have been considered and presents the findings for those options. The options for the scale of growth and spatial strategy for the Local Plan has been grouped as – quantum options; spatial options; the future development of Tonbridge; and options to prevent the merging of settlements in the north-east of the borough.</p> <p>Paragraph 32 of the Framework states:</p> <p>"Local plans and spatial development strategies should be informed throughout their preparation by a sustainability appraisal that meets</p>	<p>The SA acknowledges under Quantum Option 2 that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities. Therefore, the minor positive effect against SA objective 1: health and wellbeing for Quantum Option 2 is coupled with a minor negative effect. The SA states that all effects are uncertain at this stage, as there is no evidence indicating a particular threshold at which new development could result in health and other services and facilities becoming overloaded. The same applies in relation to SA objectives 2: services and facilities and 3: education. The SA also acknowledges in paragraph 4.6 that with regard to Quantum Option 2 "...this extent of new growth in the borough has the potential to provide sufficient critical mass to</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the relevant legal requirements¹⁹. This should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered)."</p> <p>At paragraph 4.5 of the Interim Sustainability Appraisal Report, the Council confirm that</p> <p>"No option has been considered or assessed that promotes development below the 839 dwellings per annum as it is considered an unreasonable alternative in the context of national policy and local evidence on housing affordability. In addition, given the large pool of sites currently identified and their potential yield, the borough will likely have sufficient available land to deliver the amount of development that the evidence shows is needed. In these circumstances, the Council considers that any option which did not deliver as a minimum the identified housing need does not constitute a reasonable alternative."</p> <p>We support the Council's position on seeking to deliver the housing need in full across the plan period, and agree that there is sufficient available and suitable land within the Borough to deliver that identified need, and a reasonable alternative would not include delivering below the minimum level of identified housing need.</p> <p>We do, however, question the evidence behind the findings of the Sustainability Appraisal for the options, particularly paragraph 4.6 which states that Option 2 (Meeting Assessed Housing Need + up to 10%) could be more likely to overwhelm existing services and facilities and schools. This is unsubstantiated. It is also of course the case that appropriate new development will deliver new facilities such that services are not overwhelmed. The provision of such facilities as part of some larger developments (such as the previous allocation at Borough Green) will also enhance the relative sustainability of some of the smaller settlements in their hinterland i.e. such as Wrotham for example."</p>	<p>support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p>
42271969	Q7 of the questionnaire	<p>"Question 7 asks if respondents "agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report" and seeks an explanation of views.</p> <p>Quantum Options</p>	<p>The quantum options subject to SA were identified by TMBC. It is reasonable, as a starting point, for one quantum option to be the assessed need generated by the Government's standard method. Quantum Option 2 is the assessed need + up to 10% therefore providing a buffer.</p> <p>The assessed need + 10% was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>In terms of the quantum of overall housing, Vistry do not agree with the scope of the options presented and assessed within the Interim SA. A particular concern (as detailed in our response to Question 6), is that the SA only considers options to either meet the minimum Standard Method housing need figure, or to exceed that figure by 10%.</p> <p>The Interim SA certainly provides a clear justification for not exploring options to promote development below the 839 dpa Standard Method figure. This is justified through references to worsening levels of housing affordability and national planning policies. The document also explains (at paragraph 4.4) that a figure of up to 10% above the evidence-based needs is to be tested, "to see what is realistically achievable in the context of the local housing markets and being mindful of the need for flexibility to be able to adapt to rapid change."</p> <p>However, the selection of only a 10% increase appears arbitrary and this scenario should have been considered alongside options for further uplifts (i.e., over and above a 10% increase). Indeed, noting that a 20% buffer is currently applied for the purposes of calculating the 5YHLS position, it is not clear why an option for a 20% increase was not tested. It would also be appropriate to test the effects of an increased housing requirement to support Duty-to-Cooperate discussions with neighbouring Local Authorities.</p> <p>With respect to Table 4.1, Vistry are unconvinced by the suggestion that an increase of 10% (i.e., 1,594 dwellings) would result in significantly greater effects or impacts, when compared to the baseline Standard Method figure of 15,941. The assumption made in respect of SA Objectives 1, 2, and 3, appears to be that additional growth (above the baseline) will place increase pressure on services and infrastructure.</p> <p>However, the reasoning set out in the Interim SA (at paragraphs 4.6 to 4.10) appears to ignore the potential for increased housing delivery to facilitate additional infrastructure, in the form of new health centres, community facilities and schools, etc. Vistry suggest then that Option 2 (+10% housing growth), should be scored more positively than Option 1 in respect of SA objectives 1 to 3.</p> <p>Similarly, it is counter-intuitive to assume that an option for a higher level of housing growth would result in worsened Climate Change and air quality outcomes. Ultimately, the impacts of increased levels of growth will depend on the subsequent strategy for distribution.</p>	<p>higher growth figures on. An even higher growth scenario of assessed need + 20% would not yield particularly different SA effects to Quantum Option 2, as both options are relatively similar and so it would be difficult to distinguish between the effects each is likely to have.</p> <p>The SA acknowledges that an increase of 10% has more potential to cause capacity issues with existing services and facilities. However, it also acknowledges that with regard to an increase of 10%, the Borough "has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p> <p>With regard to climate change, Quantum Option 2 receives a significant negative effect (as part of a mixed effect) because a higher level of housing growth is likely to result in increased transport movements, as there will be more people with private cars and a subsequent increase in CO₂ emissions. This will contribute to climate change, as well as poor air quality – particularly as there are seven Air Quality Management Areas (AQMAs) within the Borough.</p> <p>Spatial Option 1 receives a minor positive effect in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education because similar to Spatial Options 2 and 3, directs development to the north-east of the Borough, in close proximity of the larger settlements in the Borough, and urban areas like the Medway Gap and Snodland, and Chatham and Maidstone just outside the Borough.</p> <p>Spatial Option 5 is likely to have a significant negative effect (as part of a mixed effect) against SA objective 10: climate change mitigation because it will direct some growth towards rural settlements where there is lower service and facility provision, which is likely to increase private car travel.</p> <p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p> <p>The respondent has suggested that a strategy for meeting needs through a coordinated cross-boundary strategy should be explored. As TMBC seek to meet their OAN themselves, this is not considered a reasonable alternative option that should be subject to SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>For example, it is a reasonable supposition that a higher housing requirement is likely to result in additional allocations for larger-scale developments. Such larger-scale developments tend to provide greater potential to enhance public transport, improve pedestrian / cycle connectivity, etc. This is likely to reduce the potential consequence to Climate Change and air quality impacts. Indeed, there are latent opportunities to maximise the benefits from existing transport nodes within the Plan-area. This includes at Hildenborough, where there is a clear opportunity to deliver rail-centric growth.</p> <p>Spatial Options</p> <p>Vistry consider that the Interim SA (at Table 4.2) provides an overly favourable assessment of Option 1, which would see growth restricted to areas beyond the Green Belt and AONB. This would mean that the majority of the Plan-area will not experience the benefits of housing and employment growth. The supply of new homes within the Sevenoaks and Tunbridge Wells HMA would be particularly constrained.</p> <p>Option 2 and particularly Option 3, would see new development distributed more widely, such that benefits relating to human health and well-being, access to services and educational attainment, are likely to be increased. It is not clear then why Spatial Option 1 is scored equally to Options 2 and 3, when tested against SA objectives 1 to 3.</p> <p>A further comment is that the Interim SA's scoring of Option 5 (New Settlement) appears arbitrary. For example, it is not clear why a new settlement or Garden Village urban extension, result in less favourable climate change outcomes when assessed against SA Objective 10. Indeed, a new strategic scale development of this nature is likely to be situated near existing or potential future transport nodes and would therefore promote sustainable transport patterns. They also offer clear ability to integrate site-specific and strategic scale mitigation cohesively, offering potential for significant environmental benefits to be delivered.</p> <p>The arbitrary nature of the scoring in the Interim SA again points to the lack of supporting technical evidence to justify the options presented. In addition, Vistry would also raise a broader concern, which is that none of the identified options (or alternative options), explore a strategy for meeting needs through a coordinated cross-boundary strategy.</p> <p>Whilst progressing such a cross-boundary strategy evidently presents political challenges, it is precisely the absence of such a strategy which resulted in the withdrawal of previously submitted Plans in both</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		Tonbridge and Malling, and in Sevenoaks District. This issue is also one of the key risks facing the submitted Tunbridge Wells Local Plan, which is currently at Examination."	
43544961	Q7 of the questionnaire	"See response to Q.6. We suggest further (higher) reasonable alternative growth options should be tested through the SA, following additional assessments and liaison with adjoining LPAs. With respect to Table 4.1 of the SA, we are unclear why Option 2 would score less than Option 1 for SA Obj. 2, as additional growth would help fund additional community facilities through the IDP. The same could be said with respect to SA Obj 3 and education. SA Obj. 4 is scored the same, but delivering more affordable housing in highly accessible locations may well support a greater economically active resident workforce, and hence assist economic growth and climate change objectives. For similar grounds it is arguable whether SA Obj. 10 and 12 would score so much worse if needs we being met in sustainable locations, particularly when coupled with the transition to more energy efficient homes and transport."	<p>The SA acknowledges under Quantum Option 2 that delivering growth beyond assessed needs has more potential to cause capacity issues at existing services and facilities. Therefore, the minor positive effect against SA objective 2: services and facilities for Quantum Option 2 is coupled with a minor negative effect. The SA states that all effects are uncertain at this stage, as there is no evidence indicating a particular threshold at which new development could result in services and facilities becoming overloaded. The SA also acknowledges in paragraph 4.6 that with regard to Quantum Option 2 "...this extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities". The same applies to SA objective 3: education.</p> <p>Negligible effects are recorded against SA objective 4: economic growth, as these options focus on the quantum of housing and not the quantum of employment development.</p> <p>With regard to the spatial options, they will all deliver housing and employment land within the Borough, which will provide a range of housing types and employment opportunities for residents. As a result, significant positive effects are identified for all of the options in relation to SA objective 4.</p> <p>The options are all expected to have minor positive effects in relation to SA objectives 10: climate change mitigation and 12: air quality, for the reasons outlined in the SA. These effects are mixed with negative effects, some of which are significant.</p>
44972961	Q7 of the questionnaire	<p>"Broadly yes but the following two options should be No 1 and 2 and given significant weight. If the earth's climate continues in its erratic course then no one will be very much worried by the other options at that stage</p> <p>10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>11: To improve adaptation to climate change so as to minimise its impact"</p>	Noted.
45217569	Q7 of the questionnaire	<p>"Chapter 4 of the Interim SA Report? Explain</p> <ul style="list-style-type: none"> • Para. 4.38 Options to Prevent Merging of Settlements in the North-East of the Borough covers the area bounded by East Malling, West Malling and Kings Hill, i.e. Broadwater Farm. • Options 1 and 2 maybe essential policy options for the North-East of the Borough, but we wholeheartedly disagree that already built up areas should be further densified. • Adoption of "no special protection" Option 3 would lead to significant harm, 	<p>The Interim SA Report identifies three options to prevent merging of settlements in the north-east of the Borough: (1) Extend the outer edge of the Green Belt; (2) An anti-coalescence/strategic gap policy; (3) No change to the existing Green Belt boundary and no gap policy.</p> <p>With regard to densifying existing built up areas, it is assumed that this comment instead relates to the two options for future development of Tonbridge. 		<ul style="list-style-type: none"> • Expansion North of Kings Hill would contribute to the coalescence of communities. In direct contravention of the stated preferred strategy of the Local Plan. • Expansion of buildings from East Malling through to West Malling by the building on 40 Acres and Winterfield would be in direct contravention of the stated preferred strategy not to coalesce communities." 	
45325537	Q7 of the questionnaire	<p>"The answer to this question is split into two subsections Quantum Options and Spatial Options.</p> <p>Quantum Options</p> <p>We agree with Option 2 to the extent that it identifies a scenario whereby the Council has tested an option that goes above meeting its minimum housing need (plus 10%). However, as explained above, we recommend that a further reasonable alternative option is tested whereby a greater than 10% plus assessed housing need is met. This is to ensure the Sustainability Appraisal (SA) robustly appraises a scenario whereby it accommodates unmet need from London and other neighbouring boroughs, as well as better addresses affordability issues and providing for flexibility in the Plan (particularly if the spatial strategy includes for the delivery of larger strategic sites/ new settlements, which increases the risk of needs not being met should there be a delay in the delivery of those larger sites).</p> <p>We would not endorse Option 1, as it would fail to deliver the growth required to meet the housing and affordability issues in the Borough, would not provide for greater flexibility and resilience in meeting housing needs across the Plan period and would not provide for meeting the unmet needs of London and neighbouring authorities.</p> <p>It is noted that the SA at paragraph 4.6 is concerned that Option 2 could cause minor negative effects as it could put a strain on existing services. However, it is unclear how the SA has considered the way in which the provision of more homes could actually help deliver or fund via S106 contributions the expansion or provision of new services and infrastructure. In addition, the SA should recognise how additional growth at RSCs for example could enable a critical mass of population to be achieved to allow for services such as GP surgeries to return to RSCs where they may have left previously due to it being unviable for them to remain there. In addition, the SA should recognise that even if GP surgeries are provided within settlements, residents are free to choose which GP surgery to use and as such may not choose to use their 'local' GP and may prefer to use a GP surgery in a different settlement if there is capacity.</p> <p>In addition, we note that paragraph 4.9 questions whether Option 2 would be deliverable, as it considered that "... this level of housing delivery would be in excess of what the local housing markets have</p>	<p>Quantum Option 2 (assessed need + 10%) was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific higher growth figures on. An even higher growth scenario of assessed need + 20% would not yield particularly different SA effects to Quantum Option 2, as both options are relatively similar and so it would be difficult to distinguish between the effects each is likely to have.</p> <p>The SA acknowledges under Quantum Option 2 that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities. Therefore, the minor positive effect against SA objective 1: health and wellbeing for Quantum Option 2 is coupled with a minor negative effect. The SA states that all effects are uncertain at this stage, as there is no evidence indicating a particular threshold at which new development could result in health and other services and facilities becoming overloaded. The same applies in relation to SA objectives 2: services and facilities and 3: education. The SA also acknowledges in paragraph 4.6 that with regard to Quantum Option 2 "...this extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p> <p>Residents cannot necessarily choose to attend a different GP surgery in a different settlement, as they must fall within the catchment area for a GP surgery.</p> <p>With regards to deliverability and historic delivery rates, providing housing that meets the assessed need would be more likely to be achieved than providing housing higher than the assessed need.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>supported over the past decade, as demonstrated by the Housing Market Delivery Study. Therefore, there is uncertainty attached to this option as there is a question mark around its deliverability." However, we would be concerned with the deliverability of this Option being questioned because of historic trends, given a driving factor for historic delivery rates would have been any constraints to deliver new homes applied by the prevailing planning policy context.</p> <p>Spatial Options</p> <p>As identified above, it is therefore considered that a balanced and blended approach to Spatial Options 4 and 5 will likely be required to meet the housing needs of the Borough. These Spatial Options will best ensure that a wide range of sites, including smaller and larger plots, development adjacent to settlements, on green field and on brownfield are delivered, which will assist in providing for a consistent supply of homes across the Plan period."</p>	
45430305	Q7 of the questionnaire	<p>"● Para. 4.38 Options to Prevent Merging of Settlements in the North-East of the Borough covers the area bounded by East Malling, West Malling and Kings Hill, i.e. Broadwater Farm.</p> <ul style="list-style-type: none"> ● Options 1 and 2 maybe essential policy options for the North-East of the Borough, but we wholeheartedly disagree that already built up areas should be further densified. ● Adoption of "no special protection" Option 3 would lead to significant harm, ● Expansion North of Kings Hill would contribute to the coalescence of communities. 		contravention of the stated preferred strategy not to coalesce communities."	
45644993	Q7 of the questionnaire	Option 1. Based on the assessments 4.6, 4.7 and 4.8, particularly 4.8, referring to increased transport movements. Concentrating developments in and around existing urban areas minimises the impact of "increased transport movements".	Noted.
45648321	Q7 of the questionnaire	<p>"It unreasonable to over-deliver and base the Local Plan on meeting the assessed housing needs target which we already believe is out of date and excessive. Also, there is no logic to suggest that building more housing to meet supposed demand will lower the price of houses in either of the Housing Market Areas it will simply stimulate more demand and more people will relocate here rather than meeting demand from within the borough. Option 2 will inevitably increase the likelihood of land being removed from the Green Belt for development which is opposed.</p> <p>Regarding the provision of healthcare facilities, it must be recognised that it is easier to build the physical medical centres than find trained medical staff who would work in them. The evidence that we have seen in the borough already is that we struggle to cope with the numbers currently required, let alone 10% more. Trained medical staff are in great demand and West Malling Group Practice is a good example and are constantly understaffed.</p> <p>In terms of land where there are mineral deposits, where these are scarce, they should be worked before any development is considered.</p> <p>It is likely that huge damage will be caused by large-scale development on the Green Belt around Tonbridge. Arterial roads and many junctions are already operating over-capacity, so the idea that we would increase this additional burden by voluntarily accepting 10% more housing makes no sense. The evidence highlights the fact that we have 7 Air Quality Management Areas which are likely to be negatively impacted even further by deSning locations for a further 10% beyond the target set for the borough by the Government.</p> <p>The proposal that building 10% more homes will have a favourable impact on affordability for those looking to buy property is rejected. The Housing Market Delivery Study does not indicate that market demand will support Option 2. We need to focus on providing accommodation for those living locally and that can be achieved by building truly affordable rented homes and we know that social housing is the way to deliver this.</p> <p>Regarding the five Spatial Strategy Options, although Option One is chosen the Sustainability Appraisal acknowledges that the council's previous policies have seen substantial development in the town centre. Although a relatively dense residential development, the area</p>	<p>To support the government's objective of significantly boosting the supply of homes, councils must identify a sufficient amount and variety of land to come forward where it is needed. Paragraph 61 of the National Planning Policy Framework (NPPF) states "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance". In line with this, TMBC commissioned a Housing Needs Survey¹ to provide up-to-date evidence on housing need.</p> <p>The purpose of the SA is to appraise all options throughout the plan-making process, and this includes two quantum options: (1) Meeting Assessed Housing Need; and (2) Meeting Assessed Housing Need + up to 10%. The appraisal of these two options will help the Council determine which option to pursue. Quantum Option 2 receives a mixed minor positive and uncertain minor negative effect in relation to SA objective 1: health and wellbeing. The minor positive effect is due to the fact it "would provide the critical mass needed to support provision of health and wellbeing related infrastructure", whilst the minor negative effect is due to the fact "delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded". The effect is recorded as uncertain, as "there is no evidence indicating a particular threshold at which development could result in health, education and other services and facilities becoming overloaded, and the effects will also depend largely on the extent of new provision that is made alongside new housing development".</p> <p>The SA gives consideration to Minerals Safeguarding Areas and recorded all effects against SA objective 13: material assets and waste as uncertain as "any negative impacts will depend on the specific location and scale of development, as well as its design and the extent to which mitigation measures are incorporated".</p> <p>Quantum Options 1 and 2 receive significant positive effects in relation to SA objective 14: housing. The SA states that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents".</p> <p>With regard to agricultural land, all five spatial options are recorded as having a significant negative effect against this objective (SA</p>

		<p>be sympathetic to nearby buildings and in harmony with existing examples of good design such as those on Medway Wharf Rd, the gabled building in the High Street and Whitefriars Wharf which acknowledge the towns history. It is better to have development in the town centre where car use will be reduced because of services being close to hand and the accessibility of rail services than to develop on Green Belt land. In SW Tonbridge, Higham Wood and around Trench Wood and on Tonbridge Farm, where there are few alternatives to using cars to access services, we have a massively congested traffic system with an Air Quality Management Area at its heart. A one-way system to divert 50% of traffic away from Tonbridge High Street may mitigate the eRects of more development in the town centre.</p> <p>Development in SW Tonbridge will have a detrimental effect on the setting of the High Weald Area of Outstanding Natural Beauty as the area is overlooked by it and of course negatively impacts respect biodiversity and the open aspect and character of the landscape would be detrimentally affected.</p> <p>As the report sets out the impact of development on the Green Belt around Tonbridge will have a knock-on effect in terms of flood risk to communities downstream such as East Peckham as it will increase the number of impermeable surfaces, because the water has to go somewhere!"</p>	With regard to the future development of Tonbridge options, the SA has appraised these. Neither has yet been chosen.
42168897	Q7 of the questionnaire	<p>"● Para. 4.38 Options to Prevent Merging of Settlements in the North-East of the Borough covers the area bounded by East Malling, West Malling and Kings Hill, i.e. Broadwater Farm.</p> <ul style="list-style-type: none"> ● Options 1 and 2 maybe essential policy options for the North-East of the Borough, but we wholeheartedly disagree that already built up areas should be further densified. ● Adoption of "no special protection" Option 3 would lead to significant harm, ● Expansion North of Kings Hill would contribute to the coalescence of communities. In direct contravention of the stated preferred strategy of the Local Plan. ● Expansion of buildings from East Malling through to West Malling by the building on 40 Acres and Winterfield would be in direct contravention of the stated preferred strategy not to coalesce communities" 	<p>The Interim SA Report identifies three options to prevent merging of settlements in the north-east of the Borough: (1) Extend the outer edge of the Green Belt; (2) An anti-coalescence/strategic gap policy; (3) No change to the existing Green Belt boundary and no gap policy.</p> <p>With regard to densifying existing built up areas, it is assumed that this comment instead relates to the two options for future development of Tonbridge. The SA provides an appraisal of these different options to help the Council establish a way forwards regarding future development.</p>
45657281	Q7 of the questionnaire	Option 1. Based on the assessments 4.6, 4.7 and 4.8, particularly 4.8, referring to increased transport movements. Concentrating developments in and around existing urban areas minimises the impact of "increased transport movements".	Noted.
45712961	Q7 of the questionnaire	Assessment assumes that defined Urban Areas have the services and infrastructure to support further expansion. West Malling and Kings Hill transport infrastructure, parking, medical facilities and schools are unable to support the existing number of residents and dwellings.	Noted.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42609601	Q7 of the questionnaire	<p>"The answer to this question is split into two subsections Quantum Options and Spatial Options.</p> <p>Quantum Options</p> <p>It is noted that the Sustainability Appraisal at paragraph 4.6 is concerned that Option 2 could cause minor negative effects as it could put a strain on existing services. However, it is unclear how the SA has considered the way in which the provision of more homes could actually help deliver or fund via S106 contributions the expansion or provision of new services and infrastructure. In addition, the SA should recognise how additional growth at RSCs for example could enable a critical mass of population to be achieved to allow for services such as GP's to return to RSCs where they may have left previously due to it being unviable for them to remain there.</p> <p>In addition, we note that paragraph 4.9 questions whether Option 2 would be deliverable, as it considered that "... this level of housing delivery would be in excess of what the local housing markets have supported over the past decade, as demonstrated by the Housing Market Delivery Study. Therefore, there is uncertainty attached to this option as there is a question mark around its deliverability." However, we would be concerned with the deliverability of this Option being questioned because of historic trends, given a driving factor for historic delivery rates would have been any constraints to deliver new homes applied by the prevailing planning policy context.</p> <p>Spatial Options</p> <p>As identified above, it is therefore considered that a balanced and blended approach to Spatial Options 4 and 5 will likely be required to meet the housing needs of the Borough. These Spatial Options will best ensure that a wide range of sites, including smaller and larger plots, development adjacent settlements, on green field and on brownfield are delivered, which will assist in providing for a consistent supply of homes across the Plan period."</p>	<p>The SA acknowledges under Quantum Option 2 that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities. Therefore, the minor positive effect against SA objective 1: health and wellbeing for Quantum Option 2 is coupled with a minor negative effect. The SA states that all effects are uncertain at this stage, as there is no evidence indicating a particular threshold at which new development could result in health and other services and facilities becoming overloaded. The same applies in relation to SA objectives 2: services and facilities and 3: education. The SA also acknowledges in paragraph 4.6 that with regard to Quantum Option 2 "...this extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p> <p>Residents cannot necessarily choose to attend a different GP surgery in a different settlement, as they must fall within the catchment area for a GP surgery.</p> <p>With regards to deliverability and historic delivery rates, providing housing that meets the assessed need would be more likely to be achieved than providing housing higher than the assessed need.</p>
43485921	Q7 of the questionnaire	<p>"P. 4.38 Options to Prevent Merging of Settlements in the North-East of the Borough is of great significance to BAG as it covers the area bounded by East Malling, West Malling and Kings Hill, i.e.: Broadwater Farm. Although BAG strongly believes that Options 1 and 2 are essential policy options for the North-East of the Borough, and any adoption of ""no special protection"" Option 3 would lead to significant harm, BAG does not agree with all the findings of the strategic policy option assessments.</p> <p>The statement regarding the land being Grade 2 is misleading as the soil analysis carried out on land in the Medway gap by KCC clearly shows it as Grade 1 and Grade 2. Any reference to adverse and minor</p>	<p>The SA states that a high proportion of land between Kings Hill, West Malling and East Malling is Grade 2 agricultural land. Due to the high-level nature of the options to prevent merging of settlements, it is difficult for the SA to be more specific than this. The SA does not say that there is no Grade 1 agricultural land here, just that most of it is Grade 2. Options 1 and 2 receive minor positive effects on SA objective 9: soils, as they would prevent development on the agricultural land. The significance of all effects has been applied correctly.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>negative effects of adopting Options 1 or 2 should be disregarded as building on this farmland and open countryside would be irreversible with blatant destruction of these assets.</p> <p>BAG believes some of the positives associated with Option 1 and Option 2 have been underrepresented. For example SA Objection 9 ""To conserve and enhance soil resources and guard against land contamination"" should be strong positives for obvious reasons. Additionally, Option 3 understates its negative effects e.g. SA Objective 8 ""To protect and enhance the quality of water features and resources"" should be a strong negative, not a ""O"" due to an inevitable impact on the area's abundant and now well documented hydro-geological features.</p> <p>Any expansion North of Kings Hill would contribute to the coalescence of communities. In direct contravention of the stated preferred strategy of the Local Plan."</p>	
45742881	Q7 of the questionnaire	<p>"Quantum Options</p> <p>In terms of the quantum of overall housing, we do not agree with the scope of the options presented and assessed within the Interim SA. A particular concern (as detailed in our response to Question 6), is that the SA only considers options to either met the minimum Standard Method housing need figure, or to exceed that figure by 10%.</p> <p>The Interim SA provides a clear, and agreed, justification for not exploring options to promote development below the 839dpa Standard Method figure, noting references to worsening levels of housing affordability and national planning policies. The document also explains (at paragraph 4.4) that a figure of up to 10% above the evidence-based need is to be tested, '...to see what is realistically achievable in the context of the local housing markets and being mindful of the need for flexibility to be able to adapt to rapid change.'</p> <p>However, the selection of only a 10% increase appears arbitrary and we consider this scenario should have been considered alongside options for further uplifts (i.e. over and above a 10% increase). Indeed, noting that a 20% buffer is currently applied for the purposes of calculating the 5YHLS position, it is not clear why an option for a 20% increase was not tested. It would also be appropriate to test the effects of an increased housing requirement to support Duty-to-Cooperate discussions with neighbouring Local Authorities.</p> <p>With respect to Table 4.1, we are unconvinced by the suggestion that an increase of 10% (i.e. 1,594 dwellings) would result in significantly</p>	<p>The quantum options subject to SA were identified by TMBC. It is reasonable, as a starting point, for one quantum option to be the assessed need generated by the Government's standard method. Quantum Option 2 is the assessed need + up to 10% therefore providing a buffer.</p> <p>Quantum Option 2 was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific higher growth figures on. An even higher growth scenario of assessed need + 20% would not yield particularly different SA effects to Quantum Option 2, as both options are relatively similar and so it would be difficult to distinguish between the effects each is likely to have. +10% was considered a proportionate uplift for consideration.</p> <p>The SA acknowledges that an increase of 10% has more potential to cause capacity issues with existing services and facilities. However, it also acknowledges that with regard to an increase of 10%, the Borough "has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p> <p>With regard to climate change, Quantum Option 2 receives a significant negative effect (as part of a mixed effect) because a higher level of housing growth is likely to result in increased transport movements, as there will be more people with private cars and a subsequent increase in CO₂ emissions. This will contribute to climate change, as well as poor air quality – particularly as there are seven Air Quality Management Areas (AQMA's) within the Borough.</p> <p>The reasoning behind the effects each Quantum Option is expected to have is outlined in paragraphs 4.6 to 4.10 of the full Interim SA Report. Quantum Option 2 receives minor negative effects (as part of a mixed minor effect) against SA objectives 1: health and wellbeing, 2: services and facilities, and 3: education because as explained in the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>greater effects or impacts, when compared to the baseline Standard Method figure of 15,941. The assumption made in respect of SA Objectives 1, 2, and 3 appears to be that additional growth (above the baseline) will place increased pressure on services and infrastructure.</p> <p>However, the reasoning set out in the Interim SA (at paragraphs 4.6 to 4.10) appears to ignore the potential for increased housing delivery to facilitate additional infrastructure, in the form of new health centres, community facilities and schools, etc. We suggest that Option 2 (+10% housing growth), should be scored more positively than Option 1 in respect of SA objectives 1 to 3.</p> <p>Similarly, it is counter-intuitive to assume that an option for a higher level of housing growth would result in worse climate change and air quality outcomes. Ultimately, the impacts of increased levels of growth will depend on the subsequent strategy for distribution. For example, it is an intuitive proposition that a higher housing requirement is likely to result in additional allocations for larger-scale developments. Such larger-scale developments tend to provide greater potential to enhance public transport, improve pedestrian and cycle connectivity, etc. This would seem to reduce the potential consequence to climate change and air quality impacts. Indeed, there are latent opportunities to maximise the benefits from existing transport nodes within the Plan-area."</p>	<p>report, delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities, services and facilities, and schools. However, the Interim SA Report also acknowledges that the extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities.</p> <p>Spatial Option 5 is likely to have a significant negative effect (as part of a mixed effect) against SA objective 10: climate change mitigation because it will direct some growth towards rural settlements where there is lower service and facility provision, which is likely to increase private car travel.</p> <p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p>
45934529	Q7 of the questionnaire	Assessment assumes that defined Urban Areas have the services and infrastructure to support further expansion. West Mallong and Kings Hill transport infrastructure, parking, medical facilities and schools are unable to support the existing number of residents and dwellings.	Noted.
46010689	Q7 of the questionnaire	Option 1. Based on the assessments 4.6, 4.7 and 4.8, particularly 4.8, referring to increased transport movements. Concentrating developments in and around existing urban areas minimises the impact of "increased transport movements".	Noted.

46163713	Q7 of the questionnaire	<p>"Answer: Broadly yes but the following two options should be No 1 and 2 and given significant weight. If the earth's climate continues in its erratic course then no one will be very much worried by the other options at that stage</p> <p>10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>11: To improve adaptation to climate change so as to minimise its impact"</p>	Noted.
38377665	Q7	I agree with all the broad principles and aspirations but am not sure about the conclusions. Not clear how these are arrived at and there are too many question marks.	Due to the high-level nature of SA, uncertainty has been added to some of the effects.
42330433	Q7	The report is of poor quality. It is full of unexplained acronyms. It has meaningless assessments e.g. "-/+?" and it lacks evidence or explanations for its assessments (by comparison to the urban capacity study which at least offers some rigour to its findings).	<p>The SA Report was accompanied by a Non-Technical Summary. The SA Report itself is necessarily technical in nature given the range and quantity of data that needs to be gathered and analysed.</p> <p>All letters in abbreviated form have been fully named in the report. Chapter 2 explains how the assessment has been undertaken and Table 2.1 provides a key to the symbols and colour coding used throughout the report. The assessment criteria against which the sites have been appraised are provided in Appendix D.</p>
25315361	Q7	It is isn't sufficient for a site to be within 400m of a bus stop, there should be at least one bus a day every weekday, even in school holidays.	SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.
39011745	Q7	Chapter 4 appears to try to compare options with no specific conclusions. However, there are concerns that the descriptions are not balanced.	The Interim SA Report provides an appraisal of different options that the Council is considering for the emerging Local Plan. Consideration is not given in SA to existing policies in adopted Local Plans.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>With regards to Kings Hill, CP11 deprecates any development outside of the town itself, CP12 similarly constrains development around West Malling and CP13 should be taken into account.</p> <p>There are excessive active travel issues; Kings Hill is not effectively connected to the cycle and public footpath network, and joint use of pavements for pedestrians and cyclists where the pavements do not meet the guidelines for such use, impacts take-up of active travel, and discourages walking and access for disabled people.</p> <p>I would like to highlight that the KCC plan for cycle connectivity for the previous decade has not been implemented; this would have resulted in significant improvements. In addition I considers that the developer obligation to link onto the public footpath network has not been effectively addressed. These issues are resulting in rapidly deteriorating infrastructure for active travel which needs to be addressed as a matter of urgency.</p>	<p>The SA is too high-level to give consideration to specific road networks and congestion. However, in the site-specific appraisals, consideration is given to the proximity of sites to existing walking and cycling paths. It will be the role of the Local Plan to help address the active travel issues mentioned by the respondent.</p>
42585633	Q7	<p>Chapter 4 appears to try to compare options with no specific conclusion. However the descriptions are not balanced.</p> <p>With regards to Kings Hill CP11 avoids any development outside the town itself, CP12 similarly limits development around West Malling and CP13 should be taken into account.</p> <p>There are significant travel issues , Kings Hill is not connected to the cycle /public footpath network, joint use of pavements for pedestrians and cyclists where pavements do not meet the required guidelines deters the take up of active travel and discourages walking and access for disabled people. The result is rapidly deteriorating infrastructure for active travel</p>	<p>The Interim SA Report provides an appraisal of different options that the Council is considering for the emerging Local Plan. Consideration is not given in SA to existing policies in adopted Local Plans.</p> <p>The SA is too high-level to give consideration to specific road networks and congestion. However, in the site-specific appraisals, consideration is given to the proximity of sites to existing walking and cycling paths. It will be the role of the Local Plan to help address the active travel issues mentioned by the respondent.</p>
42527265	Q7	<p>I feel the appraisals of sites shows a fundamental lack of knowledge of the East side of the borough and many of the objective make inaccurate assumptions. There has already been at least a doubling of dwellings with little or no infrastructure provision. A bus stop does not mean there is a bus service, a school does not mean residents children will have access to it if it is already full. If the medical facility is already unable to cope with the current resident, how can additional dwellings even be considered?</p> <p>The lack of public transport requires most households to have at least 2 cars, increasing emissions and additional strain on an already saturated rural road network. Any development in the 'other rural' hierarchy should stipulate any 2/3 bed dwellings have at least 2 parking spaces. Any Travel Plans require full scrutiny. It is pointless stating that there will be increased cycle travel if there are no cycle lanes and the road are too dangerous to use as well as not having any linking infrastructure.</p>	<p>The site appraisals have been informed by numerous data sources including from the Borough Council, County Council, Natural England, the Environment Agency and Historic England.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to education, the site assessment criteria acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p>
42683265	Q7	<p>This is very hard to follow and not set out in a manner conducive to informed and widespread public comment. Even the colour assessment is not clear as the hues do not follow a logical gradation to reflect positive and negative outcomes. The limited options appraised are already flawed by the incorrect hierarchy of settlements which fails to reflect the connectivity and sustainability of each location, only the historic size of settlements. Most of the sustainability criteria, water, land, historic environment, air quality, climate and human health as well as economy will be harmed if the housing needs are met by locating new housing distant from the main transport hubs, motorway, A21 and railways, unless major new infrastructure is inserted, which is currently not affordable.</p> <p>The determining factor for the siting and provision of new dwellings must be proximity to the existing transport network and the hierarchy for development locations should reflect this.</p> <ol style="list-style-type: none"> 1. Intensification of development in established urban areas with railway stations, specifically Medway gap, Snodland and Tonbridge. Comprehensive new development in the centre along the High Street, rethinking the retail environment and on Railtrack land round the station. A eastern bypass/ ring road link is required to reduce through traffic. 2. New development around all the rural railway hubs, in particular at West Malling and Hildenborough Stations and Borough Green. There will be some loss of green space, but this harm is outweighed by meeting the housing need in locations with pedestrian access to the rail network or direct access to the motorway network. 3. Development in isolated rural settlements, distant from these transport hubs, should be limited, regardless of whether they are larger, Hadlow, East Peckham, or smaller villages, as non of these settlements has sufficient services to be self sustaining and all will just put more cars on the borough's roads with more bottlenecks and pollution. Extended development of these rural settlements will 	<p>The SA Report was accompanied by a Non-Technical Summary. The SA Report itself is necessarily technical in nature given the range and quantity of data that needs to be gathered and analysed.</p> <p>The PDF version of the Non-Technical Summary available online is in an 'Accessible format', which means that it has been formatted to meet the requirements of the Public Sector Bodies (Websites and Mobile Applications) Accessibility Regulations (2018). The template abides by WCAG 2.1 regulations to the highest standard (level AAA). The report is therefore accessible to those whose are colour blind.</p> <p>Chapter 4 of the Interim SA Report provides an appraisal of quantum options, spatial options, the future development of Tonbridge options and options to prevent merging of settlements in the north east of the Borough. The spatial options look at different options for the distribution of development within the Borough, with the options covering larger urban areas scoring more positively than others.</p> <p>Spatial Option 1 covers sites within and adjacent to settlements beyond the outer Green Belt boundary and Areas of Outstanding Natural Beauty, Spatial Option 2 covers sites within and adjacent to defined urban settlements, Spatial Option 3 covers sites within and adjacent to defined urban and rural service centre settlements, Spatial Option 4 supports distributed development across the Borough, which will include more rural areas, and Spatial Option 5 considers a new settlement. The defined urban settlements have good access to public transport links compared to more rural areas, and this is reflected in the appraisal of these options – particularly in relation to SA objective 10: climate change mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		further degrade the rural environment, reduce the agricultural & ecological potential of the borough and increase suburbanisation, with no compensating benefits.	
38333377	Q7	This is such an unweildy consultation that the there should of been a completely separete process to develop the sustainability objectives and the findings in the appraisal report.	The Scoping stage of the SA was completed in November 2021. This included the SA framework, which comprises the SA objectives. Consultation was undertaken with the three statutory consultees as required (the Environment Agency, Natural England and Historic England) and LUC updated the SA framework to reflect their comments. LUC also made some amendments to the framework to ensure it was consistent with best practice.
42719137	Q7	<p>I have looked at each of the 4 summary of SA findings tables in the interim sustainability report covering:</p> <ul style="list-style-type: none"> - Quantum Options - Spatial Options - The future development of Tonbridge Options - Options to prevent the merging of the settlements in the North East of the Borough <p>Unfortunately I find that I agree with some of the findings whilst disagreeing with others therefore, I would have to go through each of the 4 assessments line by line indicating whether I agree or not and why. There are not enough characters in this space to do that. I think this is an unfair question as it cannot be answered here and would be very time consuming to answer properly. Therefore, the reason I have answered 'NO' is because I cannot agree with all the findings.</p>	Noted.
42641505	Q7	<p>Quantum options: Option 1</p> <p>THERE IS ZERO CONSIDERATION IN THE LOCAL PLAN FOR EXPLICIT RETENTION OF AGRICULTURAL LAND TO ENCOURAGE DOMESTIC FOOD SECURITY AND LOW CARBON FOOTPRINT PRODUCTION.</p> <p>It is unreasonable to overdeliver based on predictions using data that can be considered out of date and inaccurate.</p> <p>There is no logic to suggest that building additional houses decreases prices to improve affordability (see major developments such as Kings Hill) as this would be of disbenefit to the house builders to sell below market value.</p> <p>Regarding the provision of healthcare facilities, it must be recognised that it is easier to build the physical medical centres than find trained medical staff who would work in them. The evidence that we have seen in the borough already is that we struggle to cope with the numbers currently required, let alone 10% more. Trained medical staff are in great demand and West Malling Group Practice is constantly understaffed.</p> <p>Arterial roads and many junctions are already operating over-capacity, so the idea that we would increase this additional burden by voluntarily accepting 10% more housing makes no sense.</p>	<p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification (not Placemaker) to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land receive a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land receive a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the Borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>To support the government's objective of significantly boosting the supply of homes, councils must identify a sufficient amount and variety of land to come forward where it is needed. Paragraph 61 of the National Planning Policy Framework (NPPF) states "To determine the minimum number of homes needed, strategic policies should be</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Some Routes such as the A245 operate as alternative routes for the A21 upon the regular closures and this over capacity usage needs to be considered.</p> <p>The evidence highlights the fact that we have 7 Air Quality Management Areas which are likely to be negatively impacted even further by defining locations for a further 10% beyond the target set for the borough by the Government.</p> <p>The proposal that building 10% more homes will have a favourable impact on affordability for those looking to buy property is rejected. The Housing Market Delivery Study does not indicate that market demand will support Option 2.</p> <p>We need to focus on providing accommodation for those living locally and that can be achieved by building truly affordable rented homes and evidence supports that social housing is the way to deliver this.</p> <p>Regarding the five Spatial Strategy Options, although Option One is chosen the Sustainability Appraisal acknowledges that the council's previous policies have seen substantial development in the town centre. Although a relatively dense residential development, the area identified around the Angel Centre and the commercial centre of Tonbridge will reduce the need to build elsewhere at a higher environmental cost and impact on the Green Belt.</p> <p>There are huge reservations about sites proposed in flood risk areas and although there are mitigating architectural solutions to the potential resilience of some town centre sites using SUDS, fluvial and surface water flooding will have ever-worsening impact on communities who will be living there.</p> <p>Modelling demonstrates that the flash flooding due to intense summer rain will be an increasingly frequent occurrence.</p> <p>1 - Developments do not necessarily improve human health or well being.(should be +/-)</p> <p>2 - Access to facilities and services depends on availability, where (eg GP) are at capacity and no new provision is given as the GP is within 800m of a development the service will likely be unavailable. Also links between a development (walking, cycle, car depend on additional facilities that may or may not be provided or fit for purpose. (should be +/-)</p> <p>3- Building houses does not improve educational attainment. (should be +/-)</p> <p>5, 6,7,9 are not question marks. building houses will definitely be negatives due to loss of greenspace, habitat, change to identity, soil contamination or removal from the building process. (should be --)</p> <p>10 - Any new houses and roads will require huge quantities of building materials including concrete that generate greenhouse gases and pollution. (should be --)</p>	<p>informed by a local housing need assessment, conducted using the standard method in national planning guidance". In line with this, TMBC commissioned a Housing Needs Survey to provide up-to-date evidence on housing need.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>The SA is too high-level to consider traffic levels, and the Council will commission additional evidence on matters including traffic.</p> <p>The SA does give consideration to the Air Quality Management Areas (AQMA's) present within the Borough, under SA objective 12: air quality. If a site is within 100m of an AQMA, it receives a significant negative effect. This is due to the fact development could increase levels of air pollution as a result of increased vehicle traffic.</p> <p>No spatial strategy options have been chosen. Instead, the SA provides an appraisal of each spatial strategy option.</p> <p>The SA also gives consideration to flood risk, under SA objective 8: water. If a site is within Flood Zone 3, at a 1 in 30 year risk of surface water flooding and contains waterbodies or watercourses, it receives a significant negative effect.</p> <p>The reasoning behind the effects given for Quantum Option 1 are provided on pages 79-85 of the Interim SA Report. Due to the high-level nature of the strategic policy options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p> <p>The SA does not state that building houses improves educational attainment. Instead, it states "New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage".</p> <p>The quantum options have been appraised on the basis that they would have a wide range of effects across the SA objectives. However, it is recognised that there is considerable uncertainty depending on the eventual location of housing development. As such, a number of the effects are recorded as uncertain.</p> <p>SA objective 14 covers housing delivery. As set out in the site assessment criteria "All of the residential site options are expected to have positive effects on this objective, due to the nature of the proposed development. The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>11 - Any building will lead to climate change impact, even the use of heat pumps and solar panels needs raw materials that are either strip mined or are petrochemical products. (should be --)</p> <p>12 - New houses will reduce air quality by removing green space that is a carbon and pollution sink as well as introduce more traffic during building and for new residents.(should be --)</p> <p>14 - There is no guarantee the developers will provide this. Original planning applications are regularly deviated from to avoid providing public services and more smaller houses. There is no suggestion of provision for social housing in this plan where those in need who will never be able to afford to buy can be homed. There is no mention of limits to house sizes, properties over 4 bed should be exempt from this plan as they should be provided on an individual basis not as part of government housing "need" assessments.</p> <p>Consideration needs to be made for population transfer that large new developments by national housebuilders who advertise beyond the borough boundaries and encourage incoming populations.</p> <p>A large proportion of the houses developed within its borough are not 'affordable housing or social' and are promoted and sold by it's developers to outside interest. Since the covid pandemic of 2020, there has been a significant increase of population transfer from outside the borough (mainly London). With the current London transport links, TMBC borough is highly sought after area, which increases house prices, competition and reduction of available housing to the existing residents.</p>	<p>including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings" [emphasis added].</p> <p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>
42773473	Q7	<p>There is insufficient evidence based research to back up the Interim sustainability report, where are they? I would expect to see:- 1 - Independant Climate change evidence 2 - Comprehensive independent Green belt study detailing best & worst performing Green belt areas based on bio diversity criteria 3 - Strategic planning models linked to proposals that reduce Carbon footprints so you can select the most environmentally sustainable for the future.</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>Appendix C provides the baseline information for Tonbridge and Malling. The purpose of the baseline information is to identify the key sustainability issues affecting the Borough (outlined in Chapter 3). These are then used to develop the SA framework against which the Local Plan is assessed (the SA framework can be found in Chapter 4 of the Interim SA Report). There is a section in the baseline information dedicated to climate change, containing information from numerous internal and external sources.</p> <p>The baseline information summarised in Appendix C has helped inform the appraisal of the Local Plan, including the strategic and spatial options, and reasonable alternative development site options.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Information on biodiversity is also provided in the baseline information section of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42773057	Q7	I don't agree that building 10% more homes will have an impact on affordability and if anything will just encourage people from out of the area to move here rather than encourage existing residents - and the next generation - to stay.	<p>To support the government's objective of significantly boosting the supply of homes, councils must identify a sufficient amount and variety of land to come forward where it is needed. Paragraph 61 of the National Planning Policy Framework (NPPF) states "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance". In line with this, TMBC commissioned a Housing Needs Survey to provide up-to-date evidence on housing need.</p> <p>The purpose of the SA is to appraise all options throughout the plan-making process, and this includes two quantum options: (1) Meeting Assessed Housing Need; and (2) Meeting Assessed Housing Need + up to 10%. The appraisal of these two options will help the Council determine which option to pursue.</p> <p>Quantum Options 1 and 2 receive significant positive effects in relation to SA objective 14: housing. The SA states that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents". The provision of affordable housing is likely to encourage people to stay in the area, as well as encourage people to move to the area. As mentioned in the baseline information section of the Interim SA Report, the 2020 housing affordability ratio indicates that Tonbridge and Malling Borough (11.79) is less affordable than the surrounding areas of Medway (7.57), Gravesham (8.4), and Maidstone (10).</p>
42756225	Q7	I find too many question marks shown in the table to make this meaningful. The tables colour coding seems to lack a key so is therefore meaningless.	<p>Table 2.1 in Chapter 2 of the Interim SA Report provides a key to the symbols and colour coding used throughout the SA.</p> <p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p>
42799361	Q7	<p>I do not consider it reasonable to over-deliver and base the Local Plan on meeting the assess housing needs target which I believe is out of date and excessive. I also believe that there is no logic to suggest that building more housing to meet supposed demand will lower the price of houses in either of the Housing Market Areas, it will simply stimulate more demand and more people will relocate here rather than meeting demand from within the borough I reject Option 2 as it will inevitably increase the likelihood of land being removed within the borough. I reject Option 2 as it will inevitably increase the likelihood of land been removed from the Green Belt for development which I oppose.</p> <p>Regarding the provision of healthcare facilities, it has to be recognised that it is easier to build the physical medical centres that actually find trained medical staff who would work in them. I believe that using the evidence that I have seen in the borough already that we would</p>	<p>To support the government's objective of significantly boosting the supply of homes, councils must identify a sufficient amount and variety of land to come forward where it is needed. Paragraph 61 of the National Planning Policy Framework (NPPF) states "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance". The appraisal of these two options will help the Council determine which option to pursue. Quantum Option 2 receives a mixed minor positive and uncertain minor negative effect in relation</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>struggle to cope with the numbers currently required let alone 10% more. Trained medical staff are in great demand and West Malling Group Practice are a good example and are constantly understaffed.</p> <p>In terms of land where there are mineral deposits, I believe that where these are scarce, they should be worked before any development is considered.</p> <p>It has been identified the huge damage that largescale development on the Green Belt around Tonbridge will have on our arterial roads and many junctions which are already operating over capacity the idea that we would increase this additional burden by voluntarily accepting 10% more housing makes no sense. The evidence highlights the fact that we have 7 Air Quality Management Areas which are likely to be negatively impacted even further by defining locations for a further 10% beyond the target set for the borough by the Government.</p> <p>I absolutely reject the idea that building 10% more homes will have a favourable impact on affordability for those looking to buy property. The Housing Market Delivery Study does not indicate that market demand will support Option 2. We need to focus on providing accommodation for those living locally and that can be achieved by building truly affordable rented homes and we know that social housing is the way to deliver this.</p> <p>Regarding the five Spatial Strategy Options I have chosen Option 1 although as the Sustainability Appraisal acknowledges that the councils previous policies have seen substantial development in the town centre, I accept that more relatively dense residential development in the area identified around the Angel Centre and the commercial centre of Tonbridge will reduce the need to build elsewhere at a higher environmental cost and impact on the Green Belt.</p> <p>I do not believe that sufficient importance has been place on retaining agricultural land in order to encourage and facilitate food security for the UK in this report and I oppose development on Grade 1, 2, and 3 Agricultural Land.</p> <p>I have huge reservations about sites proposed in flood risk areas and although I accept there are mitigating architectural solutions to the potential resilience of some town centre sites used SUDS, we have to be mindful that fluvial and surface water flooding will be worsening influences on the communities who will be living here and modelling demonstrates that the flash flooding due to intense summer rain will be an increasingly frequent occurrence.</p> <p>The future development of Tonbridge sets out two options and I support Option 1. However, I do not support development higher than 5 storeys and I would expect the architecture of any new development to be sympathetic to nearby buildings and to be in harmony with existing examples of good design at Medway Wharf Rd the gabled building in the High Street and Whitefriars Wharf which acknowledge the towns history. It is better to have development in the town centre</p>	<p>to SA objective 1: health and wellbeing. The minor positive effect is due to the fact it "would provide the critical mass needed to support provision of health and wellbeing related infrastructure", whilst the minor negative effect is due to the fact "delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded". The effect is recorded as uncertain, as "there is no evidence indicating a particular threshold at which development could result in health, education and other services and facilities becoming overloaded, and the effects will also depend largely on the extent of new provision that is made alongside new housing development".</p> <p>The SA gives consideration to Minerals Safeguarding Areas and recorded all effects against SA objective 13: material assets and waste as uncertain as "any negative impacts will depend on the specific location and scale of development, as well as its design and the extent to which mitigation measures are incorporated".</p> <p>Quantum Options 1 and 2 receive significant positive effects in relation to SA objective 14: housing. The SA states that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents".</p> <p>With regard to agricultural land, all five spatial options are recorded as having a significant negative effect against this objective (SA objective 9: soil). Only Spatial Option 2 is recorded as also having a minor positive effect, as a greater focus on the larger urban areas in the Borough may encourage a higher share of previously developed land that comes forward for development. Consideration is also given to the Agricultural Land Classification in the site appraisals, whereby sites on Grade 1 or 2 agricultural land receive a significant negative effect and sites on Grade 3 agricultural land receive an uncertain significant negative effect.</p> <p>Consideration is also given to flooding in this SA, with sites in Flood Zone 3 and/or land with a 1 in 30 year risk of surface water flooding receiving significant negative effects, and sites in Flood Zone 2 and/or land with a 1 in 100 year risk of surface water flooding receiving minor negative effects.</p> <p>With regard to the future development of Tonbridge options, the SA has appraised these. Neither has yet been chosen.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>where car use will be reduced as a consequence of services being close to hand and the accessibility of rail services than to develop on Green Belt land in SW Tonbridge, Higham Wood and around Trench Wood and on Tonbridge Farm where there are few alternatives to using cars to access services through a massively congested traffic system with an Air Quality Management Area at its heart. We will require a one way system to divert 50% of traffic away from Tonbridge High Street to mitigate the effects of more development in the town centre.</p> <p>Development in SW Tonbridge will have a detrimental effect on the setting of the High Weald Area of Outstanding Natural Beauty as the area is overlooked by it and of course the impacts in respect of biodiversity and the open aspect and character of the landscape would be detrimentally affected.</p> <p>As the report sets out the impact of development on the Green Belt around Tonbridge will have a knock on effect in terms of flood risk to communities downstream such as East Peckham as it will increase the number of impermeable surfaces, the water has to go somewhere!</p>	
42815521	Q7	<p>THIS QUESTION IS WORDED AMBIGUOUSLY / POORLY. You appear to be including both Quantum and Spatial Options in the same consultation question and this will confuse many respondents.</p> <p>Since assessed housing need includes inflow from other HMAs it is hard to see how even Quantum Option A could be said to have any positive health impacts FOR THE RESIDENTS OF THIS BOROUGH. As it is there is significant pressure on both health and education services and the suggestion that by increasing demand the services will magically improve is not borne out by historical experience.</p> <p>It is also highly questionable whether relaxation of planning rules as required in Spatial Options 2 and 3 will encourage economic growth or business development.</p>	<p>Quantum Options 1 and 2 both receive minor positive effects in relation to SA objectives 1: health and wellbeing and 3: education, as both support growth in the Borough, which has the potential to support the delivery of new healthcare and education facilities. It is expected that both quantum options would provide the critical mass needed to support provision of health and education facilities. The minor positive effect Option 2 is expected to have is coupled with a minor negative effect, as delivering growth beyond assessed needs has more potential to cause capacity issues at existing health and education facilities if they become overloaded.</p> <p>All five Spatial Options receive significant positive effects in relation to SA objective 4: economic growth, as they will each deliver employment land within the Borough, which will provide a range of employment opportunities for residents. Spatial Options 1, 4 and 5 also receive minor negative effects in relation to this objective, as they may be too constrained in their focus on growth in certain areas of the Borough, including smaller rural settlements that are poorly connected to the main employment locations.</p>
42832833	Q7	<p>Option 2 provides the scenario that will deliver the required Objectively Assessed Housing Need ('OAHN') (839 dpa) +10%. Whilst the additional mass could put local services/infrastructure under pressure, this could be mitigated through financial contributions from the developers and a robust and clear infrastructure delivery strategy that supports this level of growth. As set out in the response to Question 6, the OAHN should be a minimum and through the emerging Local Plan, there is an opportunity to ensure local services/infrastructure are enhanced and deliver what is required to support growth in a sustainable manner – this includes the enhancement to local services/infrastructure.</p>	<p>Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Quantum Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>With regard to SA objectives 10: climate change mitigation and 12: air quality, providing more housing as proposed under Quantum Option 2 is likely to increase the number of cars on the road and associated emissions. As Option 2 proposes more development than Option 1, it is expected to have more significant effects than Option 1.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		In respect of Objective 10 (to reduce greenhouse gas emissions) and 12 (to improve air quality) – whilst providing over and above the OAHN, as set out in the Sustainability Appraisal, development is “likely to provide investment into sustainable transport improvements within the borough, which may reduce the share of trips that are taken by private car by residents”.	
42832705	Q7	<p>For any development to meet its sustainability objectives it needs to recognise the environment in which it is being proposed: \to acheive SA 2. it needs to be recognised that any development between East Malling into West Malling from Mill Street along Claire Lane would require new pavements and lighting so that any new housing would have access to existing community facilities without encouraging additional motor vehicle use (SA10); additional pavements and lighting along Claire Lane would cause damage to a distinct countryside environment impacting wildlife habitat (SA 5 and SA 6) through disruption of wildlife habitats and interruption of "darksies" environments; the scale of the developments will materially impact what has been described in the "East Malling Conservation Study" as an areas of "Unspoilt beauty" and would disturb the distinct, historic characters of East Malling and West Malling villages</p> <p>Regarding SA 11 and 12: Incomplete ecology impact and air quality surveys need to be completed and associated issues addressed in line with the overall, cumulative impact of changes resulting from proposed development (not on a case-by-case basis) need to be addressed against very localised claims (e.g biodiversity increases in localised developments e.g unqualified/ unquantified 30% increases in biodiversity)</p> <p>Regarding SA 14: Of the proposed developments only a very small proportion are affordable to young buyers in the local demographic</p>	<p>It is not clear whether the sustainability objectives the respondent refers to are the SA objectives that comprise the SA framework within the Interim SA Report, or different objectives separate to the SA that developments must meet. The SA is a high-level tool used to identify the likely sustainability effects of a plan, and is one of many factors that feed into the plan-making process. The SA objectives provide a guide for the appraisal of options, be it policy options or site options.</p> <p>The SA is too high-level to consider pavements and lighting. This is instead something that is determined once more specific proposals are developed and submitted as part of a planning application. The SA does, however, give consideration to the landscape and what effects development will have on the landscape, under SA objective 6: landscape and townscape.</p> <p>Biodiversity is addressed under SA objective 5: biodiversity and geodiversity. Information on how sites have been appraised against this objective is provided in Appendix D of the Interim SA Report.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for things like air quality surveys to be undertaken as part of the work. The Council will, however, commission additional evidence on matters including traffic and air quality. SA objective 12: air pollution looks at the distance sites are to Air Quality Management Areas.</p>
42437729	Q7	<p>The Interim Sustainability Appraisal Report is only considering the current position and constraints. For example, when assessing the spatial options, particularly for Option 5, it does not consider what this option would look like if services were improved - i.e. new healthcare facilities, new schools, new transport links.</p> <p>Why not? If you continue to appraise against the same restrited criteria you will get the same answer - we know the answer isn't right otherwise the previous plan would not have been withdrawn. It very much feels like this plan is being drafted to direct towards predetermined answers rather than looking at the plan with a blank sheet of paper.</p>	<p>The purpose of the SA is to appraise all options throughout the plan-making process, against the current baseline (Appendix C of the Interim SA Report). The baseline information provides the basis against which to assess the plan, as set out in Planning Practice Guidance 016-20190722.</p>
42466209	Q7	<p>I do agree with some parts, the air quality pressures for example, how new builds could overwhelm the current facilities, services and schools. However I don't believe that building more homes automatically means they become affordable. Most current houses here are outside of the many peoples price range and all new homes that have been built so far are priced far higher than the national average, I can't imagine the building companies will price them lower</p>	<p>The baseline information section of the Interim SA Report (Appendix C) acknowledges the fact Tonbridge and Malling Borough is less affordable than the surrounding areas of Medway, Gravesham, and Maidstone. As mentioned in the SA, a higher level of housing supply has more potential to address housing affordability.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		that what they could achieve for them. That makes no business sense and that's what they are at the end of the day, a business.	
42720705	Q7	<p>I challenge the sustainability appraisal for at least the following ref nos:59750,59749,59599,59597,59752,59816,59598,59759,59760,59755 ,59758,59754,59757, and 59761. All these are in the surrounds of Mereworth village.</p> <ol style="list-style-type: none"> 1. The village is surrounded by the A228 and B2016. Both these roads are heavily trafficked and narrow. Already dangerous for cyclists which, together with broken down or stopped vehicles can cause bad tailbacks. Increased local traffic could cause complete gridlock. 2. The main street through the village, a bus route, already is often almost gridlocked at school exiting times and is often congested with parked cars at other times. Children are required to be collected from school and as most of the children live beyond walking distance collection is necessary. Further homes exiting on to this road would decrease the available parking and increase congestion. 3. Most of the roads in Mereworth, between the A228 and B2016 are single track roads with no pedestrian pathways. These have no allowance for increased traffic. Their exits on to the A228 and B2016 are dangerous. 4. The villagers mostly attend Kingshill GPs. This surgery is already stretched with patients often waiting over 30 minutes for a telephone call to be answered. 5. Much of the surrounding land is productive farm land. Our country needs to continue to feed itself. This greenfield land should not be used if at all possible. 	<p>The SA is too high-level to consider traffic levels, road width, availability of car parking spaces and dangerous junctions, and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA does give consideration to whether a site is greenfield or brownfield, in addition to the Agricultural Land Classification under SA objective 9: soil. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA Report, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p>
42811169	Q7	<p>It's really unclear what you are asking of us here. I think some things that really stick out as being incorrect in the assessment is that:</p> <ol style="list-style-type: none"> a) Biodiversity loss is a given with the development planned. If enhancing biodiversity is an objective then development sites and other sites within the borough should be required to have enhancements to biodiversity as a pre-condition of development being allowed. This should be paid for by the developers as a condition of them being allowed to profit from the development of the land. b) There is an assumption that a given mass of development will result in investment in infrastructure (particularly with regards to accessibility and public/green transport. In practice this doesn't appear to have happened with any of the previous developments that have happened. Surely local planning guidance should necessitate certain targets in this regard, e.g. making sure developments have sufficient local services that can be accessed within walking distance, and generally making it unfavourable for cars to be used as the primary means of transport. c) There is an assumption that increased housing supply will result in better affordability. This really depends on developers being 	<p>The purpose of the SA is to appraise all options throughout the plan-making process. Biodiversity is dealt with under SA objective 5, which seeks "To protect and enhance biodiversity and geodiversity". Things like contributions to enhancing biodiversity are dealt with separately at planning application stage.</p> <p>Guidance does exist on walking distances, and has been used to inform the site assessment criteria (Appendix D of the Interim SA Report). Therefore, all sites have been appraised on the basis of them being within easy walking distance of different services and facilities. The SA does not determine which sites are allocated though. It is one of many factors that feed into the plan-making process.</p> <p>The baseline information section of the Interim SA Report (Appendix C) acknowledges the fact Tonbridge and Malling Borough is less affordable than the surrounding areas of Medway, Gravesham, and Maidstone. As mentioned in the SA, a higher level of housing supply has more potential to address housing affordability. The emerging Local Plan will contain a policy on the percentage of affordable housing that should be delivered on all new development sites.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>mandated to build affordable homes regardless of the size of the development, and again I do not believe there is any evidence that recent developments around Tonbridge have had any impact on affordability. For example two small developments in Tonbridge, the old Pembury Road doctors surgery and the Priory Road houses don't have any affordable homes in them as far as I am aware.</p> <p>d) Under the Spatial Options, option 1 which protects the Greenbelt seems to have the same negative Biodiversity and environmental impacts as the other options. How can this be?</p> <p>What is clear from these assessments is that the negative affects outweigh the positive in all cases, so why are we not taking a harder line on development, either by really considering reducing the amount of supply or making the developments a bit more forward thinking and sustainable. Development doesn't have to be environmentally unfriendly if it is done in a progressive way with adequate investment in offsetting negative impacts (e.g. rewilding non-developed areas), changing people's behaviours (e.g. reduced reliance on cars) and increasing the demands on developers to build sustainable developments (e.g. providing green space, EV charge points, wild areas, insulated buildings)</p>	<p>not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Green Belt is a separate issue to biodiversity, the latter of which is considered under SA objective 5.</p>
42536801	Q7	The Sustainability Appraisal lacks sufficient evidence on Green Belt and climate change. Without a comprehensive Green Belt study across all the LPAs in the Housing Market Areas (HMA) affecting T&M which identifies areas where GB functions are most and least important, development of the options and then choice of an option is premature in advance of this study.	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Appendix C provides the baseline information for Tonbridge and Malling. The purpose of the baseline information is to identify the key sustainability issues affecting the Borough (outlined in Chapter 3). These are then used to develop the SA framework against which the Local Plan is assessed (the SA framework can be found in Chapter 4 of the Interim SA Report). There is a section in the baseline information dedicated to climate change, containing information from numerous internal and external sources.</p> <p>The baseline information summarised in Appendix C has helped inform the appraisal of the Local Plan, including the strategic and spatial options, and reasonable alternative development site options.</p>
42721185	Q7	There is insufficient evidence both in terms of use of the green belt and climate change. No comprehensive study has taken place across LPAs that impact on TMBC, until such extensive studies are commissioned and the results known and tested this is all premature	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. 			<p>information dedicated to climate change, containing information from numerous internal and external sources.</p> <p>The baseline information summarised in Appendix C has helped inform the appraisal of the Local Plan, including the strategic and spatial options, and reasonable alternative development site options.</p>
42722785	Q7	<p>It unreasonable to over-deliver and base the Local Plan on meeting the assessed housing needs target which we already believe is out of date and excessive. Also, there is no logic to suggest that building more housing to meet supposed demand will lower the price of houses in either of the Housing Market Areas it will simply stimulate more demand and more people will relocate here rather than meeting demand from within the borough. Option 2 will inevitably increase the likelihood of land being removed from the Green Belt for development which is opposed.</p> <p>Regarding the provision of healthcare facilities, it must be recognised that it is easier to build the physical medical centres than find trained medical staff who would work in them. The evidence that we have seen in the borough already is that we struggle to cope with the numbers currently required, let alone let alone 10% more. Trained medical staff are in great demand and West Malling Group Practice is a good example and are constantly understaffed.</p> <p>In terms of land where there are mineral deposits, where these are scarce, they should be worked before any development is considered.</p> <p>It is likely that huge damage will be caused by largescale development on the Green Belt around Tonbridge. Arterial roads and many junctions are already operating over-capacity, so the idea that we would increase this additional burden by voluntarily accepting 10% more housing makes no sense. The evidence highlights the fact that we have 7 Air Quality Management Areas which are likely to be negatively impacted even further by defining locations for a further 10% beyond the target set for the borough by the Government.</p> <p>The proposal that building 10% more homes will have a favourable impact on affordability for those looking to buy property is rejected. The Housing Market Delivery Study does not indicate that market demand will support Option 2.</p> <p>We need to focus on providing accommodation for those living locally and that can be achieved by building truly affordable rented homes and we know that social housing is the way to deliver this.</p> <p>Regarding the five Spatial Strategy Options, although Option One is chosen the Sustainability Appraisal acknowledges that the council's previous policies have seen substantial development in the town centre. Although a relatively dense residential development, the area identified around the Angel Centre and the commercial centre of Tonbridge will reduce the need to build elsewhere at a higher environmental cost and impact on the Green Belt.</p>	<p>To support the government's objective of significantly boosting the supply of homes, councils must identify a sufficient amount and variety of land to come forward where it is needed. Paragraph 61 of the National Planning Policy Framework (NPPF) states "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance". In line with this, TMBC commissioned a Housing Needs Survey to provide up-to-date evidence on housing need.</p> <p>The purpose of the SA is to appraise all options throughout the plan-making process, and this includes two quantum options: (1) Meeting Assessed Housing Need; and (2) Meeting Assessed Housing Need + up to 10%. The appraisal of these two options will help the Council determine which option to pursue. Quantum Option 2 receives a mixed minor positive and uncertain minor negative effect in relation to SA objective 1: health and wellbeing. The minor positive effect is due to the fact it "would provide the critical mass needed to support provision of health and wellbeing related infrastructure", whilst the minor negative effect is due to the fact "delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded". The effect is recorded as uncertain, as "there is no evidence indicating a particular threshold at which development could result in health, education and other services and facilities becoming overloaded, and the effects will also depend largely on the extent of new provision that is made alongside new housing development".</p> <p>The SA gives consideration to Minerals Safeguarding Areas and recorded all effects against SA objective 13: material assets and waste as uncertain as "any negative impacts will depend on the specific location and scale of development, as well as its design and the extent to which mitigation measures are incorporated".</p> <p>Quantum Options 1 and 2 receive significant positive effects in relation to SA objective 14: housing. The SA states that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents".</p> <p>With regard to agricultural land, all five spatial options are recorded as having a significant negative effect against this objective (SA objective 9: soil). Only Spatial Option 2 is recorded as also having a minor positive effect, as a greater focus on the larger urban areas in the Borough may encourage a higher share of previously developed</p>

42443169	Q7	<p>The overall assessment of impact is too positive, regardless of option. The overriding assumption is that present health care and general infrastructure is sufficient in meeting this housing need. It is not. Where is there and NHS dentist locally, when we're wait times to see a GP less than 2 weeks. I could go on. The point is that any increased development will have a negative impact. Objective 10 will never be positive as any build will increase our carbon footprint as the building industry is not operating at net zero The technologies are not developed to do so. There is no uncertainty about this. Objective 14 has nothing to do with sustainability but everything to do about suitability of the possible developed housing stock. It should therefore be excluded.</p>	<p>The SA utilises a precautionary approach and is therefore not overly-optimistic in its appraisal of the Regulation 18 Local Plan.</p> <p>Due to the high-level nature of the quantum options, it is common to make assumptions regarding service capacity. The SA acknowledges that delivering growth beyond assessed needs has potential to cause capacity issues if existing healthcare facilities remain at current levels (paragraph 4.6 of the Interim SA Report). However, additional growth would be expected to deliver infrastructure provision/improvements to support it. Quantum Option 1 is recorded as having a minor positive effect in relation to SA objective 1: health and wellbeing, whereas Quantum Option 2 is recorded as having a mixed minor positive and uncertain negative effect in relation to SA objective 1.</p> <p>Although the quantum options receive minor positive effects in relation to SA objective 10: climate change mitigation, they are also expected to have negative effects as "New housing growth in the borough is likely to result in increased transport movements to access workplaces, and services and facilities day-to-day. A significant proportion of these trips are likely to be taken using private car given that a greater percentage of individuals in the borough commute to work using private car when compared to the national average" (paragraph 4.8). Further to this, the SA states "In the case of Option 2, the negative effects identified are potentially significant as going beyond assessed needs has particular potential to cause increased congestion on key routes within the borough". Although the SA does not reference building emissions here, this would not alter the effects already recorded for both Options in relation to SA10.</p> <p>Housing provision is considered a sustainability issue and therefore SA objective 14: housing should be retained.</p>
25351073	Q7	<p>The SA lacks sufficient evidence on Green Belt and climate change.</p> <ul style="list-style-type: none"> Without a comprehensive Green Belt study across all the LPAs in the Housing Market Areas (HMA) affecting T&M which identifies areas where GB functions are most and least important, development of the 	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>options and then choice of an option is premature in advance of this study. Please refer to responses under Q40 and 41.</p> <ul style="list-style-type: none"> • There is no climate change evidence base or topic paper. This would have indicated the patterns of growth that would be most efficient in reducing the existing carbon footprint and providing the lowest impact for the future. The Sustainability Appraisal (SA) (Appendix C) is not detailed enough for this to be reliably accurate. Without a climate evidence base, the Sustainability Appraisal scores on the impact of each option on the carbon footprint is meaningless. Therefore this consultation does not give consultees the opportunity to choose an option that demonstrates the lowest carbon footprint, except in a very superficial way. 	<p>With regard to climate change, the Council has commissioned evidence on this topic to support development of the Local Plan and this will feed into the baseline information contained within the next iteration of the SA.</p> <p>It is important to note that the SA findings only factors taken into account when determining a preferred option to take forward in a plan. Factors such as public opinion, deliverability and conformity with national policy are also taken into account by plan-makers when selecting preferred options for a plan.</p>
45325537	Q7	<p>The answer to this question is split into two subsections Quantum Options and Spatial Options.</p> <p>Quantum Options</p> <p>We agree with Option 2 to the extent that it identifies a scenario whereby the Council has tested an option that goes above meeting its minimum housing need (plus 10%). However, as explained above, we recommend that a further reasonable alternative option is tested whereby a greater than 10% plus assessed housing need is met. This is to ensure the Sustainability Appraisal (SA) robustly appraises a scenario whereby it accommodates unmet need from London and other neighbouring boroughs, as well as better addresses affordability issues and providing for flexibility in the Plan (particularly if the spatial strategy includes for the delivery of larger strategic sites/ new settlements, which increases the risk of needs not being met should there be a delay in the delivery of those larger sites).</p> <p>We would not endorse Option 1, as it would fail to deliver the growth required to meet the housing and affordability issues in the Borough, would not provide for greater flexibility and resilience in meeting housing needs across the Plan period and would not provide for meeting the unmet needs of London and neighbouring authorities.</p> <p>It is noted that the SA at paragraph 4.6 is concerned that Option 2 could cause minor negative effects as it could put a strain on existing services. However, it is unclear how the SA has considered the way in which the provision of more homes could actually help deliver or fund via S106 contributions the expansion or provision of new services and infrastructure. In addition, the SA should recognise how additional growth at RSCs for example could enable a critical mass of population to be achieved to allow for services such as GP surgeries to return to RSCs where they may have left previously due to it being unviable for them to remain there. In addition, the SA should recognise that even if GP surgeries are provided within settlements, residents are free to choose which GP surgery to use and as such may not choose to use their 'local' GP and may prefer to use a GP surgery in a different settlement if there is capacity.</p> <p>In addition, we note that paragraph 4.9 questions whether Option 2 would be deliverable, as it considered that "... this level of housing</p>	<p>Quantum Option 2 (assessed need + 10%) was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific higher growth figures on. An even higher growth scenario of assessed need + 20% would not yield particularly different SA effects to Quantum Option 2, as both options are relatively similar and so it would be difficult to distinguish between the effects each is likely to have.</p> <p>The SA acknowledges under Quantum Option 2 that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities. Therefore, the minor positive effect against SA objective 1: health and wellbeing for Quantum Option 2 is coupled with a minor negative effect. The SA states that all effects are uncertain at this stage, as there is no evidence indicating a particular threshold at which new development could result in health and other services and facilities becoming overloaded. The same applies in relation to SA objectives 2: services and facilities and 3: education. The SA also acknowledges in paragraph 4.6 that with regard to Quantum Option 2 "...this extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p> <p>Residents cannot necessarily choose to attend a different GP surgery in a different settlement, as they must fall within the catchment area for a GP surgery.</p> <p>With regards to deliverability and historic delivery rates, providing housing that meets the assessed need would be more likely to be achieved than providing housing higher than the assessed need.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>delivery would be in excess of what the local housing markets have supported over the past decade, as demonstrated by the Housing Market Delivery Study. Therefore, there is uncertainty attached to this option as there is a question mark around its deliverability." However, we would be concerned with the deliverability of this Option being questioned because of historic trends, given a driving factor for historic delivery rates would have been any constraints to deliver new homes applied by the prevailing planning policy context.</p> <p>Spatial Options</p> <p>As identified above, it is therefore considered that a balanced and blended approach to Spatial Options 4 and 5 will likely be required to meet the housing needs of the Borough. These Spatial Options will best ensure that a wide range of sites, including smaller and larger plots, development adjacent to settlements, on green field and on brownfield are delivered, which will assist in providing for a consistent supply of homes across the Plan period.</p>	
42801089	Q7	<p>Specifically I think the sustainability appraisal should respond to the climate emergency; this should set policy using current best practices such as LETI. I would expect to see as a minimum a requirement for net zero development and a requirement that no fossil fuel usage would be accepted.</p>	<p>It is not the role of the SA to set out policy based on current best practices, rather it is the role of the Local Plan. The SA appraises all options throughout the plan-making process against the SA framework, which comprises a number of SA objectives. SA objective 10 seeks "To reduce greenhouse gas emissions so as to minimise climate change". In the next iteration of the SA Report, the following sub-objective will be added against this objective: "To contribute towards achieving net zero".</p> <p>Appendix C provides the baseline information for Tonbridge and Malling. There is a section in the baseline information dedicated to climate change, containing information from numerous internal and external sources.</p>
42255521	Q7	<p>Nothing has been taken into account of hybrid working and the needs to cover this. Infrastructure is clearly already at capacity so any housing would need much larger road network as there is even less public transport options. Schools are struggling to meet demands already as well as primary care options. You could build more surgeries but who will staff them? Build more schools but again where will the staffing come from?</p> <p>Increasing demand in TMBC will have direct impact on the two major hospitals under Maidstone and Tunbridge Wells Trust.</p>	<p>Hybrid working has resulted in an increase in the number of people working from home. Therefore, people do not need to travel into their offices as much as they used to, pre-COVID-19.</p> <p>Consideration is given to public transport under SA objective 10: climate change mitigation.</p> <p>With regard to school capacity (SA objective 3: education), the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown</p> <p>With regard to the capacity of medical centres (SA objective 1: health and wellbeing), the SA does not take this into consideration, as it is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).
42606657	Q7	Whilst chapter 4 is focused on the two options for meeting Assessed Housing Need, the subsequent spatial options refer simply to 'development' (not saying what type of development). Although the SA is clearly looking at housing development, the reference just to 'development' in the Reg 18 draft is likely to cause confusion. These strategic policy options are clearly about where to locate housing development and that should be made clear.	The five spatial options refer to development generally, not specifically residential development. The term 'development' in this section of the Interim SA Report should be taken to mean residential, employment and mixed-use development.
42716289	Q7	Many of the assessments are weak and do not go into enough detail on each site	Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of development which is unknown at this stage.
42587169	Q7	The call for sites and subsequent assessment do not take into account any planning history of those sites. It feels too theoretical (and in the developers' interests) to maximise the number of plots on a site but no reference seems to be made to the planning history of a site where applications for much lower densities have not been approved. The strategic policy options seem to be flawed therefore.	SA should not and does not take into consideration the planning history of sites, as this would mean that some sites would be appraised using more detail than others when they should all be appraised to a consistent level of detail.
42720097	Q7	I do dispute some of the findings of the report, however it would be useful if a summary could be provided which is less technical.	The SA Report was accompanied by a Non-Technical Summary.
42742625	Q7	Borough Green is not a "LARGE rural service centre" as described in the report. I feel the area may therefore be targeted for more development than it should be. I feel there is too much focus on developing green space - the preferences should be building in urban areas and on brownfield sites. Large new settlements tacked onto existing smaller settlements would fundamentally change the character of the area and would needlessly destroy green field and green belt land - the overriding characteristic of the Borough.	The respondent is referring to paragraph 4.20 of the Interim SA Report, which sets out the findings of the strategic policy options. The term "large" describes the size of Borough Green compared to some of the other rural service centres. The use of the term "large" would not result in Borough Green being targeted for more development than it should be. The Council cannot only develop brownfield sites, as there would not be enough land to provide the housing need. The SA gives consideration to the effects on landscape under SA objective 6: landscape and townscape. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.
42765537	Q7	The negative use of greenfield sites needs to be a maximum negative effect merely by using a greenfield site. All development should focus on brownfield.	The SA does give greenfield sites negative effects, and brownfield sites positive effects under SA objective 9: soil. Please refer to the site assessment criteria contained in Appendix D of the Interim SA Report.
42785921	Q7	I can only comment on a few of the sites (not the whole area) so I am focused only on 59735, 59798, 59801, 59804 and 59835. Whilst I	The SA is one of many factors that feed into the plan-making process. It does not specifically identify which sites should come forward

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		understand that no decision has yet been made, knowledge of the local area suggests that some of these sites would be unsuitable and were previously ruled out in the previous consultation as not available for development. Some of these overlap and so it isn't obvious if there is any "joined-up" thinking going on here as there are various assessment outcomes which perhaps may need to be considered too. More in Question 8 below.	through allocations in the Local Plan but provides an objective assessment of their sustainability. The previous SA is not relevant, as it was an SA of a different plan and so does not form part of this SA.
38330753	Q7	We believe that these options have been manufactured by a computer however the algorithm's are not accurate enough and do not include any local knowledge. Although the objectives may cover most eventualities, nearly all assessments are wrong due to a lack of local knowledge by the compliers of the local plan.	The appraisal of strategic policy options has not been generated by a computer, but instead undertaken manually. The appraisals have been informed by numerous data sources including from the Borough Council, County Council, Natural England, the Environment Agency and Historic England.
42437729	Q7	The Interim Sustainability Appraisal Report is only considering the current position and constraints. For example, when assessing the spatial options, particularly for Option 5, it does not consider what this option would look like if services were improved - i.e. new healthcare facilities, new schools, new transport links. Why not? If you continue to appraise against the same restricted criteria you will get the same answer - we know the answer isn't right otherwise the previous plan would not have been withdrawn. It very much feels like this plan is being drafted to direct towards predetermined answers rather than looking at the plan with a blank sheet of paper.	The purpose of the SA is to appraise all options throughout the plan-making process, against the current baseline (Appendix C of the Interim SA Report). The baseline information provides the basis against which to assess the plan, as set out in Planning Practice Guidance 016-20190722.
42447265	Q7	These documents are extremely complex for laypersons to absorb and truly understand. It is clear though that you underestimate the positive effects of matters such as water features and resources.	The SA Report was accompanied by a Non-Technical Summary. The SA Report itself is necessarily technical in nature given the range and quantity of data that needs to be gathered and analysed.
42606657	Q7	Whilst chapter 4 is focused on the two options for meeting Assessed Housing Need, the subsequent spatial options refer simply to 'development' (not saying what type of development). Although the SA is clearly looking at housing development, the reference just to 'development' in the Reg 18 draft is likely to cause confusion. These strategic policy options are clearly about where to locate housing development and that should be made clear.	The five spatial options refer to development generally, not specifically residential development. The term 'development' in this section of the Interim SA Report should be taken to mean residential, employment and mixed-use development.
42683265	Q7	This is very hard to follow and not set out in a manner conducive to informed and widespread public comment. Even the colour assessment is not clear as the hues do not follow a logical gradation to reflect positive and negative outcomes. The limited options appraised are already flawed by the incorrect hierarchy of settlements which fails to reflect the connectivity and sustainability of each location, only the historic size of settlements. Most of the sustainability criteria, water, land, historic environment, air quality, climate and human health as well as economy will be harmed if the housing needs are met by locating new housing distant from the main	The SA Report was accompanied by a Non-Technical Summary. The SA Report itself is necessarily technical in nature given the range and quantity of data that needs to be gathered and analysed. The PDF version of the Non-Technical Summary available online is in an 'Accessible format', which means that it has been formatted to meet the requirements of the Public Sector Bodies (Websites and Mobile Applications) Accessibility Regulations (2018). The template abides by WCAG 2.1 regulations to the highest standard (level AAA). The report is therefore accessible to those whose are colour blind.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>transport hubs, motorway, A21 and railways, unless major new infrastructure is inserted, which is currently not affordable.</p> <p>The determining factor for the siting and provision of new dwellings must be proximity to the existing transport network and the hierarchy for development locations should reflect this.</p> <p>1. Intensification of development in established urban areas with railway stations, specifically Medway gap, Snodland and Tonbridge. Comprehensive new development in the centre along the High Street, rethinking the retail environment and on Railtrack land round the station. A eastern bypass/ ring road link is required to reduce through traffic.</p> <p>2. New development around all the rural railway hubs, in particular at West Malling and Hildenborough Stations and Borough Green. There will be some loss of green space, but this harm is outweighed by meeting the housing need in locations with pedestrian access to the rail network or direct access to the motorway network.</p> <p>3. Development in isolated rural settlements, distant from these transport hubs, should be limited, regardless of whether they are larger, Hadlow, East Peckham, or smaller villages, as non of these settlements has sufficient services to be self sustaining and all will just put more cars on the borough's roads with more bottlenecks and pollution. Extended development of these rural settlements will further degrade the rural environment, reduce the agricultural & ecological potential of the borough and increase suburbanisation, with no compensating benefits.</p>	<p>Chapter 4 of the Interim SA Report provides an appraisal of quantum options, spatial options, the future development of Tonbridge options and options to prevent merging of settlements in the north east of the Borough. The spatial options look at different options for the distribution of development within the Borough, with the options covering larger urban areas scoring more positively than others.</p> <p>Spatial Option 1 covers sites within and adjacent to settlements beyond the outer Green Belt boundary and Areas of Outstanding Natural Beauty, Spatial Option 2 covers sites within and adjacent to defined urban settlements, Spatial Option 3 covers sites within and adjacent to defined urban and rural service centre settlements, Spatial Option 4 supports distributed development across the Borough, which will include more rural areas, and Spatial Option 5 considers a new settlement. The defined urban settlements have good access to public transport links compared to more rural areas, and this is reflected in the appraisal of these options – particularly in relation to SA objective 10: climate change mitigation.</p>
42721697	Q7	There is an obvious conflict of interest between number 14 and many of the others.	<p>As explained in paragraphs 1.10 to 1.13 of the Interim SA Report, SA is an assessment of the likely effects of a plan or programme (in this case TMBC's Local Plan) on the environmental, social and economic aspects of sustainable development.</p> <p>The SA provides an objective assessment of all Local Plan options against fourteen SA objectives, which cover these three aspects of sustainable development, and this includes housing delivery.</p>
42742625	Q7	<p>Borough Green is not a "LARGE rural service centre" as described in the report. I feel the area may therefore be targeted for more development than it should be.</p> <p>I feel there is too much focus on developing green space - the preferences should be building in urban areas and on brownfield sites. Large new settlements tacked onto existing smaller settlements would fundamentally change the character of the area and would needlessly destroy green field and green belt land - the overriding characteristic of the Borough.</p>	<p>The respondent is referring to paragraph 4.20 of the Interim SA Report, which sets out the findings of the strategic policy options. The term "large" describes the size of Borough Green compared to some of the other rural service centres. The use of the term "large" would not result in Borough Green being targeted for more development that it should be.</p> <p>The Council cannot only develop brownfield sites, as there would not be enough land to provide the housing need. The SA gives consideration to the effects on landscape under SA objective 6: landscape and townscape.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.
42765537	Q7	The negative use of greenfield sites needs to be a maximum negative effect merely by using a greenfield site. All development should focus on brownfield.	The SA does give greenfield sites negative effects, and brownfield sites positive effects under SA objective 9: soil. Please refer to the site assessment criteria contained in Appendix D of the Interim SA Report.
42585633	Q7	<p>Chapter 4 appears to try to compare options with no specific conclusion. However the descriptions are not balanced.</p> <p>With regards to Kings Hill CP11 avoids any development outside the town itself, CP12 similarly limits development around West Malling and CP13 should be taken into account.</p> <p>There are significant travel issues , Kings Hill is not connected to the cycle /public footpath network, joint use of pavements for pedestrians and cyclists where pavements do not meet the required guidelines deters the take up of active travel and discourages walking and access for disabled people. The result is rapidly deteriorating infrastructure for active travel</p>	<p>The Interim SA Report provides an appraisal of different options that the Council is considering for the emerging Local Plan. Consideration is not given in SA to existing policies in adopted Local Plans.</p> <p>The SA is too high-level to give consideration to specific road networks and congestion. However, in the site-specific appraisals, consideration is given to the proximity of sites to existing walking and cycling paths. It will be the role of the Local Plan to help address the active travel issues mentioned by the respondent.</p>
42801089	Q7	Specifically I think the sustainability appraisal should respond to the climate emergency; this should set policy using current best practices such as LETI. I would expect to see as a minimum a requirement for net zero development and a requirement that no fossil fuel usage would be accepted.	<p>It is not the role of the SA to set out policy based on current best practices, rather it is the role of the Local Plan. The SA appraises all options throughout the plan-making process against the SA framework, which comprises a number of SA objectives. SA objective 10 seeks "To reduce greenhouse gas emissions so as to minimise climate change". In the next iteration of the SA Report, the following sub-objective will be added against this objective: "To contribute towards achieving net zero".</p> <p>Appendix C provides the baseline information for Tonbridge and Malling. There is a section in the baseline information dedicated to climate change, containing information from numerous internal and external sources.</p>
42815521	Q7	<p>THIS QUESTION IS WORDED AMBIGUOUSLY / POORLY. You appear to be including both Quantum and Spatial Options in the same consultation question and this will confuse many respondents.</p> <p>Since assessed housing need includes inflow from other HMAs it is hard to see how even Quantum Option A could be said to have any positive health impacts FOR THE RESIDENTS OF THIS BOROUGH. As it is there is significant pressure on both health and education services and the suggestion that by increasing demand the services will magically improve is not borne out by historical experience.</p> <p>It is also highly questionable whether relaxation of planning rules as required in Spatial Options 2 and 3 will encourage economic growth or business development.</p>	<p>Quantum Options 1 and 2 both receive minor positive effects in relation to SA objectives 1: health and wellbeing and 3: education, as both support growth in the Borough, which has the potential to support the delivery of new healthcare and education facilities. It is expected that both quantum options would provide the critical mass needed to support provision of health and education facilities. The minor positive effect Option 2 is expected to have is coupled with a minor negative effect, as delivering growth beyond assessed needs has more potential to cause capacity issues at existing health and education facilities if they become overloaded.</p> <p>All five Spatial Options receive significant positive effects in relation to SA objective 4: economic growth, as they will each deliver employment land within the Borough, which will provide a range of employment opportunities for residents. Spatial Options 1, 4 and 5 also receive minor negative effects in relation to this objective, as they may be too constrained in their focus on growth in certain areas of the Borough, including smaller rural settlements that are poorly connected to the main employment locations.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
45174209	Q7	<p>Regarding site #59470 & #59777 in particular, no, I do not. The statement regarding the land on Broadwater Farm being Grade 2 land is misleading. The soil analysis carried out on land in the Medway gap by KCC clearly shows it as Grade 1 and Grade 2. Any reference to adverse and minor negative effects of adopting Options 1 or 2 should be disregarded as building on this farmland and open countryside would be irreversible with blatant destruction of these assets. At a time when food security is a pertinent concern, Grade 1 agricultural land should surely be a protected asset. As noted, the borough has a duty to conserve and enhance soil resources.</p> <p>Option 3, understates the negative impact to water features and resources, particularly given the significant hydro-geological features on the land in question which would most certainly be damaged if not destroyed by construction at Broadwater Farm Site 59740.</p> <p>Most seriously, any expansion North of Kings Hill would contribute to the coalescence of communities which is in direct contravention of the stated preferred strategy of the Local Plan.</p>	<p>Sites 59740 and 59777 are both recorded in the Interim SA Report as receiving significant negative effects in relation to SA objective 9: soil, as they are greenfield and contain a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>With regards to the strategic policy options, the SA states that a high proportion of land between Kings Hill, West Malling and East Malling is Grade 2 agricultural land. Due to the high-level nature of the options to prevent merging of settlements, it is difficult for the SA to be more specific than this. The SA does not say that there is no Grade 1 agricultural land here, just that most of it is Grade 2. Options 1 and 2 receive minor positive effects on SA objective 9: soils, as they would prevent development on the agricultural land. The significance of all effects has been applied correctly.</p> <p>With regard to Option 3, this is no change to the existing Green Belt boundary and no gap policy. Due to the high-level nature of the options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p> <p>The Interim SA Report provides an appraisal of different options that the Council is considering for the emerging Local Plan. Consideration is not given in SA to existing policies in adopted Local Plans.</p>
24925793	Q7	<p>Yes (overall). With reference to our comments above (in Q.6), Option A [=Quantum 1] has more significant positive and less negative scores, than Option B [=Quantum 2], as would be expected.</p> <p>However, we feel that the scoring of Objective 2, for Option 2, does not reflect the potential significant negative impacts of this option; in-terms of the severe highway congestion and other infrastructure pressures (inc. local services/schools), such as in Tonbridge (see Q.4, Q.11 & Q.19).</p> <p>2Office for</p>	<p>Delivering growth beyond the assessed housing need (Quantum Option 2) could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education. The SA is too high-level to give consideration to traffic congestion, and so the Council will commission additional evidence on this.</p>
43309729	Q7 of the questionnaire	<p>Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>1.2.29 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>1.2.30 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>1.2.31 The same principle applies with provision of new essential services and education and training facilities with a assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>1.2.32 In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner.</p>	
43311521	Q7 of the questionnaire	<p>Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>1.2.30 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>1.2.31 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>1.2.32 The same principle applies with provision of new essential services and education and training facilities with an assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>1.2.33 In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p> <p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>1.2.34 In respect of this question, our client only wishes to comment upon the site they are promoting. In this regard, we support the positives that will be achieved in respect of the provision of housing, reduction in greenhouse emissions and soil resourcing. However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>1.2.35 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment, and this should represent a strong positive.</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>Site 59775 receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains an existing green infrastructure asset. All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Although the respondent has stated that the site would need to achieve biodiversity net gain, this is a 'policy-off' appraisal and so consideration is not given to things like biodiversity net gain, as this is a form of mitigation. If the site is allocated in the Local Plan via policy, it will be appraised on a 'policy-on' basis.</p> <p>With regard to the historic environment, the site receives a significant negative effect because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7: heritage are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to the landscape, the site receives a significant negative effect in relation to SA objective 6: landscape and townscape, as it is not located near any settlements in a rural location. Sites located on the edge of a settlement may be more easily integrated into existing built development. All effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>1.2.36 The desktop nature of the site assessment is also of concern. Based on a human judgement there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>1.2.37 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.</p>	
43313313	Q7 of the questionnaire	<p>Question 7</p> <p>The assessment assumes that we have the services and infrastructure. I have mentioned the impact on roads and drainage. We also need to consider schools - the majority of senior school pupils are bussed out to various locations. As far as I am aware we do not have any senior school facilities on Kings Hill. This does not impact me personally, but there are numerous families for whom this is a key concern.</p> <p>The matter which does cause me massive inconvenience is the lack of access to adequate GP services. The West Malling Group Practice cannot cope with its current patient list and there is no way it could or should take on more.</p> <p>I know we have added an Aldi to our supermarket offerings, but there is still very little in the way of alternative shops in the centre. If Kings Hill is to become larger we need to have more on site shopping and eating options.</p> <p>Question 8 re 59797 & 59800</p> <p>I have already raised the issue of the impact of loss of the company running the golf course and the associated employment and amenities.</p> <p>The course is designated a Local Wildlife Site and so losing the space would affect local wildlife.</p> <p>Obviously if these two sites were developed it would open a much larger area - the rest of the course - for development, but would immediately impact on the green space requirements for the estate, the value of the houses for those living there and create a much less amenable place to live. It would also reduce the social and environmental benefits of the area to walkers, cyclists, runners, horse riders, who use the areas around and across the course alongside the golfers themselves. That would have a direct impact on the mental health of individuals. For me my golf is a significant part of my managing stress and depression or low mood, from which I personally suffer. I am not alone in benefitting massively from that. That could result in Kings Hill ceasing to be a desirable place to live and becoming a run down overpopulated area.</p> <p>The current medical roads, drainage and schools cannot support the existing population.</p> <p>Further development like this would reduce the proportion of green space and go against the original promise to conclude a golf course as an amenity.</p>	<p>The SA is too high-level to consider the impact of development on roads and so the Council will commission additional evidence on matters including traffic. Drainage is considered under SA objective 8: water.</p> <p>The SA acknowledges that there are no secondary schools in Kings Hill. As there are primary schools in Kings Hill, most sites in the area receive minor positive effects against SA objective 3: education. All effects against this objective are recorded as uncertain, as effects will depend on there being capacity at those schools to accommodate new pupils.</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However this GP surgery is now closed. In the next iteration of the SA Report, the proformas for the sites affected will be updated. The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities. Sites 59797 and 59800 are expected to have a negligible effect in relation to SA objective 4 as "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. Having said that, the promoter of this site has not declared that it contains an existing business.</p> <p>The sites receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity, as they are within 250m of Kings Hill Golf Course, Cattering & Hoath Wood Local Wildlife Site and area of Ancient Woodland. They also contain green infrastructure assets. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Sites 59797 and 59800 receive uncertain significant negative effects in relation to SA objective 1: health and wellbeing (as part of a mixed effect), as they contain Kings Hill Golf Course. They also receive minor</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			positive effects in relation to this objective as they are within 800m of other areas of open space, and walking paths.
43395937	Q7 of the questionnaire	<p>Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>1.2.30 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>1.2.31 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>1.2.32 The same principle applies with provision of new essential services and education and training facilities with a assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>1.2.33 In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p> <p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>1.2.34 In respect of this question, our client only wishes to comment upon the site they are promoting. In this regard, we support the double positive that will be achieved in respect of the provision of housing. However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>1.2.35 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment, and this should represent a strong positive.</p> <p>1.2.36 The desktop nature of the site assessment is also of concern. Based on a human judgement there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>1.2.37 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>Site 59654 is incorrectly recorded as containing an existing green infrastructure asset, and therefore incorrectly receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. In the next iteration of the SA Report, site 59654 will receive a minor negative effect, as it is within 250m and 1km of an SSSI (Wateringbury). All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Although the respondent has stated that the site would need to achieve biodiversity net gain, this is a 'policy-off' appraisal and so consideration is not given to things like biodiversity net gain, as this is a form of mitigation. If the site is allocated in the Local Plan via policy, it will be appraised on a 'policy-on' basis.</p> <p>With regard to the historic environment, the site receives a significant negative effect because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7: heritage are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to the landscape, the site receives a minor negative effect in relation to SA objective 6: landscape and townscape, as it is located adjacent to a settlement. Sites located adjacent to settlements may be more easily integrated into existing built development. All effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>

		1.2.39 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.	
43545921	Q7 of the questionnaire	<p>Question 7: Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>The text of Chapter 4 of the Interim SA report provides a range of options. The methodology for assessing the options in accompanying tables in chapter 4 is over-complicated, leading to confusion and no clear conclusions. It would have been more appropriate to rank the impact in numerical terms (eg 1 to 5) where 1 is a positive impact and 5 is a negative impact.</p>	<p>The SA Report was accompanied by a Non-Technical Summary. The SA Report itself is necessarily technical in nature given the range and quantity of data that needs to be gathered and analysed.</p> <p>Chapter 2 of the Interim SA Report explains how the assessment has been undertaken and Table 2.1 provides a key to the symbols and colour coding used throughout the report. The assessment criteria against which the sites have been appraised are provided in Appendix D.</p>
43548193	Q7 of the questionnaire	<p>Q.7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>To some extent we do agree with the findings, but, for example we do consider that a great deal of emphasis is placed on air quality considerations. The Council seem to be concerned with the location of development that could impact on current Air Quality Management Areas (AQMA) now. In our opinion the existing rise in the uptake of hybrid and electric vehicles and future moves towards hydrogen will mean that over the lifetime of the local plan, AQMA's will not be of such high importance and the location of development relative to existing urban areas now should be more important. In summary, development that could give rise to some harm to an AQMA now, but which provides greater prospects for walking and cycling and provides shorter journey times overall should not score so poorly in the assessment now.</p> <p>Q.8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number.</p> <p>No. There are significant errors in the site assessments based on incorrect assumptions made about the sites that Millwood are promoting. In relation to Millwood's Haysden site, we comment as follows:</p> <p>SA Objective 3</p> <p>In particular we believe that there is school and college place capacity at the current time, and if this supply should diminish we would expect it to be mitigated via a legal agreement submitted in support of a planning application. This matter should therefore score more positively.</p> <p>SA Objective 5</p> <p>The emerging proposals for the site will retain and enhance the existing pond and deliver a net gain in biodiversity overall with no adverse effects, but we agree this is uncertain at this stage. The correct score should be 'uncertain positive'.</p>	<p>Noted.</p> <p>As it is unknown whether all schools within the Borough have capacity to accommodate new pupils or not, all effects against SA objective 3: education are recorded as uncertain.</p> <p>This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. biodiversity net gain). As site 59775 contains an existing green infrastructure asset, it receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Site 59775 is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, the site correctly receives a significant negative effect in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59775 correctly receives a minor negative effect in relation to SA objective 8: water, as it contains land with a 1 in 100 year risk of surface water flooding. This is in accordance with the site assessment criteria presented in Appendix D of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 7</p> <p>The proposed development of the site is not likely to have any adverse impacts on heritage assets and we consider the score should be 'Negligible' if not positive.</p> <p>SA Objective 8</p> <p>We consider that the site is not adversely affected by flooding and consider that the score should be amended to 'negligible'.</p>	
43745089	Q7 of the questionnaire	<p>Question 7.</p> <p>Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>The same principle applies with provision of new essential services and education and training facilities with a assumption that more growth will overwhelm rather than help provide improved education facilities. In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p> <p>Question 8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>In respect of this question, our client only wishes to comment upon the site they are promoting. In this regard, we support the double positive that will be achieved in respect of the provision of housing. However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment and this should represent a strong positive.</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>Site 59656 receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains an existing green infrastructure asset and is within 250m of some areas of ancient woodland. All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Although the respondent has stated that the site would need to achieve biodiversity net gain, this is a 'policy-off' appraisal and so consideration is not given to things like biodiversity net gain, as this is a form of mitigation. If the site is allocated in the Local Plan via policy, it will be appraised on a 'policy-on' basis.</p> <p>With regard to the historic environment, the site receives a significant negative effect because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7: heritage are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to the landscape, the site incorrectly receives a significant negative effect in relation to SA objective 6: landscape and townscape when it should receive a minor negative effect, as although it is outside of a settlement, it is adjacent to its edge. Sites located on the edge of settlement may be more easily integrated into existing built development. All effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effect.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		The desktop nature of the site assessment is also of concern. Based on a human judgement it is clear that there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive. In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.	
43781249	Q7 of the questionnaire	<p>Q.7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>1.3.30 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%).</p> <p>1.3.31 A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>1.3.32 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>Page 11 of 25</p> <p>1.3.33 The same principle applies with provision of new essential services and education and training facilities, with an assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>1.3.34 In our view the SA looks unreasonably negatively on growth and development rather than looking in an impartial manner or a basis for opportunity. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p>	SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.
42832833	Q7 of the questionnaire	<p>Q.7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>No – Option 2 provides the scenario that will deliver the required Objectively Assessed Housing Need ('OAHN') (839 dpa) +10%. Whilst the additional mass could put local services/infrastructure under pressure, this could be mitigated through financial contributions from the developers and a robust and clear infrastructure delivery strategy that supports this level of growth. As set out in the response to Question 6, the OAHN should be a minimum and through the emerging Local Plan, there is an opportunity to ensure local services/infrastructure are enhanced and deliver what is required to</p>	<p>Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Quantum Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>With regard to SA objectives 10: climate change mitigation and 12: air quality, providing more housing as proposed under Quantum Option 2 is likely to increase the number of cars on the road and associated emissions. As Option 2 proposes more development than Option 1, it is expected to have more significant effects than Option 1.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>support growth in a sustainable manner – this includes the enhancement to local services/infrastructure.</p> <p>In respect of Objective 10 (to reduce greenhouse gas emissions) and 12 (to improve air quality) – whilst providing over and above the OAHN, as set out in the Sustainability Appraisal, development is “likely to provide investment into sustainable transport improvements within the borough, which may reduce the share of trips that are taken by private car by residents”.</p> <p>Therefore, to support the Local Plan, it is vital that the Council brings forward an Infrastructure Delivery Plan ('IDP') to identify the infrastructure/local services required to support the growth scenario chosen (either Option 1 or Option 2). In the expectation that an IDP is brought forward alongside the preference for growth to be distributed across the Borough, we do not consider Option 2 should be scored less positively than Option 1.</p>	
44200193	Q7 of the questionnaire	<p>Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. 25378817	Q7 of the questionnaire	<p>Q7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report?</p> <p>It is difficult to assess a spatial strategy without knowing how much development it will deliver and where that development will be. This</p>	The assessed need + 10% was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific higher growth figures on. Past delivery is a reasonable factor for the Council to take into account when considering the reasonableness of higher growth options. The Council had not received any formal requests to meet the unmet needs of neighbouring authorities, although the + 10% does provide some flexibility.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>can be seen in the findings in chapter 4 where there are a number of uncertain outcomes in appraisals of the various options.</p> <p>It is difficult to assess a spatial strategy without knowing how much development it will deliver and where that development will be. This can be seen in the findings in chapter 4 where there are a number of uncertain outcomes in appraisals of the various options.</p> <p>Our first observation of the Sustainability Appraisal (SA) is with regard to the quantum of development that has been tested as a reasonable alternative. The Council has tested an option that meets needs and one that meets needs plus 10%. We would suggest that the Council needs to test a higher figure in relation to the uncapped need for housing and an option that includes meeting some of the unmet needs from London or the need of another neighbouring areas. These are real scenarios facing the Council and should be tested in the SA to ensure it is robust in its consideration of reasonable alternatives. A failure to test higher levels of delivery could have, in particular, significant consequences with regard to the duty to co-operate. A failure to consider a higher level of delivery would show that such matters have not been properly considered meaning not only that the SA lacked the necessary robustness but also that the Council's consideration of cross boundary issues had not maximised the effectiveness of the local plan as required by section 33A of the Planning and Compulsory Purchase Act 2004.</p> <p>Secondly, we are concerned with the assessment of the options related to quantum and the statement in paragraph 4.9 that there is uncertainty as to whether the 10%+ option is deliverable given that it would be in excess of what has been delivered in the last decade. This assumption is based on the Housing Market Delivery Study (HMDS) which examines past delivery rates and uses these to make assumptions as to the capacity of the area to deliver homes in future. Whilst helpful to understand the rate at which homes have been delivered in the past, we would caution whether this indicates any uncertainty as to whether the 10%+ option is deliverable. The ability of an area to support housing growth will relate principally to the range of sites allocated through the chosen spatial strategy rather than an innate capacity in the market as to the amount of growth that can be achieved. It is also questionable as to whether the SA should even comment on deliverability of the requirement at such an early of plan preparation given that there is no indication as to how many homes each option would deliver. The Council should not be seeking to limit growth on the basis of what has been achieved in the past.</p> <p>Thirdly, we note that the SA assumes a more negative outlook for the 10%+ option with regard to objectives 1, 2 and 3 broadly on the basis of the capacity of local infrastructure and services to cope with the additional growth. We would suggest that until clarity is known as to where growth will occur and the availability of services in those areas it is not possible to state whether or not services will be sufficient with regard to either option. In fact, a larger quantum of housing could ensure that some services are retained or expanded through the</p>	<p>The SA refers to the deliverability of options because the SA is only required to appraise options that are reasonable and if they are not deliverable, they could be considered not to be reasonable.</p> <p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p> <p>The SA acknowledges that an increase of 10% has more potential to cause capacity issues with existing services and facilities. However, it also acknowledges that with regard to an increase of 10%, the Borough "has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities".</p> <p>With regard to SA objective 10: climate change mitigation, this relates more specifically to access to active and sustainable transport modes so as to minimise reliance on the private car.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>additional council tax, S106 contributions and per capita funding as a result of the additional homes provided.</p> <p>Finally, the SA makes the assumption with regard to objective 10 that the delivery of more homes is broadly similar, but the negative effect is more significant with regard to option 2. When considering these options, it is important to remember that the issue of climate change is global. Whilst an increased number of homes may increase the population in Tonbridge and Malling it doesn't increase the country's overall population. Building additional homes however may allow more people to live in newer more sustainable homes that will reduce energy consumption and CO2 emissions. Each new build home produces just a third of the carbon emitted by older homes, a saving of 2.2 tonnes of CO2 every year by using on average 100 kWh of energy per m2 of house space compared to 259 kWh per m2 for an older property. It is important that the SA recognises this positive contribution moving forward.</p>	
42006241	Q7 of the questionnaire	<p>Q.7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>Quantum Options</p> <p>The two options set out are meeting the housing figure and meeting the housing figure +10%. We consider that if these figures are to include the windfall allowance (calculated as 19.5% of the overall housing figure), then it would be reasonable to include meeting the housing figure +19.5% to compensate for this as the windfall figures are not committed sites.</p> <p>We consider that due to the number of unknowns within this assessment (e.g. no evidence indicating the thresholds where facilities become overloaded and the undetermined provision that is made alongside new development), the difference between option one and option two is largely unknown at this stage.</p> <p>Spatial Options</p> <p>We consider that within Objective 14: to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenure, greater positive weight should be given to the opportunity within Option 4 to deliver a range of dwellings. Options 1-3 concentrate on development in a smaller number of areas whereas option 4 allows for a much wider range of development. This is more likely to lead to smaller sites coming forward which are more likely to be of high quality and are likely to be delivered quickly.</p> <p>The Future Development of Tonbridge Options</p> <p>In relation to Objective 14: to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenure, we consider it important to highlight the difference between the two options set out. Option 1 is to optimise densities on development sites within Tonbridge, where as Option 2 is conservative densities on development sites within Tonbridge, minimising the intensification of</p>	<p>Due to the high-level nature of the spatial options, it is difficult for the SA to be more specific than it already is, particularly as most effects will depend on the eventual location of housing development which is unknown at this stage.</p> <p>With regard to SA objective 14: housing, Option 4 already receives a significant positive effect in relation to this objective and so although it may deliver more of a range of dwellings compared to some of the other options, this effect cannot be upgraded any more than it already is. All of the growth strategy options will deliver housing and employment land within the Borough, which will provide a range of housing types and employment opportunities for residents.</p> <p>The minor negative effect Option 1 (Future Development of Tonbridge Options) receives in relation to SA objective 14: housing is considered appropriate. The SA explicitly states "In terms of housing, optimising densities on development sites within Tonbridge is likely to deliver higher density development, that may be less desirable, potentially focusing on smaller units and flats. Therefore, Option 1 is expected to have a minor negative effect in relation to SA objective 14: Housing. Whereas, Option 2 is expected to have a minor positive effect, as it is more likely to deliver higher quality housing with a mix of sizes, types and tenures, that doesn't focus too much housing in one area".</p> <p>With regard to sites 59713 and 59715, these sites have been appraised on a 'policy-off' basis, which means they have been appraised on their physical constraints only with no consideration given to mitigation. This ensures all sites are appraised on a consistent basis. If the sites are allocated in the Local Plan via policy containing mitigation measures, they will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the built-up areas. Maximising densities may give the same number of dwellings, however the appropriate mix of sizes, types and tenure will not be met. Option 1 for objective 14 is considered to be a minor negative effect as part of the appraisal due to potentially fewer desirable units and flats in an intensified area. It should be considered a major negative due to the likelihood of delivering lower-quality housing without a mix of sizes, types and tenure. This goes against every element of the objective and should therefore be considered a major negative.</p> <p>Q.8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number.</p> <p>General observations of the individual site assessments</p> <p>Esquire Developments are currently promoting two sites that have been identified in Appendix D of the Interim Sustainability Appraisal Report. Site 59713 also known as Land North of 351 Hermitage Lane, Maidstone has been submitted under application ref. 22/00907/FL for 42 dwellings and is currently awaiting a decision (Appendix 1 of these representations) and Site 59715, also known as Land North, East and South of 161 Watlington Road has been submitted under application ref. 22.01570/OA as an Outline application for up to 52 dwellings (Appendix 2).</p> <p>Accordingly, a significant amount of technical work has been undertaken on the sites to establish their suitability for development. Accordingly, the degree of detail contained in these applications is more so than the high-level assessment undertaken in the Sustainability Assessment.</p> <p>As a result, we are able to identify that there are shortcomings with some of the conclusions in the Sustainability Assessment that are not supported, and alternative conclusions reached on site specific matters including where generalised assumption has skewed the assessment in favour of large sites over 00 dwelling s- see SA Objective 14). This is set out in Appendix 3 of this statement.</p>	
42819617	Q7 of the questionnaire	<p>Q.7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>3.36 The Planning and Compulsory Purchase Act 2004 requires Local Plans to be subject to Sustainability Appraisal to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. We generally support the overall scope and methodology set out in the SA. However, we are of the view that it fails to assess the impact of the differing scenarios accurately.</p> <p>3.37 The SA includes an assessment of both quantum options. It does not include an option for development below the 839 dwellings per annum as it is considered an unreasonable alternative in the context of national policy and local evidence on housing affordability. We consider this a sensible approach given that TMBC are not willing to</p>	<p>Delivering growth beyond the assessed housing need (Quantum Option 2) could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>The SA does not conclude that both growth scenarios would result in a negligible impact on economic growth. Quantum Option 1 receives a significant positive effect in relation to SA objective 4, whilst Quantum Option 2 receives a mixed minor positive and minor negative effect. The reasons for this are outlined in paragraph 4.34 of the Interim SA Report.</p> <p>With regard to SA objective 2: service and facilities, site 59845 receives a minor negative effect in relation to this objective as it falls</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>consider a lower housing target. A summary of the SA findings is included below:</p> <p>3.38 While we broadly agree with the SA's assessment of the different quantum options, it fails to recognise the significant benefits of delivering Option B. The SA concludes that Option B would result in 'mixed minor effects' for objective 1,2 and 3 while Option A would result in 'Minor Positive Effects'. We disagree with this. As set out above, a higher growth scenario would ensure homes are allocated in sustainable locations across the Borough mitigating against speculative applications coming forward which may result in unsustainable growth patterns. Both options should show 'Significant Positive Effects' against these objectives.</p> <p>3.39 The assessment also concludes that both growth scenarios would result in negligible impact on the economic growth. We strongly disagree with this conclusion. Housing development will create jobs during the construction phase. It will provide additional residential expenditure in the local economy, additional s106 payments to support local infrastructure, and more spending power in the local area to enhance the vitality and viability of local service. Furthermore, providing family homes in the Borough will help attract and retain the local workforce strengthening the local economy. These objectives should be show 'Significant Positive Effects' in both growth scenarios.</p> <p>Q.8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>3.40 Appendix D of the Interim SA sets out the fourteen Sustainability Objectives. While we generally support the objectives. However, it is important to note that the assessment is generic for across the Borough. Setting over-arching targets fails to accurately reflect the potential of each specific site.</p> <p>3.41 These representations relate specifically to land off Tonbridge Road (ref: 59845). The table below sets out the SA's conclusions alongside a column which is a more accurate reflection of the site.</p> <p>3.47 We do not support the SA assessment and would support a more detailed and accurate review of each site's sustainability merits.</p> <p>3.48 In addition, the report includes a yield of 0 dwellings on the site. This yield is based on the methodology set out in the Urban Capacity Study and is based on the site's accessibility. To determine overall accessibility of a site, a scoring matrix was applied to each of the elements of accessibility considering accessibility to the following services:</p> <ul style="list-style-type: none"> • Bus Stops • Train Stations • Primary and Secondary Schools • GP • Dentist Pharmacy 	<p>within the Fair Accessibility Band in the Urban Capacity Study (July 2022). This is in accordance with the site assessment criteria.</p> <p>With regard to SA objective 3: education, the site receives a minor positive effect as it is within 800m of a primary school. All effects against this objective are recorded as uncertain, as it is unknown whether the schools have capacity to accommodate new pupils or not. Although the respondent states that the site is within 2.5 miles of an allocation to deliver 900 homes along with a primary and secondary school, this is quite a distance and the application is subject to approval.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities in the long-term and not temporarily. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 5: biodiversity and geodiversity, this is a 'policy-off' appraisal and so consideration is not given to mitigation, such as ecological enhancements, provision of a community orchard and wildflower meadow, and biodiversity net gain. If the site is allocated in the Local Plan via policy, it will be appraised on a 'policy-on' basis.</p> <p>With regard to SA objective 6: landscape and townscape, Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. The site does, however, incorrectly receive an uncertain significant negative effect in relation to SA objective 6 when it should receive an uncertain minor negative effect. This is due to the fact it is located on the edge of a settlement, and so development can be more easily integrated into existing built development.</p> <p>With regard to SA objective 7: heritage, the site is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, the site correctly receives a significant negative effect in relation to SA objective 7. All effects against this objective are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>All site options receive a negligible effect in relation to SA objective 11: climate change adaptation, as "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, this is a 'policy-off' appraisal and so consideration is not given to mitigation, such as the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<ul style="list-style-type: none"> • Retail • Supermarket • Pub <p>3.49 We agree that development densities should be influenced by a site's accessibility. However, the Urban Capacity Study only considers distances from certain locations rather than how accessible a site genuinely is. For example, the capacity study considers distances from bus stops. However, it does not consider the frequency of buses serving the bus stop or where they run to. Therefore, the methodology cannot fully reflect the accessibility of the site.</p> <p>3.50 Furthermore, the identified yield does not consider the site-specific characteristics. The assessment does not factor in topography, ecology, landscape, heritage or neighbouring uses. These will all have an impact on the potential yield of a site. As a result, a number of site's have been identified to deliver a high yield of development due to their accessibility credentials when in reality, the site cannot deliver such a high yield without resulting in harm.</p> <p>3.51 We are of the view that the site capacity fails to accurately reflect the true potential yield of a site. The current approach results in a misleading indication of the scale of development that can come forward in certain locations. Instead, TMBC should be working with landowners and developers on a site-by-site basis to understand the true potential of a development site.</p>	<p>incorporation of junction capacity improvements. Therefore, the effect against SA objective 12 remains as it is.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". As site 59845 will deliver fewer than 100 new dwellings (not 0), it receives a minor positive effect.</p> <p>The respondent agrees with the effects recorded against SA objectives 1: health and wellbeing, 8: water, 9: soil, 10: climate change mitigation and 13: material assets and waste.</p> <p>The Urban Capacity Study does take into consideration bus service frequency, please refer to paragraph 53 of the document.</p>
25240641	Q7 of the questionnaire	<p>1.2.25 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>1.2.26 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>1.2.27 The same principle applies with provision of new essential services and education and training facilities with a assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>1.2.28 In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p>

45864993	Q7 of the questionnaire	<p>Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>4.1.32 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>4.1.33 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>4.1.34 The same principle applies with provision of new essential services and education and training facilities with a assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>4.1.35 In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner.</p> <p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>4.1.36 In respect of this question, our client only wishes to comment upon Oast Park Golf Club, which is assigned site reference '59840' within the Sustainability Appraisal report.</p> <p>4.1.37 Upon reviewing the findings of the Sustainability Appraisal report, we are concerned that the report significantly underplays the accessibility of the site and its existing relationship with the Snodland urban area and without basis, identifies high levels of landscape and heritage harm without regard to the scale of the development proposed. Finally, the report seemingly attributes very little positive impact to the delivery of up to 800no. new homes and thus the report has the effect of appearing heavily skewed against the delivery of new housing.</p> <p>4.1.38 Considering the report's site assessment for Oast Park in detail, we note that under SA Objective 1, the report references the sites good accessibility to healthcare and/or open space, but attributes a significant negative to the loss of an existing sports facility. In this regard, the report fails to consider the present disused state of the golf course which has ceased operating as a golf course for a number of years. By contrast, the proposed development is capable of providing high-quality sport and leisure facilities on site which has not</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022). As site 59840 falls within the 'Fair Accessibility Band', it receives a minor negative effect in relation to SA objective 2. This is in accordance with the site assessment criteria.</p> <p>The site is incorrectly recorded as not located near any settlements in rural locations. However, the site still receives an uncertain significant negative effect in relation to SA objective 5: landscape and townscape, due to its location in the AONB.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p> <p>Site 59840 is incorrectly recorded as receiving an uncertain minor positive effect in relation to SA objective 14 when it should receive an uncertain significant positive effect. In the next iteration of the SA, the proforma for the site will be updated to reflect this.</p> <p>The quality of existing open spaces is not considered in the SA, and this includes the space comprising this site. Therefore, the site correctly receives an uncertain significant negative effect in relation to SA objective 1: health and wellbeing.</p> <p>The site correctly receives uncertain significant negative effects in relation to SA objectives 5: biodiversity and geodiversity and 6: landscape and townscape. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. ecological enhancements). This ensures all sites are appraised on a consistent basis. If the site is allocated in the Local Plan via policy outlining mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA utilises a precautionary approach and therefore if a site is located within close proximity of a heritage asset (as recorded in the Kent Historic Environment Record), it has the potential to result in a significant negative effect. All effects against SA objective 7: heritage are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>been factored into the assessment and would correctly result in a net positive.</p> <p>4.1.39 The site is logically located close to the urban area of Snodland with good onward access to larger settlements. The report considers the site to have a fair accessibility 'minor negative' to community facilities and services. Given the rural nature of the majority of the borough, we would suggest that in context, the site has a good accessibility level and should be considered a minor positive.</p> <p>4.1.40 SA Objective 5 relates to biodiversity and identifies the site to be within 250m of a designated ecological site and to form an existing green infrastructure asset which could be lost. The report concludes this to result in a uncertain significant negative. However, the report fails to consider the inherently managed state of the golf course, which undoubtedly reduces the ecological potential of the site and fails to consider the potential for significant ecological enhancement as part of the proposed development. Indeed the report notes that it may be possible to conserve or even enhance the asset through the design and layout of the new development, yet still concludes a significant negative.</p> <p>4.1.41 Similarly, SA Objective 6 relates to townscapes and landscapes and whilst acknowledging that the effects will depend on the design, scale and layout of development, which may help mitigate any adverse effects, still identifies a uncertain significant negative. Notwithstanding our view that this assumption is premature, the site is characterised by its managed former golf course state and is already appreciated in an edge-of-settlement context.</p> <p>4.1.42 SA Objective 7 relates to heritage assets and identifies a heritage asset within 250m of the site and concludes an uncertain significant negative. However, the report concedes that effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. In this regard, the presence of a single asset, which itself is confirmed to be visually and spatially unrelated to the site does not in our view amount to a significant negative and fails to have any regard to the relative scale of development proposed.</p> <p>4.1.43 Finally, with respect to SA Objective 14 which concerns housing delivery, we fail to understand how the delivery of up to 800no. new homes comprising a mix of dwelling sizes, types and tenures attracts only an uncertain minor positive. Consequently, when read alongside the preceding objectives, which place significant individual weight on landscape, ecological and heritage assets without regard to the relative scale of development proposed, the report appears heavily skewed against the delivery of new housing.</p>	
45875041	Q7 of the questionnaire	Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.	SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>1.2.25 No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However, in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>1.2.26 Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1.</p> <p>1.2.27 The same principle applies with provision of new essential services and education and training facilities with a assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>1.2.28 In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Without a credible and more balanced assessment it represents an unsound assessment upon which to base future decisions.</p> <p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>1.2.29 In respect of this question, our client only wishes to comment upon the site they are promoting.</p> <p>1.2.30 We support the double positive that will be achieved in respect of the provision of new job opportunities (Objective 4) and in particular we would reiterate that a shortfall of 147,550 sq.m light/general industrial and storage and distribution requirements across the period 2021-40, which our client's land has a role in helping to address.</p> <p>1.2.31 However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>1.2.32 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. Provision of employment uses with dedicated species rich features would result in substantial betterment and this should represent a strong positive.</p> <p>1.2.33 The Council have assessed the site as Negative against SA8 objective 8 when it is not in Flood zone nor % at risk for surface flood.</p> <p>1.2.34 Based on a human judgement it is clear that there are not any significant heritage, environmental or landscape constraints to development and that the impacts are likely to be neutral or positive. Furthermore, the land is well related to the established employment hub of Wrotham.</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, site 59680 receives a significant negative effect, as it is within 250m of ancient woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Although the respondent has stated that the site would need to achieve biodiversity net gain, this is a 'policy-off' appraisal and so consideration is not given to things like biodiversity net gain, as this is a form of mitigation. If the site is allocated in the Local Plan via policy, it will be appraised on a 'policy-on' basis.</p> <p>The site receives an uncertain minor negative effect in relation to SA objective 8: water, as it contains land with a 1 in 100 year risk of surface water flooding. This is in accordance with the site assessment criteria.</p> <p>With regard to the historic environment, the site receives a significant negative effect because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7: heritage are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to the landscape, the site receives a significant negative effect in relation to SA objective 6: landscape and townscape, as it is partially within the AOND. All effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effect.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage, biodiversity/geodiversity and landscape constraints in more detail.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		1.2.35 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.	
44546401	Q7 of the questionnaire	<p>Questions 7</p> <p>Kitewood's site to the west of Hays Road in Snodland is identified as site no. 59874 in the list of sites at Table 9 of the Tonbridge and Malling Borough Local Plan Regulation 18 Draft. The site is accessible by car, being located close to the junction of Hays Road and Malling Road. It is also accessible by public transport (by bus, by train) and by pedestrians and cyclists. The site is close to existing employment opportunities and also lies adjacent to residential uses on the opposite side of Hays Road. www.carneysweeney.co.uk</p> <p>The new occupiers of development on the site would benefit from existing social infrastructure and services in Snodland. Contributions are also able to be made to expand any of this infrastructure, as appropriate. The site study document that is submitted with this response to the Regulation 18 consultation shows the physical features on and immediately adjoining the site. From this, it is clear that development can be provided on the site outside Flood Zone 3 (which is to the south), without impact on the AONB (the site is well screened from the wider landscape) and can provide biodiversity improvements on the undeveloped areas of and boundaries to the site.</p> <p>The site is no longer farmed and no important agricultural land would be lost upon the site's development. The site is currently used for grazing horses and is therefore likely to have low ecological value. If the site contains a viable quantity of minerals, these could be extracted as part of the development process, and therefore is not a reason for the site being left undeveloped or to restrict its allocation. Indeed, extraction prior to development is acceptable within the Council's previously adopted Policy DM5 on mineral resources.</p> <p>The site can provide a range of housing types, mix and tenures together with employment use, in order to deliver a truly inclusive mixed development.</p> <p>The fact that the site can deliver both employment and housing development is also an important sustainability factor, that should be taken account to in the sustainability appraisal. As a result of the above, Kitewood's site at Snodland performs very well from a sustainability perspective.</p>	<p>Site 59874 has been appraised in line with the site assessment criteria, as outlined in Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>The site has been appraised on a 'policy-off' basis and so consideration is not given mitigation (e.g. financial contributions). Documents submitted by site promoters are not considered in the SA, so as to ensure all sites are appraised on a consistent basis. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>
43619329	Q7 of the questionnaire	<p>[59647]</p> <p>Q7 Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>No. The SA Assessment seems to be based on unevidenced assumptions. For example, the SA tests option 1 (meeting development needs) and option 2 (meeting development needs plus 10%). A minor positive effect is identified for both Option 1 and Option 2 in relation to SA objective 1: health and wellbeing. However,</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>The assessed need + 10% was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific higher growth figures on. An even higher growth scenario of assessed need + 20% would not yield particularly different SA effects to Quantum Option 2, as both options are relatively similar and so it</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>in the case of Option 2, a minor negative effect is also identified as it is deemed that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities if they become overloaded.</p> <p>Such a conclusion is clearly without reason. There is no basis to suggest that additional growth would stretch existing healthcare capacity more than option 1. To the contrary, it could just as easily be the case that the extra development will deliver new and upgraded facilities that are not achievable under option 1. This is particularly the case at Court Lane, Hadlow, which has potential to provide a new medical centre for Hadlow and the surrounding area. The development would be mitigating its impact, whilst allowing for greater and improved provision for the existing community.</p> <p>The same principle applies with provision of new essential services and education and training facilities with an assumption that more growth will overwhelm rather than help provide improved education facilities.</p> <p>In our view the SA looks unreasonably negatively on growth rather than looking in an impartial manner. Indeed, it is Rydon's firm belief that TMBC should be adding a 20% buffer to the Local Housing Need requirement. This is for a number of reasons which are relevant to TMBC, not least the inherent lack of housing affordability in the borough.</p> <p>MBC's past performance particularly in relation to Housing Land Supply and the 2021 Housing Delivery Test measurement, which equated to 63%, provide a clear reason to provide a 20% buffer to the Local Housing Need. This would lead to an annual housing requirement of 1,007 dpa, and a housing requirement at this level would significantly improve the affordability situation within the Borough and would deliver more affordable homes for those members of the community in the most need. This should be tested through the SA.</p> <p>Q8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>No. Again, the SA is based on unevidenced assumptions partly due to the fact that TMBC have elected to proceed with this Regulation 18 consultation and accompanying SA in advance of the publication of the SHLAA. In respect of the site at land to the north of Court Lane, Hadlow (ref 59647), we wish to make the following observations.</p> <p>SA Objective 2</p> <p>With regard to the site's accessibility (SA Objective 2) we welcome the conclusion that the site falls within the Good Accessibility Band however it is not at all clear how this conclusion has been arrived at. Paragraph 5.6 states that each site's overall accessibility score has been determined by applying a scoring matrix to each element of accessibility, however this matrix does not appear to have been published. It is therefore impossible to be able to review and confirm</p>	<p>would be difficult to distinguish between the effects each is likely to have.</p> <p>As stated in paragraph 2.27 of the Interim SA Report, "Reasonable alternative options for the residential, employment and mixed use sites to be allocated in the Local Plan have been identified by TMBC. These sites were identified via a call-for sites exercise and an Urban Capacity Study. In addition, allocations from the withdrawn Local Plan which were not submitted during the call-for-sites exercise and were not identified in the Urban Capacity Study have been identified in the pool of reasonable alternative options."</p> <p>Site 59647 receives a negligible effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Good Accessibility Band. As outlined in paragraph D.3 of the Interim SA Report, "Sites have been assessed by TMBC for accessibility to local services (including transport infrastructure, education facilities, healthcare facilities and essential services) using accessible walking distances informed, in part, by guidance such as Planning for Walking [See reference 53]. Sites have also been assessed on their location, with sites within settlements placing higher in the settlement hierarchy being considered more accessible. Sites have then been given an overall accessibility score, and placed in to one of the following bands outlined in Table D.1 below". Sites that fall within the Very Good Accessibility Band receive minor positive effects against this objective whereas sites that fall within the Good Accessibility Band receive negligible effects.</p> <p>Site 59647 receives an uncertain minor negative effect in relation to SA objective 5: biodiversity and geodiversity as it is within 250m and 1km of Ancient Woodland. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. biodiversity net gain). This ensures all sites are appraised to a consistent level of detail.</p> <p>With regard to SA objectives 6: landscape and townscape and 7: heritage, consideration is not given to supporting documents submitted by site promoters. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 8: water, the proforma for the site states that it is within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site is within an area with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soil, as the site is greenfield and contains Grade 2 agricultural land, it receives a significant negative effect in relation to this objective.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>whether the scoring is fair or indeed whether it has been informed by accurate factual information or not. The Council already confirms in relation to SA Objective 1 that this site is accessible to certain key facilities. This score should therefore be amended to Positive (+)</p> <p>SA Objective 5</p> <p>The SA states that:</p> <p>“The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site.”</p> <p>There are no statutory designated sites of nature conservation value within or immediately adjacent to the site. The nearest statutory designated site is Bourne Alder Carr Site of Special Scientific Interest (SSSI) located approximately 5.2km northwest of the site boundary.</p> <p>There are no non-statutory designated sites of nature conservation value within or immediately adjacent to the site. The nearest non-statutory designated site is Hazel Wood and Paddling Brook Shaw, West Peckham Local Wildlife Site (LWS) located approximately 1.6km northeast of the site boundary (see Plan ECO1).</p> <p>This raises significant concern about the accuracy of the evidence which underpins the SA, and the resultant Uncertain Minor Negative score given against SA Objective 5 in respect of this site.</p> <p>The land is currently of little or no ecological value and would be able to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment and this should represent a positive grading.</p> <p>SA Objective 6</p> <p>The SA grades the site as “Uncertain minor negative” in respect of SA Objective 6 which is to protect and enhance the borough’s landscape and townscape character and quality. It is stated that these effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scape and layout of the development, which may help mitigate any adverse effects.</p> <p>Rydon have commissioned evidence in respect of landscape and visual impact, to help inform TMBC’s Sustainability Appraisal and Local Plan evidence base. A Landscape & Visual Technical Note prepared by Liz Lake Associates can be found at Appendix 2. This finds that in visual terms, the extended development will only be visible from a very limited number of locations, mainly the public footpath MT125 running past the north east of the Site and from Hadlow Tower in the south west.</p> <p>It is considered that a proportionate release of Green Belt land to the north of Court Lane, Hadlow can take place without harming the purposes or functions of the Green Belt in this area.</p> <p>Given the availability of this new landscape evidence, the site should be considered to provide the opportunity for residential development</p>	<p>services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>from a landscape and visual perspective. The site's grading in respect of SA Objective 6 should be revised to neutral.</p> <p>SA Objective 7</p> <p>The SA states that</p> <p>"The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets."</p> <p>The site is graded as Uncertain Significant Negative in respect of this objective. However, Rydon have commissioned Orion Heritage to consider the possible effects that the proposed development of the site may have on the designated and non-designated heritage assets within the vicinity of the site. This new evidence provides the necessary certainty with respect to the effects of the development on heritage assets, in particular with regard to lines of sight. Orion have identified the following heritage assets, and have made the following observations in respect of effects:</p> <p>Hadlow Tower, Grade I Listed Building</p> <p>The Grade I listed Hadlow Tower sits 300m to the south west of the site. Intervisibility is shared from within the site, however, in its current form the Listed Building and the study site share limited to no co-visibility due to intervening natural screening and built form when approaching the asset along surrounding roads. The site in its current form is considered to make a limited contribution to the Tower's overall significance, which largely relates to its architectural and historic special interest.</p> <p>Church of St Mary, Grade II* Listed Building</p> <p>The Church of St Mary is located c.200m to the south west of the site. There is no visual connection between the site and the Church at ground level, and it is the immediate environs which form the setting of the Church. The site is considered to make a negligible contribution to the wider setting and a limited contribution to the significance of the Church.</p> <p>The Terrace, Grade II Listed Building</p> <p>The Terrace is a Grade II Listed Building which falls 65m to the south west of the site. Its setting relates to its position within the streetscape of Tonbridge Road. The site is considered to make a neutral contribution to the setting and no contribution to the significance of the Listed Building.</p> <p>Conservation Areas</p> <p>Two Conservation Areas sit within a 1km radius of the site. There is no intervisibility between the site the Freehold Conservation Area, and development of the site is not considered to have any potential to affect its character or appearance.</p> <p>The Hadlow Conservation Area is located immediately adjacent to the site. Due to the curvature of the roads and the close-knit built form,</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the Conservation Area has an enclosed feel with limited views to the wider landscape. Many of the key views and vistas are inward looking, to key landmark buildings. There is only a limited visual connection between the site and the Conservation Area, restricted to glimpsed views through spaces between buildings. The site is therefore considered to make only a limited contribution to the character and appearance of the Conservation Area.</p> <p>Given the above conclusions, it is clear that whilst there are designated heritage assets within the site's vicinity, there is very limited visual connectivity. The site makes only a limited contribution to the setting of designated heritage assets, and given the availability of the evidence, TMBC can now conclude with certainty in respect of cultural heritage, and the site's grading in this respect should be changed to Negligible. Orion's report is attached to these representations at Appendix 1.</p> <p>SA Objective 8</p> <p>Rydon's Flooding and Drainage Engineers Stuart Michael Associates have prepared a Technical Note which directly addresses the SA's statement that the "site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area" and the resultant Significant Negative/ Negligible score against SA Objective 8. The Technical Note is appended to these representations at Appendix 3, and highlights that the site lies wholly within Flood Zone 1 according to the UK Government Flood Map for Planning and is therefore at low risk of fluvial flooding. The nearest flood plain is located approximately 500m southwest of the site and is associated with the River Bourne. The Technical Note finds that the site:</p> <p>"is not significantly within an area at risk of flooding from either fluvial or surface water site. Mapping indicates the site is not located within a Groundwater Source Protection Zone and that there are no watercourses on the site or in close proximity to the Site."</p> <p>The site's score in terms of SA Objective 8 must be revised to Negligible.</p> <p>SA Objective 9</p> <p>It is stated that the site contains a significant proportion of Grade 1 or Grade 2 agricultural land, however this is not evidenced. The site's farmers state that only limited crops can grow on the land, and as such Rydon will commission an Agricultural Land Value assessment to inform subsequent evidence. At this stage, there is significant uncertainty and this must be reflected in the assessment.</p> <p>SA Objective 10</p> <p>The site is very well related to a very sustainable settlement. As such there is no reason why the site should be graded as only a Minor Positive, and this should be changed to Significant Positive.</p> <p>Overall, we have significant concerns with the SA. The desktop nature of the site assessment is of concern. Based on a human judgement it</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>is clear that there are not any significant constraints to development and that the impacts are likely to be neutral or positive.</p> <p>In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information. On this basis, we have prepared a revised SA for the site as below:</p> <p>[Insert copy of SA scoring]</p> <p>Q9. Do you agree with this set of strategic matters? Yes/No. Please explain</p> <p>The Council has have identified the following strategic matters that need to be addressed within the plan; Housing, Economic Development, Transport, Tonbridge (as the borough's principal town centre), Retail, Community facilities and infrastructure, Natural Environment, Built and Historic Environment, Green Belt and Climate Change.</p> <p>Whilst we recognise that these topics are relevant to the plan, not all need be of a strategic nature. Para 20 of the NPPF states that strategic policies should set out an overall strategy for the pattern, scale and design quality of places, and make sufficient provision for:</p> <p>(a) housing (including affordable housing), employment, retail, leisure and other commercial development;</p> <p>(b) infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat);</p> <p>(c) community facilities (such as health, education and cultural infrastructure); and</p> <p>(d) conservation and enhancement of the natural, built and historic environment, including landscapes and green infrastructure, and planning measures to address climate change mitigation and adaptation.</p> <p>In line with the Framework, strategic policies should be limited to those necessary to address the strategic priorities of the area (and any relevant cross-boundary issues), to provide a clear starting point for any non-strategic policies that are needed. Strategic policies should not extend to detailed matters that are more appropriately dealt with through neighbourhood plans or other non-strategic policies.</p> <p>With the above in mind, the plan should be more focussed on the strategic policies that it is proposing to introduce.</p> <p>Q.10. Which strategic matters should be priorities in the Local Plan? And</p> <p>Q.11. What are your reasons for selecting these particular strategic matters as priorities for the Local Plan (outline briefly)?</p> <p>As outlined above, the NPPF sets clear parameters for what constitute strategic policies and what should feature in a plan. Given there is</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>clarity on these matters we question the benefit in implying that there is an element of choice of which matters take priority.</p> <p>Q.12. Do you agree that the housing requirement for the Local Plan should involve meeting the identified housing needs in full, as a minimum?</p> <p>In addition to the spatial distribution of development across the borough, the Council is seeking input on the quantum of development that is accommodated, namely whether to plan for the full housing need of the area, or to plan for full need plus 10% for flexibility to be built into the strategy.</p> <p>By way of simple response, there is a clear need to ensure development requirements are met in full and that any future plan is sufficiently flexible in the face of what could be a difficult economic period.</p> <p>As emphasised within the plan, one of the Government's key objectives for planning is to significantly boost the supply of homes. This includes not just market housing but also housing to meet the needs of different groups in society. The gross need for housing (2021-2040) is stated to be 9,245 dwellings based on an annual delivery rate of 839 pa.</p> <p>Such delivery requires a step change in how the borough is planning for housing.</p> <p>In addition to the overall housing need, the plan also acknowledges that housing affordability is a significant issue that is worsening beyond that of the county, region and national level. Accordingly affordable housing provision must be a strategic priority with the need for close to 300 affordable dwellings per annum.</p> <p>In our view, the delivery of a higher number of homes will have the greatest impact on combatting the affordability constraints.</p> <p>Q.13. Do you agree that the Local Plan should allocate a mix of sites (small, medium, and large) to help maintain supply throughout the plan period?</p> <p>Yes. Paragraph 69 of the NPPF explicitly acknowledges that small and medium sized sites can make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites local planning authorities should accommodate at least 10% of their housing requirement on sites no larger than one hectare and support the development of windfall sites through their policies and decisions.</p> <p>We also consider the need to recognise the importance of SME developers. The support for SMEs is recognised within Central Government and significant weight and reliance is being placed upon them to help deliver and achieve the 300,000 dwellings per annum housing target. In particular SMEs think differently and act differently to volume housebuilders, including the ability to deliver bespoke designs reflecting the local area and deliver quickly. do not also land</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>bank and deliver quickly and so it is important that this is fully understood when selecting sites.</p> <p>Q.14. Do you agree that the Local Plan should require a specified mix of dwelling types (eg flatted, terraced, semi-detached, detached) on large development sites to meet the range of households' needs? Yes/No Please explain</p> <p>Yes. There is great emphasis on the need to deliver mixed and balanced communities throughout the framework</p> <p>Q.15. Do you agree that the Local Plan should require a proportion of plots on large developments to be made available for self-build and custom house building? Yes/No Please explain</p> <p>No. The Council should address self build need within the plan and potentially allocate suitable sites for self build development. However, the practicalities of delivering self builds as part of a larger scheme is complex and faces a number of design and infrastructure constraints.</p> <p>Q.16. Do you agree that the Local Plan should require a proportion of homes on large development sites to be Build-to-Rent products? Yes/No Please explain</p> <p>No. The Council should address build-to-rent need within the plan and potentially allocate suitable sites for build-to-rent development. However, the practicalities of delivering build-to-rent products as part of a larger scheme is complex and faces a number of design and infrastructure constraints. These should therefore only be pursued where there is a willingness on the part of the developer.</p> <p>Q17 Do you agree with the windfall allowance methodology?</p> <p>We support a modest windfall allowance to reflect that some unplanned sites will continue to be delivered. However, as part of the plan making process there is a requirement to consider, identify and maximise a range of sites before proceeding to any greenfield or Green Belt land releases.</p> <p>Owing to the onerous nature of these tests, it is likely that more sites will be identified and more land exhausted than has previously been the case. Accordingly, we question the extent to which past trends will represent a sound basis for future expectations.</p> <p>The above in mind, any windfall allowance should be conservative rather than overly optimistic.</p> <p>Q.18. Which housing matters are most important to you?</p> <p>As outlined above, there is a need to plan for full housing needs. Given there is clarity on these matters we question the benefit in implying that there is an element of choice of which types of housing take priority.</p> <p>Green Belt</p> <p>Q.40. Do you agree that there are exceptional circumstances, at the strategic level, for altering Green Belt boundaries (in principle) to help address assessed development needs?</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Yes. We acknowledge that before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the Council must demonstrate that it has examined all other reasonable options making as much use as possible of suitable brownfield sites and underutilised land; optimising the density of development and informed by discussions with neighbouring authorities. However, these exercises were carried out in detail as part of the previous Local Plan work and evidence established that Green Belt release is needed. Since this time, annual housing requirements have increased significantly.</p> <p>Notwithstanding the earlier decisions and evidence, housing and employment needs remain a core part of why exceptional circumstance exist to justify a review of Green Belt boundaries.</p> <p>Case law, (Calverton Parish Council v Nottingham City Council, Broxtowe Borough Council and Gedling Borough Council [2015] EWHC 1078 (Admin)) also provide guidelines for determining whether exceptional circumstances exist. The above judgement states:</p> <p>‘planning judgments involved in the ascertainment of exceptional circumstances in the context of both national policy and the positive obligation located in section 39(2) should, at least ideally, identify and then grapple with the following matters:</p> <p>(i) the acuteness/intensity of the objectively assessed need (matters of degree may be important);</p> <p>(ii) the inherent constraints on supply/availability of land prima facie suitable for sustainable development;</p> <p>(iii) (on the facts of this case) the consequent difficulties in achieving sustainable development without impinging on the Green Belt;</p> <p>(iv) the nature and extent of the harm to this Green Belt (or those parts of it which would be lost if the boundaries were reviewed); and</p> <p>(v) the extent to which the consequent impacts on the purposes of the Green Belt may be ameliorated or reduced to the lowest reasonably practicable extent’.</p> <p>Considering these parameters in turn, the acuteness of the local and economic housing need is clear in the need to deliver 15,941 new homes and 296,260 sq.m (69.8ha) of employment provision in the plan period. Furthermore, the Council's Green Belt Assessment prepared by Arup also confirms that TMBC does have a good strategic exceptional circumstances case for altering the Green Belt boundaries to help meet the assessed development needs.</p> <p>Q.41. Do you agree with that the set of factors listed in para. 5.11.7 should be used to determine if exceptional circumstances exist to justify alterations to Green Belt boundaries? Yes/No. If no, please explain, highlighting additional/alternative factors that you consider need to be included in the review process.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The plan highlights a set of factors that need to be taken into account when reviewing the existing Green Belt boundaries to determine if exceptional circumstances exist to justify local alterations. These are:</p> <ul style="list-style-type: none"> (a) National policy (purposes of the designation and the need to promote sustainable patterns of development; (b) Case law (c) Housing Market Areas (d) Housing affordability (e) Policy and environmental constraints (f) Assessed development needs (g) Housing supply (h) The potential for development in the built-up areas (Urban Capacity Study). <p>Fundamentally we agree that all of these matters should be taken into account when making a judgement about the locations for Green Belt release. The most obvious omission is delivery. In respect of making a judgement on site allocations, it is imperative that the plan includes a range of deliverable sites. Whilst it is recognised that the Council must assess potential for development in the built-up areas, the reality is that many of these will come forward for development without plan led intervention. Those that have consistently delayed are often not forthcoming because of viability or wider ownership constraints. It is therefore essential that deliverability is a core component when considering options.</p>	
42819617	Q7 of the questionnaire	<p>Q.7. Do you agree with the findings of the strategic policy options assessments in Chapter 4 of the Interim Sustainability Appraisal Report? Yes/No Please specify the option and explain.</p> <p>3.26 The Planning and Compulsory Purchase Act 2004 requires Local Plans to be subject to Sustainability Appraisal to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. We generally support the overall scope and methodology set out in the SA. However, we are of the view that it fails to assess the impact of the differing scenarios accurately.</p> <p>3.27 The SA includes an assessment of both quantum options. It does not include an option for development below the 839 dwellings per annum as it is considered an unreasonable alternative in the context of national policy and local evidence on housing affordability. We consider this a sensible approach given that TMBC are not willing to consider a lower housing target. A summary of the SA findings is included below:</p> <p>Table 3.1 Summary of SA's Findings</p> <p>3.28 While we broadly agree with the SA's assessment of the different quantum options, it fails to recognise the significant benefits of delivering Option B. The SA concludes that Option B would result in</p>	<p>Delivering growth beyond the assessed housing need (Quantum Option 2) could result in some capacity issues, whilst also stimulating the provision of new services and facilities. For this reason, Option 2 is expected to have mixed minor positive and uncertain minor negative effects in relation to SA objectives 1: health and wellbeing, 2: services and facilities and 3: education.</p> <p>The SA does not conclude that both growth scenarios would result in a negligible impact on economic growth. Quantum Option 1 receives a significant positive effect in relation to SA objective 4, whilst Quantum Option 2 receives a mixed minor positive and minor negative effect. The reasons for this are outlined in paragraph 4.34 of the Interim SA Report.</p> <p>With regard to SA objective 2: service and facilities, site 59843 receives a negligible effect in relation to this objective as it falls within the Good Accessibility Band in the Urban Capacity Study (July 2022). This is in accordance with the site assessment criteria.</p> <p>With regard to SA objective 3: education, the site receives a minor positive effect as it is within 800m of a primary school. All effects against this objective are recorded as uncertain, as it is unknown whether the schools have capacity to accommodate new pupils or not. Although the respondent states that any proposal will include</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>'mixed minor effects' for objective 1,2 and 3 while Option A would result in 'Minor Positive Effects'. We disagree with this. As set out above, a higher growth scenario would ensure homes are allocated in sustainable locations across the Borough mitigating against speculative applications coming forward which may result in unsustainable growth patterns. Both options should show Significant Positive Effects against these objectives.</p> <p>3.29 The assessment also concludes that both growth scenarios would result in negligible impact on the economic growth. We strongly disagree with this conclusion. Housing development will create jobs during the construction phase. It will provide additional residential expenditure in the local economy, additional s106 payments to support local infrastructure, and more spending power in the local area to enhance the vitality and viability of local service. Furthermore, providing family homes in the Borough will help attract and retain the local workforce strengthening the local economy. These objectives should be show Significant Positive Effects in both growth scenarios.</p> <p>Q.8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>3.30 Appendix D of the Interim SA sets out the fourteen Sustainability Objectives. While we generally support the objectives. However, it is important to note that the assessment is generic for across the borough. Setting over-arching targets fails to accurately reflect the potential of each specific site.</p> <p>3.31 These representations relate specifically to land off Crouch Lane (ref: 59843). The table below sets out the SA's conclusions alongside a column which is a more accurate reflection of the site.</p> <p>Table 3.2 Sustainability Assessment Critique SA Objective TMBC's Assessment Applicant's Assessment</p> <p>3.36 We do not support the SA assessment and would support a more detailed and accurate review of each site's sustainability merits.</p> <p>3.37 In addition, the report includes a yield of 76 dwellings on the site. This yield is based on the methodology set out in the Urban Capacity Study and is based on the site's accessibility. To determine overall accessibility of a site, a scoring matrix was applied to each of the elements of accessibility considering accessibility to the following services:</p> <ul style="list-style-type: none"> • Bus Stops • Train Stations • Primary and Secondary Schools • GP • Dentist Pharmacy • Retail • Supermarket 	<p>developer contributions ensuring there is sufficient capacity to support growth, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. financial contributions). If the site is allocated in the Local Plan via a policy, it will be appraised on a 'policy-on' basis. The same applies to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape,</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities in the long-term and not temporarily. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 7: heritage, the site is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, the site correctly receives a significant negative effect in relation to SA objective 7. All effects against this objective are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives a minor negative effect as it is within Source Protection Zones 2 and 3. The effect is recorded as uncertain, as it is unknown at this stage what effects development might have on water quality.</p> <p>With regard to SA objective 9: soil, the site correctly receives an uncertain significant negative effect. Although the respondent states that the harm caused by the loss of agricultural land will be outweighed by the benefits of the scheme and that the effect should be upgraded and uncertainty removed, SA objective 9 relates solely to agricultural land and whether the site is previously developed or not, rather than the overall scheme. The effect should remain as it is.</p> <p>All site options receive a negligible effect in relation to SA objective 11: climate change adaptation, as "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 13: material assets and waste, the justification text for the minor negative effect explains that the effect is uncertain at it will largely depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction. Although the site promoter states that they understand the site to have no realistic prospect of being worked for minerals in the long term, this is not certain. Additionally, this level of information is not available for most of the sites. So as to ensure consistency, all sites within a Minerals Safeguarding Area are recorded as having an uncertain minor negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>• Pub</p> <p>3.38 We agree that development densities should be influenced by a site's accessibility. However, the Urban Capacity Study only considers distances from certain locations rather than how accessible a site genuinely is. For example, the capacity study considers distances from bus stops. However, it does not consider the frequency of buses serving the bus stop or where they run to. Therefore, the methodology cannot fully reflect the accessibility of the site.</p> <p>Furthermore, the identified yield does not consider the site-specific characteristics. The assessment does not factor in topography, ecology, landscape, heritage or neighbouring uses. These will all have an impact on the potential yield of a site. As a result, a number of site's have been identified to deliver a high yield of development due to their accessibility credentials when in reality, the site cannot deliver such a high yield without resulting in harm.</p> <p>3.39 We are of the view that the site capacity fails to accurately reflect the true potential yield of a site. The current approach results in a misleading indication of the scale of development that can come forward in certain locations. Instead, TMBC should be working with landowners and developers on a site-by-site basis to understand the true potential of a development site.</p>	<p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". As site 59843 will deliver fewer than 100 new dwellings, it receives a minor positive effect.</p> <p>The respondent agrees with the effects recorded against SA objectives 1: health and wellbeing, 10: climate change mitigation and 12: air quality.</p> <p>The Urban Capacity Study does take into consideration bus service frequency, please refer to paragraph 53 of the document.</p>
25240641	Q8 of the questionnaire	<p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>1.2.29 In respect of this question, our client only wishes to comment upon the site they are promoting.</p> <p>1.2.30 We support the double positive that will be achieved in respect of the provision of new job opportunities (Objective 4) and in particular we would reiterate that a shortfall of 147,550 sq.m light/general industrial and storage and distribution requirements across the period 2021-40, which our client's land has a role in helping to address.</p> <p>1.2.31 However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>1.2.32 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The current use is a commercially farmed orchard of limited value, so provision of employment uses with dedicated species rich features would result in substantial betterment and this should represent a strong positive.</p> <p>1.2.33 The Council have assessed the site as Significant Negative against SA8 objective 8 when only 1% in Flood zone and less than 1% at risk for surface flood. In order to clarify flood risk a high level FRA is included as Appendix 1.</p> <p>1.2.34 New Access and cycle infrastructure is an integral part of the proposal and any future employees will have many opportunities to access jobs without a reliance on private vehicle. This in turn links in</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59701 is incorrectly recorded as receiving an uncertain significant negative effect when it should receive an uncertain minor negative effect. This is because it is incorrectly recorded as containing a green infrastructure asset, as there is some overlap with an existing green infrastructure asset. In the next iteration of the SA Report, site 59701 will receive an uncertain minor negative effect in relation to SA objective 5.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. This is in accordance with the site assessment criteria. Further to this, the site overlaps a watercourse. The effect is uncertain as it is unknown what effect development might have on water quality.</p> <p>With regard to SA objective 10: climate change mitigation, this is a 'policy-off' effect and so consideration is not given to mitigation, such as provision of cycle infrastructure.</p> <p>With regard to the historic environment, the site receives a significant negative effect because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7: heritage are recorded as uncertain, as they will depend on factors such as the design of the development and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>with SA Objective 10 which seeks to reduce greenhouse gas emissions so as to minimise climate change.</p> <p>1.2.35 Based on a human judgement it is clear that there are not any significant heritage, environmental or landscape constraints to development and that the impacts are likely to be neutral or positive. Furthermore, the land is well related to Tonbridge.</p> <p>1.2.36 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.</p>	<p>whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to the landscape, the site receives a minor negative effect in relation to SA objective 6: landscape and townscape, as it is on the edge of a settlement and so development may be more easily integrated into existing built development. All effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effect.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>
25368033	Q8 of the questionnaire	<p>I am writing to you having also completed our formal response to the 'Regulation 18' consultation using the online portal system as is the Council's preferred method of comment.</p> <p>As you are aware, the online system has been designed such that whilst it is possible in some instances to elaborate on answers to questions, a maximum of 6,000 characters can be used in each case (This equates on average to approximately 800 words).</p> <p>Whilst this is sufficient in the main, in the case of the Site Assessment responses (Question 8), it does not enable a full response to be provided.</p> <p>There is similarly no facility to attach plans or drawings which can be necessary to assist in explaining the points being made.</p> <p>Whilst appreciating the reasoning behind the use of the online system, (which we have utilised), I would ask that the Council consider the following additional points in relation to our client's land at Dryland Road, Borough Green (Site Reference 59748) as in many cases the assessment summaries appear either incorrect or uncertain of the effects that would result from its development.</p> <p>We highlight a number of the main areas of concern below.</p> <p>SA Objective 1: To improve human health and well-being</p> <p>1.The Sustainability Appraisal (SA) lists the site as likely to have significant positive effects and also uncertain negative effects. We agree with the positive effects categorisation but not the reference to uncertain negative effects.</p> <p>* Paragraph 5.4 of the SA states that negative effects under this category are likely to relate to sites that contain "an area of open space or accommodate an outdoor sports facility that may be lost as a result of development. However, these negative effects are uncertain as the effects will depend on the exact scale, layout and design of development and whether these existing features are in fact lost to new development."</p> <p>* Our clients site is private land, it does not include any public open space or sports facilities that would be lost through development. The site proposals include the provision of new publicly accessible</p>	<p>The reasoning behind any uncertain effects is provided in Appendix D of the Interim SA Report.</p> <p>Site 59748 receives an uncertain significant negative effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect), as it contains an existing area of open space. This open space may be lost as a result of development, although this is uncertain. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. open space provision). This ensures all sites are appraised to a consistent level of detail. The SA does acknowledge the fact site 59748 is within close proximity of a GP surgery and open space and for this reason, also receives a significant positive effect in relation to SA objective 1.</p> <p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). As the site falls within the Fair Accessibility Band in the Urban Capacity Study, it receives a minor negative effect in relation to SA objective 2. The straight-line distances the respondent refers to are used to inform SA objectives 1: health and wellbeing and 3: education. The site's access to walking paths is recognised under SA objective 1. The site's proximity to a railway station (and bus stops) is considered under SA 10: climate change mitigation, and schools under SA objective 3.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59748 contains green infrastructure assets. Additionally, it is adjacent to Ancient Woodland (Bourne Valley Woods). In the next iteration of the SA Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). Therefore, the site correctly receives an uncertain significant negative effect in relation to SA objective 5. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. biodiversity net gain).</p> <p>Site 59748 is correctly recorded as being within 250m of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, the site correctly receives an uncertain significant negative effect in relation to SA objective 7: heritage.</p> <p>With regard to SA objective 8: water, the proforma for the site states that it is within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>footpaths and open space which would result in a significant improvement in terms of access to open space in this area. An indicative site plan is included to demonstrate this provision to the south of the built development.</p> <p>* It is noted that site number 59710 (Land near the garden centre at Borough Green Road) has been ranked as a significant positive in terms of improving human health and well-being. The assessment states that this is because the site lies within 800m of an existing healthcare facility and an area of open space/play area/sports facility. Our client site lies close to a bowling club, (50m) and a recreation ground (100m) and within easy walking distance of the Borough Green Medical Centre (260m) but these aspects are not referenced in the text in the same way.</p> <p>* The attached context and facilities plan demonstrated the ease of access to nearby local facilities including the medical centre.</p> <p>* We ask that the reference to uncertain negative effects is therefore removed from the assessment.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>* The site is noted as having 'fair' accessibility to facilities and services. The SA notes that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater."</p> <p>* Given the above there is clearly potential for sites to score well based on a straight line distance whilst in reality, due to inaccessible third party land and the locations of footpaths to key facilities, to perform far more poorly in reality. Our client's site 59748 has the ability to link directly to existing footpaths and so access services directly and easily. The site similarly has the potential to deliver new links across and through it and so improve accessibility for new and existing residents. Please see the indicative site plan attached.</p> <p>* Notwithstanding this, if straight line distances are to be used, the accompanying facilities plan demonstrates that the site lies within a reasonable walking distance of the following:</p> <ul style="list-style-type: none"> * Bowling Green - 50 metres * Sports Ground - 100 metres * Medical centre - 260 metres * Bus Stop - 380 metres * Public House - 400 metres * High Street (Various Shops) - 450 metres * Primary School - 550 metres * Railway Station - 700 metres * Secondary School - 1000 metres 	<p>risk of surface water flooding. In this instance, the site is within an area with a 1 in 30 year risk of surface water flooding. Therefore, the site is correctly recorded as receiving a significant negative effect.</p> <p>It is important to note that that SA is one of many factors that feed into the plan-making process.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* The site sustainability credentials were noted as part of the previous 2016 call for sites process where the Council's summary assessment report concluded:</p> <p>"In terms of access to services, this site is in a sustainable location, adjacent to the built-up confines of Borough Green"</p> <p>* The overall assessment was that the site should be categorised as 'green' and so considered "suitable and deliverable".</p> <p>* Given the above we do not agree that the site accessibility should be considered as only 'fair' under this category, it is clearly very well related to shops and facilities and so offers a highly sustainable option for new development.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>* The appraisal assesses the site as having "uncertain significant negative" effects. The associated text states:</p> <p>"The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites.....</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of development. The effect is uncertain as it may be possible to conserve or even enhance the asset through design and layout of the new development."</p> <p>* This is incorrect. The DEFRA 'Magic' Map confirms that the site is approximately 1km away from the Bourne Alder Carr SSSI and over 310m from the Kent Downs AONB. No other sites are highlighted.</p> <p>* The site should be considered to have a neutral impact on this basis not uncertain negative as currently listed.</p> <p>* In terms of the reference to the site containing a "green infrastructure asset", it is noted that the site is all private agricultural land. It is not publicly accessible. Notwithstanding this, as part of the sites development it is proposed to deliver a significant biodiversity net gain. This has been assessed by Corylus Ecology Consultants in this regard. In summary, the whole of the site comprises 7.6834ha with 2.5ha shown as holding potential for development of approximately 45 – 50 new homes directly adjoining the settlement edge. This leaves 5.1516ha of wider land remaining.</p> <p>* It is proposed that 3ha is designated as a biodiversity net gain area to provide 20% net gain for another site within the district. A further area is capable of providing at least 30% biodiversity net gain for the site, along with general amenity open space, footpaths and walking routes as indicated on the accompanying site plan.</p> <p>* This aspect of the assessment should be updated to note the site as having a significant positive effect i.e. delivering a biodiversity net gain well beyond standard policy requirements.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* The SA suggests “uncertain significant negative” effects under this category on the basis that the site lies within 250 metres of a heritage asset.</p> <p>* Having reviewed the heritage mapping system provided by Historic England it is understood that the closet asset is Hunts Farmhouse (grade II) which is approximately 230m away at No.77 Maidstone Road.</p> <p>* There are a number of intervening buildings, the bowls club and a large playing field between the site and this property. It is very clear that development at our client’s site would have absolutely no impact upon the setting of the farmhouse.</p> <p>* This assessment should be amended to confirm that there would be no negative impact and the site should be ranked as at least neutral in this respect.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>* The appraisal highlights the site as falling with a range of from “significant negative to uncertain minor negative effects”.</p> <p>* The text suggests that up to 25% of the site may be located in Flood Zone 3.</p> <p>* This is incorrect.</p> <p>* The flood map for planning (below) demonstrates that Flood Zone 3 only touches the far northern edge of the site. The site itself is not at risk from flooding.</p> <p>* The accompanying plan demonstrates that the development would be retained south of the Flood Zone 3 area.</p> <p>* The assessment should be amended to remove any negative scoring associated with the site in respect of flood risk. This should be a neutral category.</p> <p>[map showing flood zone 3 included]</p> <p>Conclusions</p> <p>* The weight that may be attributed to the site assessment scores which are currently set out in the SA Appraisal when determining potential allocations for the plan period is unclear.</p> <p>* If the site assessments are to form the basis of and the evidence base for these decisions it is respectfully submitted that it is important that they are accurate and fair.</p> <p>* This submission with reference to the accompany plans seeks to ensure that the Council has accurate information regarding our client’s Dryland Road site.</p> <p>* We trust that this will be taken into account and the current inaccuracies corrected as part of the Council’s further assessment of the submitted sites.</p> <p>[site layout and site context documents also included]</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42768289	Q8 of the questionnaire	<p>"Site 59825: Shipbourne primary school has no capacity and therefore SA objective 3 is significant negative not minor positive. Please explain the employment development in SA4: this is not the case.</p> <p>Site 59827: almost every site in Shipbourne would be within 800m of the common; this is already overused with hundreds of cars parked round it on weekends. SA objective 3 has the same point about Shipbourne primary school and is therefore a double negative. nb SA 4 is marked neutral for this site but positive for the site above. Given their proximity this js surprising. There is no "sustainable economic growth" because there is no employment development."</p>	<p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils". Site 59825 receives an uncertain minor positive effect in relation to SA objective 3: education, as it is within 800m of Shipbourne School but it is unknown whether there is capacity at the school to accommodate new pupils or not.</p> <p>Site 59825 was incorrectly appraised as a mixed use site and in the next iteration of the SA Report will be appraised as a residential site.</p> <p>Site 59827 is located within 800m of a number of open spaces, including the common. Therefore, it receives a minor positive effect in relation to SA objective 1: health and wellbeing.</p> <p>Site 59827 has been appraised as a residential site and so it receives a negligible effect in relation to SA objective 4: economic growth. As stated in the proforma for the site "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA, the site assessment criteria will be updated so that if a residential site contains an existing business that could potentially be lost as a result of development, it receives a minor negative effect.</p>
42069697	Q8 of the questionnaire	<p>"Site Identification Number: 59709</p> <p>Berkeley has some concerns with the ISAR scorings given to this site as explained below.</p> <p>SA Objective 2: The outcome of objective 2 is accepted. Berkeley strongly believes that access to community facilities and services will be improved post development of the site. Two primary schools are located less than 1km from the site, in addition to a secondary school being located approximately 1.8km from the land at Dark Hill Farm.</p> <p>SA Objective 5: Berkeley would ask the council to reconsider the assessment of objective 5 (to protect and enhance biodiversity and geodiversity) as uncertain significant negative. The site's definition as a green infrastructure asset is questionable given the limited public access to it. While Berkeley appreciates the site lies within close proximity to a Local Wildlife Site, it is not within 250m of one or more internationally or nationally designated sites. Development will be unlikely to cause disruption to the Local Wildlife Site.</p> <p>Berkeley endeavours to achieve 10% net-biodiversity gain on all projects and the land at Dark Hill Farm is no exception. There is an opportunity as part of the development to retain, enhance and create areas of green space on site and will do so with the upmost respect for the current landscape setting. It is incorrect to assume that development will worsen the surrounding natural environment and not enhance it.</p> <p>SA Objective 6: Berkeley disagrees with regard to scoring the site with an uncertain significant negative for objective 6 – to protect and</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>The site receives an uncertain significant negative effect against SA objective 5: biodiversity and geodiversity. This is due to the fact the site is within 250m of Bourne Valley Woods Local Wildlife Site and Ancient Woodland. The site also contains existing green infrastructure assets (thick vegetation).</p> <p>Although development of this site offers the opportunity to achieve biodiversity net gain, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is located within the North Downs AONB.</p> <p>With regard to SA objective 7: heritage, the site is recorded as containing Neolithic finds, in addition to falling within 250m of a number of heritage assts. Therefore, it receives a significant negative effect in relation to this objective. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>enhance the borough's landscape and townscape character and quality.</p> <p>Greater certainty about the impacts of development on the landscape is provided by landscape assessment work undertaken by Murdoch Wickham Associates for Berkeley. The analysis explains that the land comprises paddocks with areas of scrub and derelict farm buildings. The characteristics of the site are not typical of the wooded, traditional farmed landscape associated with the Greensand Ridge within the Kent Downs AONB.</p> <p>Residential development on the western fringes of Borough Green is visible in views to the site and other urbanising influences including traffic noise associated mainly with the A25 and the nearby residential development in the former quarry site to the south west further detract from the site's contribution to the AONB.</p> <p>Overall, the site has a relatively high degree of visual enclosure, in particular the fields north of the footpath, which runs across the centre of the site. The northern hedge provides an effective screen between the site and the A25. There are potential views to the land from the west in the vicinity of Oldbury Hill, but this is a densely wooded area, and no viewpoints were identified.</p> <p>The site does not share the dominant characteristics of the Kent Downs AONB. The site serves a much lower function in comparison to the wider area and the land contributes little to the AONB designation. It is concluded that the development of the Dark Hill Farm site would have a negligible impact on the AONB.</p> <p>SA Objective 7: the scoring the site with an uncertain significant negative for objective 7 due to the site's proximity (being within 250m) to a heritage asset requires further analysis.</p> <p>The site does not contain any designated or non-designated heritage assets. Furthermore, there are no listed buildings directly adjacent to the site. The Borough Green conservation area is located on the eastern side of the town and as such would not be impacted.</p> <p>The site is located approximately 135m from the closest heritage asset in Borough Green, with further Grade II listed buildings, found an additional 20m eastward and still within the urban confines of Borough Green. Ightham Court, a Grade II* listed building (Registered Park and Gardens designation) is located approximately 750m from the site north-westward.</p> <p>There is limited or no intervisibility between the site and the nearby heritage assets. The land at Dark Hill Farm will have a negligible impact on any of the surrounding heritage assets and it is incorrect to score the site with an uncertain significant negative, purely based on proximity.</p> <p>SA Objective 8-- The SA assesses the site, in line with objective 8 criteria, to have a 'significant negative' impact on enhancing the quality of water features and resources. The assessment states the site to be either entirely or significantly (i.e. >25%) within Flood Zone 3</p>	<p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertain significant negative effect is as a result of the site containing land with a 1 in 30 year risk of surface water flooding. Further to this, there is some overlap with a watercourse in the north west of the site and therefore it is uncertain what effect development might have on the watercourse in terms of water quality.</p> <p>With regard to SA objective 9: soils, the site receives an uncertain significant negative effect because it comprises Grade 3 agricultural land but it is unknown whether it is Grade 3a (high quality) or 3b (not classified as high quality) agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>and/or within an area with a 1 in 30-year risk of surface water flooding.</p> <p>While a proportion of the western boundary is part of Flood Zone 3, it is not in excess of 25% of the site. In fact, much less than 25% of the site resides in Flood Zone 3 as this only affects a small area on the western site boundary.</p> <p>Surface water flooding is also determined to affect more than 25% of the site, alongside the land being associated with a 1 in 30-year risk of surface water flooding. It is evident that only a small proportion of the northern parcel is prone to surface water flooding.</p> <p>Surface water flooding will be dealt with appropriately through respecting existing surface water flows and incorporating mitigation measures (SuDS) within the design proposal.</p> <p>Overall, whilst there is some flood risk on site, which is accepted, this has the potential to be avoided or suitably mitigated. This means that the impact would be negligible.</p> <p>SA Objective 9-- The SA assessment of objective 9 ranks the site as an uncertain significant negative. An agricultural land classification survey will need to be undertaken to determine whether the Option Land is Grade 3a (best and most versatile) or Grade 3b (not best and most versatile). However, either way this should not prejudice the assessment of suitability, as the site is not currently in productive agricultural use and realistically is not of a size of which it could function efficiently as a piece of agricultural land to be commercially farmed."</p>	
42807617	Q8 of the questionnaire	<p>"The above site has been incorrectly assessed against a number of SA objectives.</p> <p>The site has been incorrectly given a Fair Accessibility Band and a minor negative score within the corresponding SA Objective. Based on the methodology within the Urban Capacity Study (p16-17), the below assessment highlights why the site should be ranked within the 'Good' Accessibility Band. Please also refer to Berkeley's covering letter sent under a separate cover for the tabulated assessment.</p> <p>Requirement (Berkeley Assessment of Score)</p> <p>Bus Stop <400m (1)</p> <p>Bus Stop Service Level (Min 0.4 score applied as unknown)</p> <p>Train Station <800m (0)</p> <p>Primary School <800m (1)</p> <p>Secondary School <800m (0)</p> <p>GP <800m (0)</p> <p>Dentist <800m (0)</p> <p>Pharmacy <800m (0)</p> <p>Convenience Retail <800m (0.5)</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 2: services and facilities, although 43.5% of site 59808 falls within the 'Good' accessibility band, the remainder of the site falls within the 'Fair' accessibility band. As SA utilises a precautionary approach, the site is recorded as falling within the 'Fair' accessibility band and therefore receives a minor negative effect in relation to SA2.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site has been appraised in line with the site assessment criteria. Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 7: heritage, it is correct for the SA to have utilised a precautionary approach.</p> <p>With regard to SA objective 8: water, the site received an uncertain significant negative effect because the site is within an area with a 1 in 30 year risk of surface water flooding. Further to this, the site</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Supermarket <800m (0)</p> <p>Post Office <800m (0)</p> <p>Pub <800m (0.5)</p> <p>Settlement Classification (4)</p> <p>Total (7.4)</p> <p>$7.4 / 17 * 100 = 43.5\%$</p> <p>A total percentage of 43.5%, would place the site within the 'Good' band for accessibility.</p> <p>SA Objective 5:- The site relates to a group of fields containing semi-improved grassland. The tree belts are limited to the periphery of the site, where the trees would benefit from active management relating to non-native species and trees with poor health conditions. Given the extent of Berkeley's land holding it may be possible to conserve and enhance the biodiversity of the site, achieving a net gain through the active management of the tree belts and additional planting within Berkeley's retained land in the wider land holding. Berkeley therefore would suggest that the SA score of uncertain significant negative is overly precautionary.</p> <p>SA Objective 7: A uncertain significant negative score, due the sites setting within 250m of a heritage asset, is overly precautionary. The nearest heritage assets within Coldharbour Lane (The White House), Berkeley's own Oakhill House development, and Hildenborough Conservation Area are not visible from the site, and would otherwise be screened by committed development.</p> <p>SA Objective 8: The SA states that more than 25% of the site is within Flood Zone 3 and/or is within an area with a 1 in 30 year risk of surface water flooding. The entire site is however located within Flood Zone 1, and therefore is at the lowest risk of flooding. Berkeley's initial Flood Risk Assessment prepared by WSP acknowledges that there is a small area within a 1 in 30 year risk of surface water flooding. However, it is noteworthy that this area is under 25% of the site, relates to existing drainage attenuation and depressions in the land, is located in an area of the site that is adjacent to an area already the subject of land form changes (Applications 20/02441/FL and 22/01753/F), and can otherwise be mitigated and re-compensated for as part of a detailed drainage design strategy and modelling.</p> <p>SA Objective 9: The SA assessment of Objective 9 ranks the site as an uncertain significant negative. However, the site is not currently in productive agricultural use and is landlocked without direct access other than through Berkeley's wider Oakhill House estate, via third party land or the creation of an access onto Woodfield Avenue or Tonbridge Road, as part of a development. Due to known soil conditions within the Oakhill House development site, the majority of the site is expected to be of a moderate quality in Subgrade 3 and in part will be impractical to farm due to land form changes (Applications 20/02441/FL and 22/01753/F)."</p>	<p>contains a water body of watercourse or falls within Source Protection Zone 1. The 'policy-off' appraisal of the site in this section of the SA does not take into consideration mitigation, rather it is based on the physical constraints of the site. This ensures all sites are appraised in a consistent manner.</p> <p>The Strategic Flood Risk Assessment (SFRA) which informed this SA objective will be updated. Therefore in the next iteration of the SA Report, the site appraisals will reflect more up-to-date flood risk data.</p> <p>With regard to SA objective 9: soils, the site has been appraised in line with the site assessment criteria. The site comprises greenfield land, a significant proportion of which is classified as Grade 3 agricultural land. It is irrelevant whether the site is currently in agricultural use or not.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42203041	Q8 of the questionnaire	<p>"Individual site reference number: 59714</p> <p>Berkeley is concerned about the SA ratings given to this site. Whilst some scoring may be due to differing judgements applied, there appear to be factual inconsistencies in the assessment, most notably in terms of accessibility where the site is rated as 'fair' (SA Objective 2) and in relation to flood risk (SA Objective 8).</p> <p>SA Objective 2: Berkeley suggests that the above site, relating to land off Offham Road, West Malling, has been incorrectly assessed within the Urban Capacity Study, which has led to its rating within the Fair Accessibility Band and a minor negative within the corresponding SA Objective. As per the methodology within the Urban Capacity Study, our analysis highlights why the site should be ranked within the 'Very Good' Accessibility Band.</p> <p>*Please see our emailed response for our assessment of the site's accessibility score. Despite uncertainty regarding how the score is calculated for the Bus Stop Service Level, a lowest possible score of 0.4 still takes the site's cumulative score to a total of 10.4. This shows that using the council's methodology in the Urban Capacity Study, the site should score 61% and therefore be placed within the band labelled as 'Very Good' accessibility.</p> <p>SA Objective 5: The site is a field with short grass that contains a small tree belt consisting of approximately a dozen small trees. Other than the site being undeveloped it is unclear as to why the site is considered a 'green infrastructure asset'. The site is not currently publicly accessible and contains no habitat of exceptional biodiversity value. In addition, it may be possible to conserve or even enhance the biodiversity of the site through the design of the landscaping and the new homes. Therefore, the uncertain significant negative assessment should be reconsidered.</p> <p>SA Objective 6: The scoring of uncertain minor negative from the development of the site for landscape and character should instead be negligible. The site is well enclosed, with development to the north and east of the site and further development bordering the site to the south and west. The site is therefore more closely associated with the existing built form of West Malling, effectively sitting within its confines, than it is with the open countryside further out to the south and west of the site.</p> <p>SA Objective 7: Berkeley suggests that the method of scoring the site with an uncertain significant negative due to the site's setting within 250m of a heritage asset may be overly cautious. The key views of these heritage assets are from St. Leonard's Street and the centre of the town. Views between the site and the St. Mary's Church are limited. There are few viewpoints into the Conservation Area from neighbouring properties due to the height of the surrounding vegetation and the relatively recent development at the back of Douces Manor screens the listed building. Berkeley has previously commissioned a Heritage Assessment, which has concluded there will be no material harm to any of the designated heritage assets or non-designated historic buildings resulting from the development.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 2: services and facilities, this comment relates more specifically to the Urban Capacity Study (July 2022) than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the green infrastructure asset the site proforma is referring to is an area of woodland overlapping the south eastern edge of the site. Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 6: landscape, the site has been appraised in line with the site assessment criteria. The site is considered to be on the edge of the settlement of West Malling.</p> <p>With regard to SA objective 7: heritage, it is correct for the SA to have utilised a precautionary approach. Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 8: water, the site receives a mixed significant negative and negligible effect. The significant negative effect is as a result of the site falling within an area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the site not containing a water body or watercourse, or falling within a Source Protection Zone.</p> <p>With regard to SA objective 9: soils, the site has been appraised in line with the site assessment criteria. The site comprises greenfield land, a significant proportion of which is classified as Grade 3 agricultural land. It is irrelevant whether the site is currently in agricultural use or not.</p> <p>With regard to SA objective 13, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Additionally, the proposals will be designed sensitively and will have a neutral impact on Sub Areas C and E of the West Malling Conservation Area, meaning the site will not unacceptably impact on the significance or setting of St. Mary's Church.</p> <p>SA Objective 8: Berkeley suggests that the result of this Objective, classified as both a significant negative / negligible effect, may be incorrect. The SA states that more than 25% of the site is within Flood Zone 3 and/or is within an area with a 1 in 30 year risk of surface water flooding. The EA flood risk maps for planning show that in terms of fluvial flooding the entire site is located within Flood Zone 1, and therefore is at the lowest risk of flooding. Berkeley's initial Flood Risk Assessment prepared by WSP acknowledges that there is a small area within a 1 in 30 year risk of surface water flooding, although this area is under 25% of the site. Any issues regarding surface water flooding can be effectively mitigated through the incorporation of sustainable urban drainage systems within the development.</p> <p>SA Objective 9: The site is located to the south-west of West Malling and consists of one field, comprising grass pasture, currently unused for agricultural purposes. The SA assessment of Objective 9 ranks the site as an uncertain significant negative. However, the site is not currently in productive agricultural use and realistically cannot be of a size of which it could function efficiently as a piece of agricultural land to be commercially farmed. It would not be suitable for modern agricultural vehicles to farm for crops and the size of the field would mean that animals could only be grazed temporarily before having to be moved on regularly, which is not practical.</p> <p>SA Objective 13: The site is classed as an uncertain minor negative with regards to protecting material assets and minimising waste. The SA reports that this is due to uncertain effects as to whether the site can viably offer mineral extraction. However, the site is likely too small to viably support mineral extraction. Any extraction prior to development would likely have adverse amenity impacts for residents living adjacent to the site."</p>	
42606657	Q8 of the questionnaire	<p>"Site 59611. The inclusion of this vacant, brownfield, previously developed site, sandwiched between the A20 and M20, as a potential employment site is welcomed. However, its assessment within the Sustainability Appraisal against the following five of the SA Objectives should be reconsidered:</p> <p>SA Objective 4-- An industrial/warehousing allocation on the former Stocks Nightclub and Spring Villas site would contribute towards diversifying employment opportunities, increasing employment, encouraging economic growth, reducing levels of unemployment and improving physical accessibility to jobs. It therefore satisfies all of the sub-objectives of SA4.</p> <p>Th1090oesn'on given in the Interim Sustainability Appraisal for only attributing a 'minor positive' to the site is because it is not within 800 m of a train station or within 400 m of a bus stop. What the scoring</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 4: economic growth, the site receives a minor positive effect instead of a significant positive effect because it is smaller than 5ha. It also receives a negligible effect, as it is not within 800m of a train station or 400m of a bus stop or cycle path. SA objective 4 appraises the distance employment sites are to train stations, bus stops and cycle paths, as this gives an indication of how accessible sites are to the local workforce. If a site is within close proximity of a railway station, that it will be easier for workers to reach the site.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>criteria fails to take into account is that there are different types of employment, which have different locational criteria.</p> <p>Whilst it is right for high density office uses to be directed to town centres and to sites in close proximity to public transport nodes, this vacant, scrubland site is being promoted for industrial/warehousing, not offices. The NPPF only seeks to apply such a sequential approach to applications for main town centre uses, such as offices (paragraph 87). It does not apply to industry/warehousing, for which its proximity to the strategic road network, and the motorways in particular, should enable the site to score more highly.</p> <p>The fact that industrial/warehousing units could be accessed on this site without the need for HGVs to travel through towns, where they would cause congestion and potential air quality problems, should be taken into account and should be given just as much, if not more weight, than proximity to public transport. The different characteristics of warehousing is also recognised in the NPPG. Whilst most of the guidance is focused on the big strategic facilities, it states that ""the logistics industry plays a critical role in enabling an efficient, sustainable and effective supply of goods for consumers and businesses, as well as contributing to local employment opportunities, and has distinctive locational requirements that need to be considered"" (my emphasis) paragraph: 031 Reference 2a-031-2019 0722.</p> <p>Currently, the Borough Council is not planning specifically for industry/warehousing and is treating all employment generically. That is not appropriate here. The Council should have regard to its up-to-date Economic Development Needs Study, August 2022. It advises the Council that the largest employment sector in Tunbridge & Malling in 2021 is wholesale and transport. It goes on to identify particular growth opportunities for logistics in the Borough.</p> <p>The Economic Development Needs Study concludes that over the plan period there is a need for 292,940 m² of new industrial and storage/distribution development. This compares to just 53,320 m² of new office space (18% of the total employment requirement). Therefore greater weight should be given to the location requirements for industrial/distribution space, for which this brownfield site (ref: 59611) is ideally suited.</p> <p>It is worth noting that the Borough Council has allocated the Invicta Business Park and Marley site immediately opposite, as employment land under Policy E2 and therefore the Council has already recognised that this is an appropriate location for employment development.</p> <p>In the light of the above, the site should therefore be reclassified as having a 'significant positive' (++) in respect of the economic growth objective.</p> <p>SA Objective 5-- The Sustainability Assessment states that the site contains an existing green infrastructure asset that could be lost as a result of new development and therefore under objectives set out under SA5, the site is classified as an ""uncertain significant negative"".</p>	<p>The SA takes into consideration air quality and due to the fact the site is not within 100m of an Air Quality Management Area, it receives a negligible effect in relation to SA objective 12: air quality.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity because it contains a green infrastructure asset in the form of woodland and thick vegetation. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value".</p> <p>Although the respondent states that there is an opportunity to enhance the biodiversity value of the site, this is a 'policy-off' appraisal that does not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Having regard to the criteria, the former Stocks Nightclub and Spring Villas site is previously developed land that is not designated for nature conservation, nor are there any known rare endangered species and the landscaping belt along the M20 would remain unaffected. The site does not provide any public access for people to access wildlife or open green spaces. The main central part of the site, which would be subject to the redevelopment, could not be regarded as a green 'asset'. This is derelict scrub land that is vacant and unutilised, with limited biodiversity value. Through redevelopment, there is an opportunity to enhance the biodiversity value of the site, and therefore far from being an ""uncertain significant negative"", the land offers the opportunity to make a positive contribution. The site should therefore be reclassified as a 'minor positive' (+) in respect of biodiversity in the Sustainability Assessment.</p> <p>PLEASE NOTE: How a redevelopment of Site 59611 for industrial/warehousing would sit with objectives SA6, SA7 and SA10 is provided separately, due to the character limit imposed here."</p>	
42729633	Q8 of the questionnaire	<p>"With regard to Site 59831) Land east of Bull Lane) the following comments are made on the SA:</p> <p>SA2: This score is based on the accessibility assessment in the urban capacity study – which itself focused on the urban areas of the borough. It is questionable whether the same criteria can fairly be applied to any rural site to inform the SA, when it is clear that by its very nature a more rural site will not be as accessible as one located in a main town and village. In any event, the site has not been assessed in the UCS and the accessibility assessment of the site against the criteria has not been published. This is required for comments to be provided on SA2 scoring.</p> <p>SA4: The site's location may help to increase footfall and demand for local shops and services, supporting sustainable economic growth in this area and benefiting the local community. The site's development would also support the economy in and around the larger urban areas nearby. A score of + (minor positive) could be given.</p> <p>SA5: the site is close to Wagons Pit Aylesford but is not in it. Development of the site would be carried out to ensure this geological site is safeguarded. Further, a landscape led approach incorporating green infrastructure could significantly enhancing the site which is used as part of the vineyard. Thus, Chapel Down does not agree with TMBC's score.</p> <p>SA6: The site is next to Eccles, and immediately adjoins a formerly allocated site. the site is not designated open space nor does it provide any public recreational benefit. This conclusion is incorrect. As stated, a landscape led design can ensure development is appropriate for the character of this locality. This score should be minor negative at worst, pending design details.</p> <p>SA7: the site may be within 250m of a heritage asset as the crow flies. However, there are roads and buildings (including numerous houses)</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>In the Urban Capacity Study (July 2022), site 59831 is recorded as falling within the Fair Accessibility Band. This information has fed into the SA.</p> <p>With regard to SA objective 4: economic growth, the site has been appraised in accordance with the site assessment criteria.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives an uncertain significant negative effect in relation to this objective, as it is next to Wagons Pit Aylesford Regionally Important Geological Site, in addition to overlapping a green infrastructure asset along its eastern edge (trees/thick hedgerow). With regard to this last point, the following sentence will be added to the site assessment criteria in the next iteration of the SA Report: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value".</p> <p>Although the respondent acknowledges that a landscape approach incorporating green infrastructure could enhance the site, this is a 'policy-off' appraisal that does not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape and townscape, although the site is located within close proximity to the settlement of Eccles, it does not adjoin it. Therefore, the site receives an uncertain significant negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>between them. There the sites development is unlikely to have any impact on a heritage asset. Evidence can be provided to demonstrate this at the design stage. A minor negative score should be given at this stage.</p> <p>SA9: this refers to soil resources and contamination. A minor negative score is more appropriate as TMBC has not made any reference to contamination; further contamination is not anticipated at the site and a survey can be undertaken if required.</p> <p>SA13: owing to the size of the site, its location adjacent to a settlement and adjacent to a former allocation (pending planning application) it is not expected that it could offer opportunities for mineral extraction. A zero score is more appropriate as a result."</p>	<p>With regard to SA objective 7: heritage, the site is located within 250m of a number of heritage assets, as recorded in Kent County Council's Historic Environment Record. This is a 'policy-off' appraisal and so consideration is not yet given to mitigation.</p> <p>As stated on the proforma for the site, it receives a significant negative effect in relation to SA objective 9: soils because it comprises greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>With regard to SA objective 13: material assets and waste, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p>
42452545	Q8 of the questionnaire	<p>"We have undertaken a review of the Interim SA site assessment for Coblands Nursery-- site reference 59746.</p> <p>It is understood that the scoring applied to the site is based on computer modelling which should be a starting point but does not provide sufficient detail.</p> <p>We have provided a finer grain assessment of the scoring for site reference 59746 which has adjusted scoring for human health/wellbeing, biodiversity, landscape character, heritage impact and mineral impact. This is presented with the benefit of a more refined review, taking account of the specific location and impact of development.</p> <p>A response has been provided under Comment ID 31 to the SA Annex 1 consultation but please see attached and submitted document titled Interim SA review-- site 59746."</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>We have provided a response to your original comment, which can be found at the start of the table in the row with Respondent ID 12097205 (page 13).</p>
25369441	Q8 of the questionnaire	<p>As a general comment the methodology appears complex with some ten different colours and symbols used to summarise the results for each category. In addition many of the results simply highlight an uncertainty as to the likely impacts as clearly much will depend upon the way in which sites are designed and their ability to provide mitigation and / or enhancements. Their value in assessing potential allocations is limited in this regard. That aside we comment on the assessment of our client's site at Drylands Road, Borough Green, (site reference 59748 on pages 583 – 585) in the context of the various SA objectives as necessary. Site Reference 59748 – Land off Dryland Road, Borough Green. SA Obj 1-- The Sustainability Appraisal (SA) lists the site as likely to have significant positive effects and uncertain negative effects. Paragraph 5.4 of the SA states that negative effects under this category are likely to relate to sites that contain "an area of open space or accommodate an outdoor sports facility that may be lost as a result of development. However, these negative effects are uncertain as the effects will depend on the exact scale, layout and design of development and whether these existing features are in fact lost to new development." In this regard it is relevant to note that the</p>	<p>As outlined by the respondent, a number of the effects in the SA are recorded as uncertain due to several reasons, including the fact that some of the effects will depend on the final design, scale and layout of development which will be provided at planning application stage if allocated.</p> <p>With regard to SA objective 1: health and wellbeing, the site contains a bowling green and therefore receives an uncertain significant negative effect, as the bowling green could be lost to development. The uncertain significant negative effect is coupled with a significant positive effect, as the site is within 800m of a healthcare facility and existing areas of open space and a walking path.</p> <p>This is a 'policy-off' appraisal that does not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>The justification text for SA objective 1 has been missed from the proforma as an error and in the next iteration of the SA Report will be added in.</p> <p>Site 59748 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. The Urban Capacity Study</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>site is private land, it does not include any public open space or sports facilities that would be lost through development. The site proposals include the provision of new publicly accessible footpaths and open space which would result in a significant improvement in terms of access to opens pace in this area. An indicative site plan is included to demonstrate this. (Please note this will also be emailed separately). It is noted that site number 59710 (Land near the garden centre at Borough Green Road) has been ranked as a significant positive in terms of improving human health and well-being. The assessment states that this is because the site lies within 800m of an existing healthcare facility and an area of open space/play area/sports facility. Our client site at Drylands Road (59748) lies close to a bowling club, (50m) and a recreation ground (100m) and within easy walking distance of the Borough Green Medical Centre (260m) but these aspects are not referenced in the text. This should be added for consistency. A separate submission is being emailed to the Council alongside a facilities plan to demonstrate the sustainability of the site and its ease of access to local facilities. SA Obj 2- The site is noted as having 'fair' accessibility to facilities and services. The SA notes that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater." Given the above there is clearly potential for sites to score well based on a straight line distance whilst in reality, due to inaccessible third party land and the locations of footpaths to key facilities, to perform far more poorly in reality. This is important in the case of our client's site 59748 which has the ability to link directly to existing footpaths and so access services directly and easily. The site similarly has the potential to deliver new links across and through it and so improve accessibility for new and existing residents. When assessing the sustainability of the site in 2016 as part of the previous call for sites process the summary report concluded: "In terms of access to services, this site is in a sustainable location, adjacent to the built-up confines of Borough Green". The overall assessment was that the site should be categorised as 'green' and so considered "suitable and deliverable". As set out above a separate submission with detailed facilities plan is being sent to the Council via email. SA Obj 5- The appraisal assesses the site as having "uncertain significant negative" effects. The associated text states: "The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity site.". The site contains an existing green infrastructure asset that could be lost as a result of development. The effect is uncertain as it may be possible to conserve or even enhance the asset through design and layout of the new development." The DEFRA 'Magic' Map confirms that the site is approximately 1km away from the Bourne Alder Carr SSSI and approximately 310m from the Kent Downs AONB. No other sites are highlighted on the map. It is not therefore clear why the assessment notes that site as being within 250m of a designated site. We ask that this is reviewed and corrected. The site assessment should be amended to show at least a neutral</p>	<p>does not utilise straight-line distances but actual public footpaths. Therefore, this information has fed into the appraisals of SA objective 2: services and facilities.</p> <p>The other SA objectives are reliant on straight-line distance but this is acknowledged in the SA under the section entitled 'Difficulties and Data Limitations'.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives an uncertain significant negative effect in relation to this objective, as it contains some green infrastructure assets along its northern edge (thick vegetation and woodland) and abuts Bourne Valley Woods Local Wildlife Site and area of Ancient Woodland. Green infrastructure assets do not have to be publicly accessible to be identified as green infrastructure assets. Although the respondent notes that biodiversity net gain will be achieved on-site, this is a 'policy-off' appraisal that does take into consideration mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		score for this element. In terms of the reference to the site containing a “green infrastructure asset”, it is noted that the site is private agricultural land. It is not publicly accessible. Notwithstanding this, as part of the sites development it is proposed to deliver a significant biodiversity net gain. This has been assessed by Corylus Ecology Consultants. In summary, the whole of the site comprises 7.6834ha with 2.5ha shown as holding potential for development of approximately 45 – 50 new homes directly adjoining the settlement edge. This leaves 5.1516ha of wider land remaining. It is proposed that 3ha is designated as a biodiversity net gain area to provide 20% net gain for another site within the district. A further area is capable of providing at least 30% biodiversity net gain for the site, along with general amenity open space, footpaths and walking routes as indicated on the accompanying plan. This aspect of the assessment should be updated to note the site as having a significant positive effect. SA Obj 7- The SA suggests “uncertain significant negative” effects under this category on the basis that the site lies within 250 metres of a heritage asset. Having reviewed the heritage mapping system provided by Historic England <i>[Word limit reached on submission]</i>	
42821249	Q8 of the questionnaire	<p>"we agree and support the assessment of the individual sites within the SA at Annex 1, particularly the assessment of Court Lane Nurseries (Site ID: 59853 / 59857) which against the SA objectives, scores the highest in Hadlow / East Peckham ward.</p> <p>We have the following further comments to make on the SA Assesst:</p> <p>4) 1) Hadlow is a sustainable location for growth</p> <p>In relation to existing settlements in the Borough, the findings of the SA site assessments clearly suggest that Hadlow is one of the most sustainable settlements to accommodate growth within the new Local Plan, against all objectives, given its accessibility to existing services and facilities. This is also illustrated by Hadlow's place in the settlement hierarchy as a Rural Service Centre (Tier 2 settlement).</p> <p>Furthermore, upon a review of all sites located within the “Hadlow / East Peckham” ward, those sites located within and around Hadlow are the most sustainable against the SA objectives, in comparison to others that are located away from Hadlow village.</p> <p>The settlement has a wide range of services and facilities, access to public transport and has limited designations, other than Green Belt, therefore can promote sustainable development, in line with NPPF, Para. 11.</p> <p>2) Court Lane Nurseries is the most sustainable site with Hadlow</p> <p>12 sites have been identified and assessed as part of the SA at Hadlow.</p>	Support noted.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>We conclude that it is clear that the site at Court Lane Nurseries (Site ID 59853 / 59857) scores the highest against all SA objectives. We consider this assessment of the sites to be accurate.</p> <p>Most significantly, as identified by the Council, what sets Site ID 59853 / 59857 above all of the other sites is that it is brownfield land. As a result, the SA assessment scores the site as having a “significant positive effect likely” against SA Objective 9, which states “the site is located on brownfield land”, as well as SA Objectives 3 and 4, which relate to accessibility to schools and economic growth. Overall, the site scores the most “positive effects” out of all the sites assessed in Hadlow.</p> <p>We support the findings of this assessment which in accordance with the NPPF mean that the site should come forward for future development / achieve site allocation in the new Local Plan. This point is further explored below.</p> <p>3) Court Lane Nurseries is brownfield land</p> <p>The site at Court Lane Nurseries (Site ID 59853 / 59857) is the only site at Hadlow that is identified as being brownfield land.</p> <p>Against SA Objective 9, the site scores as having a significant positive effect. All other sites within Hadlow are considered to be greenfield and containing a proportion of Grade 1 or 2 agricultural land therefore scoring as having a “significant negative effect likely”.</p> <p>We agree and support this assessment given the site contains a number of large buildings and glasshouses, most of which are now vacant and at risk of becoming derelict and possibly vandalised. The site also contains significant hardstanding, including a concrete vehicular access and a large area of the site being covered in gravel to facilitate overflow parking facilities for College students.</p> <p>In line with Para.119 of the NPPF, strategic policies should promote an effective use of land and should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or ‘brownfield’ land.</p> <p>Therefore, we recommend that Court Lane Nurseries, Hadlow should be considered in the first instance for an allocation within the new Local Plan."</p>	
42498817	Q8 of the questionnaire	<p>"I disagree with SA of site 59811 as promoting health and wellbeing – would harm Green Belt, surrounded by footpaths and open countryside. Agree that on all other measures it would represent a negative impact to the identified strategic assessments. As off-grid, most likely domestic heating oil would be used in any large-scale development which would harm air quality.</p> <p>In general I strongly agree with the fact that the SA assessment is very negative for options 4 & 5"</p>	<p>Site 59811 receives a minor positive effect in relation to SA objective 1: health and wellbeing because, in line with the site assessment criteria, it is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both).</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42815777	Q8 of the questionnaire	<p>"1. Site 59821, 59823, 59683ply</p> <p>4) i)1097oesn'tulfills all the 5 objectives of Metropolitan Green Belt.</p> <p>The above sites to the North of Oast Lane directly on the boundary between Tonbridge and Hildenborough serves as a green wedge effectively protecting Hildenborough's status as a village and stopping it becoming absorbed into the urban sprawl of Tonbridge. It is not infill within the village and will effectively remove any demarcation between the town and the village. Hildenborough will become part of the town forever and will completely lose its identity.</p> <p>ii) Development on these sites will lead to a significant loss of productive agricultural land which has been farmed for decades</p> <p>iii) (SA Objective 5 , 6 and & 7) Environment- These sites are the start of a vast stretch of open countryside stretching all the way to Shipbourne and beyond. It provides protection against flooding, opens out onto a historic orchard used in the hop industry. As such it attracts birds of prey including buzzards, barn and screech owls, swifts, swallows and roe deer. There are two very old ponds and multiple mature trees over a hundred years old which would be destroyed forever if these sites are developed.</p> <p>This site IS located near a rural settlement namely the 8 houses off Oast Lane four of which (1 oast houses, 1 cottage, 1 hop barn and 1 bull barn) are of significant cultural heritage being used in Kent's historic hop and farming industry. If the fields surrounding these properties were to be developed the essence of the rural nature of these historic hop properties would be lost forever.</p> <p>iii) Infrastructure: The bus service through Hildenborough out of rush hour is only hourly and access to train stations is not within an acceptable walking distance for many people being more than 30 mins to Tonbridge train stations and an hour to Hildenborough from the South side.</p> <p>iv) SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change: Development of these sites, being over 2 miles from the North access to the A21 (Morley's Roundabout), would result in a significant amount of south bound traffic joining the already congested B245 route towards Tonbridge High Street to join the A21 (Vauxhall Lane junction).</p> <p>During rush hour the queues from the intersection with the Shipbourne Road and the High Street already tail back to Dry Hill Park Road and this will only cause further congestion backing up through Hildenborough village and Shipbourne Road causing more pollution and for the local residents and school children. Over 450 children live during term time in the boarding houses on these main roads and they will be directly affected by the pollution caused by any increase in traffic in the North Tonbridge/ South Hildenborough area. The adverse health effects of such pollution on children and the links to asthma are well documented. As well as Tonbridge boarding school</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is important to note that the SA findings are one of many factors taken into account when determining a preferred option to take forward in a plan. Factors such as public opinion, deliverability and conformity with national policy are also taken into account by plan-makers when selecting preferred options for a plan.</p> <p>As acknowledged in the proformas for these sites against SA objective 9: soils, each comprises greenfield land and contains a significant proportion of Grade 3 agricultural land. Therefore, each site receives a significant negative effect against this objective. The effect is recorded as uncertain to acknowledge the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, all three sites receive an uncertain significant negative effect against this objective.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59821 and 59683 are recorded as having significant negative effects in relation to this objective. In the next iteration of the SA, the effect for site 59821 will be upgraded to a minor negative effect, as it is incorrectly recorded as not located near any settlements in a rural location. This is as a result of the GIS analysis identifying some sites as not located near any settlements even though they are on the edge of a settlement, as there was no percentage overlap with the settlement boundaries. The effect for site 59683 will not be upgraded because while the site adjoins a settlement, it contains an open space that could be lost as a result of development. All adverse effects against the landscape objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>Site 59683 is incorrectly recorded as not being located near any settlement, even though it adjoins the settlement of Tonbridge. The reason for this is that only a small percentage of the site adjoins the settlement. The uncertain significant negative effect is still considered reasonable, given the size of the site.</p> <p>With regard to SA objective 7: heritage, all three sites are recorded as having uncertain significant negative effects in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>there are 2 primary schools on Dry Hill Park Road which will also be affected by pollution should traffic increase.</p> <p>The traffic along the B245 is solid at rush hour and without lights or a roundabout the ability of traffic leaving Oast Lane to drive North Bound will be severely restricted causing traffic to back up a short access road.</p> <p>vi) SA Objective 2: To improve equality and access to community facilities and services: Local services already under considerable strain – in particular Hildenborough's GP surgery and schools & school buses. Already a considerable number of houses being built on Fidelity site plus the new care home will begin to affect those services too.</p> <p>Vii) The B245 regularly floods in particular by Waterfield Lane and Farm Lane.</p> <p>Any destruction of greenfield sites on the North (higher) side of this Road will cause more rain water to run into the B245 and causing flooding to the properties on the South of this road. Properties around Correnden Road and Hawden Lane/Road have flooded in the past and will do some more regularly.</p> <p>Viii) Development will irrevocably alter the open, semi-rural, low-density character of the communities on the current edge of Tonbridge town</p> <p>ix) None of the sites identified on the Green Belt around Tonbridge are easily accessible to local facilities – shops, schools, medical facilities with spare capacity"</p>	<p>With regard to bus services, SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. With regard to SA objective 10: climate change mitigation, the criteria for this objective look at proximity to railway stations, bus stops and cycle paths, so as to encourage more active and sustainable transport modes. All three sites receive a minor positive effect in relation to this objective because although they are more than 800m from a railway station, they are within 400m of at least one bus stop.</p> <p>The site assessment criteria for SA objective 2: services and facilities relate more specifically to access to services and facilities, rather than capacity of existing services as this is challenging to quantify</p>
42794625	Q8 of the questionnaire	The findings may all be appropriate but it is impossible to comment with no significant knowledge of each local site. To find my local site was impossible, too. A detailed and properly linked Table of Contents is missing.	The unique ID numbers are how the sites are referred to throughout the Local Plan and so names for each site have not been provided. In the next iteration of the SA Report, the proformas will be structured by ward and a Contents page provided.
42815521	Q8 of the questionnaire	<p>"Site 59830: Due to the huge size of this site the assessments are essentially meaningless. SA Objectives 4, 10: While some parts of the site might be 800m from a railway station other areas will be significantly further and experience shows that rail commuters will drive either to the nearest rail station or Sevenoaks which has a faster and more direct service to London. This is at best an Uncertain Significant Negative (not a Certain Significant Positive). SA Objective 1: No evidence is given to support the bizarre assessment of it being Significant Positive / Uncertain Significant Negative.</p> <p>A number of other sites in the list are adjacent to one another and yet assessed in isolation. Some rely on the presence of nearby green spaces to justify a positive assessment on health / well-being - and yet these green spaces are threatened by their inclusion in other potential sites that in turn rely on yet another site. The lack of an easy to find overall map which shows all of the sites and how they relate to one another is a fatal weakness in this part of the consultation process. I am sure it isn't a deliberate attempt to deceive.</p>	<p>It is often unknown where the entrance to a site will be until planning application stage. In the SA, distances from the edge of a site option to existing services was calculated using the smallest distance between the site and the existing service. However, the SA acknowledges in the 'Difficulties and Limitations' section of the report that actual walking distances could be greater.</p> <p>Chapter 5 and Annex 1 of the Interim SA Report contain an appraisal of each separate site. In the next iteration of the SA Report, there will be a 'Cumulative effects' section. It is the purpose of this section of an SA Report to consider the effects that a plan as a whole will have on an area.</p> <p>In the next iteration of the SA, a map will be provided that shows the location of all reasonable alternative development site options.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		For example Sites 59593, 59600, 59881, 59665 and others produce what is essentially ribbon development along the line of the M26 motorway and all claim the same minor positive of being within 800m of an open space."	
25406913	Q8 of the questionnaire	<p>Within Annex 1: Reasonable alternative development site options of the Sustainability Appraisal there are some important factual inaccuracies which skew the assessment of our submitted sites. We set out below the corrected facts. Due to word limits, the full response is also submitted under the SA Annex 1 section of the consultation.</p> <p>Site 59825: Land north of Back Lane, Shipbourne (5 Acre Field) SA states: "The Site is within an area of open space or currently accommodates a sports facility and this may be lost as a result of development" Correction: There is no public access to this site, it is private land owned by the Fairlawne Estate. There are no public footpaths crossing the site nor are there any sports facilities to be lost. SA states: "The Site includes employment development smaller than 5ha in size." Correction: This is not applicable given only residential development is proposed and there are no existing employment uses on the site. Site 59823: Oast Lane, Tonbridge SA states: "The Site is located in the Fair Accessibility Band". Correction: The site should be within the Very Good or Excellent accessibility band. The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within 1km of an existing bus stop and within walking distance to a number of services and facilities including a convenience store, school and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site's position on the edge of Tonbridge and the broad range of services and facilities in the Town, the site must logically be placed in a higher accessibility zone. The SA states: "The Site includes employment development smaller than 5ha in size." Correction: The site is only proposed for housing and supporting infrastructure. It does not include employment development. The SA states: "The site contains an existing green infrastructure asset that could be lost as a result of new development". Correction: The site contains no green infrastructure asset, adjoins the built-up edge of Tonbridge, is not a designated open space and has no public access. SA states: "The Site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources. SA states: "The Site is within a Minerals Safeguarding Area". Correction: On the basis of the Kent Minerals and Waste Local Plan 2013-2030 the site is not within any minerals safeguarding area. Site 59821: Oast Lane, Tonbridge SA states: "The Site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, site 59825 is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an existing open space (Shipbourne Common) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>Sites 59825, 59823 and 59821 have been appraised as mixed use sites. The positive effects these sites are expected to have in relation to SA objective 4: economic growth are as a result of the fact these sites would include employment development.</p> <p>Following discussions with Tonbridge and Malling Borough Council, site 59825 will be reappraised as a residential site in the next iteration of the SA.</p> <p>Sites 59823 and 59821 are recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. Site 59804 is recorded as falling within the Good Accessibility Band and site 59801 is recorded as falling within the Poor Accessibility Band. This information has fed into the SA.</p> <p>Site 59823 does contain an existing green infrastructure asset in the form of a line of woodland/thick vegetation to its east.</p> <p>With regards to SA objective 8: water, sites 59823, 59779 and 59801 receive a mixed significant negative and negligible effect. The significant negative effect is as a result of the sites falling within an area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the sites not containing a water body or watercourse or falling within a Source Protection Zone. Sites 59821 and 59804 receive an uncertain significant negative effect. This is because site 59821 falls within an area with a 1 in 30 year risk of surface water flooding and partially falls within Source Protection Zone 2. Site 59804 falls within an area with a 1 in 30 year risk of surface water flooding, in addition to containing a watercourse and slightly overlapping Source Protection Zone 3.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>development.” Correction: The site is not a designated open space, has no public access and does not accommodate a sports facility. SA states: “The Site is placed in the Fair Accessibility Band.” Correction: The site should be within the Very Good or Excellent accessibility band. The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within 1km of an existing bus stop and within walking distance to a number of services and facilities including a convenience store, school and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site’s position on the edge of Tonbridge and the broad range of services and facilities in the Town, the site must logically be placed in a higher accessibility zone. SA states: “The site includes employment development more than 5ha in size.” Correction: The site is only proposed for housing and supporting infrastructure. It does not include employment development. SA states: “The Site is not located near to any settlements in rural locations.” Correction: The statement is nonsensical. The site adjoins the built-up edge of the principal urban area of Tonbridge. A highly sustainable location. SA states: “The Site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.” Correction: On the basis of the Environment Agency’s flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources SA states: “The site is within a Minerals Safeguarding Area.” Correction: On the basis of the Kent Minerals and Waste Local Plan 2013-2030 the site is not within a minerals safeguarding area (it is in close proximity). Site 59778: Allotment Site, The Street, Plaxtol SA states: “The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development.” Correction: The Site does not accommodate outdoor sports facilities; however it does include a private allotment site. The land which accommodates the allotments is wholly owned by the Fairlawne Estate and the allotments could be retained or relocated if required. Commentary on other FECL sites continued in SA response due to word limit restrictions</p>	<p>Sites 59823, 59821 and 59801 are identified as falling within a Minerals Safeguarding Area. Therefore, they receive an uncertain minor negative effect in relation to SA objective 13: material assets.</p> <p>With regard to SA objective 1: health and wellbeing, site 59821 is also incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an existing open space (Tonbridge Farm Sportsground) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59821 and 59823 are recorded as having significant negative effects in relation to this objective. In the next iteration of the SA, these effects will be upgraded to minor negative effects. This is because the GIS analysis identified some sites as not located near any settlements in a rural location when they are in fact located on the edge of a settlement, as there was no percentage overlap with the settlement boundaries.</p> <p>It is correct that site 59778 receives uncertain significant negative effect in relation to SA objective 1: health and wellbeing, as it contains an open space in the form of allotments. Although the respondent notes that the land which accommodates the allotments (owned by the Fairlawne Estate) could be retained or relocated, these are 'policy-off' appraisals of the sites that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis. The uncertain significant negative effect is mixed with a minor positive effect,</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the SA acknowledges that site 59779 is within 250m of Ancient Woodland through the sentence "The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites". LUC acknowledge that this sentence does not explicitly refer to Ancient Woodland, even though Ancient Woodland was included in the GIS analysis. In the next iteration of the SA, the sentence will be revised to state "The site is within 250m of one or more internationally or nationally designated biodiversity sites, geodiversity sites or Ancient Woodland". The SA also now acknowledges that the site is within 250m of Shipbourne Common Local Wildlife Site.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect against SA objective 6: landscape and townscape when they are not located near any settlements. Although the respondent has raised the point that the site is located on the edge of a hamlet, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for the site is therefore correct. In the next iteration of the SA Report, we will add</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>this limitation to the 'Difficulties and Data Limitations' section of the SA..</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not state that site 59779 comprises open space.</p> <p>However, site 59804 does contain an open space, as acknowledged in the SA. Frogbridge Wood is located in its north eastern corner.</p> <p>As only a small percentage of site 59804 overlaps the settlement of Tonbridge, the GIS analysis does not identify it as adjoining the settlement of Tonbridge. In the next iteration of the SA, we will refine the GIS analysis so that sites where there is very little overlap with existing settlements are still recorded as bordering those settlements. However, the effect will remain the same, as the site contains an open space that could be lost as a result of development.</p> <p>With regard to SA objective 7: historic environment, site 59801 is located within 250m of a heritage asset (Horns Lodge), as recorded in the Kent Historic Environment Record.</p> <p>As only a small percentage of site 59801 overlaps the settlement of Tonbridge, the GIS analysis does not identify it as adjoining the settlement of Tonbridge. In the next iteration of the SA, the site will receive an uncertain minor negative effect in relation to SA objective 6: landscape and townscape.</p>
42715009	Q8 of the questionnaire	<p>"SITES 59735, 59798, 59801, 59804 and 59835 cover the same or overlapping areas but have different assessments. As such, the assessments have questionable credibility and are illogical. The assessments appear rushed and ill considered, underestimating the impact on human health (SA1), greenhouse gas emissions (SA10) and air quality (SA12). The footpath within Horns Lodge lane runs alongside these sites and is used daily by walkers, dog walkers, joggers, cyclists and horse riders. It is essential to the physical and mental well being of a large cross section of the local community. To develop these sites would generate noise, traffic and pollution and be detrimental to the well being of the local community-.</p> <p>SA3 - local schools are at maximum capacity, so contrary to the assessment, will not improve educational attainment.</p> <p>Development of these sites would result in the loss of very important green belt land, destroy woodland (some being protected ancient woodland).</p> <p>I believe a large pipeline runs through the area and has associated protection orders.</p> <p>There are many more negatives that space precludes going in to further detail but these sites are totally unsuitable for development and the only merit would appear to be to the landowners and developers pockets."</p>	<p>With regard to SA objectives 1: health and well-being, 10: climate change mitigation and 12: air quality, all reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Although the sites listed cover the same or overlapping areas, each has been appraised individually as a reasonable alternative development site option. Chapter 5 and Annex 1 of the Interim SA Report contain an appraisal of each separate site. In the next iteration of the SA Report, there will be a 'Cumulative effects' section. It is the purpose of this section of an SA Report to consider the effects that a plan as a whole will have on an area.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>With regard to Ancient Woodland, if a site contains or falls within 250m of an area of Ancient Woodland, it receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity.</p> <p>The SA is high-level and therefore does not give consideration to pipelines. This is something that will instead be considered at planning application stage if the site is allocated.</p>
42651521	Q8 of the questionnaire	<p>"Site 59805 – In terms of objectives 1-4, considerable weight needs to be given to the potential for a site of this scale to deliver new services and facilities which will improve accessibility for new and existing residents in the northern part of the town.</p> <p>For Spatial Objective 5, the delivery of significant biodiversity net gain within the development should be given significant weight. Regarding spatial objective 7, it is not agreed that there will be negative impacts on cultural heritage features.</p> <p>In terms of Objective 8, only very limited parts of the site are outside Flood Zone 1 and these would easily be incorporated into open space within any masterplan for the wider site."</p>	<p>This is a 'policy-off' appraisal and so mitigation such as the delivery of new services and facilities, and subsequent improved accessibility, is not taken into consideration. Each reasonable alternative development site option is appraised on its physical constraints only. This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via a policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>The respondent refers to Spatial Objectives 5 and 7 in the context of site 59805. It is assumed that they are instead referring to SA objectives 5: biodiversity and geodiversity and 7: heritage. As mentioned already, site 59805 has been appraised on a 'policy-off' basis and so consideration has not been given to mitigation.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of a couple of heritage assets, as recorded in the Kent Historic Environment Record. As such, there is potential for development to cause harm to these heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding and contains some water bodies.</p>
38330369	Q8 of the questionnaire	<p>"Ref: 59601</p> <p>Obj. 1 should be (+?) Hadlow medical centre fully subscribed.</p> <p>Obj. 6 Should be (--) Green Belt. Development would negatively impact views of Hadlow Tower and the village conservation area.</p> <p>Obj. 7: Should be (--) Development would negatively impact views of Hadlow Tower and the village conservation area.</p> <p>59605</p> <p>Obj. 10: Should be (-) No footpath or cycle path linking to Hadlow village; the A26 is a fast road and dangerous for pedestrians; residents unlikely to use transport other than private car. Lack of parking space in Hadlow, means residents of the site would use shops further afield.</p> <p>59637</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to SA objective 6: landscape and townscape, Green Belt is a policy designation and not an environmental or sustainability</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Obj. 6: Should be (--). Green Belt. Development would negatively affect footpath users' enjoyment of the countryside. For visitors to the Cemetery, it would adversely impact cherished views across the existing countryside to the Grade I listed Hadlow Tower.</p> <p>Obj 7: Should be (--), the site affects the setting of the cemetery, with its Grade II listed war memorial.</p> <p>Obj 8: Should be just (--). site prone to flooding; run-off from any development could affect the health of the nearby pond.</p> <p>Obj 10: Should be (-). No cycle paths around Hadlow and between Hadlow and Tonbridge.</p> <p>59638</p> <p>Obj 1: Should be (-) The junction of the access road with the A26 is dangerous due to poor visibility and the speed of traffic using the A26.</p> <p>Obj 5: Should be (--): the location of the site next to the pond would impact the quality of the water in the pond and the wildlife that use it.</p> <p>Obj 6: Should be (--): Green Belt. Development would adversely impact the rural setting of the pond.</p> <p>Obj 10: Should be (-): No cycle paths around Hadlow and between Hadlow and Tonbridge.</p> <p>59647 Obj 1: Should be (+?): the Hadlow medical centre is over-subscribed with no room for expansion.</p> <p>Obj 6: Should be (--): site is Green Belt. Traffic from any development of that size would cause unacceptable congestion on Court Lane and at the narrow junction with the A26.</p> <p>Obj 10: Should be (-): No cycle paths around Hadlow and between Hadlow and Tonbridge.</p> <p>59659 & 59686</p> <p>Obj 1: Should be (+?): Hadlow medical centre is over-subscribed with no room for expansion. Dangerous junction with A26.</p> <p>Obj 6: Should be (-) Green Belt.</p> <p>Obj 10: Should be (-): No cycle paths around Hadlow and between Hadlow and Tonbridge.</p> <p>59776</p> <p>Obj 1: Should be (--): Carpenters Lane unsuitable for the increased traffic from the development: this would impact the well-being of local residents. The junction with the A26 would be dangerous with the increased traffic turning on to the main road. The local medical centre is over-subscribed with no room for expansion.</p>	<p>designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>All effects against SA objective 7: heritage are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>Sites 59605, 59638 and 59686 receive minor positive effects in relation to SA objective 10: climate change, as they are more than 800m from a railway station but within 400m of a bus stop.</p> <p>Site 59776 receives a minor negative effect in relation to SA objective 10, as it is more than 800m from a railway station and more than 400m from a bus stop and cycle route.</p> <p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal are measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking are likely to be greater.</p> <p>With regard to site 59637, heritage is considered under SA objective 7, not SA objective 6. The site is recorded as having an uncertain significant negative effect in relation to SA objective 7, as it is within 250m of a heritage asset. Site 59811 is also recorded as having an uncertain significant negative effect in relation to SA7. All effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to site 59637 and SA objective 8: water, the site receives a significant negative effect already.</p> <p>With regard to the respondent's comment on site 59638 and the fact its next to a pond, the site is recorded as containing this pond under SA objective 8. The presence of the pond is not considered a landscape issue.</p> <p>Site 59842 receives an uncertain significant negative effect for the reasons outlined in the proforma. The uncertainty relates to the fact that the extent to which water quality is affected would depend on construction techniques and the use of SuDS within the design.</p> <p>A map showing the location of site 59795 can be found at the top of its proforma. Although the site may not look as though it comprises brownfield land, TMBC has informed LUC that it does.</p> <p>TMBC also informed LUC that site 59853 comprises brownfield land.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, all adverse effects are recorded as uncertain. As stated in the proforma for site 59859, it may be possible to conserve or even enhance the biodiversity or geodiversity asset through the design and layout of new development.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Obj 6: Should be (--). Green Belt. Development would adversely impact the setting of Williams Field, the main open space in the village.</p> <p>Obj 10: Should be (-)/(-) depending on the exit points from the development. No cycle paths around Hadlow and between Hadlow and Tonbridge.</p> <p>59795</p> <p>Obj 6: Uncertainty as to location site. TMBC map shows site as Green Belt field with trees.</p> <p>Obj 9: Uncertain whether site is brownfield land. see above</p> <p>59811</p> <p>Obj 1: Should be (--) the well-being of Hadlow residents would suffer from a large amount of increased traffic. Hadlow is where traffic from the site would access the A26 increasing congestion in Carpenters Lane and at the junction with the A26.</p> <p>Obj 6: Should be (--). Green Belt, part of historic Oxon Hoath estate and crossed with footpaths affording sweeping views across the countryside to the Grade 1 listed Hadlow Tower and beyond.</p> <p>Obj 7: Should be (--). Site surrounds the historic grade II listed Oxon Hoath.</p> <p>Obj 10: Should be (--). No public transport or cycle paths means all journeys will be by car.</p> <p>59853</p> <p>Obj 1: Should be (--?): Increased traffic and congestion on Court Lane and at the narrow junction with A26.would adversely affect the residents' well-being. Victoria Road also unsuitable for increased traffic. No cycle/foot paths and distance from Hadlow would mean residents using cars rather than walking. Medical centre full: no room for expansion.</p> <p>Obj 9: Should be (-). Only about 50% of the site is brownfield. The rest is grass with some under cultivation.</p> <p>Obj 10: Should be (-) Most of site more than 400m from bus stop.</p> <p>59842</p> <p>Obj. 1: Should be (--): Size of the site would adversely impact Hadlow residents' well-being due to congestion and pollution from increased traffic in the village centre. Medical centre full.</p> <p>Obj 6: Should be (--?): Site lies between two well-used footpaths and any development would adversely impact walkers' enjoyment of the countryside.</p>	<p>There is no site with the ID 59659.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Obj 8: Should be (--): Site prone to flooding, also has valuable role in absorbing run-off from fields to the north, helping prevent flooding of Hadlow village - particularly of homes on Maidstone Road. Development would affect the water quality of the two streams on site that feed into the Bourne.</p> <p>59859</p> <p>Obj 1: Should be (--?): Access on to Carpenters Lane is on a dangerous bend with poor visibility.</p> <p>Obj 5: Should be (--): site would impact biodiversity of the river Bourne, particularly due to flooding of the site.</p> <p>SA Obj 8: Should be just (--?) Site is flood plain and prone to flooding. Run off will adversely impact the quality of water in the Bourne."</p>	
42387809	Q8 of the questionnaire	<p>"59595 SA2 ver1105oesn't1105y1105y1105yability Site is on very narrow lane in a hollow, already fairly dangerous. No safe way to walk or cycle to any transport or services so 2 cars/family needed. No way to make safe access onto Matthews Lane. SA Objective 3 says within 800m of school - site is more than 2km from either of the closest schools. It is classed as brownfield but is actually disused farm.</p> <p>59597Site surrounds old farm buildings, now houses. SA2: Access onto Mereworth Road already dangerous as blind bend adjacent to dangerous junction (many accidents at junction) and road very narrow. Although there is an hourly bus to Tonbridge and Maidstone nearby it is infrequently used as inconvenient for most purposes and most households would need to have 2 cars, increasing pollution and congestion.</p> <p>SA 7: Yotes Court house and environs of cultural interest and beauty.</p> <p>59598 SA2: Access is onto 7 Mile Lane B2016 at a point which is already an accident black spot with speeding vehicles on a straight road with deceptive dips and a crossroads adjacent to a school where there are frequent accidents.</p> <p>59747 SA 14: 100 houses in this area would be totally out of character with the local area; the nearest village only has about 50 houses.</p> <p>59750 SA6: 800 houses in this area would be totally out of character with the local area; it is many times more houses than the nearest villages combined.</p> <p>59752 SA6 : this vast site would dwarf the village of Mereworth and join it with Kings Hill as one urban sprawl.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>As stated against SA objective 2: services and facilities in the proforma for site 59595, it falls within the Poor Accessibility Band. Therefore, it receives a significant negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the proforma states that the site is more than 800m of an existing secondary school and a primary school.</p> <p>Site 59597 is recorded as having a minor negative effect in relation to SA objective 2 and an uncertain significant negative effect in relation to SA objective 7: heritage. Please refer to the proforma for the reasons why.</p> <p>Site 59598 is recorded as having a significant negative effect in relation to SA objective 2. Please refer to the proforma for the reasons why.</p> <p>Site 59747 receives a significant positive effect in relation to SA objective 14: housing, as it has capacity to accommodate 100 dwellings or more. The respondent's comment relates more specifically to the landscape, which is covered under SA objective 6: landscape and townscape. The site is recorded as having an uncertain significant negative effect in relation to SA objective 6.</p> <p>With regard to site 59750, it receives an uncertain significant negative effect in relation to the landscape (SA objective 6) for the reasons outlined in the proforma.</p> <p>With regard to site 59752, it receives an uncertain minor negative effect in relation to SA objective 6 for the reasons outlined in the proforma.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59811: This vast site would effectively create a New Town in a very rural area. Being on rising land from the Bourne Valley up to the top of the Greensand Ridge, this greenfield site is highly visible for many miles across the Borough and into Sevenoaks Borough.</p> <p>All the SA items, with the exception of SA14, providing more housing can only have strong negative effects.</p> <p>The road infrastructure is inadequate being small country lanes. If the A26 were upgraded to take a development of this size (and where would that money come from?) this would create even more problems towards Tonbridge or Maidstone as the A25 is already frequently blocked with traffic.</p> <p>SA1 and 2 There are no schools or medical facilities, within several miles and those are oversubscribed.</p> <p>SA 5,6,7,8,9,10,12 All environmental aspects will be significantly degraded as the area is currently a beautiful greenfield area, surrounded by ancient woodland at the north end.</p> <p>SA 14 In this area, it can be expected that most households would need 2 cars as the distance to schools, shops, places of work, train stations etc is large and public transport virtually non- existent and unlikely to be significantly improved in the foreseeable economic climate. The need for private transport or the high cost of public transport should it ever emerge would preclude lower income families from living on this development, making yet another vast estate for the well off with little gain in genuinely affordable housing."</p>	<p>With regard to site 59811, it receives an uncertain significant negative effect in relation to SA objective 6 for the reasons outlined in the proforma.</p> <p>The proforma for site 59811 states that "The site is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both)". Specifically, the site is within 800m of an existing area of open space/walking and cycle path/play area/sports facility.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>Site 59811 is recorded as having a significant negative effect in relation to SA objective 2: services and facilities, as it falls within the Poor Accessibility Band.</p> <p>The site is already recorded as having uncertain significant negative effects in relation to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 8: water and 9: soils. The reasons are outlined within the proforma. The site is recorded as having a minor negative effect in relation to SA objective 10: climate change mitigation, as it is more than 800m from a railway station and more than 400m from a bus stop and cycle route. A negligible effect is expected in relation to SA objective 12: air quality, as the site is not within 100m of an AQMA.</p> <p>SA objective 14 relates specifically to housing provision, not transport. Transport is addressed separately under SA objective 10: climate change mitigation. Site 59811 receives a minor negative effect in relation to S10, as it is more than 800m from a railway station and more than 400m from a bus stop and cycle route. This is acknowledged in the proforma for the site.</p>
25401729	Q8 of the questionnaire	<p>"Sites 59720, 59608, 59871, 59793, 59709, 59872, 59770, 59830 are not suitable because they are in greenbelt and or AONB and would cause harm to the greenbelt AONB. In relation to 59830, in contravention of NPPF, it would create urban sprawl and not prevent the villages of Ightham and Borough Green from merging. For many or each of the sites above in Ightham we have the following comments:</p> <p>SA Objective 1:</p> <p>There is no capacity in the local GP surgery to absorb the potential increase in numbers for this size of development, it is already difficult to get an appointment.</p> <p>SA Objective 2:</p> <p>Public transport links in Ightham and Ivy Hatch are severely limited. Recent cuts to local bus services make it difficult for some school children to access schools allocated to them. The traffic on the A227 and A25 is often at a standstill into Sevenoaks and Borough Green. Further development would put unacceptable pressure on the A</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>The Green Belt is separate to the AONB. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Consideration is given to the AONBs within the Borough under SA Objective 6: landscape and townscape. If a site is within 500m of either AONBs, it is recorded as having an uncertain significant negative effect in relation to SA6.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>roads and the narrow country lanes in the villages of Ightham and Borough Green.</p> <p>SA Objective 3:</p> <p>The primary and secondary schools in Ightham and Borough Green are currently full or oversubscribed.</p> <p>SA Objective 4:</p> <p>We not able to determine at this point in the planning process.</p> <p>SA Objective 5:</p> <p>The sites within AONB (and close to a SSSI) and development would have a negative effect on the biodiversity of both of these designated areas.</p> <p>SA Objective 6:</p> <p>Development will have a detrimental effect on the local character and distinctiveness of the historic villages of Ightham and Ivy Hatch. It will result in the coalescence of Borough Green and Ightham. It will result in the loss of 'green space' and will have a harmful effect on the Kent Downs AONB and impact on the openness of the Green Belt.</p> <p>SA Objective 7:</p> <p>Some sites are close to the Heritage asset of Ightham Court protected as an Historic Park and Garden, Ightham Mote (Scheduled Monument) and the Conservation Areas in Ightham and Ivy Hatch.</p> <p>SA Objective 8:</p> <p>Some sites are within the flood zone</p> <p>SA Objective 9:</p> <p>This development on a greenfield (currently agricultural) site would adversely impact the soil quality and contribute to land contamination.</p> <p>SA Objective 10:</p> <p>The distance from a railway station and the poor bus links would result in increased traffic movements and therefore are likely to increase greenhouse gas emissions.</p> <p>SA Objective 11:</p> <p>Not quantifiable at this stage in the planning process.</p> <p>Objective 12:</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The effects recorded against SA objective 2: services and facilities were informed by the accessibility band each site falls within, as identified in the Urban Capacity Study.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 5: biodiversity and geodiversity gives consideration to biodiversity and geodiversity assets. The AONBs are dealt with separately under SA objective 6: landscape and townscape, as AONB is a landscape (not a biodiversity/geodiversity) designation.</p> <p>SA objective 6: landscape and townscape gives consideration to the landscape and townscape, not the historic environment. This includes whether a site comprises open space or not. The historic environment is dealt with separately under SA objective 7: heritage.</p> <p>With regard to SA objective 7: historic environment, all sites listed are recorded as having uncertain significant negative effects in relation to the historic environment. All effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, sites that fall within Flood Zones 3 and 2 receive significant negative and minor negative effects, respectively.</p> <p>With regard to SA objective 9: soils, sites that comprise greenfield land receive negative effects, the significance of which depends on the Agricultural Land Classification.</p> <p>With regard to SA objective 10: climate change mitigation, consideration is given to the proximity of sites to railway stations, bus stops and cycle paths.</p> <p>With regard to SA objective 12: air quality, sites within 100m of an AQMA receive a significant negative effect.</p> <p>SA objective 13: material assets gives consideration to Minerals Safeguarding Areas.</p> <p>SA objective 14 relates to housing delivery, not the historic environment or landscape. In the SA, sites 59720, 59709 and 59830 are recorded as having uncertain significant negative effects against SA objectives 6: landscape and townscape and 7: historic environment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Developments close to the AQMA in Borough Green will result in increased traffic movements which will adversely impact the air quality in this area.</p> <p>Objective 13: All sites are within a mineral safeguarding area.</p> <p>Objective 14: 59720, 59709, 59830 are wholly unsuitable in size and position, on the edge of the historic village of Ightham/Ivy Hatch and will result in the loss of the green wedge between Ightham and Borough Green. In particular the scale of 59830 will significantly and adversely impact the community, will create urban sprawl and have a detrimental effect on this small historic rural settlement."</p>	<p>The SA must give consideration to all reasonable alternative development site options.</p>
42804513	Q8 of the questionnaire	<p>"Site 59806. The site assessment takes no account of the scale of proposed development. 3,289 dwellings is a new town, and would require considerable additional infrastructure to support i-. SA1 - it is a significant negative impact on health as a new health centre and GPs would need to be-found - the current health centre in Hadlow could not cope with triple the number of current patient-. SA3 - educational attainment; yes, there are two schools nearby but there would need to be a new primary school to serve the development. SA10 It is described as a minor negative that there is no railway station anywhere nearby and a single bus stop on the main road. This is a significant ne-ative - a frequent new bus service would be needed as a minimum, and there would be a significant increase in car journeys on the already congested A26 at Hadlow- SA14 - the number of dwellings proposed is a significant positive but I would question the suitability of such a large site, remote from employment and public transport, for affordable housing.</p> <p>This site does not fit with the conclusions of the sustainability appraisal to opt for smaller scale developments on the fringes of urban centres.</p> <p>Site 59811. The site assessment takes no account of the scale of proposed development. 2,362 dwellings is a new town, and would require considerable additional infrastructure to support i-. SA1 - it is a significant negative impact on health as a new health centre and GPs would need to be-found - the current health centre in Hadlow could not cope with 2.5 times the number of current patient-. SA3 - educational attainment; yes, there are two schools nearby but there would need to be a new primary school to serve the development. SA10 Access issues are a significant negative; a new access road would be needed as Carpenters Lane would not be able to cope with the volume of traffic. A frequent new bus service would be needed as a minimum, and there would be a significant increase in car journeys on the already congested A26 at Hadlow- SA14 - the number of dwellings proposed is a significant positive but I would question the suitability of</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, site 59806 is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an open space and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 2: services and facilities, the proformas for both sites acknowledge that neither is within 800m of an existing secondary school or primary school. Therefore, both receive an uncertain minor negative effect in relation to this objective. The uncertainty acknowledges the fact that the provision of new residential development could stimulate the provision of new schools and/or school places, although this cannot be assumed.</p> <p>In line with the site assessment criteria, a site receives a minor negative effect under SA objective 10: climate change mitigation if it is more than 800m from a railway station and 400m from a bus stop.</p> <p>With regard to SA objective 14: housing, the site receives a significant positive effect because it will deliver a significant number of new homes. The SA acknowledges under SA objective 2: services and facilities that the site falls within the Poor Accessibility Band. For this reason, the site receives a significant negative effect in relation to SA2. The SA also acknowledges that the site is more than 800m from a railway station and more than 400m from a bus stop and cycle route. Therefore, it receives a minor negative effect in relation to SA objective 10: climate change mitigation. The site receives a negligible</p>

		<p>such a large site, remote from employment and public transport, for affordable housing.</p> <p>This site does not fit with the conclusions of the sustainability appraisal to opt for smaller scale developments on the fringes of urban centres."</p>	<p>effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities.</p>
42723393	Q8 of the questionnaire	<p>"Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes, which do not appear to be credible or logical.</p> <p>2. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>3. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community.</p> <p>Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>4. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>5. Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>6. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone will not only reduce the suitability of the areas for development. It reduces the area available for development and will have an impact on the future sales value of properties built in it"</p>	<p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>
42829313	Q8 of the questionnaire	<p>"KWT has not had the capacity to undertake a detailed assessment of all site allocations included within Annex 1. We have provided commentary below on a number of major development sites, focusing</p>	<p>All negative effects against SA objective 5: biodiversity and geodiversity are recorded as uncertain. As outlined in the site assessment criteria contained within Appendix D of the Interim SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>solely on SA Objective 5: To protect and enhance biodiversity and geodiversity.</p> <p>There are number of sites proposed around Eccles and Holborough, some of which KWT are commenting on at planning application stage and/or liasing with the developer regarding impacts. These include (but is not limited to) 59851, 59847, 59684, 59826 and 59864. Cumulative impacts of these schemes on sensitive wildlife sites should be considered. It mitigating for these proposals it is recommended that relevant policies require the long term management of the Local Wildlife Sites in this area.</p> <p>We feel that the presumed uncertainty of negative impacts is misleading. Where designated sites fall within the red line boundary for a site then negative impacts should be assumed. Without further detail being included within the Site Assessments it is not reasonable to assume that impacts will be avoided or mitigated. We advise that designated wildlife sites are excluded from the red line boundaries, however these could be included within a wider blue-line boundary for the express purpose of bringing the Local Wildlife Site into long term management. It is essential that a substantial buffer zone be included from the outset of scheme design.</p> <p>This presumed uncertainty of negative impacts is a common thread that runs throughout the assessment of sites. Other examples include the assessment for 59861. Dog Kennel Wood Ancient Woodland are uncertain at this stage. Further detail is required to decrease the certainty of a negative impact on biodiversity, and would require the east of the site to be allocated through this plan for biodiversity enhancements. Without such commitments there will be severe fragmentation of habitats and isolation of this ancient woodland.</p> <p>In addition, KWT would be very concerned is 59646 were progressed due to the presence of East Peckham Ponds LWS which forms part of a biodiversity corridor along the River Medway. It is not considered that the negative impacts can be assumed as "uncertain" at this stage. This site would represent a prime location for the creation of an off-site BNG scheme.</p> <p>The comments made above apply to a number of other sites and we suggest that all assessments under Objective 5 are re-considered on the basis that mitigation of impacts cannot be assumed."</p>	<p>Report, "Development sites that are within close proximity of an international, national or locally designated biodiversity or geodiversity site have the potential to affect the biodiversity or geodiversity of those sites/features, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, increased recreation pressure etc. Conversely, there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application".</p>
42722081	Q8 of the questionnaire	<p>"59877- I object to this site being used for development.</p> <p>Objection 1- This says it is within an 800M site of a medical centre and sports facility as positives. There is no information about how capacity at the medical centre would be increased so this would just add another strain on an already very busy service- it CANNOT be declared a positive.</p> <p>Objection 3- in regards to local schools. Kent's own published data (/www.kent.gov.uk/_data/assets/pdf_file/0009/126774/Guide-to-applying-to-Primary-in-Kent.pdf) shows that both local primary</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. 42039457	Q8 of the questionnaire	<p>"Site 59737</p> <p>SA Objective 5 – Significant negative effect is likely. Development of the site would have an adverse impact on several clusters of mature trees with TPOs."</p>	Site 59737 already receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42688225	Q8 of the questionnaire	<p>"Site 59799</p> <p>SA Objective 6: This site IS located near a settlement in a rural location and development of ANY kind would have a significant negative impact on residents already residing, whether homeowners or private tenants.</p> <p>SA Objective 7: Never mind ""lines of site between the development site and nearby heritage alts"".... what about the ACTUAL residents who also do not want to have their line of site ruined?!! This is a conservation area and we moved here because we believed there would be no danger of major development.</p> <p>SA Objective 14: This site would be devastated if ANY major building work took place. Gaining access for plant machinery would change the face of the landscape irreparably not to mention the complete and utter disruption to the lives of those already residing. Roads will only tolerate single line traffic, giving way is the norm but this is regarded as an advantage by locals!! So to suggest that ""this site would be expected to provide fewer than 100 dwellings"" and describe that as a Minor positive is an extremely alarming prospect for the community living here.</p> <p>The exact same comments apply to the following two sites</p> <p>Site 59623 and particularly Site 59624. These are sites which utilise the same access roads as site 59799 and involve the same community. To suggest that Site 59624 ""would be expected to comprise 100 dwellings or more"" is again a totally terrifying prospect for existing residents and would transform the landscape with the most negative outcomes for all concerned."</p>	<p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect against SA objective 6: landscape and townscape when they are not located near any settlements. Sites receive an uncertain minor negative effect when they are located on the edge of a settlement. Although the respondent has raised the point that the site is located on the edge of a settlement, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for the site is therefore correct (uncertain significant negative). In the next iteration of the SA Report, we will add this limitation to the 'Difficulties and Data Limitations' section of the report.</p> <p>The site also already receives an uncertain significant negative effect in relation to SA objective 7: heritage.</p> <p>SA objective 14 relates to housing delivery only. If a site is likely to deliver 100 homes or more, it will receive a significant positive effect in relation to SA14. If a site is likely to deliver fewer than 100 dwellings, it will receive a minor positive effect.</p> <p>Site 59799 receives different effects across all fourteen SA objectives. With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect. The SA must give consideration to all reasonable alternative development site options.</p>
42719137	Q8 of the questionnaire	<p>"Similar to question 7. Annex 1 is 1101 pages with 347 sites each with assessments of the 14 objectives. In addition the sites are neither grouped by area or in chronological order and there is no search function making it very difficult to answer these questions. Even for the 17 sites we have found so far that we do have objection to, the max 6000 characters in this space is not sufficient to answer the question fully. An additional complication is that I agree with some of the assessments whilst disagreeing with others. I will give an example:</p> <p>Site 59424:</p> <p>Objections: DEFRA Forest Inventory, ancient woodland and TPO protected trees. Overdevelopment and lack of resources at Kings Hill, harm to protected species, outside of the confines of existing developments, impact on local residences of main access, impact on wildlife corridor.</p> <p>Objective 1 a--essment - I do not agree that removing trees, which would worsen air quality, would be a ++ for human health and wellbeing. In addition, many people use the woods for walking and relaxing, again, building 164 houses in their place is not something I consider positive for human health and wellbeing when there are</p>	<p>The unique ID numbers are how the sites are referred to throughout the Local Plan and so names for each site have not been provided. In the next iteration of the SA Report, the proformas will be structured by ward and a Contents page provided.</p> <p>The site has been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.Site 59424 receives a negligible effect in relation to SA objective 2: services and facilities for the reason provided in the proforma.</p> <p>Site 59424 is recorded as having an uncertain significant negative effect in to SA objective 5: biodiversity and geodiversity, as it is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. This includes Ancient Woodland. It is highly unlikely that any Ancient Woodland would be lost to development. All negative effects against this SA objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>already urban areas that are better resources and suited to such development</p> <p>Ob-ective 2 - Is not a negligible effect as access to community facilities e.g. main line train station is either car (emissions), bus (infrequent) or 1114oesn'tng (approx. 55mins if you are relatively fit)</p> <p>Ob-ective 5 - How can it be an uncertain negative on biodiversity if you chop down a load of ancient woodland</p> <p>Obj-ctive 12 - I agree that it would have a significant negative effect on air quality.</p> <p>This has covered just 4 objectives on one site, I could continue further with this site and cover the other 10 objectives, making comment on each if necessary, but I know I would run out of characters long before I covered the 17 sites I want to comment on, let alone all the others.</p> <p>I will list the 17 sites I object to below and send a separate paper copy to TMBC which detail the objections.</p> <p>59424, 59531, 59534, 59544, 59547, 59630, 59631, 59634, 59655, 59740, 59761, 59752, 59762, 59797, 59800, 59802, 59884"</p>	<p>an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p>
42342977	Q8 of the questionnaire	<p>"Site 59847 This is largely the correct site for th1114oesn't1114y1114yopportunity in the 2007 plan and this is a Brownfield site however parts of it are covered by a jungle of Old Mans Beard weed and is an ideal Nightingale habitat. Remember Chattenden Woods. At SA 10 there is a statement that it is within 800m of a railways station however that is as the crow flies. One must cross the Medway on the bridge a journey of about 1500m to from the nearest tip of the site.</p> <p>Sites 59791 & 59792 These sites are adjacent to the village of Wouldham it is a poor village1114oesn't1114y ameniteis and a village hall that needs replacing. It does not own its recreation ground or its allotmanets and the latter are being built over in this application. To raise SA 2 to a reasonable level this site needs to deliver a village hall, fully prepared new allotments to replace the old ones and these together with the recreation ground need to be firmly under the parish councils control and ownership and not a management company created by the developer. SA6 the landscape effects of this site will need very careful consideration when viewed from about 5 miles of the Kent Down ANOB. In SA10 there are bus stops but no local buses except school buses.</p> <p>59787. SA 4 there are two bus stops here but no buses except school buses. Parking is a problems here and so considering off street parking will be required. The cycle way runs along side New Court Road the other side of the village and goes from Bell Lane in Burham about a kilometre to Margetts Lane. SA6 This site is in a very prominent knoll just below the ANOB. On the knoll on the other side of Rochester Road is a terrace of old houses built circa 1920 that are</p>	<p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>With regard to SA objective 2: services and facilities, sites 59791 and 59792 are recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. Therefore, both sites receive a minor negative effect in relation to SA2.</p> <p>With regard to SA objective 6: landscape and townscape, these are 'policy off' appraisals and so do not take into consideration mitigation, such as landscaping. Sites 59791 and 59792 receive uncertain significant negative effects in relation to SA6.</p> <p>With regard to SA objective 4, this concerns economic growth. SA objective 10: climate change mitigation deals with sustainable transport separately. Site 59787 is recorded as falling within 400 of a bus stop.</p> <p>Sites 59787, 59818 and 59819 receive uncertain significant negative effects in relation to SA objective 6: landscape and townscape for the reasons provided in their proformas. The proformas acknowledges that the sites are within 500m of the AONB.</p> <p>Sites 59784 and 59819 receive significant negative effects in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>The SA acknowledges already that site 59820 comprises brownfield land.</p>

		<p>very prominent all across when gap where the Medway goes through the North Downs and from the surrounding ANOB for about 4 or five miles. The old houses fit well into the scene but it would be difficult to see how any new industrial or housing mix could fit in without degrading this vista.</p> <p>59818. SA 6 Like Site 59787 above there landscape views to consider here. SA 13 indicated mineral conservation issues. The site was close to exhausted about 80 years ago and has been an uncontrolled waste tip for about half that time and controlled until finally capped about 10 years ago.</p> <p>59784. SA9 My prime concern with this site is the loss of a very large commercially viable field of high grade farm land that is irreplaceable.</p> <p>59819. SA6 this site is not as visible in the landscape as others and there are good views through road of New court road. SA 9 This links with the land above and my comments there have less weight here as a considerable part of the land above is still available as a commercially viable field.</p> <p>59820. This is a Brownfield site right up to the river and is a natural extension to Peters Village. I am not certain but I think it was the site of the original Wouldham Hall Cement Works."</p>	
42720577	Q8 of the questionnaire	<p>"I disagree with the findings and methodology of the individual site assessments.</p> <p>Sites 59830, 59707/59731, 59880 and 59881 have been assessed as either significant or minor positive for SA Objective 1, 'to improve human health and well being'. This has been decided on the premise that the site is within 800m of an existing healthcare facility. However, existing health and social care services are overstretched, and there is no indication of how the sites would be developed to accommodate the additional demand on these services.</p> <p>These sites have also been assessed as significant positive for SA Objective 3, 'to improve levels of educational attainment ...', because they are within 800m of a school. The schools however are currently at full capacity and again no indication is given as to how the schools would accommodate the additional intake resulting from development of these sites.</p> <p>It is equally concerning that these sites have been assessed as either significant or minor positive for SA Objective 10, 'reduction in greenhouse gas emissions'. This assessment appears to have been decided on the basis of the sites being within 400m of a bus stop or 800m of a railway station. Surely a more thorough examination of the potential reduction in greenhouse gas emissions is required.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>In the case of Site 59830, the proposed development is of the order of 3000 homes, yet the site is rated 'significant positive' on the basis that part of the site is within 800m of Borough Green railway station. Trains travelling from this station are already at capacity during peak periods, and many commuters from this area drive to Sevenoaks to use the train services to Charring Cross and London Bridge.</p> <p>Regarding SA Objectives 6 and 7, it is disingenuous to suggest that the negative impact on the landscape of building on Green Belt land near to the ANOB, can be mitigated from a negative to an uncertain negative by design, scale and layout of development."</p>	<p>assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objectives 6: landscape and townscape and 7: heritage, SA is very high-level and the actual effect a site will have on these two objectives will depend in part on the design, scale and layout of development, which will be determined at planning application stage.</p>
42835105	Q8 of the questionnaire	<p>"59745 Site north of Hilden Avenue – 72 Un–ts 59804 - Merging Hildenborough and Tonbridge 59821 – Site North of Oast Road – Mixed Used 59823 – Site North of Oast Road – Mixed U–ed 59808 - Site North of Woodfield Avenue 222 Un–ts 59609 - Little Tr–nch far– - 59612 - Trench farm Yes–No 59625 - Trench F–rm 59746 - Trench f–rm 59683 - Longmead Flood plain and any other sites in –his area - the mapping is very confusing with nlverview... Objective 1: To improve human health and well-being This should be a major negative as the above sites means that a number of areas move further away from greenbelt as the green belt is built on. Objective 4: To encourage sustainable growth should be more negative. The houses are not near the town or the station. It would be much more sustainable to build houses closer to reliable transport links and or using sites in the town. Objective 5: To Protect Biodiversity and GeoDiversity This should be a Major Negative for these sites especially 59745, 59804, and 59808 but this area makes up parts of other sites too. In this locations they are partially wooded, there are ponds, low brush, they are not open fields etc. There is all sorts of wildlife that inhabit these sites. Badgers, Foxes, various small rodents, owls (at least two types), bats, all sorts of insects (multiple butterfly species, dragon flies) Toads, frogs, hedgehogs. We also regularly see woodpeckers, moorhens, kingfisher, heron, various breeds of duck, newts, Jays etc etc. There</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. If a site contains an existing business that could be lost as a result of residential development, it receives a minor negative effect. All mixed use and employment site options are expected to have positive effects on this objective, as they provide opportunities for new jobs.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, all negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, all negative effects are recorded as uncertain, as the actual effects will depend on the design, scale and layout of development, which will be determined at planning application stage.</p> <p>With regard to SA objective 7: heritage, all effects are recorded as uncertain, as the actual effects will depend on factors such as the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>are very few ares like this in the green belt, especially on the doorstep of town so people can go out and appreciate the biodiversity and wildlife.</p> <p>Objective 6: To protect and enhance the borough's landscape. This should be a major negative as the top five sites will connect Hildenborough and Tonbridge.</p> <p>At the moment from Tonbridge you cannot see the north side of Hildenborough as it is hidden by the brow of the hilden ridge. The top three developments on the list above essentially would mean that the green view from tonbridge will be destroyed and it will remove the gap between the town and the village. Building on fields that until the 1970's were used for hop production.</p> <p>Objective 7: To protect the cultural heritage resource</p> <p>Should be significant negative especially for top four. In this area there are a number of historic farmsteads that have been on maps for hundreds of years.</p> <p>There is the site of an old chandelery, oast houses, farm houses that describe the rural and industrial nature of the Hilden/Tonbridge area. They are able to be walked past on many different walks through the area and surrounding them with new builds will destroy the cultural heritage and the pleasant walks through it for residents.</p> <p>Objective 8: To protect and enhance water features and resources</p> <p>The sites above are on hills that form the catchment area for hildenbrook and the Medway. Both of which flood. At the moment, the run off from these hills is slowed by the presence of vegetation and soil. There is already flood waters that form at the bottom of Hilden Avenue, Hildenborough in heavy rain. The clay soils currently holds significant water but if these are covered in concrete that capacity will be gone and flood risks will increase.</p> <p>All of the above meet the 5 objectives of Metropolitan Green Belt</p> <p>Many of the Sites consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A), the importance of which has been highlighted by recent food shortages. But also land full of nature with multiple species fundamentally reducing biodiversity</p> <p>Many of above have been previously affected and are all at increasing risk of flooding both from fluvial and surface water sources and many are identified as being at huge increased risk as recognised by the strategic flood risk assessment.</p> <p>All will lead to a significant loss of productive agricultural land or land with that potential future use.</p> <p>Longmead plot significantly reduces amenity and facilities for –ublic</p> <p>59745 - significantly increases the traffic on an already congested road with limit access for traffic with only link onto exiting road system is on a blin"</p>	<p>design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, sites are given a significant negative effect if they are entirely or significantly within Flood Zone 2 and/or within an area with a 1 in 30 year risk of surface water flooding. Sites are given a minor negative effect if they are entirely or significantly within Flood Zone 2 and/or contain land with a 1 in 100 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soils, sites are given a significant negative effect if they contain a significant proportion of Grade 1 and/or 2 agricultural land. Sites are given an uncertain significant negative effect if they contain a significant proportion of Grade 3 agricultural land, with the uncertainty acknowledging that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). Sites are given a minor negative effect if they contain less than a significant proportion of Grade 1, 2 or 3 agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42615041	Q8 of the questionnaire	<p>"Site 59669</p> <p>SA Objective 1 : up until very recently this site was used for agricultural purposes (animal grazing) and has been cleared of this usage presumably because of potential building purposes.</p> <p>SA Objective 2 : at the moment the only suitable access is from Noble Tree Road which is narrow and busy at peak times with poor visibility at the junctions (especially at the junction with Ringshill). Considerable improvements would be necessary.</p> <p>SA Objective 3 : these are fee paying schools and do not necessarily cater for local residents since pupils travel from other areas to attend.</p> <p>SA Objective 4 : agree that residential sites will not stimulate growth or employment.</p> <p>SA Objective 5 : difficult to see how a residential development could enhance the huge range of wildlife in this particular area. (Deer, birds of prey, bats, grass snakes toads, frogs etc.)</p> <p>SA Objective 6 : definite significant negative. Noble Tree Road is more like a country lane so it is difficult to imagine how the surrounding open green belt</p> <p>Could be enhanced by a residential development.</p> <p>SA Objective 7 : this is an uncertain significant negative.</p> <p>SA Objective 8 : there is standing water on this site. Also the fields are subjected to significant surface water during the winter months with flooding down towards the railway track. For about 6 months of the year there is a stream all the way down towards the railway track which after development would almost certainly increase the possibility of flooding.</p> <p>SA Objective 9 : there is currently no mains drainage for properties adjacent to this site. This is green belt and significant damage could be caused by a residential development.</p> <p>SA Objective 10 : disagree. The amount of emissions both from houses and vehicles will be significant.</p> <p>SA Objective 11 : trees are already being taken down which has a negative effect on climate change.</p> <p>SA Objective 12 : how can air quality be improved with a considerable Increase in the number of car journeys. Not everybody has an electric car.</p> <p>SA Objective 13 : do not understand what a minerals safeguarding area is.</p> <p>SA Objective 14 : present infrastructure not suitable for 100 houses but agree generally about appropriate mix of dwellings."</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, all schools included in the GIS analysis are state schools.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives an uncertain significant negative effect for the reasons provided in the proforma.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 8: water, the site is recorded as not containing a water body or watercourse.</p> <p>With regard to SA objective 9, this objective related to soil not drainage and the Green Belt. The SA is too high-level to give consideration to mains drainage for properties.</p> <p>With regard to SA objective 10, this objective relates to the distance sites are to sustainable transport modes.</p> <p>With regard to trees, this is considered under SA objective 5: biodiversity and geodiversity, not SA objective 11: climate change adaptation.</p> <p>A Minerals Safeguarding Area is defined in the National Planning Policy Framework (NPPF) as "An area designated by minerals planning authorities which covers known deposits of minerals which are desired to be kept safeguarded from unnecessary sterilisation by non-mineral development".</p>
42801633	Q8 of the questionnaire	<p>"Site 59779:</p> <ul style="list-style-type: none"> • Green Belt and the Kent Downs AONB, edge of Shipbourne Conservation Area. 	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<ul style="list-style-type: none"> • Poor drainage on southern boundary. • Access onto Back lane in close proximity to main access to Shipbourne Primary school. Danger to school children and congestion at pick up and drop off times. • Dangerous junction of Back Lane with the A227. • Bus stop on the A227 currently only provides a school service. • There is an active covenant on this land restricting development. It is therefore undeliverable. <p>Site 59825:</p> <ul style="list-style-type: none"> • Green Belt, Kent Downs AONB, within the Shipbourne Conservation Area. • Very open site. • Dangerous access onto narrow Upper Green Road, or onto Back Lane. • Proposed mixed development on this site is questionable. There is no identifiable need for social housing in Shipbourne. <p>Site 59827:</p> <ul style="list-style-type: none"> • Green Belt, Kent Downs AONB and the edge of the Conservation area. • There are land drainage issues on this site and a watercourse runs along the southern boundary. • There are already issues with sewer overflow across the site. <p>Common to all three sites:</p> <ul style="list-style-type: none"> • All three sites are in the Green Belt and the Kent Downs AONB. If any of these sites were developed, they would be in conflict with GB policy and conflict with the Kent Downs AONB Management Plan which gives advice on how “to conserve and enhance natural beauty” in accordance with the Countryside and Rights of Way (CROW) Act 2000. The village and surroundings are widely valued as a “green lung” north of Tonbridge and extensively enjoyed by walkers & other visitors. New housing estates would erode the attractive character of the area, so SA objective 1 is negative. <p>As there is no effective public transport, every new house would have one or more new cars, significantly increasing traffic and greenhouse emissions (so SA objective 10 is significant negative)</p> <ul style="list-style-type: none"> • Shipbourne Conservation area and the adopted Shipbourne Design Statement set out what is special and important to Shipbourne and clearly indicate how vulnerable Shipbourne is to development. • The village which has no services other than the small primary School, already oversubscribed: it is on a small site so could not be significantly expanded. So no improvement in educational attainment: SA objective 3 is negative. 	<p>relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The AONBs are considered under SA objective 6: landscape and townscape. If a site is within 500m of an AONB, it receives an uncertain significant negative effect.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Most of these comments concern mitigation and so relate more to the Local Plan than the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>All 3 sites are remote from shops, schools, employment so are unsuitable for a mix of dwelling types sizes and tenures, to meet the Borough's housing needs. So SA objective 14 is negative.</p> <ul style="list-style-type: none"> • The junctions at both ends of Back Lane are dangerous and Back Lane experiences speeding traffic. • The village is not on the gas network so the current electricity grid would need upgrading to sustain any new developments in these sites. • Sewerage is also under pressure and overflows are already experienced as mentioned on site 59827. • Provision of water: current systems are inadequate to accommodate new development." 	
42613473	Q8 of the questionnaire	<p>"SA-Objective 2 - Service and infrastructure in the area are already stretched. HTMG is already struggling to cope with the number of patients and with the care home and Oakhill house development going in with no more services being put in is going to push them further, so another 222 properties will mean these will be unsustainable.</p> <p>SA Objective 3: The junior schools are already full, with one of the schools recently refusing to have a second form entry.</p> <p>SA Objective 4: There are very little/no job opportunities in Hildenborough, so this would increase commuting and the impact of emissions.</p> <p>SA Objective 9/10: Berkeley homes used the site to deposit 'clean soil', but this has not been the case; burying building waste, so not helping to conserve and enhance soil resources and guard against land contamination. They deposited the clean soil to save the environment from dies-I emissions - so are they going to remove it again, impacting on the-environment - where will they deposit it this time"</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities, not access to employment opportunities. SA objective 10: climate change mitigation instead gives consideration to things like emissions by looking at the proximity of development sites to sustainable transport links, although the SA acknowledges that the actual use of sustainable transport modes is dependent on people's behaviour. With regard to Berkeley Homes, this comment does not specifically relate to the SA.</p>
42832705	Q8 of the questionnaire	<p>"For any development to meet its sustainability objectives it needs to recognise the environment in which it is being pr1120oesn't \to acheive SA 2. it needs to be recognised that any development between East Malling into West Malling from Mill Street along Claire Lane would require new pavements and lighting so that any new housing would have access to existing community facilities without encouraging additional motor vehicle use (SA10); additional pavements and lighting along Claire Lane would cause damage to a distinct countryside environment impacting wildlife habitat (SA 5 and SA 6) through disruption of wildlife habitats and interruption of ""darksies"" environments; the scale of the developments will materially impact what has been described in the ""East Malling Conservation Study"" as an areas of ""Unspoilt beauty"" and would disturb the distinct, historic characters of East Malling and West Malling villages</p>	<p>It is not clear whether the sustainability objectives the respondent refers to are the SA objectives that comprise the SA framework within the Interim SA Report, or different objectives separate to the SA that developments must meet. The SA is a high-level tool used to identify the likely sustainability effects of a plan, and is one of many factors that feed into the plan-making process. The SA objectives provide a guide for the appraisal of options, be it policy options or site options.</p> <p>The SA is too high-level to consider pavements and lighting. This is instead something that is determined once more specific proposals are developed and submitted as part of a planning application. The SA does, however, give consideration to the landscape and what effects development wil have on the landscape, under SA objective 6: landscape and townscape.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Regarding SA 11 and 12: Incomplete ecology impact and air quality surveys need to be completed and associated issues addressed in line with the overall, cumulative impact of changes resulting from proposed development (not on a case-by-case basis) need to be addressed against very localised claims (e.g biodiversity increases in localised developments e.g unqualified/ unquantified 30% increases in biodiversity)</p> <p>Regarding SA 14: Of the proposed developments only a very small proportion are affordable to young buyers in the local demographic"</p>	<p>Biodiversity is addressed under SA objective 5: biodiversity and geodiversity. Information on how sites have been appraised against this objective is provided in Appendix D of the Interim SA Report.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for things like air quality surveys to be undertaken as part of the work. The Council will, however, commission additional evidence on matters including traffic and air quality. SA objective 12: air pollution looks at the distance sites are to Air Quality Management Areas.</p>
42616641	Q8 of the questionnaire	<p>Generally agree on site assessments. But for site 59811, disagree that is positive on Objective 1 (Improve human wealth and well being). It is within 800 metres of a footpath, but not open space or healthcare facility and is inappropriate in respect of 2262 homes in view of appalling access off existing single track road (Matthews Lane)</p>	<p>Site 59811 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of at least one publicly accessible open space and a walking path.</p>
42514977	Q8 of the questionnaire	<p>"Appendix D (non technical summary) seems to outline the objectives not assess the sites. It is only Annex 1 that gives detail for sites. The criteria used are not of equal importance and so it is difficult to give weight to conflicting criteria. Less and more focussed and weighted criteria would have been better.</p> <p>The approach taken seems to have been to include any area of land that might be developed irrespective of practical suitability. This is disappointing and means that we are obliged to review a mass of unsuitable detail.</p> <p>As examples sites 59709, 59720, 59793, 59872 and 59871 vary greatly in size, but the estimated housing is only identified as ',100' or 100+'. This tells us very little to make a detailed comment.</p> <p>However, no consideration is given to existing pressures on infrastructure - a huge weakness of the analysis. e.g. medical facilities available - but already very busy, especially at peak times. School exists but few available places - and only a primary school close. My confidence that the required investment would be made is very low.</p> <p>Road network is not identified as a bottleneck but with larger developments would be a nightmare, eg 59709, 59720. Village would effectively be joined up with the Borough Green urban area. Larger developments should be rejected in small village environments unless there is a very good reason, with supporting infrastructure."</p>	<p>The purpose of the SA is to assess all reasonable alternative development site options, as identified by TMBC.</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>
42714529	Q8 of the questionnaire	<p>"59854 I do not agree with rating '++' for SA 10. Greenhouse gas emissions, just because it is 800 m from a rail station. At best it is neutral. New residents will use cars and heating, they cannot do everything by rail.</p> <p>59616 I agree with the findings</p> <p>59620 I agree with the findings</p> <p>59621 I agree with the findings</p> <p>59622 I agree with the findings</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 10: climate change mitigation, the proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59699 I do not agree with the findings. Any development on this site will have very significant negative impact on : SA6 Landscape quality. This is exceptionally beautiful area of countryside that must not be touched.</p> <p>59740 I agree with most of the findings but disagree with with SA10 reduce greenhouse emissions. Again, new residents will use cars and heating and this will increase greenhouse gas emissions, not decrease."</p>	<p>modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p>
42561377	Q8 of the questionnaire	<p>"Site no. 59770 (The complete lack of detail in this site proposal makes it very difficult to assess. The default position should be rejection until details are pr-vided)</p> <p>Obj1 - the site is on the A25 and cannot be beneficial to-health</p> <p>Obj2 - don't und-rstand</p> <p>Obj3 - on its own, this site would not drive the development of a new school but could overwhelm the existing primary school. It is some miles away from the nearest secondary s-hools.</p> <p>Obj4 - what is the proposed employment development? The site may be near a bus stop but extremely few commuters use it. They nearly all-drive.</p> <p>Obj5 - replacing a field full of sheep with a housing development cannot be good for biodiv-rsity.</p> <p>Obj6 - as fo- obj5.</p> <p>Obj7 - no -omment</p> <p>Obj8 - massive negative. Run-off from the site causes flooding of Rectory Lane at times of heavy rain. It also causes a manhole cover to lift resulting in raw sewage in the road. Increasing the impermeable surface area on the site will exacerbat- this.</p> <p>Obj9 - this is unquestionably agricultural land. It has a flock of sheep - n it.</p> <p>Obj10 - the inhabitants will use cars not -uses.</p> <p>Obj11 - -greed</p> <p>Obj12 - -greed</p> <p>Obj13 - no-idea.</p> <p>Obj14 - as there are no details of the proposal, impossible to assess."</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022), which identified site 59770 as falling within the Fair Accessibility Band.</p> <p>With regard to SA objective 3: education, the site is recorded as falling within 800m of an existing secondary school or primary school but not both. The site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Site 59770 is proposed as a mixed-use site and therefore is recorded as having a minor positive effect in relation to SA objective 4: economic growth, as it will create job opportunities.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity and 6: heritage, the site is already recorded as having uncertain significant negative effects against these objectives.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect for the reasons outlined in the proforma. Specifically, the site contains land with a 1 in 30 year risk of surface water flooding.</p>
25408097	Q8 of the questionnaire	<p>"I do not agree with the methodology used by this study. For example the Borough Green Gardens site is treated as a single unit spatially. In reality it is 5 different quarries all at different stages of quarrying. There is no point in ticking a box twice because part of the site is close to a station if the other end of the site is miles away. There is no point in ticking a box because there is a local school when it is obvious that an extra 3,000 families will need multiple new school forms and huge infrastructure that's currently not present.</p>	<p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>It is not the purpose of the SA to quantify the infrastructure required, rather it is used to assess the social, economic and environmental effects of a plan.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It would be far better to make a serious attempt to quantify the infrastructure required, including an end to end 'Relief Road', and estimating costs it in order to determine if the proposal is even viable.</p> <p>Can a road be built in time given that the quarries keep extending their time horizon to complete quarrying?"</p>	
42810369	Q8 of the questionnaire	<p>"59795-Residential - this response is predicated on the basis that the site is the site suggested in the document and not the greenfield indicated by the associated map.</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: Significant –egative (—) - the site is on a busy cut through route between the A26 and A227 that has poor drainage, no footpaths or verges, no lighting and poorly maintained road edges. The road is hazardous for pedestrian and cycling traffic and therefore the site is inappropriate for such a significant high density residential development with the associated requirements for car parking and car use.</p> <p>SA Objective 3: Minor –egative (-) - 26 additional houses will undoubtedly lead to added need for educational facilities and the concomitant transport load on the road.</p> <p>SA Objective 5: Significant –egative (—) - 26 additional houses with the associated increase in vehicles and household pets will have a significant negative impact on biodiversity in general and local small mammal, bird, reptile and amphibian populations in particular.</p> <p>SA Objective 6: Significant –egative (—) - the sheer scale of the proposals - nearly doubling the housing stock accessing directly onto Ashes Lane - will undoubtedly have a significant negative impact, potentially creating a precedent for substantial infill between the centres of Tonbridge and Hadlow.</p> <p>SA Objective 7: Significant –egative (—) - the scale of any additional development on this site, over and above the existing, will have a significant negative impact by the sheer number of additional buildings, population and vehicles.</p> <p>SA Objective 8: Minor –egative (-) - likely to have a negative impact as Ashes Lane has a consistent drainage problem with large puddles in the road caused by inadequate/poor road construction/maintenance. The additional burden caused by the use of the vehicles owned by 26 additional houses will only exacerbate an existing poor drainage situation.</p> <p>SA Objective 10: Significant –egative (—) - 26 houses on this site will necessitate additional (50+ ?) car use for work, leisure and education undoubtedly increasing emissions.</p> <p>SA Objective 11: Significant –egative (—) - the location of this site, some distance from public transport routes via a dangerous road, will require significant car use.</p>	<p>A map showing the location of site 59795 can be found at the top of its proforma. Although the site may not look as though it comprises brownfield land, TMBC has informed LUC that it does.</p> <p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 1: health and wellbeing relates to the proximity of sites to healthcare facilities, in addition to open space, walking and cycling paths, play areas and sports facilities.</p> <p>With regard to SA objective 3: education, this objective assesses what distance a site is to an educational facility. The SA acknowledges that there is uncertainty regarding the capacity of schools and that the provision of new residential development could stimulate the provision of new schools or school places, but that this cannot be assumed at this stage.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect in relation to this objective. All negative effects recorded against this objective are recorded as uncertain. This is because as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, the site is already recorded as having a significant negative effect in relation to this objective. All effects are recorded as uncertain against this objective, as the actual effects will depend on the design, scale and layout of development, which will be determined at planning application stage.</p> <p>With regard to SA objective 7: heritage, the site is already recorded as having a significant negative effect in relation to this objective. All effects are recorded as uncertain against this objective, as the actual effects will depend on factors such as the design of the development</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		SA Objective 12: Minor –egative (-) - the additional energy/car use will do nothing to protect or improve air quality."	<p>and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site is not recorded as being at risk of flooding.</p> <p>With regard to SA objective 10: climate change mitigation, no sites will have a significant negative effect as this would not be in line with the site assessment criteria. The site received a minor negative effect, as it is more than 800m from a railway station and ore than 400m from a bus stop and cycle route.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, the site is not within 100m of an Air Quality Management Area (AQMA) and so receives a negligible effect.</p>
42707201	Q8 of the questionnaire	<p>"Site 59863:</p> <p>SA1- site is sandwiched between a dual carriageway and a motorway and as such, I have doubts regarding how this placement and proximity to two significant roads will ultimately improve human health and wellbeing if used for housing. Employment use- depends on what exactly is going to go there, but land more suitable for employment use than residential.</p> <p>SA4- area is not serviced by any frequent buses that lead to any significantly populated areas (nearest bus to Maidstone for example, is the 71 from London Road). In addition, I struggle to picture any significant business developments in an area this distant and inaccessible from any established areas.</p> <p>Site 59445- Whilst I agree with the assessment that the site is widely unsuitable, the geography of the site (aka a hole in the ground) makes the site widely unsuitable for any housing anyway. Without spending a massive amount of money filling in a field with a children's playground in it, I cannot see how you can cram a potential yield of 19 houses there.</p> <p>Site 59441/59442: SA6- Any development would result in an effect on the townscape and landscape, so I would disagree with the ""uncertainty"" behind this assessment.</p> <p>Site 59432: SA1- Fail to see how building on what is commonly used as a playing field will constitute a minor positive to improve human health and well-being. In addition it will lead to a decline in the facilities of the already-existing stock of housing and it's residents with regards to health and wellbeing.</p>	<p>The purpose of SA is to assess all reasonable alternative development site options. Site 59863 is proposed for employment development not residential development. It receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an existing area of open space/sports facility or walking/cycle path, which will help meet the recreational needs of employers working at the site.</p> <p>Site 59863 is expected to have a significant positive effect in relation to SA objective 4: economic growth, as it proposes employment development more than 5ha in size. It is also located close to two bus stops, on its western edge.</p> <p>The SA acknowledges that both sites 59445 and 59432 comprise an area of open space that could be lost as a result of development, and therefore both sites receive an uncertain significant negative effect in relation to SA objective 1: health and wellbeing. These effects are coupled with minor positive effects, as both sites are within 800m of a healthcare facility or an existing area of open space/walling and cycle path/play area/sports facility (but not both).</p> <p>With regard to SA objective 6: landscape and townscape, all effects are recorded as uncertain against this objective, as the actual effects will depend on the design, scale and layout of development, which will be determined at planning application stage.</p> <p>With regard to SA objective 3: education, the site is recorded as falling within 800m of an existing secondary school or primary school but not both. The site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		SA3- whilst geographically near to a primary school, the limited number of spaces at said primary school will render this assessment invalid. In addition, there is no space in Leybourne itself where a new primary school can be constructed, without the objections to the other sites as listed above."	facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils " [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.
42736321	Q8 of the questionnaire	<p>"Response on Annex B</p> <p>This response relates to site references 59871 (Fen Pond Road). References to Sustainability Appraisal ("SA") Objectives have been abbreviated "SAO".</p> <p>Environmental impact</p> <p>The topography of the site is a very narrow farm track to a small farm field lined by woodland on a significant slope down to the A25 bypass. To replace the existing farmland and woods with a housing site of the scale proposed - more houses than currently line this entire part of Fen Pond Road - would mean very significant changes to the landscape itself in order to create an appropriate site (SAO 5). It would not be possible, as the SA suggests in SAO 5, to conserve or enhance the asset through design - the SAO 5 entry should be updated to account for this and the existing SAO 5 statement should not be considered a relevant consideration for the decision as the impact could only be a significant negative.</p> <p>This development could not be built without losing the entire topography, shape and aspect of the farmland and woods on which it is proposed. It will also reduce the biodiversity and geodiversity, as well as reducing protection of soil resources and the character of the area as a result (SAO 5, 6 and 9). The scale of the site, including by contrast to the scale of the proposal, does not mean design will be able to mitigate these impacts to any meaningful degree.</p> <p>The proposal is extremely close (<250m) to the curtilage of the Grade I listed St Peters Church as well as being on the edge of the Ightham conservation area and is certain to have a negative impact in respect of both (SAO 7) as the essential privacy and tranquility of the churchyard will be significantly reduced by the loss of the farm/woodland buffer to the new development and (as a result of the landscape changes) the A25 bypass.</p> <p>In light of the above, the development would therefore have a materially negative impact on the Green Belt and Ightham as in an Area of Outstanding Natural Beauty.</p> <p>Increased traffic and pollution</p> <p>Access to public transport is extremely minimal in Ightham with a very infrequent bus service from the centre of the village, no cycle paths</p>	<p>Site 59871 receives a minor negative effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band.</p> <p>With regard to SA objective 3: education, the site has been appraised in line with the site assessment criteria and receives an uncertain minor positive effect due to the fact it is located within 800m of an existing secondary or primary school (but not both). The site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown. The site assessment criteria also state "New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage" [emphasis added]. This shows that although development could stimulate the provision of new schools or school places, that this has not been a material consideration in the assessments against SA objective 3.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities rather than access to employment opportunities. The SA acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect in relation to this objective. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application. The same applies to SA objectives 6: landscape and townscape and 7: heritage.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>and no direct access to trains (SAO 10). As there are no local amenities or business or industrial premises in Ightham aside from the pub (SAO 4) this development cannot be considered to encourage expansion or growth of those objectives. The result of this absence is that most households in Ightham have at least two cars (SAO 2, 12). This proposal is therefore likely to be for around 40-50 cars to be added to this small and already congested area – primarily the Church and the Close section of Fen Pond Road, which is part of the Conservation Area and essential for the church community.</p> <p>Specific impact on the Close (Conservation Area)</p> <p>Unless each new dwelling were to be assigned two parking spaces plus guest parking in the new development, which seems very unlikely given how small the space is - including for the number of proposed dwellings, the overflow parking will have to spill-over into the Close and Fen Pond Road. This is already the case, and was clearly underestimated for, the development comprising 31-35b Fen Pond Road as cars visiting those properties regularly use the Close. The Close parking is already at full capacity aside from small periods in the day meaning any church events have to park along the road and grass already causing significant congestion at key times. This is a significant negative impact for the residents, including in respect of air quality (SAO 12) which the SA assessment currently omits.</p> <p>In light of this, it is hard to see how a new development of this scale in the proposed location, could have anything other than a materially negative on the village's character and quality, cultural heritage resource and pollution levels with cars queueing on Fen Pond Road to get past the parked cars lining the road (SAO 6, 7, 11, 12). Notably the SA currently appears to underestimate the wide-ranging negative impacts.</p> <p>Access to education</p> <p>Ightham has a primary school already at full capacity each entry year and lacks the buildings and facilities to increase its intake any further. A build of the scale proposed in 59871 is likely to have a materially detrimental impact on access to the village school for those across the village. The SA fails to reflect this and the suggestion in the SA that the development could stimulate new schools or spaces being created is unrealistic and should not be a materially relevant consideration for the assessment under SAO 3."</p>	<p>With regard to SA objective 9: soils, the site is already recorded as having a significant negative effect in relation to this objective. The effect is recorded as uncertain, as the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality).</p> <p>The SA acknowledges that in relation to SA objective 10: climate change mitigation, the site is more than 800m from a railway station but within 400m of a bus stop. SA objective 10 (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>The site receives a negligible effect in relation to SA objective 12: air quality, as it is not within 100m of an AQMA. This is in line with the site assessment criteria.</p> <p>The SA utilises a precautionary approach and therefore does not underestimate the adverse effects development could have.</p>
42819681	Q8 of the questionnaire	<p>"In North East Tonbridge:</p> <p>1) Sites 59690, 59693, 59721, 59805 and 59809 fulfil all the five objectives of Metropolitan Green Belt.</p> <p>2) Sites 59690, 59693, 59721, 59805 and 59809 consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A), the importance of which has been highlighted by recent food shortages.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Sites 59693, 59721 and 59809 are recorded as having minor positive effects in relation to SA objective 1: health and wellbeing, as they are</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>3) Development on sites 59690 , 59693, 59721, 59805 and 59809 will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>4) I fail to understand how Sites 59693, 59721 and 59809 have been rated as + for SA1 as there are no dedicated cycle paths in this part of Tonbridge and the existing healthcare facilities will be overloaded by the additional population that will live in the large number of new houses that would be built on these sites. It is true that these three developments will join the open countryside on their eastern flank, until that is the town is extended further eastwards towards Hadlow in the next (post 2040) phase of urban sprawl! Also why are Sites 59690 and 59805 rated as only -?/+ for SA1 when they have the same postcode as Site 59809?</p> <p>5) Development on sites 59690, 59693, 59721, 59805 and 59809 will lead to a significant loss of productive agricultural land or land with that potential future use.</p> <p>6) Development on sites 59690, 59693, 59721, 59805 and 59809 will irrevocably alter the open, semi-rural, low-density character of the communities on the current edge of Tonbridge town (so lowering their SA1 score!)</p> <p>7) There will be a significant negative impact on the functioning of Tonbridge town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>8) None of the sites identified on the Green Belt around Tonbridge are easily accessible to local facilities – shops, schools, medical facilities etc. Again, why have Sites 59693, 59721 and 59809 been rated as + for SA1?"</p>	<p>either within 800m of an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both).</p> <p>Sites 59690 and 59805 are incorrectly recorded as containing open space. The reasons these sites are recorded as containing open spaces is that they slightly overlap existing open spaces and so the GIS analysis identified them as containing open spaces. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the sites will receive minor positive effects in relation to SA objective 1.</p> <p>The SA gives consideration to the Agricultural Land Classification under SA objective 9: soils. The sites listed, with the exception of 59690 and 59809, are recorded as having significant negative effects in relation to this objective as they are greenfield and contain a significant proportion of Grade 1 and/or 2 agricultural land (best and most versatile agricultural land). Sites 59690 and 59809 receive uncertain significant negative effects in relation to this objective, as they contain a significant proportion of Grade 3 agricultural land but it is unknown whether the Grade 3 agricultural land is Grade 3a (high quality) or 3b (not classed as high quality). The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>
42483521	Q8 of the questionnaire	<p>"Site 59592</p> <p>1127oesn't1127 the exisitng healthcare facilities are full. The existing open space has a small play area and very little for teenagers</p> <p>2. Obj 3 close to primary School which is oversubscribed but local secondary schools are in Tonbridge or Tunbridge Wells require a long bus ride on a busy road.</p> <p>3. Obj 5 on the pl1127oesn't1127ynd i reguarly see bats, deer, foxes and I understand there may be badgers and snakes. This is not suitable land for the wildlife.</p> <p>4. Obj 6 I cant see how a development on this greenbelt land with no doubt felling of trees and a new access road will enhance the borou-h.</p> <p>5. Obj 8 - 1127oesn'tte map doesnt show it but there is also a pond on the site support the wildlife. The area already has a lot of rainwater</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). Both sites fall within 800m of a number of open spaces, not just one.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, both sites are recorded as having an uncertain significant negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>coming from the fields at the back and I believe further building may cause issues.</p> <p>Site 59808</p> <p>1. obj 1 per site 5952 above</p> <p>2. Obj 3 per site 5952 above</p> <p>3. obj 5 we need to be protecting this land, its wildlife. It is regularly used by myself and others for exercise and family walks.</p> <p>4. Obj 6 part of the land has already been approved for development further development before that site has fully bedded in and the impact of local services, the community, wildlife and flooding need to be seen before further such developments."</p>	<p>With regard to SA objective 6: landscape and townscape, Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. Some errors have, however, been identified regarding whether sites are within, on the edge of or not located near any settlements in a rural location. This is because the GIS analysis identified some sites as not located near any settlements when they are in fact on the edge of a settlement, as there was no percentage overlap with the settlement boundaries. Therefore, in the next iteration of the SA Report, some of the effects against this objective will be updated to accurately reflect whether sites are on the edge of not located near any settlements.</p> <p>With regard to SA objective 8: water, site 59592 is recorded as not containing a water body or watercourse. There is a water body around 100m to the north east of the site.</p>
42715681	Q8 of the questionnaire	<p>"Sites 59647, 59635, 59601, 59859, 59776, 59637, 59638, 59686, 59842, 59806, 59853, 59857 and 59811. SA objective 1 - should be a significant negative for all. The Hadlow GP surgery is fully subscribed. SA objective 3 - should be a significant negative. The primary school has very little room for expansion, thus parents of primary school aged children will drive them to schools elsewhere (very few entrust children of that age to buses) leading to traffic congestion in the village with a detrimental impact on health and wellbeing.</p> <p>Sites 59635 and 59647. SA objective 6 - should be a significant negative. 59647 is Green Belt land. Also, 61 and 134 additional homes respectively would put unsustainable pressure on Court Lane which is unsuitable for an increase in traffic volume, as is its junction with the A26 which already gets congested.</p> <p>Sites 59601 and 59859. SA objectives 5 and 8 - should be a significant negative. These sites are both bounded by the River Bourne and run off from any development could adversely impact on biodiversity and water quality.</p> <p>Site 59601. SA objective 6 - should be a significant negative. This is Green Belt land. Any development would harm the aspect of the village and Hadlow Tower on the approach from the south.</p> <p>Site 59859 and 59776. SA objective 6 - should be a significant negative. Residents' and/or businesses' vehicles would be using Carpenters Lane which is unsuitable for increased traffic volume. In addition it would add to congestion at the junction with the A26. In addition, Site 59776 is in Green Belt land enjoyed by local walkers using the public footpath that crosses it.</p> <p>Site 59637. SA objectives 1 and 6 - should be significant negatives. This is Green Belt land enjoyed by local walkers using the public footpath that crosses it. Moreover, Cemetary Lane is unsuitable for the additional volume of traffic that development of the site would produce and it has no footpath.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown. This objective does not look at traffic congestion on local roads.</p> <p>With regard to SA objective 6: landscape and townscape, Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. Some errors have, however, been identified regarding whether sites are within, on the edge of or not located near any settlements in a rural location. This is because the GIS analysis identified some sites as not located near any settlements when they are in fact on the edge of a settlement, as there was no percentage overlap with the settlement boundaries. Therefore, in the next iteration of the SA Report, some of the effects against this objective will be updated to accurately reflect whether sites are on the edge of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site 59638. SA objectives 5 and 8 should be significant negatives. The site is next to a pond and development could impact on water quality and biodiversity. SA objective 6 - should be a significant negative. This is Green Belt land. Development would ruin the setting of the pond with a rural scene behind it.</p> <p>Site 59686. SA objectives 5 and 6. This is Green Belt land.</p> <p>Site 59842. SA objective 1 - should be a significant negative. Apart from the points about GP surgery and primary school noted above, a development of this size in this location would be out of all proportion to its neighbourhood and have a detrimental impact on the mental health and wellbeing of existing residents. There are two public footpaths adjacent to the site which are heavily used by local walkers whose enjoyment would be negatively impacted by a development here. The volume of traffic from such a development would worsen congestion in the village. SA objective 8 - should be a significant negative. It is understood that this land absorbs run off from fields to the north during heavy rain, helping to prevent flooding of houses to the south of it and the village as a whole. Development of the site could significantly increase the risk of such flooding.</p> <p>Sites 59806. SA objective 1 - should be a significant negative. Apart from the points about the GP surgery and primary school in Hadlow, the additional traffic from such a huge development would cause significant additional congestion through Hadlow with a negative impact on residents' wellbeing. SA objective 6 - should be a significant negative. This is a large area of Green Belt land (including agricultural land) with some woodland.</p> <p>Site 59811. SA objective 1. As above for 59806 with the further issue of a likely heavy use of Carpenters Lane which is unsuited to a high volume of traffic. SA objectives 6 - should be significant negatives. This is Green Belt land and is part of the landscape around Oxenhoath. Development would significantly encroach on the Green Belt land (including agricultural land) where there are public footpaths and ruin the setting of the listed Oxenhoath."</p>	<p>not located near any settlements in a rural location. This objective also does not look at traffic congestion on local roads.</p> <p>Site 59638 is already recorded as containing a water body, under SA objective 8: water. It receives uncertain significant negative effects against both SA objectives 5: biodiversity and geodiversity and 8. All negative effects against these two objectives receive uncertainty, as the actual effects will depend on the final design, scale and layout of development.</p> <p>Site 59842 already receives a significant negative effect in relation to SA objective 8: water. The effect is recorded as uncertain, as the site is located within a Source Protection Zone. Therefore, the extent to which water quality is affected depends on construction techniques and the use of sustainable drainage systems within the design.</p>
42713345	Q8 of the questionnaire	<p>"Site 59761</p> <p>SA Objective 1 is a certain significant negative as it removes the open space used as a sports facility.</p> <p>SA Objective 5 is a certain significant negative as it would destroy a woodland therefore there is not way that biodiversity and geodiversity could be maintained</p> <p>SA Objective 6 is a certain significant negative as it would remove an open space"</p>	<p>The significant negative effect against SA objective 1: health and wellbeing is recorded as uncertain, as the open space may be lost as a result of development. However, it is also possible that the open space may be incorporated into the development as it only overlaps the site in its south east corner.</p> <p>All negative effects against SA objective 5: biodiversity and geodiversity are recorded as uncertain. As outlined in the site assessment criteria contained within Appendix D of the Interim SA Report, "Development sites that are within close proximity of an international, national or locally designated biodiversity or geodiversity site have the potential to affect the biodiversity or geodiversity of those sites/features, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, increased recreation pressure etc. Conversely, there may be opportunities to promote habitat connectivity if new developments include green</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application".</p> <p>All negative effects against SA objective 6: landscape and townscape are recorded as uncertain, as if a site contains an open space it is unknown whether that open space will be retained or not, and the actual effects will also depend on the final design, scale and layout of development, which will be determined at planning application stage.</p>
42742625	Q8 of the questionnaire	<p>"Site 59830:</p> <p>SA Objective 1 - I disagree that it will have a positive impact on human health. The vast majority of this site is undeveloped land that is used and cherished by the local community. This will negatively impact human physical and mental health.</p> <p>SA Objective 6 - The report incorrectly states the site is not near any rural settlements. It IS near some - Ightham, Wrotham Heath, Platt Village to name some, as well as Borough Green itself. The effect of development would be to combine these individual villages into a large urban settlement. The report suggests the site is within 500m of the AONB; this is incorrect as large parts of the site are WITHIN the AONB.</p> <p>SA Objective 10 - Whilst some of the site may be within 800m of a train station, the site is large and some areas are actually 2.2km away (measured in a straight line).</p> <p>SA Objective 12 - I believe the site IS within close proximity of an AQMA on the A25.</p> <p>Site 59632:</p> <p>No objection."</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59830 is recorded as having a significant positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of a GP surgery and open space, in addition to walking paths.</p> <p>With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>As only a small percentage of site 59830 overlaps the settlement of Borough Green, the GIS analysis does not identify it as adjoining the settlement of Borough Green. In the next iteration of the SA, we will refine the GIS analysis so that sites where there is very little overlap with existing settlements are still recorded as bordering those settlement. However the effect will remain the same, as the site is within 500m of an AONB.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater."</p> <p>With regard to SA objective 12: air quality, the site is not located within 100m of an AQMA.</p>
42530881	Q8 of the questionnaire	<p>"Site 59669</p> <p>SA Objective 1: development would significantly impact human health and well-being. It is currently used for dog walking and this would be lost. Up until 3years ago this was grazing land for sheep cows horses</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in</p>

		<p>pigs and goats. As a country we need to produce more food so to lose 40acres of land to housing would impact on that</p> <p>SA Objective 2 : I agree as only access is onto Noble Tree Road which is a narrow lane</p> <p>SA Objective3: Disagree Schools referred to are fee paying and should not be included in the assessment. Fosse Bank School is in a difficult financial position and may close</p> <p>SA Objective 4: Agree</p> <p>SA Objective 5: Definite negative effect as site is existing green infrastructure which is home to roe deer, muntjac deer buzzards, red kites, toads and grass snakes. There is no way wild life could be protected in a housing development</p> <p>SA Objective 6: Definite significant negative. Noble Tree Road is a country lane and to have a housing estate would certainly not enhance the character of Hildenborough. The road is already heavily used and could not cope with significantly increased traffic</p> <p>SA Objective 7: Agree</p> <p>SA Objective 8: Significant negative but assessment inaccurate as there is a small pond adjacent to Noble Tree Road. There is significant surface water flooding and run off into a stream that then runs into the Hawden Stream with the definite possibility of increasing flooding.</p> <p>SA Objective 9: significant negative- this land was originally Rings Hill Wood flattened in the hurricane of 1987. Since then it has been used as grazing land for pigs goats sheep cows and horses. It is now used for dog walking. A development would not conserve nor enhance soil resources and guard against land contamination. There is also no Mains drainage for houses on the west side of Noble Tree Road and down a section of Rings Hill so this would cause huge destruction of greenfield site</p> <p>SA Objective 10: Disagree as car traffic would be greatly increased in country lane with estimated 800 extra car journeys per day</p> <p>SA Objective 11: Disagree as arborists on site of assessing which trees should be removed. Trees help stop climate change so we should be planting them in green field sites not cutting them down</p> <p>SA Objective 12: no comment</p> <p>SA Objective 13: Agree</p> <p>SA Objective 14: uncertain minor positive as there are no details of what Bovis is planning on the 4 fields"</p>	<p>relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, all schools included in the GIS analysis are state schools.</p> <p>All negative effects against SA objective 5: biodiversity and geodiversity are recorded as uncertain. As outlined in the site assessment criteria contained within Appendix D of the Interim SA Report, "Development sites that are within close proximity of an international, national or locally designated biodiversity or geodiversity site have the potential to affect the biodiversity or geodiversity of those sites/features, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, increased recreation pressure etc. Conversely, there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application".</p> <p>All negative effects against SA objective 6: landscape and townscape are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development, which will be determined at planning application stage.</p> <p>With regard to SA objective 8: water, the pond the respondent is referring to is located outside of the site, not within it. The site already receives a significant negative effect in relation to this objective, as it is within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The significant negative effect against SA objective 9: soils is recorded as uncertain, to acknowledge the fact it is unknown whether the Grade 3 agricultural land is Grade 3a (high quality) or 3b (not classes as high quality).</p> <p>SA objective 10: climate change mitigation looks at the proximity of development sites to sustainable transport links, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities. The SA does not specifically look at traffic levels but to inform plan-making, the Council will commission additional evidence on traffic.</p> <p>Site 59669 receives a significant positive effect in relation to SA objective 14: housing, as it is expected to comprise 100 dwellings or more. We have responded to this estimated yield provided by TMBC, which was generated using a methodology agreed by the Council and applied to all sites.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			With regard to the respondent's comments on the remaining SA objectives, these have all been appraised in accordance with the site assessment criteria.
42107681	Q8 of the questionnaire	<p>"59550</p> <p>SA Objective 1. This conflicts with the Objective as it would remove an outdoor children's recreation facility which is currently well used. The next nearest children's facility is at Haysden Country park which can not be safely accessed by unaccompanied children.</p> <p>SA Objective 5. This would remove a green area and impact adversely therefore unless really good enhancement of biodiversity were made.</p> <p>SA Objective 14. The site is not large enough to make any significant contribution, for example a low rise block of affordable housing, as it is not large enough.</p> <p>59552.</p> <p>SA Objective 1. This conflicts with the Objective as it would remove an outdoor children's recreation facility which is currently well used. The next nearest children's facility is at Haysden Country park which can not be safely accessed by unaccompanied children.</p> <p>SA Objective 5. This would remove a green area and impact adversely therefore unless really good enhancement of biodiversity were made.</p> <p>Overall there will be a significant negative impact on the functioning of the town centre both income and amenity due to the expansion of the town boundaries and consequent population increase. It will be easier to access Sevenoaks for example due to congestion.</p> <p>None of the sites identified on the Green Belt around Tonbridge are easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Air Quality. In Southwest Tonbridge sites 59550, 59552, 59571, 59572, 59641, 59695, 59764, 59765 and 59869 will all contribute to an unacceptable increase in traffic along Brook Street and will further overwhelm all the roundabouts along the A26 from Brook Street, St Stephens', Vale Road and will worsen the air quality in the Air Quality Management Area in Tonbridge High Street.</p> <p>Site 59683 will lead to signifcant loss of amenity and recreational space at Tonbridge Farm Sportsground where we have been told there is insufficient spare capacity for a Baseball Diamond but that we can now squeeze in hundreds of houses on a Floodplain! The selection of sites 59515, 59516, 59521, 59522, 59550, 59552, 59554, 59555, 59571, 599572 will all result in an unacceptable loss of amenity space for our communities."</p>	<p>Sites 59550 and 59552 are both recorded as having uncertain significant negative effects in relation to SA objective 1: health and wellbeing, due to the fact they contain an open space that could be lost as a result of development, although this is uncertain. The effects are coupled with a minor positive effects, as both sites are within 800m of other areas of open space, as well as walking paths.</p> <p>Site 59550 is already recorded as having a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, whilst site 59552 is recorded as having a minor negative effect. All negative effects against this objective are uncertain.</p> <p>With regard to SA objective 14: housing, the SA acknowledges that the site 59552 would provide fewer than 100 dwellings.</p> <p>The SA acknowledges that sites 59515, 59516, 59521, 59522, 59550, 59552, 59554, 59555, 59571 and 59572 contain open space. Site 59683 already receives an uncertain significant negative effect in relation to SA objective 8: water, as it falls within Flood Zone 3 and an area with a 1 in 30 year risk of surface water flooding. It also contains a watercourse.</p>
42801793	Q8 of the questionnaire	<p>"59597 disagree with assessment for obj 1, 3, 5,6,7,9,10,13and 14</p> <p>They are all Significant negative</p>	All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>All the sites around Oxenhoath this is West Peckham not Hadlow</p> <p>59806</p> <p>59811</p> <p>How on earth can building in an area of natural beauty, risk to flooding , narrow lanes be acceptable"</p>	<p>justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>
42719745	Q8 of the questionnaire	<p>"These comments cover Site IDs 59735, 59798, 59801, 59835 and 59804</p> <p>1. Site IDs 59735, 59798, 59801, 59804 and 59835 cover a unique area of greenbelt land which sits between Tonbridge, Hildenborough and Shipbourne and has many bridleways and footpaths and so is accessed and enjoyed by horse-riders, cyclists and walkers. Development on these sights would have a devastating impact on the openness and permanence of the greenbelt land between Coldharbour Land and Horns Lodge Lane.</p> <p>2. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes. Sites 59801 and 59798 correctly have SA2 assessed as '-' and as such are flagged as least suitable for development. Sights IDs 59735, 59835 and relevant parts of 59804 should be equally scored '-' for SA2 and as such should also be ranked amongst the least suitable.</p> <p>3. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), climate change (SA11) and local air quality (SA12).</p> <p>4. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community.</p> <p>Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>5. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>6. Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>7. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.</p> <p>8. Previous application to move a Dutch barn for stables on to sight IDs 59798, 59835 and equivalent section of 59804 was rejected due to impacting the openness of the greenbelt."</p>	
42713473	Q8 of the questionnaire	<p>"Site 59761</p> <p>Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> • To protect and enhance designated sites of nature conservation importance. • To protect and enhance wildlife especially rare and endangered species. • To protect and enhance habitats and wildlife corridors. • To provide opportunities for people to access wildlife and open green spaces. • To increase biodiversity net gain. • To protect and enhance priority species and habitats of conservation importance that contribute to reversing the trend of ecological decline. • To protect, enhance and expand ecological networks and their interconnectivity. • Conservation of biodiversity, including priority habitats and species, under the NERC Act (S41). • To protect and enhance sites designated for geodiversity. <p>. By taking away the woodland you will take away and significantly negatively impact all of the above. There are endangered species in the woodland and every one of these sub objectives will be negatively impacted. You will destroy habitats and wildlife corridors and further endanger species."</p>	<p>Site 59761 is recorded as having an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity, for the reasons outlined in the proforma.</p>
42539777	Q8 of the questionnaire	<p>"Site 59618</p> <p>The Sustainability Appraisal Objectives are too rigid and do not take into account site specific circumstances. The rigidity of the objectives could result in suitable sites being dismissed such as this particular site which is edge of settlement and which would satisfy Strategy Option 4. We can provide the following comments against the Council's assessment of the site as measured against the SA objectives.</p>	<p>The SA findings are one of many factors taken into account when determining a preferred option to take forward in a plan..</p> <p>Mitigation, as referred to in relation to SA objectives 5 and 6, is not taken into consideration in the 'policy-off' appraisals of the reasonable alternative development site options contained within Chapter 5 and Annex 1 of the Interim SA Report. If the sites are allocated at a later stage in the plan-making process and policy wording provided, mitigation will be taken into account through 'policy-on' appraisals of the sites.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 2 - development proposals can result in better connectivity once built out as planning policy requires residential schemes to improve the sustainability credentials of a site. It is therefore probable that this site will have improved accessibility with the benefit of planning permission compared to its current status.</p> <p>SA Objective 3 - it is unhelpful when a site is marked negatively based on uncertain factors. When factors are unknown or uncertain sites should be marked as neutral or negligible until those factors become known.</p> <p>SA Objective 4 - we disagree with the Council as a Minor Positive should be given here as residential development irrespective of location can contribute towards economic growth and delivery of employment opportunities.</p> <p>SA Objective 5 - again this is an unfair and incorrect judgement given that the Council itself states that it may be possible to conserve or even enhance the asset through the design and layout of the new development. We would reiterate this point and also add that Biodiversity Net Gain will be a compulsory requirement by which time the Local Plan will be adopted. This should be scored negligible as a minimum or even a Minor Positive.</p> <p>SA Objective 6 - The site is within the AONB but this does not preclude development per se. As the Council states, the effects of development are uncertain at this stage as the effects on the landscape will depend on the design, scale, and layout of development which may help mitigate any adverse effects. Any planning application that may come forward on the land would be accompanied by a Landscape and Visual Impact Assessment. This should be marked negligible at this stage.</p> <p>SA Objective 7 - the Council has incorrectly scored this as no heritage asset is within 250m of the site. This should be scored negligible.</p> <p>SA Objective 8 - again the Council have reached an incorrect conclusion as we can confirm that the site is within Flood Zone 1 which has no risk of flooding. This should be scored negligible.</p> <p>We have also submitted sites 59619, 59620, 59621 and 59622 on behalf of the same client. All these sites form part of the same landholding but were put forward as a whole and in parts thereof. This landholding is not within the AONB but is Green Belt. It is also edge of settlement and a short distance away from the High Street of West Malling. The site is highly sustainable. The majority of the comments we raise above for site 59618 apply here and we do not wish to repeat them again."</p>	<p>Some of the effects in the SA are recorded as uncertain, as the actual effects will depend on such things as mitigation which as outlined above, will be determined at a later stage in the plan-making process.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.</p> <p>With regard to SA objective 7: heritage, the site falls within 250m of a number of monuments as recorded in Kent County Council's Historic Environment Record. Therefore, the site receives a significant negative effect in relation to this objective. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain minor negative effect, as it contains land with a 1 in 100 year risk of surface water flooding.</p>
42796225	Q8 of the questionnaire	<p>"59745 Site north of Hilden Avenue – 72 Units</p> <p>59804 - Merging Hildenborough and Tonbridge</p> <p>59821 – Site North of Oast Road – Mixed Used</p> <p>59823 – Site North of Oast Road – Mixed Used</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59808 - Site North of Woodfield Avenue 222 Units</p> <p>59609 - Little Trench farm -</p> <p>59612 - Trench farm</p> <p>59625 - Trench Farm</p> <p>59746 - Trench farm</p> <p>59683 - Longmead Flood plain</p> <p>and any other sites in this area - the mapping is very confusing with no overview...</p> <p>Objective 1: To improve human health and well-being</p> <p>This should be a major negative as the above sites means that a number of areas move further away from greenbelt as the green belt is built on.</p> <p>Objective 4: To encourage sustainable growth should be more negative. The houses are not near the town or the station. It would be much more sustainable to build houses closer to reliable transport links and or using sites in the town.</p> <p>Objective 5: To Protect Biodiversity and GeoDiversity This should be a Major Negative for these sites especially 59745, 59804, and 59808 but this area makes up parts of other sites too.</p> <p>In this locations they are partially wooded, there are ponds, low brush, they are not open fields etc. There is all sorts of wildlife that inhabit these sites. Badgers, Foxes, various small rodents, owls (at least two types), bats, all sorts of insects (multiple butterfly species, dragon flies) Toads, frogs, hedgehogs. We also regularly see woodpeckers, moorhens, kingfisher, heron, various breeds of duck, newts, Jays etc etc. There are very few ares like this in the green belt, especially on the doorstep of town so people can go out and appreciate the biodiversity and wildlife.</p> <p>Objective 6: To protect and enhance the borough's landscape. This should be a major negative as the top five sites will connect Hildenborough and Tonbridge. At the moment from Tonbridge you cannot see the north side of Hildenborough as it is hidden by the brow of the hilden ridge. The top three developments on the list above essentially would mean that the green view from tonbridge will be destroyed and it will remove the gap between the town and the village. Building on fields that until the 1970's were used for hop production.</p> <p>Objective 7: To protect the cultural heritage resource</p> <p>Should be significant negative especially for top four. In this area there are a number of historic farmsteads that have been on maps for hundreds of years. There is the site of an old chandelery, oast houses, farm houses that describe the rural and industrial nature of the Hilden/Tonbridge area. They are able to be walked past on many different walks through the area and surrounding them with new</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. If a site contains an existing business that could be lost as a result of residential development, it receives a minor negative effect. All mixed use and employment site options are expected to have positive effects on this objective, as they provide opportunities for new jobs.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, all negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, all negative effects are recorded as uncertain, as the actual effects will depend on the design, scale and layout of development, which will be determined at planning application stage. Some errors have, however, been identified regarding whether sites are within, on the edge of or not located near any settlements in a rural location. This is because the GIS analysis identified some sites as not located near any settlements when they are in fact on the edge of a settlement, as there was no percentage overlap with the settlement boundaries. Therefore, in the next iteration of the SA Report, some of the effects against this objective will be updated to accurately reflect whether sites are on the edge of or not located near any settlements.</p> <p>With regard to SA objective 7: heritage, all effects are recorded as uncertain, as the actual effects will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, sites are given a significant negative effect if they are entirely or significantly within Flood Zone 2 and/or within an area with a 1 in 30 year risk of surface water flooding. Sites are given a minor negative effect if they are entirely or significantly within Flood Zone 2 and/or contain land with a 1 in 100 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soils, sites are given a significant negative effect if they contain a significant proportion of Grade 1 and/or 2 agricultural land. Sites are given an uncertain significant negative effect if they contain a significant proportion of Grade 3</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>builds will destroy the cultural heritage and the pleasant walks through it for residents.</p> <p>Objective 8: To protect and enhance water features and resources</p> <p>The sites above are on hills that form the catchment area for hildenbrook and the Medway. Both of which flood. At the moment, the run off from these hills is slowed by the presence of vegetation and soil. There is already flood waters that form at the bottom of Hilden Avenue, Hildenborough in heavy rain. The clay soils currently holds significant water but if these are covered in concrete that capacity will be gone and flood risks will increase.</p> <p>All of the above meet the 5 objectives of Metropolitan Green Belt</p> <p>Many of the Sites consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A), the importance of which has been highlighted by recent food shortages. But also land full of nature with multiple species fundamentally reducing biodiversity</p> <p>Many of above have been previously affected and are all at increasing risk of flooding both from fluvial and surface water sources and many are identified as being at huge increased risk as recognised by the strategic flood risk assessment.</p> <p>All will lead to a significant loss of productive agricultural land or land with that potential future use.</p> <p>Longmead plot significantly reduces amenity and facilities for public</p> <p>59745 - significantly increases the traffic on an already congested road with limit access for traffic with only link onto exiting road system is on a blind corner (Hillview Road/Hilden Avenue)"</p>	<p>agricultural land, with the uncertainty acknowledging that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). Sites are given a minor negative effect if they contain less than a significant proportion of Grade 1, 2 or 3 agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>
42720097	Q8 of the questionnaire	<p>"Sites 59424, 59544, 59547</p> <p>Objective 1The development would remove trees and worsen air quality and quality of life for existing nearby residents.</p> <p>Objective 10 and 12 The loss of trees and vegetation combined with the increase in traffic would not be a positive. The site is not accessible for all (ref NPPF) as the rail station is too far for many to walk and the bus service does not run 24/7 on a frequent basis.</p> <p>Sites 59531, 59534, 59884</p> <p>Objectives 1, 2, the site is used as a community play area by children.</p> <p>10 and 12 the removal of the green space and new traffic movements associated with the development will increase greenhouse gases. Car ownership at Kings Hill is high due to the lack of local services and facilities (it's not a town) the distance to the train station and the lack of adequate bus services.</p> <p>Annoyingly the list of sites in Annex 1 are not in any order and who has the time to sift through all the sites? I have commented on those that I have found but have been told there are other sites which affect where I live which were at the back of the Annex. Please provide a list of all sites proposed at and around Kings Hill so that me and others affected can easily access the information and take part in this</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to trees, this is considered under SA objective 5: biodiversity and geodiversity, not SA objective 1: health and wellbeing. Air quality is considered separately under SA objective 12: air quality.</p> <p>Each of these three sites is more than 800m from a railway station but within 400m of a bus stop. As such, they each receive a minor positive effect in relation to SA objective 10: climate change mitigation.</p> <p>The SA acknowledges that sites 59531, 59534 and 59884 contain open space.</p> <p>The unique ID numbers are how the sites are referred to throughout the Local Plan and so names for each site have not been provided. In the next iteration of the SA Report, the proformas will be structured by ward and a Contents page provided.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		consultation. This would be a fair and reasonable way to consult local people so that they can make their views known and help to shape the new Local Plan. Currently the documents are difficult to access, difficult to read and take hours to filter through."	
42616033	Q8 of the questionnaire	<p>"Loss of Kings Hill Golf Course including loss of local employment, bar, club staff and green keepers - Contrary to SA Objective 4 and 1</p> <p>Loss of enjoyment to golf members, including seniors, juniors and local associations using the club facilities contrary to SA Objective 5 and 1</p> <p>The site contains a body of water contrary to SA Objective 8</p> <p>The site is principally a golf course not agricultural land contrary to SA Objective</p> <p>The site expected to provide 1228 dwellings contrary to SA Objective 14 namely 100 dwellings. If a smaller site is being proposed, it should be shared with the community"</p>	<p>Sites 59797 and 59800 receive uncertain significant negative effects in relation to SA objective 1: health and wellbeing, as they contain Kings Hill Golf Course. SA objective 4: economic growth relates to the delivery of employment opportunities. Both sites are expected to have a negligible effect in relation to SA objective 4 as "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. Having said that, the promoter of this site has not declared that it contains an existing business.</p> <p>The sites receive uncertain significant negative effects in relation to SA objective 5: biodiversity and geodiversity, as they are within 250m of Kings Hill Golf Course, Cattering & Hoath Wood Local Wildlife Site and area of Ancient Woodland. They also contain green infrastructure assets.</p> <p>Site 59800 is acknowledged in the SA as containing a water body and therefore received an uncertain significant negative effect in relation to SA objective 8: water.</p> <p>SA objective 9: soil relates to the Agricultural Land Classification (ALC). The ALC still applies when land is not actively being used for agricultural purposes.</p> <p>The sites receive significant positive effects in relation to SA objective 14: housing, as they are expected to comprise 100 dwellings or more. This is in line with the site assessment criteria.</p>
42442881	Q8 of the questionnaire	<p>"Some of the site assessments consider impacts to be negligible or not have a negative impact which I disagree with for example site 59424 would involve felling trees, destruction of bio diversity and wild life habitats. How does this comply with COP 26 pledges? Also this site suggests potential for 100+ dwellings , how would the local health infrastructure be supported to manage this increase with a GP group that is already struggling to serve the existing population."</p>	<p>Site 59424 is recorded as having an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All negative effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p>
42801121	Q8 of the questionnaire	<p>"1. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes, which does not appear to be credible or logical.</p> <p>2. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human</p>	<p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>3. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community. Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>4. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>5. Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>6. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it.</p> <p>This fact alone must significantly reduce the suitability of the areas for development."</p>	<p>It is noted that Horns Lodge Lane is used for recreational purposes.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>
42721345	Q8 of the questionnaire	<p>"1. Site 59821, 59823, 59683 apply</p> <p>i) These fulfills all the 5 objectives of Metropolitan Green Belt.</p> <p>The above sites to the North of Oast Lane directly on the boundary between Tonbridge and Hildenborough serves as a green wedge effectively protecting Hildenborough's status as a village and stopping it becoming absorbed into the urban sprawl of Tonbridge. It is not infill within the village and will effectively remove any demarcation between the town and the village. Hildenborough will become part of the town forever and will completely lose its identity.</p> <p>ii) Development on these sites will lead to a significant loss of productive agricultural land which has been farmed for decades</p> <p>iii) (SA Objective 5 , 6 and & 7) Environment- These sites are the start of a vast stretch of open countryside stretching all the way to Shipbourne and beyond. It provides protection against flooding, opens out onto a historic orchard used in the hop industry. As such it attracts birds of prey including buzzards, barn and screech owls, swifts, swallows and roe deer. There are two very old ponds and</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is important to note that the SA findings are not the only factors taken into account when determining a preferred option to take forward in a plan. Factors such as public opinion, deliverability and conformity with national policy are also taken into account by plan-makers when selecting preferred options for a plan.</p> <p>As acknowledged in the proformas for these sites against SA objective 9: soils, each comprises greenfield land and contains a significant proportion of Grade 3 agricultural land. Therefore, each site receives a significant negative effect against this objective. The effect is recorded as uncertain to acknowledge the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality).</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>multiple mature trees over a hundred years old which would be destroyed forever if these sites are developed.</p> <p>This site IS located near a rural settlement namely the 8 houses off Oast Lane four of which (1 oast houses, 1 cottage, 1 hop barn and 1 bull barn) are of significant cultural heritage being used in Kent's historic hop and farming industry. If the fields surrounding these properties were to be developed the essence of the rural nature of these historic hop properties would be lost forever.</p> <p>iii) Infrastructure: The bus service through Hildenborough out of rush hour is only hourly and access to train stations is not within an acceptable walking distance for many people being more than 30 mins to Tonbridge train stations and an hour to Hildenborough from the South side.</p> <p>iv) SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change: Development of these sites, being over 2 miles from the North access to the A21 (Morley's Roundabout), would result in a significant amount of south bound traffic joining the already congested B245 route towards Tonbridge High Street to join the A21 (Vauxhall Lane junction).</p> <p>During rush hour the queues from the intersection with the Shipbourne Road and the High Street already tail back to Dry Hill Park Road and this will only cause further congestion backing up through Hildenborough village and Shipbourne Road causing more pollution and for the local residents and school children. Over 450 children live during term time in the boarding houses on these main roads and they will be directly affected by the pollution caused by any increase in traffic in the North Tonbridge/ South Hildenborough area. The adverse health effects of such pollution on children and the links to asthma are well documented. As well as Tonbridge boarding school there are 2 primary schools on Dry Hill Park Road which will also be affected by pollution should traffic increase.</p> <p>The traffic along the B245 is solid at rush hour and without lights or a roundabout the ability of traffic leaving Oast Lane to drive North Bound will be severely restricted causing traffic to back up a short access road.</p> <p>vi) SA Objective 2: To improve equality and access to community facilities and services: Local services already under considerable strain - in particular Hildenborough's GP surgery and schools & school buses. Already a considerable number of houses being built on Fidelity site plus the new care home will begin to affect those services too.</p> <p>Vii) The B245 regularly floods in particular by Waterfield Lane and Farm Lane. Any destruction of greenfield sites on the North (higher) side of this Road will cause more rain water to run into the B245 and causing flooding to the properties on the South of this road. Properties around Correnden Road and Hawden Lane/Road have flooded in the past and will do some more regularly.</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, all three sites receive an uncertain significant negative effect against this objective.</p> <p>With regard to SA objective 7: heritage, all three sites are recorded as having uncertain significant negative effects in relation to this objective.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 8: water, all three sites receive significant negative effects for the reasons provided in the proformas.</p> <p>With regard to SA objective 10: climate change mitigation, the criteria for this objective look at proximity to railway stations, bus stops and cycle paths, so as to encourage more active and sustainable transport modes. All three sites receive a minor positive effect in relation to this objective because although they are more than 800m from a railway station, they are within 400m of at least one bus stop.</p> <p>The site assessment criteria for SA objective 2: services and facilities relate more specifically to access to services and facilities, rather than capacity of existing services.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Viii) Development will irrevocably alter the open, semi-rural, low-density character of the communities on the current edge of Tonbridge town</p> <p>ix) None of the sites identified on the Green Belt around Tonbridge are easily accessible to local facilities – shops, schools, medical facilities with spare capacity"</p>	
42795649	Q8 of the questionnaire	<p>"59715: SA Objectives 5,6,7,9 will have a definite significant negative effect destroying agricultural land and impacting heritage assets. It is located on a narrow road close to the rural settlement of East Malling Village which will be negatively impacted. Most traffic from this site will come through East Malling Village having a negative effect on air quality and green house gases (objectives 10 & 12) and add to the congestion in Chapel Street & the High Street. This will have a serious negative effect on the heritage assets of the village</p> <p>59726 & 59631: Same comments as above</p> <p>59740, 59636, 59824, 59743, 59698 & 59630 are close to East Malling Village and will have a negative effect on air quality due to increase in traffic</p> <p>The cumulative effect of all these developments needs to be taken into account as East Malling village is being surrounded on all sides with significant negative effect on green areas, character, heritage assets and air quality. The current developments along New Road and Forty Acres should also be taken into account as East Malling Village will be directly impacted by the huge traffic increase. Traffic needs to be diverted away by other routes and rat running prevented through the village. Please do not look at these sites individually as there are a large number in close proximity to East Malling Village"</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). The sites listed are not within 100m of an AQMA.</p> <p>The next iteration of the SA will contain a cumulative effects section, which will explore the total effects of the plan as a whole, including where settlements may have more than one allocation and what cumulative effect this might have.</p>
42666881	Q8 of the questionnaire	<p>"SA objective 2</p> <p>59750: bus service recently reduced to twice per hour during daytime, I would question whether much of proposed site will be within a 'fair' walking distance of existing bus stops on The Street.</p> <p>59758: Beech Road is narrow single-track lane without footpaths, only the eastern end of the road (Airfield Estate) is served by a bus route (and that of indeterminate frequency).</p> <p>59752: again question whether access is 'fair' rather than 'poor' given distance some of site is from A26 and A228.</p> <p>SA objective 3</p> <p>59749: given distance between site and primary school, and the busy/dangerous roads between do not believe this should be 'positive' in any way.</p> <p>59753: likewise.</p> <p>SA objective 8</p> <p>59816: is the flood risk really 'negligible'?</p> <p>SA objective 10</p>	<p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>Site 59752 was recorded in the Urban Capacity Study as falling within the Fair Accessibility Band and so received a minor negative effect in relation to SA objective 2.</p> <p>SA objective 3: education looks at access to educational facilities only, not road safety.</p> <p>It is correct that site 59816 is not considered at risk of flooding.</p> <p>Sites 59750, 59752, 59758, 59759, 59760 and 59761 are all recorded as falling within 400m of a bus stop.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		59750, 59752, 59758, 59759, 59760 and 59761: do not believe all of proposed sites will be within 400m of an existing bus stop."	
42443361	Q8 of the questionnaire	<p>"+ There are inaccuracies in the Sustainability Appraisal for various startegic & individual sites.</p> <p>+ For example, the train station indicated at Wateringbury is NOT in Tonbridge & Malling Borough but in Maidstone.</p> <p>+ Further, the Station is in Green Transport/walking/cycling distance of only a very few areas/sites. The Station has a very small Car Park (shared with the local School)</p> <p>+ In the case of some site assessments has been inaccurately considered - one INDICATIVE example is Appendix B Site 59803 stated as within 800m of the station when in fact only a very small remote corner of the site may be within a arc as the crow flies."</p>	<p>The railway station the respondent refers to is located within the boundaries of Tonbridge and Malling Borough. However, even if the railway station were located within Maidstone Borough, residents living within Tonbridge and Malling would still likely access it.</p> <p>With regard to the respondent's comment on site 59803, the SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater."</p>
42718849	Q8 of the questionnaire	<p>"Site ref 59791 and 59792</p> <p>Although the objectives may cover most eventualities nearly all assessments are wrong due to a lack of local knowledge by the compilers of this local plan.</p> <p>1) The medical centre quoted in objective 1 does not exist at this present time, and is unlikely to be built, if past experience is anything to go on. The local G.P. surgery are unable to cope with the present level of patients. The site is within an area of open space and these outdoor spaces are of much need to the local residents including the allotments. I would suggest your minor positive is in fact totally wrong as an objective because there would be no positives to improve health and well being in fact with a further influx of residents from any further housing once again the levels would become major negatives and not minor positives.</p> <p>2) With the great increase of traffic within the local area, which has had a huge impact on the infrastructure already, the exits from these sites do not have the best sight lines and in my opinion will in fact create a dangerous area.</p> <p>3) The school mentioned within the 800 mtrs boundary is already full to capacity, and local families coming to the area are having to seek places at other schools further away from the village. This means further movements of vehicles which will increase emissions and add to air pollution.</p> <p>5)The taking of agricultural land and allotments not only do they not enhance the well being of local residents, but in the bigger picture reduce food supplies.</p> <p>6)The AONB mentioned in this area is in point of fact only 100mtrs from this proposed site and will have an effect on wild life which is of various types including badgers.</p>	<p>The proformas for sites 59791 and 59792 state that they are either within 800m of an existing healthcare facility <i>or</i> an existing area of open space/walking and cycle path/play area/sports facility (but not both). Specifically, both sites are within 800m of an area of open space and some walking paths. The SA acknowledges that both sites contain an area of open space that could be lost as a result of development, although this is uncertain. The overall effect for both sites against this objective is mixed uncertain significant negative and minor positive.</p> <p>The SA is too high-level to give consideration to sight lines.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 7: historic environment, sites 59791 and 59792 are recorded as having uncertain significant negative effects for the reasons provided in the proformas. All effects against this objective are recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p> <p>Both sites are recorded as having significant negative effects in relation to SA objective 9: soils, as they contain a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>The SA uses 500m as a threshold for determining effects on the AONB. Due to the fact both sites are within 500m of an AONB, both receive an uncertain significant negative effect in relation to SA objective 6: landscape and townscape.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>7)While it is uncertain what the impact 170 houses will have on the heritage site, the site will obviously have a horrendous effect on the well being of all residents.</p> <p>8)The rainfall on the Downs/ANOB which at present is absorbed by the agricultural fields would not have any natural soak away when these fields are replaced by footings and roadways.</p> <p>10) The bus stop is within 400 yards of these sites but at present there are no buses visiting Wouldham village, and this would mean residents of these properties would need to use their cars for all journeys therefore increasing the gas emissions .</p> <p>11) With the remarks already made re: emissions, it is obvious that these sites will only add to climate change, and will not minimise its impact on climate change.</p> <p>12) Air quality has always been a bone of contention in Wouldham and more vehicles will only add bad gases to this level.</p> <p>To summarise these answers to sites 59791 and 59792 it is very obvious that these sites are not suitable for housing due to the lack of infrastructure including no schools, no medical centre, no bus service, and a sharp rise in the bad air quality. Remembering that this area is still called ""The Garden of England"" and should be treated as such."</p>	<p>not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). The sites listed are not within 100m of an AQMA.</p>
42721793	Q8 of the questionnaire	<p>"For each of Site 59803, Site 59845, Site 59728 and Site 59700 the document states</p> <p>"SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>The site is not within 100m of an AQMA.""</p> <p>This is incorrect. The site is within 100m as per Drawing DD / 343/3 (Management area No 3 order 2005) This AQMA has the highest levels in the Borough.</p> <p>The development of these sites will significantly increase the already very high levels of congestion on this cross roads every morning and evening with mile+ long tail backs in each direction (check Google traffic historic maps for evidence of this) as well as adding to and expanding the area of air quality concern.</p> <p>It is also the case that there has very recently been the addition of 55 homes in the Meadow View Court development in the centre of the Orpines.</p> <p>Since that development there has been a significant increase in flooding along the main road blocking half or at times the whole road. Throughout this area there are a series of complex water courses and such a major development will lead to much higher levels of water coming down the slope of the valley to cause flooding at the junction."</p>	<p>Although sites 59803, 59845, 59728 and 59700 are within fairly close proximity of the AQMA mentioned, they are just over 100m from it. As such, they receive negligible effects in relation to SA objective 12: air quality.</p> <p>None of the sites have been identified as being at risk of flooding, including surface water flooding.</p>
42442017	Q8 of the questionnaire	<p>"59685; 59690; 59693; 59721; 59805; 59809</p> <p>The following are errors in the assessment:</p>	<p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. 		<p>1) SA objectives 4 and 10 rely on the presence of a bus stop within 400m. The bus service is poorly used by residents in that area - most use cars. Data on this will exist, but I cannot provide it in time for this consultation. Factoring in this local knowledge and data should turn these positive marks to negative marks. See e.g. consultation's paragraph 5.5.11 ""Bus patronage has not recovered to pre-pandemic levels and there is concern at this time regarding the ongoing viability of many bus services, which could be lost if patronage does not improve, or if government funding is reduced or withdrawn.""</p> <p>2) SA objective 8 ""The site does not contain a water body or watercourse"" - this is incorrect. The area is well known locally for having poor drainage and possible springs.</p> <p>3) SA objective 14. No justification at all is given for the positive mark.</p> <p>4) SA objectives 5, 6 and 7. The impacts on culture and environment will also be determined by car usage. As noted, despite the presence of a bus stop, car usage among local residents is high and bus usage low. This has not been considered.</p> <p>5) SA objective 3 is listed as uncertain positive. The ""positive"" rating depends on their being places at local schools. If the places do not appear, this will be a negative score. Given the uncertainty, why is the score given ""uncertain minor positive"" when ""uncertain minor negative"" is equally plausible? The rating is biased and should be corrected."</p>	<p>the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>The site is not identified as containing a water body. No evidence suggests otherwise.</p> <p>It is acknowledged that in some proformas, justification text is missing from some of the SA objectives. This will be corrected in the next iteration of the SA Report.</p> <p>SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape and 7: heritage do not specifically relate to transport. Sustainable transport is instead considered under SA objectives 4: economic growth and 10: climate change mitigation.</p> <p>With regard to SA objective 3: education, it is unknown whether places will be available or not in local schools. Therefore, the effects will remain uncertain. A minor positive effect is used instead of a minor negative effect, to acknowledge that the site is within 800m of a school.</p>
39066721	Q8 of the questionnaire	<p>"The interim Sustainability Appraisal Report ('iSA') offers preliminary assessment of sites. Tarmac's interests relate to three sites – numbers 59858, 59864 and 59866. Our comments relate solely to their appraisal in the iSA. We note that none of the Tarmac sites are summarised in paragraph 5.41 of the iSA as being poorly performing.</p> <p>The three Tarmac sites represent alternative scale options on the site of the Medway Cement Works for which planning permission was granted in 2001 and which remains extant following implementation. The sites represent cumulative development options, with site 59866 being the largest, capable of accommodating up to around 4,000 homes, supported by social, community and educational facilities, together with substantial open and natural space. Other than in relation to sustainability appraisal objective 3, the sites perform equally against the assessment objectives.</p> <p>The iSA analysis is undertaken at a broad scale, without the benefit of understanding of the prospective development. No criticism is made of that given the early stage of plan making. Opportunities exist, however, to refine the SA at subsequent plan-making stages. In support of that, a Prospectus is submitted in parallel with our response, demonstrating how the site responds positively to the sustainability objectives. Our responses below reflect the opportunity presented in that Prospectus.</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>Mitigation is not taken into consideration in the 'policy-off' appraisals of the reasonable alternative development site options contained within Chapter 5 and Annex 1 of the Interim SA Report. If the sites are allocated at a later stage in the plan-making process and policy wording provided, mitigation will be taken into account through 'policy-on' appraisals of the sites.</p> <p>With regard to SA objective 1: health and wellbeing, sites 59858, 59864 and 59866 all receive mixed significant positive and uncertain significant negative effects because while they are in close proximity of an existing healthcare facility and an existing area of open space/walking and cycle path/play area/sports facility, they contain Holborough Park, which comprises Holborough Cricket Pitch and Football Pitch, which could be lost as a result of development although this is uncertain. As mentioned in the previous paragraph, mitigation is not yet taken into account at this stage.</p> <p>All effects against SA objective 3: education are recorded as uncertain. The site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA1: the sites score as significantly positive and uncertain significant negative. This generic assessment reflects the proximity of mixed-use sites to existing healthcare facilities, an analysis that we support. The Tarmac sites are of sufficient scale to offer new or expanded facilities to serve new residents, ensuring no adverse impacts on users of existing facilities. An uncertain significant negative effect is assumed. Whilst the existing Holborough cricket ground is within the sites, that facility is to be retained and enhanced, alongside provision of substantial new open space and recreational facilities. In the largest development scenario, a substantial new country park is proposed serving the wider Snodland area. The uncertain significant negative outcome can therefore be reasonably regarded as pessimistic and should be considered a positive outcome.</p> <p>SA2: the sites score as a minor negative outcome. As the iSA notes at paragraph 5.10, larger sites have the potential to incorporate new provision of community facilities and services. The submitted prospectus demonstrates that new development can be well-served by new facilities which support active travel choices, ensuring that positive SA outcomes can be secured.</p> <p>SA3: this is the only objective where the three sites score differently: the larger site scoring better. We support the iSA's analysis of positive outcomes, but do not consider these to be uncertain. Provision is made for new schooling which can support new development, with the submitted Prospectus demonstrating how provision can be made for new education facilities at the heart of new development.</p> <p>SA4: we support the ISA's analysis, further noting that new public transport and active travel mode provision is integral to the Medway Valley opportunity. Opportunities also exist for proportionate provision of commercial spaces within new development.</p> <p>SA5: the analysis recognises that opportunities exist for mitigation of potential biodiversity impacts. The site offers strong prospects for positive biodiversity net gain, including delivering up to 60% of the site area as open or natural green space. We therefore do not consider these benefits to be uncertain.</p> <p>SA6: the proximity of the sites to the AONB lead to an uncertain significant negative outcome. We agree that through detailed design, but also strategic advanced mitigation measures, any such uncertainty can be addressed. A substantial new country park ensures no built development encroachment within the AONB.</p> <p>SA7: significant opportunities exist to both conserve and enhance the cultural heritage of the site, including opportunities for positive interpretation of industrial heritage. We consider the uncertain significant negative assessment to be pessimistic.</p> <p>SA8: we disagree with the analysis that the site is significantly within flood zone 3 and believe this to be an error in the analysis. The prospectus demonstrates that existing water bodies are retained, with opportunities for new sustainable drainage systems to be implemented.</p>	<p>depend on there being capacity at those schools to accommodate new pupils" [emphasis added].</p> <p>With regard to SA objective 8: water, all three sites receive an uncertain significant negative effect because they are all within an area with a 1 in 30 year risk of surface water flooding. All three sites contain water bodies and sites 59864 and 59866 also overlap Source Protection Zone 1.</p> <p>With regard to SA objective 9: soils, TMBC informed LUC that all three sites comprise greenfield land. Land where minerals have been extracted is not defined as previously developed/brownfield land in the National Planning Policy Framework.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA9: whilst part so the sites are in agricultural use, much of the site has bene previously quarried and does not exhibit high quality agricultural land. Much of the site is therefore not greenfield in the conventional sense. The site benefits from extant planning permission for a cement works and quarry, to be restored to wetland and thus represents a fall-back position.</p> <p>SA10: the iSA recognises existing provision of public transport, which would be further enhanced to support new development. Strategic development increases the potential for internalised travel patterns and use of active travel modes, offering further SA benefits. The strategic scale of development can help to support rail services, including the existing HS1 services at Snodland.</p> <p>SA11, SA12: we support the iSA analysis.</p> <p>SA13: the recently published Kent Minerals and Waste Local Plan review proposes to delete the specific safeguarding of the Medway Valley Cement Works (KMWLP policy CSM3) reflecting the status of the extant permission. Any alternative use of the site would rely upon an analysis against other policies within the KMWLP.</p> <p>SA14: we consider the analysis of the sites to be pessimistic, since the potential exists for the delivery of significant numbers of new dwellings supported by infrastructure, facilities and open space. Given the acute housing needs identified in the HNS and the prospect for strategic development to deliver quicker than smaller sites (as per the HMDS), a significant positive outcome should be anticipated."</p>	
42337889	Q8 of the questionnaire	<p>"Some general points of concern</p> <p>Inconsistency: Some sites have been give different assessments but the commentary is exactly the same.</p> <p>Access: It is stated that access to schools or public transport are within a specific distance of the designated sites but this cannot be the case for the whole area of the site.</p> <p>Local knowledge: Equally, access to a school site may be via a woodland or for public transport to a bus stop with limited services – there is no way that all new residents would use these services.</p> <p>Health: There is now no GP service in West Malling, the closest is Kings Hill or Leybourne. The Sustainability Objective also conflates health facilities with access to sporting facilities/playgrounds!</p> <p>Highways: Sustainability Appraisal objectives do not include impact on the local road system.</p> <p>Specific points of concern (by Sustainability Appraisal objective)</p> <p>59594 – 34 houses</p> <ul style="list-style-type: none"> • Objective 10: I question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. 	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>The GP surgeries data used to inform the Interim SA Report does not acknowledge that West Malling GP surgery will be closed in the future. In the next iteration of the SA Report, the GP surgery will be removed from the GIS data and the proformas for the sites affected updated.</p> <p>There is considered to be a lot of crossover between access to healthcare facilities and areas of open space and sports facilities, as these can encourage more physical activity with beneficial effects on people's health. The site assessment criteria for SA objective 1: health and wellbeing are considered suitable and appropriate.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>• Objective 14: I question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59602 – 19 houses</p> <p>• Objective 3: I question if this is within 800m of a primary or secondary school.</p> <p>• Objective 14: I question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59603 – 30 houses</p> <p>• Objective 3: I question if this is within 800m of a primary or secondary school.</p> <p>• Objective 9: As this includes site 59602 in its entirety which is classified as greenfield, how can this site be assessed as brownfield?</p> <p>• Objective 14: I question why a positive, we don't believe the site would give a mix of tenures due to its size. Does it also double-count the site it encompasses: 59602?</p> <p>59699 – 260 houses</p> <p>• Objective 1: With the closing of West Malling surgery the site is not within 800m of an existing health facility.</p> <p>• Objective 4: The site is not all within 400m of a bus stop, nor would all 260 households be able to use this limited bus service or cycle. It is also unclear what business opportunities this mixed-use site would deliver and therefore its impact on the local economy.</p> <p>• Objective 6: This should be significant negative as it will have a major impact on the landscape.</p> <p>• Objective 10: The majority of the site is not within 400m of a bus stop and the bus service is extremely limited – it would increase car/highway movements significantly.</p> <p>59716 – 28 houses</p> <p>• Objective 1: Contradictory, no explanation is given. It can't be both significantly negative and significantly positive.</p> <p>• Objective 10: I question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited.</p> <p>• Objective 14: I question why a positive, we don't believe the site would give a mix of tenures due to its size.</p> <p>59733 – 27 houses</p>	<p>Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The proformas for each site accurately state whether they are within 800m of a primary school or not.</p> <p>The appraisal of site 59603 does not double-count site 59602, which it encompasses. Each of these sites has been appraised separately.</p> <p>With regard to SA objective 9: soils, site 59602 comprises brownfield land. In the next iteration of the SA, the GIS analysis will be updated to reflect this.</p> <p>Due to an error, justification text was not provided for the effect site 59716 is expected to have against SA objective 1: health and wellbeing. In the next iteration of the SA, the justification text will be added to the proforma. In accordance with the SA methodology set out in Chapter 2 of the Interim SA Report, sites can have mixed effects.</p>

42802177	Q8 of the questionnaire	"Given the inconsistent numbering, it is difficult to assess the combined impact on the village of Hildenborough of the 23 sites listed for development. It would appear that there is the belief that there is the potential for at least 2,120 homes, covering 268 hectares of mostly green belt land; this is more than 1% of the whole of Tonbridge and	All sites are considered reasonable alternative development site options. All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Malling. The B245, and other local services and infrastructure, cannot easily be scaled up to support this scale of additional development. The assessment criteria for the individual sites seems inconsistent, and it seems off to equally weight the criteria which is the implicit methodology.</p> <p>It would seem evident that ALL of the Hildenborough sites fail to deliver key sustainability objectives (as defined in the SA framework): SA Objective 1 - To improve human health and well-being; SA Objective 2 - To improve equality and access to community facilities and services; SA Objective 4 - To encourage sustainable economic growth, business development, and economic inclusion across the borough; SA Objective 5 - To protect and enhance biodiversity and geodiversity; SA Objective 6 - To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The Sustainability Appraisal Report correctly identifies 4 out of 23 Hildenborough sites as being less sustainable than others as they are expected to have significant negative effects across at least six different SA Objectives. Given Hildenborough's unique situation, and dearth of services, it is suggested that more sites should be considered similarly as reflected in recent planning reports.</p> <p>As an example: It is unclear why Site 59669 is assessed to have a 'significantly positive' impact on SA Objective 1; Site 59679 should be assessed to be in a Poor Accessibility Band (as Site 59669); Planning permission was refused for site 59669 in Oct 21 (TM/21/02831/FL, TM/21/02834/LB). The 'employment development' benefits were shown to be minimal, at best."</p>	<p>relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59669 is not assessed in the SA as having a significant positive effect in relation to SA objective 1: health and wellbeing. It is recorded as having a mixed uncertain significant negative and minor positive effect. In the next iteration of the SA Report, this will be amended to a minor positive effect only. The uncertain significant negative effect is as a result of the site containing an area of open space. However, the site does not contain an open space, just overlap one. The GIS analysis will be refined so that sites overlapping open spaces are not recorded as containing open spaces. The site receives a minor positive effect because it is within 800m of an existing area of open space and walking paths.</p> <p>In the Urban Capacity Study (July 2022), site 59679 is recorded as falling within the Good Accessibility Band whereas site 59669 is recorded as falling within the Poor Accessibility Band. This information has fed into the SA.</p>
42662465	Q8 of the questionnaire	The council disagrees with SA of site 59811 as promoting health and wellbeing – would harm Green Belt, surrounded by footpaths and open countryside. Agree that on all other measures it would represent a negative impact to the identified strategic assessments. As off-grid, most likely domestic heating oil would be used in any large-scale development which would harm air quality.	Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.
42527265	Q8 of the questionnaire	<p>"Site 59791</p> <p>SA1 is incorrect. There is no health facility within 800 mtrs.</p> <p>SA3 is incorrect. There is no secondary school within 800mtrs which is an issue as the bus service is not secure. The primary school is already full and current students already need to travel to schools outside of the area.</p> <p>SA6. The site rises to an AONB and an SSSI risk area. It is next to a rural settlement which would have their views of the AONB ruined.</p> <p>SA8. The gradient of the site means that by changing the land from farmland (which soaks up water) to buildings, means that surface water would drain to the houses below increasing the risk of flooding in the village. KCC already state that the Southern Water system cannot cope with the amount of water being currently passed to it</p>	<p>The proformas for sites 59791 and 59792 state that they are either within 800m of an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both). Specifically, both sites are within 800m of an area of open space and some walking paths. The SA acknowledges that both sites contain an area of open space that could be lost as a result of development, although this is uncertain. The overall effect for both sites against this objective is mixed uncertain significant negative and minor positive.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore,</p>

		<p>present level of patients, any additions could reduce the service to a dangerous level. The site is within an area of open space and much needed for the well-being of the local residents, including allotment space.</p> <p>SA2: The exit roads from the development would come out onto a single/narrow country lane with bad visibility.</p> <p>SA3: The primary is full and there are no secondary schools within 3 miles.</p> <p>SA5: The taking of agriculture land for would not enhance the well-being of local residents, but also reduce food supplies.</p> <p>SA6: The AONB mentioned is only 100 mtrs from the proposed development and this development will have an effect on local wildlife, including badgers. The area also rises to an SSSI risk area and is next to a rural settlement which would have their views of the AONB ruined.</p> <p>SA8: The rainfall on the North Downs which is at present absorbed by agricultural fields would not have any natural soak-away if these fields are replaced by roads and properties. The gradient means that surface water would drain to the houses below increasing the risk of flooding the in the village. KCC already state that the water system cannot cope with the current amount of water passed into it during extreme weather events, drains are already becoming overloaded, causing flooding towards the river.</p> <p>SA10: There is no bus service, the bus stop is now redundant. This means that residents of any new properties would need to use their cars for all journeys, therefore increasing gas emissions. This is not a minor positive, but a major negative.</p> <p>SA11: The lack of public transport and the increased use in private vehicles will only increase emissions which will additionally contribute to climate change and NOT minimise any impact.</p> <p>SA12: Air quality in Wouldham has been a bone of contention and more vehicles with the congestion they bring will only add to the poor air quality.</p> <p>To summarise these answers to sites 59791 and 59792. It is very obvious that these sites are not suitable for housing due to the lack of infrastructure, including no schools, no medical centre and no bus service. The road infrastructure is already unable to cope with the increased traffic caused by Peters Village and the bridge. KCC have continually investigated options for road improvements but are unable to implement any solution even to alleviate the present traffic problems."</p>	<p>both). Specifically, both sites are within 800m of an area of open space and some walking paths. The SA acknowledges that both sites contain an area of open space that could be lost as a result of development, although this is uncertain. The overall effect for both sites against this objective is mixed uncertain significant negative and minor positive.</p> <p>The SA is too high-level to give consideration to sight lines.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to the respondent's comment on SA objective 5: biodiversity and geodiversity, agricultural land is dealt with separately under SA objective 9. Sites 59791 and 59792 are recorded as having significant negative effects in relation to SA objective 9L soils, as they are greenfield and contain a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>With regard to the respondent's comment on SA objective 11: climate change adaptation, sustainable transport is considered separately under SA objective 10: climate change mitigation. Sites 59791 and 59792 receive minor positive effects in relation to SA10, as they are more than 800m from a railway station but within 400m of a bus stop. Air quality is dealt with separately under SA objective 12: air. With regard to SA12, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). The sites listed are not within 100m of an AQMA.</p> <p>The SA uses 500m as a threshold for determining effects on the AONB. Due to the fact both sites are within 500m of an AONB, both receive an uncertain significant.</p> <p>Neither site has been identified as being at risk of flooding, including surface water flooding.</p> <p>With regard to SA objective 10: climate change mitigation (and SA objective 4: economic growth), the criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>
42684641	Q8 of the questionnaire	"I have answeredon some sites showing my answers . I do not have time to go through each one . I will say with this number of houses water will be an issue especially by 2040 and I don' t think this is taken seriously enough.	<p>Appendix C of the Interim SA Report contains some baseline information on water.</p> <p>Site 59637 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8: water, as it contains land with a 1</p>

		<p>59637 Outskirts of Hadlow. Flood Zone 3 sump area for water. No rail service not a great bus service. Tight road access to the A26 which will be packed with cars . Not one of the brightest ideas.</p> <p>59691 Wedged between J4 and another round surrounded by water in zone 3. I would not want any child breathing in air form these potential houses.</p> <p>59669 Near Hildenborough Rail sation. great site careful build as prone to flooding? on a slope? This would help with co2 levels as no need to drive to the station!</p> <p>59763 This is part of a whole site near Eccles. I still think building here would be really interesting as the water features around here would be fabulous. Expensive build as all houses would need to be raised .</p> <p>59783 The other side of the road to the station- a bit further away. Greenbelt and not a great shaped plot. 59669 a much better site in Hildenborough.</p> <p>59799 Is this near a heritage site? Over a stream are you planning watermills? Think again I would suggest.</p> <p>59800 and 59802 both extensions to Kings Hill so not a bad idea locations not ideal but plant lots of trees. It could be a lovely site.</p> <p>59806 a site between Hadlow and Mereworth Spread across the a228 High Flood risk and along with 50811 and 59637 you have just build on good farmland and built the 9000 homes. All cars would have to drive to a rail station A26 is the only major road and the congestion would be a nightmare. This is prime farming land and to buildings here would be an eyesore for miles around- especially the Oxenhoath site. NO NO NO</p> <p>59818 Burham what a delightful Kent Village- the most glorious views and you want to build how many home near the river? On aesthetic grounds . No and nowhere near a rail station and bus route .Car or water transport only then. No</p> <p>59827 this site is not near any amenities, could flood and is in a sleepy kent village NO. There were s couple of sites in Plaxtol which would be</p>	<p>in 30 year risk of surface water flooding. The site is also recorded in the SA as receiving a significant negative effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band. The SA is too high-level to consider road width, and the Council will commission additional evidence on matters including traffic.</p> <p>Site 59691 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8, as it contains land with a 1 in 30 year risk of surface water flooding. We note the site is adjacent to main roads. However, as it is not within 100m of an Air Quality Management Area it receives a negligible effect in relation to SA objective 12: air quality.</p> <p>Site 59669 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8, as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to site 59783, Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59799 is recorded in the SA as receiving a significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets, as recorded on the Kent Historic Environment Record. As such, there is potential for it to have an adverse effect on the historic environment. The site is also recorded as receiving a significant negative effect in relation to SA objective 8, as it contains a watercourse and is also at risk of surface water flooding.</p> <p>Site 59806 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8, as it contains water bodies and land with a 1 in 30 year risk of surface water flooding. Sites 59806 and 59637 also receive significant negative effects in relation to SA objective 9: soil, as they are greenfield and contain a significant proportion of Grade 1 or 2 agricultural land (best and most versatile agricultural land). Site 59811 receives an uncertain significant negative effect because it is greenfield and contains a significant proportion of Grade 3 agricultural land. The uncertainty acknowledges the fact it is unknown whether the site comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land. All three sites fall within the Poor Accessibility Band, as recorded in the Urban Capacity Study, and so receive significant negative effects in relation to SA objective 2: services and facilities. Sites 59806 and 59811 receive minor negative effects in relation to SA objective 10: climate change mitigation, as they are more than 800m of a railway station and 400m of a bus stop. Site 59637, however, is recorded as having a minor positive effect in relation to SA objective 10 as although it is more than 800m from a railway station, it is within 400m of a bus stop.</p> <p>Site 59818 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8, as it contains water bodies and</p>

		<p>infill and this village has a post office . Relook at these if you want to build around this area. They would no flood either.</p> <p>59839 Near Barming rail station and a good site.</p> <p>59749 The northern part of this plot would flood probably as Flood zone 3/1. This is still well away from a rail station on green belt land and agricultural land. The use of cars on this site would be the way to go and I think is a poor choice.</p> <p>TMBC have in the above choices chosen to build mainly on greenfield sites north of Hadlow with poor access to rail services and a mediocre bus service. Cars would be the transport of choice. The main A26 is accessible for this volume of Traffic through Hadlow Village – where you are also planning to build a large no of homes on flooded fields, which form a sump for the area around.</p> <p>These choices are very poor indeed. It is imperative that homes are build near good transport links and that means a good rail service. There are at least four excellent rails links in this borough. You will not be able to achieve car usage reduction if you continue with these sites. All councils keep hammering about bike usage. I am a fit 62 year old and I would not ride a bike to my local co-op in Martin Hardie way as Cuckoo Lane is too dangerous. So if I am not a user this is NOT a good omen. People take the easy route -if it is cheaper and faster (as you don't park a car) to walk to a rail station or have a very frequent bus route- people will use that option. So concentrate your plans on areas with rail services. This is the main reason why people move here quick access to London.</p> <p>The above choices are NOT sound and will only cause more road usage.</p> <p>59796 the Lidl site good as you just roll out of bed to the station.</p> <p>59878/9 the station car park great position but people need to park so build a multi storey on the other car park site. 59815 really stocks green?"</p>	<p>land with a 1 in 30 year risk of surface water flooding. The site is also recorded in the SA as receiving a significant negative effect in relation to SA objective 6: landscape and townscape, as it is within 500m of the AONB. It also receives a significant negative effect in relation to SA objective 2: services and facilities, as it falls within the Poor Accessibility Band, as recorded in the Urban Capacity Study. However, the SA acknowledges under SA objective 10: climate change mitigation that the site is more than 800m of a railway station but within 400m of a bus stop.</p> <p>Site 59827 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8, as it contains land with a 1 in 30 year risk of surface water flooding. The site is also recorded in the SA as receiving a significant negative effect in relation to SA objective 2: services and facilities, as it falls within the Poor Accessibility Band. It is also recorded as having a minor negative effect in relation to SA objective 10: climate change mitigation, as it is more than 800m from a railway station and more than 400m from a bus stop and cycle route.</p> <p>The SA acknowledges that site 59839 is within 800m of a railway station, under SA objective 10: climate change mitigation.</p> <p>Site 59749 is recorded in the SA as receiving a significant negative effect in relation to SA objective 8, as it contains land with a 1 in 30 year risk of surface water flooding. The site is also recorded as having a minor negative effect in relation to SA objective 10: climate change mitigation, as it is more than 800m from a railway station and more than 400m from a bus stop and cycle route. As mentioned already, Green Belt is not covered by the SA. With regard to agricultural land, the site receives a significant negative effect against SA objective 9: soil, as it is greenfield and contains a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>TMBC is considering brownfield sites, as well as greenfield sites. The Interim SA Report provides an appraisal of all reasonable alternative development site options. No allocations have yet been determined.</p> <p>Respondent has not raised any specific points regarding the SA for site 59763, 59800, 59802, 59796, 59878, 59879 and 59815.</p>
42729441	Q8 of the questionnaire	<p>As mentioned before the existing developed Kings Hill should not be added to, it has not enough green space, it was planned and accepted as is, its facilities are overrun and do not meet current capacity requirements. The golf course should not be touched, gives employment and recreational area and sold as part of the original plan which TMBC had major input to.</p>	<p>The SA provides an appraisal of all reasonable alternative development site options, some of which are located in and around Kings Hill. The Council will determine which sites to allocate and not allocate.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42469985	Q8 of the questionnaire	Please do not build on anything further which is green, brown land only!	The SA provides an appraisal of all reasonable alternative development site options, including whether they are on brownfield or greenfield land. The Council will determine which sites to allocate and not allocate.
42832833	Q8 of the questionnaire	<p>"The Site has been assessed through the Interim Sustainability Appraisal (site reference: 59773) and there are some parts of the appraisal that we agree and support, whilst others we consider incorrect.</p> <p>Our comments on the relevant objectives (that we do not agree with) are set out in response to the Interim Sustainability Appraisal - Annex 1."</p>	<p>Site 59773 has been appraised in line with the site assessment criteria as outlined in Appendix D of the Interim SA Report. In accordance with the site assessment criteria, the site receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of open space and walking paths. Housing delivery is considered separately under SA objective 14: housing.</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022). Housing delivery is dealt with separately under SA objective 14: housing. This is a 'policy-off' appraisal and so consideration is not given to mitigation, such as financial contributions towards community facilities and public transport.</p> <p>With regard to SA objective 3: education, again this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. contributions towards education provision). This ensures all sites are appraised on a consistent basis. All effects against this objective are recorded as uncertain due to uncertainty regarding school capacity.</p> <p>With regard to SA objective 4: economic growth, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities. Although it is noted that an SME would undertake the construction work, this is an appraisal of the site and does not take into consideration who is developing the site.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape and 7: heritage, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain and landscaping). If the site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-off' basis.</p>
43487649	Q8 of the questionnaire	<p>"1.2.33 In respect of this question, our client only wishes to comment upon site 59771. In this regard, we support the double positives that will be achieved in respect of the provision of housing and soil resourcing and the single positives regarding reduction in greenhouse emissions, and housing mix. However, we believe the SA takes an overly negative stance in respect of some wider objectives.</p> <p>1.2.34 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment, and this should represent a strong positive.</p> <p>1.2.35 The desktop nature of the site assessment is also of concern. Based on a human judgement there are not any significant heritage or</p>	<p>Site 59771 contains green infrastructure assets in the form of trees and thick vegetation. For this reason, it receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value".</p> <p>SA is a desk-based, strategic assessment and all reasonable alternative development site options have been appraised on a 'policy-off' basis. This means they are appraised on their physical constraints only and not mitigation (e.g. Biodiversity Net Gain) or</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>1.2.36 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information."</p>	<p>supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail.</p>
43514945	Q8 of the questionnaire	<p>"In respect of this question, our client only wishes to comment upon the site they are promoting. In this regard, we support the double positive that will be achieved in respect of the provision of housing. However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>1.2.35 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment and this should represent a strong positive.</p> <p>1.2.36 The desktop nature of the site assessment is also of concern. Based on a human judgement it is clear that there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>1.2.37 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information"</p>	<p>Site 59664 is located within 1km of two Local Wildlife Sites (Oaken Wood, Barming and Kings Hill Golf Course, Catterling & Hoath Woods). For this reason, it receives a minor negative effect in relation to SA objective 5: biodiversity and geodiversity. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure..</p> <p>SA is a desk-based, strategic assessment and all reasonable alternative development site options have been appraised on a 'policy-off' basis. This means they are appraised on their physical constraints only and not mitigation (e.g. Biodiversity Net Gain) or supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail.</p>
41998081	Q8 of the questionnaire	<p>"In respect of this question, we support the double positive that will be achieved in respect of the provision of housing, reduction in green house gas emissions, soil resourcing and access to education facilities owing to the proximity to Borough Green and Wrotham Schools.</p> <p>1.2.55 However, we believe the ISA takes an overly negative stance in respect of some wider objectives.</p> <p>1.2.56 For example, the land is currently of no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment than can otherwise be expected and so this should represent a further positive for redevelopment.</p> <p>1.2.57 The desktop nature of the site assessment is also of concern. Based on a human judgement there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>1.2.58 The notion that this former quarry is positively contributing to landscape character and quality and justifies a negative score based on being 500m from the AONB boundary is unsound. The land is not within the designated landscape and provides little or no positive landscape features.</p> <p>1.2.59 Similarly, the site being within 250m of a listed building (The Old Manor House List UID: 1235988) is not justification for a negative score and the redevelopment of the site would have no material impact upon the setting of the heritage asset given the lack of intervisibility. This listed building is protected for being a 16th Century Farmhouse yet the setting has seen any wider characteristics of a</p>	<p>Site 59732 is incorrectly recorded as containing a green infrastructure asset. This is due to the fact it is adjacent to a green infrastructure asset which partially overlaps the site and so the GIS analysis identified the site as containing a green infrastructure asset. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect. This is due to the fact it is within 1km of a Local Wildlife Site (Bourne Valley Woods) and some areas of Ancient Woodland. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure.</p> <p>SA is a desk-based, strategic assessment and all reasonable alternative development site options have been appraised on a 'policy-off' basis. This means they are appraised on their physical constraints only and not mitigation (e.g. Biodiversity Net Gain) or supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail.</p> <p>As the site is within 500m of the AONB, it could have an adverse impact on the AONB. Therefore, it receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. This is in accordance with the site assessment criteria.</p> <p>With regard to SA objective 7: heritage, the site is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. Therefore, it receives an uncertain significant negative effect in relation to this objective. SA utilises a precautionary approach and as this is a 'policy-off' appraisal, consideration is not given to mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>farmstead being lost many years previous. Accordingly, we say no heritage harm would occur.</p> <p>1.2.60 The site is not within Flood Zone 3 nor vulnerable to surface water flooding and development would result in an overall betterment given the need to exceed greenfield conditions.</p> <p>1.2.61 In short, it is essential that sites are properly appraised on a qualitative basis to ensure that decisions are made on credible information. At present it appears that</p> <p>Page 16 of 26</p> <p>the ISA assessments are all software generated and missing key human judgement."</p>	<p>With regard to SA objective 8: water, the site contains land with a 1 in 30 year risk of surface water flooding. Therefore, it is correct that the site receives a significant negative effect in relation to this objective.</p> <p>All reasonable alternative site options have been appraised in line with the site assessment criteria contained in Appendix D of the Interim SA Report. A GIS model was developed to appraise each site against these criteria, so as to ensure consistency and no introduction of human error. The appraisals are 'policy-off', as this ensures they are all appraised on a consistent basis. If a site is allocated via policy in the Local Plan containing mitigation measures, it will be appraised on a 'policy-on' basis.</p>
43779649	Q8 of the questionnaire	<p>"Site Identification Number: 59709</p> <p>Berkeley has some concerns with the ISAR scorings given to this site as explained below.</p> <p>SA Objective 2: The outcome of objective 2 is accepted. Berkeley strongly believes that access to community facilities and services will be improved post development of the site. Two primary schools are located less than 1km from the site, in addition to a secondary school being located approximately 1.8km from the land at Dark Hill Farm.</p> <p>SA Objective 5: Berkeley would ask the council to reconsider the assessment of objective 5 (to protect and enhance biodiversity and geodiversity) as uncertain significant negative. The site's definition as a green infrastructure asset is questionable given the limited public access to it. While Berkeley appreciates the site lies within close proximity to a Local Wildlife Site, it is not within 250m of one or more internationally or nationally designated sites. Development will be unlikely to cause disruption to the Local Wildlife Site.</p> <p>Berkeley endeavours to achieve 10% net-biodiversity gain on all projects and the land at Dark Hill Farm is no exception. There is an opportunity as part of the development to retain, enhance and create areas of green space on site and will do so with the upmost respect for the current landscape setting. It is incorrect to assume that development will worsen the surrounding natural environment and not enhance it.</p> <p>SA Objective 6: Berkeley disagrees with regard to scoring the site with an uncertain significant negative for objective 6 – to protect and enhance the borough's landscape and townscape character and quality.</p> <p>Greater certainty about the impacts of development on the landscape is provided by landscape assessment work undertake by Murdoch Wickham Associates for Berkeley. The analysis explains that the land comprises paddocks with areas of scrub and derelict farm buildings. The characteristics of the site are not typical of the wooded, traditional farmed landscape associated with the Greensand Ridge within the Kent Downs AONB.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>The site receives an uncertain significant negative effect against SA objective 5: biodiversity and geodiversity. This is due to the fact the site is within 250m of Bourne Valley Woods Local Wildlife Site and Ancient Woodland. The site also contains existing green infrastructure assets (thick vegetation).</p> <p>Although development of this site offers the opportunity to achieve biodiversity net gain, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is located within the North Downs AONB.</p> <p>With regard to SA objective 7: heritage, the site is recorded as containing Neolithic finds, in addition to falling within 250m of a number of heritage assts. Therefore, it receives a significant negative effect in relation to this objective. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertain significant negative effect is as a result of the site containing land with a 1 in 30 year risk of surface water flooding. Further to this, there is some overlap with a watercourse in the north west of the site and therefore it is uncertain what effect development might have on the watercourse in terms of water quality.</p> <p>With regard to SA objective 9: soils, the site receives an uncertain significant negative effect because it comprises Grade 3 agricultural land but it is unknown whether it is Grade 3a (high quality) or 3b (not classified as high quality) agricultural land. The criteria for this</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Residential development on the western fringes of Borough Green is visible in views to the site and other urbanising influences including traffic noise associated mainly with the A25 and the nearby residential development in the former quarry site to the south west further detract from the site's contribution to the AONB.</p> <p>Overall, the site has a relatively high degree of visual enclosure, in particular the fields north of the footpath, which runs across the centre of the site. The northern hedge provides an effective screen between the site and the A25. There are potential views to the land from the west in the vicinity of Oldbury Hill, but this is a densely wooded area, and no viewpoints were identified.</p> <p>The site does not share the dominant characteristics of the Kent Downs AONB. The site serves a much lower function in comparison to the wider area and the land contributes little to the AONB designation. It is concluded that the development of the Dark Hill Farm site would have a negligible impact on the AONB.</p> <p>SA Objective 7: the scoring the site with an uncertain significant negative for objective 7 due to the site's proximity (being within 250m) to a heritage asset requires further analysis.</p> <p>The site does not contain any designated or non-designated heritage assets. Furthermore, there are no listed buildings directly adjacent to the site. The Borough Green conservation area is located on the eastern side of the town and as such would not be impacted.</p> <p>The site is located approximately 135m from the closest heritage asset in Borough Green, with further Grade II listed buildings, found an additional 20m eastward and still within the urban confines of Borough Green. Ightham Court, a Grade II* listed building (Registered Park and Gardens designation) is located approximately 750m from the site north-westward.</p> <p>There is limited or no intervisibility between the site and the nearby heritage assets. The land at Dark Hill Farm will have a negligible impact on any of the surrounding heritage assets and it is incorrect to score the site with an uncertain significant negative, purely based on proximity.</p> <p>SA Objective 8 - The SA assesses the site, in line with objective 8 criteria, to have a 'significant negative' impact on enhancing the quality of water features and resources. The assessment states the site to be either entirely or significantly (i.e. >25%) within Flood Zone 3 and/or within an area with a 1 in 30-year risk of surface water flooding.</p> <p>While a proportion of the western boundary is part of Flood Zone 3, it is not in excess of 25% of the site. In fact, much less than 25% of the site resides in Flood Zone 3 as this only affects a small area on the western site boundary.</p> <p>Surface water flooding is also determined to affect more than 25% of the site, alongside the land being associated with a 1 in 30-year risk of</p>	<p>objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>surface water flooding. It is evident that only a small proportion of the northern parcel is prone to surface water flooding.</p> <p>Surface water flooding will be dealt with appropriately through respecting existing surface water flows and incorporating mitigation measures (SuDS) within the design proposal.</p> <p>Overall, whilst there is some flood risk on site, which is accepted, this has the potential to be avoided or suitably mitigated. This means that the impact would be negligible.</p> <p>SA Objective 9 - The SA assessment of objective 9 ranks the site as an uncertain significant negative. An agricultural land classification survey will need to be undertaken to determine whether the Option Land is Grade 3a (best and most versatile) or Grade 3b (not best and most versatile). However, either way this should not prejudice the assessment of suitability, as the site is not currently in productive agricultural use and realistically is not of a size of which it could function efficiently as a piece of agricultural land to be commercially farmed."</p>	
43544961	Q8 of the questionnaire	<p>"It is acknowledged the initial SA site level assessments are necessarily broad brush, and that further refinement with the benefit of site specific assessment is necessary. In many instances the impacts of development for Site 59692 are overstated, and similarly, benefits understated. Our client is in the process of updating the site assessments and masterplan options for this site. We would welcome the opportunity to share this with the Council once complete. This emerging work continues to confirm this site is suitable for housing, with no known overriding constraints to its delivery within the first five years of the plan period post adoption. This builds on the conclusion the LPA reached in proposing this site for allocation under Policy LP25 (x) of the former Reg. 19 Submission Local Plan."</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>Site 59692 has been appraised in accordance with the site assessment criteria on a 'policy-off' basis. This ensures all sites are appraised on their physical constraints only with no consideration given to mitigation or supporting documents submitted by site promoters. If this site is allocated at a later stage in the plan-making process and policy wording provided, mitigation will be taken into account through a 'policy-on' appraisal of the site.</p>
24986657	Q8 of the questionnaire	<p>"The findings and assessments of each of the sites 59779, 59825 and 59827 made in Annex 1 of the SA are inaccurate and the scoring is misleading. Also as indicated in answers to other questions the SA should have screened out sites in the Green Belt and the AONB as constraints at this iteration of the SA.</p> <p>Comments on the 3 sites in Shipbourne Parish:</p> <p>Common to all three sites 59779, 59825 and 59827</p> <ul style="list-style-type: none"> □ The junctions at both ends of Back Lane are dangerous and Back Lane experiences speeding traffic since the road is used as a cut through to from the A228/A26- to A227 and cross country to the A21 □ The bus stop mentioned in relation to site 59779 is only used at school times and provides no better service than to the other two sites in terms of accessibility to the current school bus route. □ All three are unsustainable and undeliverable unless huge changes are made to the current policies covering conservation and enhancement of this AONB Village in the GB. 	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.</p> <p>The SA is too high-level to consider dangerous road junctions, congestion and speeding traffic, in addition to the gas network, electricity grid and sewage network, but these are things that will instead be considered at planning application stage if the sites are allocated.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>□ The village is not on the gas network so the current electricity grid would need upgrading to sustain any new developments in these sites.</p> <p>□ The pipes for providing water supply are inadequate for new development</p> <p>□ Sewerage and land drainage is also under pressure and overflows are already experienced as mentioned below on site 59827.</p> <p>□ Development of any one of these sites would have a huge impact on the character and landscape of this small Conservation Area status village which is in the AONB and the Green Belt and which has no services other than the small primary School, already oversubscribed.</p> <p>Site 59779:</p> <p>□ Green Belt and the Kent Downs AONB, edge of Shipbourne Conservation Area.</p> <p>□ Poor drainage on southern boundary.</p> <p>□ Access onto Back lane in close proximity to main access to Shipbourne Primary school. 43629217	Q8 of the questionnaire	<p>"Site 59807 – Land off Ashton Way, West Malling</p> <p>The ISA determines that there is an 'Uncertain minor positive (+?)' impact of the site against SA Objective 3, which relates to improving levels of educational attainment and skills and training development. The assessment notes that development could provide contributions to education. Gladman would like to take this opportunity to confirm that, subject to CIL compliance, any education contributions sought by the Council will be secured via a S106 agreement to ensure suitable provision for new and existing residents.</p> <p>Under Objective 5 (to protect and enhance biodiversity and geodiversity), the site is rated as 'Uncertain significant negative (--?)'. The SA states that the site contains an existing green infrastructure asset that could be lost as a result of new development and that the effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>Gladman disagree with this assessment and this representation confirms via the site submission that the Public Right of Way to the south of site will be conserved and enhanced as part of any future development package. All green infrastructure assets on site will be retained and enhanced to ensure the site is well screened with a suitable level of buffering.</p> <p>Under SA Objective 6 (to protect and enhance the borough's landscape and townscape character and quality), the site is rated as 'Uncertain significant negative (--?)'. The SA notes that the site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces, but these effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Gladman do not consider it appropriate to determine unknown impacts as 'significant' when the site does not impact settlements in rural locations, nor does it result in the loss of designated open space.</p>	<p>Site 59807 like all other reasonable alternative development site options, has been appraised on a 'policy-off' basis. This means that consideration has not been given to mitigation. Instead, sites have been appraised on their physical constraints only. This ensures all sites are appraised to a consistent level of detail. Therefore, although the respondent has referred to financial contributions and other forms of mitigation, these will not be taken into consideration at this stage of the plan-making process. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA utilises a precautionary approach. Therefore, impacts can be significant but recorded as uncertain if they are dependent on other factors.</p> <p>The SA is too high-level to give consideration to previous applications for sites, including appeal decisions.</p> <p>Site 59807 receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. The 25% threshold only applies to Flood Zones 2 and 3.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". Site 59807 is still expected to have a positive effect in relation to this objective, albeit minor.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Development at this location will be sympathetically designed to ensure that the scale and layout of the development mitigates any adverse effects.</p> <p>This is supported by appeal decision APP/H2265/W/20/3254563, which states at paragraph 33 that “due to the topography around the site, its development would have no notable impact on the wider landscape.”</p> <p>Under SA Objective 7 (to protect and enhance the cultural heritage resource), the site’s impact is rated ‘Uncertain significant negative (–?)’ as the site is located within 250m of a heritage asset. The effects are considered uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Tonbridge & Malling Local Plan Reg. 18 Representations 14</p> <p>Gladman disagree with the potential for significant negative impacts on a heritage asset and take the opportunity to confirm that the site can be designed and delivered in a way that is sensitive to the conservation considerations. Gladman recognise that there is the potential for minor negative impacts on the wider setting of St Mary’s Abbey Complex, the Church of St Mary the Virgin, The Lavenders, St Leonards Tower and West Malling Conservation Area, however, this would amount to less than substantial harm (at the lower end of the spectrum) as defined by the NPPF.</p> <p>Under SA Objective 8 (to protect and enhance the quality of water features and resources), the site is considered to have ‘Significant negative (–)/Negligible (0)’ impacts. This considers that the site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30-year risk of surface water flooding and that the site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>However, the site is not within Flood Zone 3 (see Figure 1) and the small area of surface water flood risk along the north-western boundary does not constitute over 25% of the site (see Figure 2)3.</p> <p>Further, as concluded by the Flood Risk Assessment carried out by Enzygo in support of planning application ref. 19/02856/OA, the development of the site can be achieved with minimal risk from flooding and without increasing flood risk elsewhere.</p> <p>Therefore, Gladman consider the significant negative assessment to be inappropriate and should be considered negligible at the very most.</p> <p>Under SA Objective 14 (to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types, and tenures), the site is considered to have a ‘Minor positive (+)’ impact as the site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>making as greater contribution towards local housing needs as larger sites would.</p> <p>Gladman disagree that the contribution of up to 75 dwellings, of which 40% will be affordable, should be considered 'minor positive'. Smaller development sites are essential to ensuring a range of housebuilders can operate in an area at one time, boosting the supply of housing across the plan period. Gladman consider that the delivery of up to 75 dwellings, on a site located outside the Green Belt and AONB in a significantly constrained authority, should be considered a significant positive.</p> <p>Furthermore, Gladman are promoting the parcel of land immediately south of this site which in combination, could provide circa 105 units. This larger site therefore has the potential to meet the >100-unit threshold to ensure a 'significant positive' contribution to local housing needs.</p> <p>Site 59814 – West Malling</p> <p>Under SA Objective 3 (to improve levels of educational attainment and skills and training development), the site is considered to have an 'Uncertain minor positive (+?) impact. The assessment notes that development could provide contributions to education. As previously stated,"</p>	
44336545	Q8 of the questionnaire	<p>"We wish to clarify Question 8 as Appendix D of the Interim Sustainability Appraisal ('SA') includes the Site Assessment Criteria, not the findings of the individual site assessments. The individual site assessments are provided at Annex 1: Reasonable Alternative Development Site Options.</p> <p>3.77 Assuming the reference is incorrect within Question 8, we agree and support the assessment of the individual sites within the SA at Annex 1, particularly the assessment of Court Lane Nurseries (Site ID: 59853 / 59857) which against the SA objectives, scores the highest in Hadlow / East Peckham ward.</p> <p>3.78 We have the following further comments to make on the SA Assessment: 1) Hadlow is a sustainable location for growth</p> <p>3.79 In relation to existing settlements in the Borough, the findings of the SA site assessments clearly suggest that Hadlow is one of the most sustainable settlements to accommodate growth within the new Local Plan, against all objectives, given its accessibility to existing services and facilities. This is also illustrated by Hadlow's place in the settlement hierarchy as a Rural Service Centre (Tier 2 settlement).</p> <p>3.80 Furthermore, upon a review of all sites located within the "Hadlow / East Peckham" ward, those sites located within and around Hadlow are the most sustainable against the SA objectives, in comparison to others that are located away from Hadlow village.</p> <p>3.81 The settlement has a wide range of services and facilities, access to public transport and has limited designations, other than Green</p>	<p>Question 8 of the consultation was "Do you agree with the findings of the individual site assessments in Annex 1 of the Interim Sustainability Appraisal? Yes/No Please explain and quote the individual site reference number".</p> <p>Table 16 in the Non-Technical Summary presents the findings of the residential site options. This table is also presented in the Interim SA Report, in Table 5.1.</p> <p>Annex 1 of the Interim SA Report provides a proforma for each site appraised in the SA, whilst Appendix D of the Interim SA Report presents the site assessment criteria.</p> <p>Support noted.</p> <p>The SA is one of many factors that feed into the plan-making process. It does not specifically identify which sites should come forward through allocations in the Local Plan but provides an objective assessment of their sustainability.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Belt, therefore can promote sustainable development, in line with NPPF, Para. 11.</p> <p>2) Court Lane Nurseries is the most sustainable site with Hadlow</p> <p>3.82 12 sites have been identified and assessed as part of the SA at Hadlow.</p> <p>3.83 We conclude that it is clear that the site at Court Lane Nurseries (Site ID 59853 / 59857) scores the highest against all SA objectives. We consider this assessment of the sites to be accurate.</p> <p>Most significantly, as identified by the Council, what sets Site ID 59853 / 59857 above all of the other sites is that it is brownfield land. As a result, the SA assessment scores the site as having a "significant positive effect likely" against SA Objective 9, which states "the site is located on brownfield land", as well as SA Objectives 3 and 4, which relate to accessibility to schools and economic growth. Overall, the site scores the most "positive effects" out of all the sites assessed in Hadlow.</p> <p>3.85 We support the findings of this assessment which in accordance with the NPPF mean that the site should come forward for future development / achieve site allocation in the new Local Plan. This point is further explored below.</p> <p>3) Court Lane Nurseries is brownfield land</p> <p>3.86 The site at Court Lane Nurseries (Site ID 59853 / 59857) is the only site at Hadlow that is identified as being brownfield land.</p> <p>3.87 Against SA Objective 9, the site scores as having a significant positive effect. All other sites within Hadlow are considered to be greenfield and containing a proportion of Grade 1 or 2 agricultural land therefore scoring as having a "significant negative effect likely".</p> <p>3.88 We agree and support this assessment given the site contains a number of large buildings and glasshouses, most of which are now vacant and at risk of becoming derelict and possibly vandalised. The site also contains significant hardstanding, including a concrete vehicular access and a large area of the site being covered in gravel to facilitate overflow parking facilities for College students.</p> <p>3.89 In line with Para.119 of the NPPF, strategic policies should promote an effective use of land and should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land.</p> <p>3.90 Therefore, we recommend that Court Lane Nurseries, Hadlow should be considered in the first instance for an allocation within the new Local Plan."</p>	
44403137	Q8 of the questionnaire	<p>"In respect of this question, our client only wishes to comment upon their site [Site 59720]. In this regard, we support the double positive that will be achieved in respect of the provision of housing. However, we believe the SA takes an overly negative stance in respect of wider objectives.</p>	<p>Site 59720 receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains existing green infrastructure assets, specifically trees and thick vegetation in the north of the site and around its edges. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment, and this should represent a strong positive.</p> <p>Flooding has been a concern to the local residents of Ightham and flood incidents along the Busty Stream have occurred, the most severe of which took place in 2016. This site falls outside of the area impacted by past flood events.</p> <p>In short, the desktop nature of the site assessment is of concern. Based on a human judgement there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive. It is therefore essential that sites are properly appraised to ensure that decisions are made on credible information."</p>	<p>a wide variety of features which may vary in their value". Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>The SA acknowledges that the site is largely with Flood Zone 1 (less than 1 in 1,000 annual probability of river flooding), is not at risk of surface water flooding and does not contain a water body or watercourse, but that it does fall within Source Protection Zone 3. For this reason, it receives a mixed uncertain minor negative and negligible effect in relation to SA objective 8: water.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>
44406689	Q8 of the questionnaire	<p>"Site reference 59797 and site reference 59800:</p> <p>Development on any of the golf course would result in the loss of golf course and loss of businesses that operate it (which provides employment for local residents). Impact of Wildlife as Golf Course is designated by the Environment Agency as a Local Wildlife Site as part of the nature conservation sites in their screening report for Nature and Heritage Conservation in 2019. Area is part of Green Belt. Harm to the aquifer for streams. Development risks impacting designated Historic Woodland adjacent to site. Loss of recreation facilities for golfers, and public footpaths used by walkers, dog walkers, and cyclists would adversely impact health and well-being of local residents in contradiction to SA Objective 1. Road Infrastructure cannot support current traffic demands with bottlenecks regularly occurring on A228 and no easy options to address. Medical Facilities and Schools cannot support existing demand. Approval for Kings Hill development was granted based upon 40% of the area remaining green space with the golf course an agreed amenity"</p>	<p>The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. The promoter of this site has not declared that it contains an existing business.</p> <p>Although not explicitly stated in the proforma, the SA does acknowledge the fact sites 59797 and 59800 overlap a Local Wildlife Site (Kings Hill Golf Course, Cattering & Hoath Woods). In the next iteration of the SA Report, the proformas for both sites will be updated to each state "The site is within 250m of one or more internationally or nationally designated biodiversity sites, geodiversity sites, or Ancient Woodland, or contains a locally designated site."</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Both sites receive significant negative effects in relation to SA objective 7: heritage, as they are within 250m of heritage assets as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain as they depend on the design of new development and whether there are sight lines between the development site and nearby heritage assets.</p> <p>The SA acknowledges that development of these sites will result in a loss of open space and therefore both sites receive an uncertain</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>significant negative effect (as part of a mixed effect) against SA objective 1: health and wellbeing.</p> <p>The SA is too high-level to consider specific road networks and their capacity, and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1: health and wellbeing do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>The SA also does not take into consideration the capacity of schools. With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>
44412897	Q8 of the questionnaire	<p>"No. Again, the SA is based on unevidenced assumptions partly due to the fact that TMBC have elected to proceed with this Regulation 18 consultation and accompanying SA in advance of the publication of the SHLAA. In respect of the site south west of Teston Road, Kings Hill (ref 59655), we wish to make the following comments:</p> <p>SA Objective 2</p> <p>With regard to the site's accessibility (SA Objective 2) we question the conclusion that the site falls within the Fair Accessibility Band. It is not at all clear how this conclusion has been arrived at. Paragraph 5.6 states that each site's overall accessibility score has been determined by applying a scoring matrix to each element of accessibility, however this matrix does not appear to have been published. It is therefore impossible to be able to review and confirm whether the scoring is fair or indeed whether it has been informed by accurate factual information or not. In respect of the site's accessibility, it should be noted that it is a short 340m walk from the Discovery School (Primary School) within Kings Hill, whilst there are various sports facilities and allotments in the immediate vicinity, with the centre of Kings Hill also nearby.</p> <p>SA Objective 5</p>	<p>As stated in paragraph 2.27 of the Interim SA Report, "Reasonable alternative options for the residential, employment and mixed use sites to be allocated in the Local Plan have been identified by TMBC. These sites were identified via a call-for sites exercise and an Urban Capacity Study. In addition, allocations from the withdrawn Local Plan which were not submitted during the call-for-sites exercise and were not identified in the Urban Capacity Study have been identified in the pool of reasonable alternative options."</p> <p>Site 59655 receives a minor negative effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. The Urban Capacity Study can be found online here: https://www.tmbc.gov.uk/downloads/download/446/local-plan-regulation-18-consultation-evidence-base. The SA acknowledges that the site is within close proximity of The Discovery School under SA objective 3: education, and that it is also within close proximity of open space including allotments under SA objective 1: health and wellbeing.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. provision of a buffer). This ensures all sites are appraised to a consistent level of detail. If the site were to be allocated via policy in the Local Plan containing mitigation measures then it would be appraised on a 'policy-on' basis. The site contains green infrastructure assets in the form of trees and thick vegetation on its northern and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The SA states that:</p> <p>"The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites."</p> <p>And</p> <p>"The site contains an existing green infrastructure asset that could be lost as a result of new development"</p> <p>The site adjoins ancient woodland to the south and to the east. The site's boundary extends slightly into the ancient woodland to the south. Nevertheless, Bellway have significant experience of developing near to ancient woodland. A buffer will be provided, and the site's structural landscaping will be undisturbed by the development.</p> <p>Other than the trees, predominantly on the boundaries plus a single belt of vegetation within the site, the farmed land is currently of little or no ecological value. A development would need to achieve biodiversity net gain and therefore the provision of housing would result in betterment and this should represent a strong positive.</p> <p>SA Objective 6</p> <p>The SA grades the site as "Uncertain minor negative" in respect of SA Objective 6 which is to protect and enhance the borough's landscape and townscape character and quality. It is stated that these effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scape and layout of the development, which may help mitigate any adverse effects.</p> <p>Bellway have commissioned evidence in respect of landscape and visual impact, to help inform TMBC's Sustainability Appraisal and Local Plan evidence base. A Landscape & Visual Appraisal with Green Belt Review, prepared by Barton Willmore now Stantec (BWnS) can be found at Appendix 1 to these representations. This considers the site to be of Low Sensitivity and Low Landscape Value for the following reasons:</p> <p>Whilst the adjoining woodland is clearly characteristic of the Mereworth Woodlands LCA, the Site itself is not, with no evidence of ecological, geological, geomorphological, or physiographic interest that contribute positively to the landscape;</p>	<p>southern boundary, and through the east of the site. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value".</p> <p>With regard to SA objective 6: landscape and townscape, consideration is not given to supporting documents submitted by site promoters. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 7: heritage, the SA correctly acknowledges the fact site 59655 is within 250m of a heritage asset, as recorded in the Kent Historic Environment Record. Specifically, it contains a Second World War anti-tank buoy, and is adjacent to a Farmstead. There are additional heritage assets within 250m of the site.</p> <p>With regard to SA objective 9: soil, as the site is greenfield and contains Grade 2 agricultural land to its north, it receives a significant negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Site does not form part of the historic landscape setting to a noted heritage asset, or show evidence of archaeological, historical, or cultural interest that would contribute positively to the landscape;</p> <p>The landscape condition of the Site is unremarkable, with the internal field boundary of sweet chestnut offering the only landscape feature of interest;</p> <p>The Site is not thought to be connected with notable people, events, or the arts;</p> <p>The character of the Site does not demonstrate a strong identity or sense of place;</p> <p>The Site does not currently afford the opportunity for public recreation;</p> <p>The Site is generally not of noteworthy scenic beauty, insofar that it comprises a series of equestrian paddocks and a large area of hardstanding, contained by woodland;</p> <p>The Site does not benefit from a perception of relative wildness or naturalness, but the strength of the woodland enclosure does offer a sense of tranquillity within the Site despite the proximity to Kings Hill;</p> <p>The Site demonstrably functions as an equestrian facility; and</p> <p>The Site is not covered by any landscape designations.</p> <p>The site has a very localised visual envelope due to the enclosure and containment provided by the existing boundary vegetation. As the site sits on relatively high ground, it does not allow for overlooking from distant views.</p> <p>Given the availability of this new landscape evidence, the site should be considered to provide the opportunity for residential development from a landscape and visual perspective. The site's grading in respect of SA Objective 6 should be revised to neutral.</p> <p>SA Objective 7</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>According to Historic England's online map search, the nearest designated heritage asset is a Scheduled Ancient Monument some 450 to the north west of the site. The statement that the site is located within 250m of a heritage asset appears to be inaccurate, particularly given the absence of any evidence. The site's grading should be revised from 'uncertain significant negative' to neutral.</p> <p>SA Objective 9</p> <p>According to Natural England's Land Classification Map of London and the South East, the site falls within an area categorised as "Other land primarily in non-agricultural use", and therefore is not given an agricultural land classification. This is a fair reflection of the site's equestrian use. An extract of the Natural England map is provided below. The site's grading should therefore be revised from 'significant negative' to neutral."</p>	
44416033	Q8 of the questionnaire	<p>"No. Again, the SA is based on unevidenced assumptions partly due to the fact that TMBC have elected to proceed with this Regulation 18 consultation and accompanying SA in advance of the publication of the SHLAA. In respect of the Land South of Station Approach, West Malling (ID 59860), we make the following comments:</p> <p>The Site Area</p> <p>The area assessed, should include the in the north-western corner, currently occupied by a tennis court and positioned between Lavenders Road and Swan Street. This formed part of the application discussed further below. This area will not form part of the development area, but will usefully secure, an area of ecology and landscaping and critically secure an offset from the adjacent heritage assets (the Abbey).</p> <p>SA Objective 5</p> <p>As the Council is aware, the Site being was subject to an Outline application in 2018 (ref 18/02093/OA). The application was accompanied by an Ecological Appraisal. The condition and management of the Site has not changed since that time.</p> <p>The assessment confirms that the habitats within the Site are common and widespread and are generally of value at Site level only. Hedgerows and trees are considered to be of somewhat elevated value within the context of the Site at the local level. Proposals can</p>	<p>The SA is high-level and does not give consideration to previous planning applications for sites, and giving consideration to supporting documents would result in not all sites being appraised on a consistent basis.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59860 was incorrectly recorded as containing a green infrastructure asset. The reason the site is recorded as containing a green infrastructure asset is that it slightly overlaps a green infrastructure asset (trees and thick vegetation to the north west of the site) and so the GIS analysis identified the site as containing a green infrastructure asset. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective, as it is within 1km of Ancient Woodland.</p> <p>With regard to SA objective 6: landscape and townscape, the proforma for the site states that it is not located near any settlements in rural locations <i>and/or</i> would result in the loss of designated open space. The SA does not state that the site would result in the loss of open space as if it did, it would receive an uncertain significant negative effect in relation to SA objective 1: health and wellbeing. The site receives an uncertain significant negative effect in relation to SA objective 6, as it is not located near any settlements in a rural location and could therefore have an adverse effect on the landscape.</p> <p>With regard to SA objective 7: heritage, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. reduction of the development area). If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>retain those features identified to be of value, with all the hedgerows and the vast majority of trees retained. New habitats can also be created to offset losses, in conjunction with landscape proposals.</p> <p>1.2.37 The above assessment was based on a larger development and the proposed smaller development area (with development now not proposed in the north-western part of the Site), would have a further reduced impact. The Council's assessment of "Uncertain significant negative (--?) " therefore must be changed to "neutral".</p> <p>SA Objective 6</p> <p>The Site is not within a designated open space and therefore will not result in its loss. Furthermore, it lies adjacent to the "Rural Service Centre", West Malling. The Site is also not subject to any landscape designations and is not within an area identified as a "valued landscape". The Council's assessment of "Uncertain significant negative effect (--?) " is therefore unjustified.</p> <p>Following the aforementioned application, the area of development is proposed to be reduced. The proposed development will still result in change to the landscape, as is the case with any development on a greenfield site. However, these impacts will be minimised and suitable mitigation can be put in place, through high quality development and landscaping, which can further minimise any impacts. The assessment must therefore be amended to "negligible (0)".</p> <p>SA Objective 7</p> <p>Following the Outline application and subsequent Appeal (ref APP/H2265/W/19/3227034), it is proposed that the development area is reduced to facilitate a development that provides greater separation from the designated heritage assets as well as facilitate a form and arrangement of development that is more in keeping with the identified rural character, which forms the setting to the heritage assets. The Council's assessment of impacts must therefore be amended to "negligible (0)".</p> <p>SA Objective 8</p> <p>As demonstrated as part of the Outline application and supporting Flood Risk Assessment, the Site is located within Flood Zone 1 and the development of the Site would not lead to an increase of flooding on or off the Site. In addition, the majority of the Site is at low risk of</p>	<p>With regard to SA objective 8: water, the site receives a significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>The SA correctly identifies the site as containing Grade 1 agricultural land, under SA objective 9: soil. As more than 25% of the site comprises Grade 1 agricultural land and SA utilises a precautionary approach, a significant negative effect is correctly recorded in relation to SA objective 9.</p> <p>With regard to SA objective 13: material assets and waste, the SA specifically states in the proforma for the site "The effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed."</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>surface water flooding, with a very small area of "low risk" flooding on the northern boundary of the Site.</p> <p>The Council's assessment of "Significant negative (-)/Negligible (0)", must therefore be amended to "Negligible (0)"</p> <p>SA Objective 9</p> <p>In respect of the abovementioned Appeal, the Inspector determined that:</p> <p>"So in common sense terms even as BMVAL the appeal site presents an isolated pocket of agricultural land which in the economy of scale and the constraints of the land, at worst, its loss would be modest. Therefore, the development of the grade 1 and 3a agricultural land in real terms would not adversely impact on the economic and other benefits of BMVAL and the primary purpose of food production. Therefore, the aims of the Framework in this regard, would not be undermined by the proposed development" (para 22)</p> <p>The Council's assessment fails to take into account the above, or the contribution the Site would actually make to food production when weighing the impact the development would have on the availability of BMVAL. In light of the above, the assessment must be amended to "Negligible (O)".</p> <p>Objective 13</p> <p>Whilst the Site is within a Minerals Safeguarding Area, the Council's assessment fails to consider:</p> <p>a) The size of the Site and whether it is of a size that mineral extraction would be viable; and</p> <p>b) The context of the Site, including the proximity of residential development and Abbey (a heritage asset), which would likely preclude extraction because of the impact on amenity.</p> <p>In light of the above, the Council's assessment must be amended to "Negligible (O)", since it is clear that the Site is unlikely to have a detrimental impact on the availability of minerals."</p>	
44426049	Q8 of the questionnaire	<p>"In respect of this question, our client only wishes to comment upon the site they are promoting [59613]. In this regard, we support the 'significant positive' that will be achieved in respect of the provision of housing. However, we believe the SA takes an overly negative stance in respect of wider objectives and attributes only minor positives and</p>	<p>Site 59613 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of open space and a walking path, but is not within 800m of a GP surgery. This is in accordance with the site assessment criteria outlined in Appendix D of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>a minor negative in relation to the accessibility of the site to amenities (SA Objectives 1-3). Given the location of the site, within convenient active travel distance to grocery stores, primary school, pharmacy, open space, a range of independent business and regular bus services with East Peckham, we consider that the benefits of development at the site would yield greater sustainability benefits than the SA suggests, particularly in the context of the rural nature of the borough where sustainable opportunities outside of the principal settlement of Tonbridge and inherently more limited. Development would also contribute positively to the viability and vitality of the facilities and community and can contribute to the provision of additional infrastructure. This does not appear to have been considered within the appraisal.</p> <p>We note also that East Peckham was identified previously by the Council as a suitable and reliable location for growth within the failed Local Plan. In our view, East Peckham should continue to be identified as suitable for development and the release of this site from the green belt would contribute to meeting the Council's housing requirement which has increased further still since the previous Plan preparation.</p> <p>In addition, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment, and this should represent a strong positive.</p> <p>The desktop nature of the site assessment is also of concern. Based on a human judgement there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>In short, it is essential that sites are properly appraised to ensure that decisions are made on credible information."</p>	<p>The site receives a minor negative effect in relation to SA objective 2: services and facilities, as the site is placed in the Fair Accessibility Band within the Urban Capacity Study (July 2022). This is in accordance with the site assessment criteria.</p> <p>The site receives an uncertain minor positive effect in relation to SA objective 3: education, as it is within 800m of a primary school (East Peckham Primary School). All effects against this objective are recorded as uncertain for the reason outlined in the site assessment criteria, specifically "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on their being capacity at those schools to accommodate new pupils" [emphasis added].</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>
44417409	Q8 of the questionnaire	<p>"No we do not agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report. In fact we have serious concerns about the accuracy and robustness of the findings of the SA when it comes to a number of sites in and around Hadlow. Starting with the land east of Carpenters Lane/ north of The Paddock, Hadlow, site reference 59776 we would advise as follows:</p> <p>JAA table 5 – Overview of the SA scoring of site 59776</p> <p>[See SA Annex 1 for table and revised scoring and additional comments on sites 59776, 59601, 59859, 59806, 59846, and 59811.]"</p>	<p>Paragraph 3.55 in the Interim SA Report identifies one of eleven key sustainability issues facing Tonbridge and Malling Borough. These key sustainability issues (identified using the baseline information) have been used to develop a set of SA objectives, which provide a framework against which the effects of the Local Plan will be assessed.</p> <p>The site assessment criteria outlined in Appendix D of the Interim SA Report are developed using the SA objectives, and are also reliant on what information the local planning authority has available. The SA is a desk-based strategic assessment and it would not be possible of proportionate for the SA to explore tranquillity.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>With regard to SA objective 1: health and wellbeing, justification text was not provided due to an error. In the next iteration of the SA Report, justification for the effect against SA objective 1 will be provided. The site is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. In the next iteration of the SA, the site will receive a significant positive effect only in relation to SA1.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. open space provision). This ensures all sites are appraised on a consistent basis. If the site were to be allocated via Local Plan policy containing mitigation measures, it would be appraised on a 'policy-on' basis.</p> <p>The appraisal against SA objective 2: health and wellbeing has been informed by the Urban Capacity Study (July 2022). As the site falls within the Fair Accessibility Band, it receives a minor negative effect in relation to this objective. This is in accordance with the site assessment criteria. SA objective 2 does not cover homelessness and so the sub-objective "To tackle homelessness more effectively" will be moved to underneath SA objective 14: housing. Although, it is noted above that the sub-objectives are used when appraising policies, not sites. Access to public transport is considered separately under SA objective 10: climate change mitigation.</p> <p>Site 59776 is incorrectly recorded as containing green infrastructure assets, as it overlaps some green infrastructure assets in its vicinity. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect, as it is within 1km of an area of Ancient Woodland. All negative effects against SA objective 5 are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>SA objective 6: landscape and townscape looks at the effect development of each reasonable alternative development site option may have on the landscape and townscape. The fact site 59776 is a paddock does not relate to the effect its development might have on the landscape.</p> <p>Site 59776 is, however, incorrectly recorded as having a significant negative effect in relation to this objective. In the next iteration of the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>SA, the effect will be upgraded to a minor negative effect, as the site is located on the edge of the settlement of Hadlow.</p> <p>All negative effects against SA objective 6: landscape and townscape are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p> <p>Whether a site comprises brownfield or greenfield land is considered separately under SA objective 9: soils.</p> <p>Site 59776 receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. This is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 8: water, the proforma for site 59776 states that it is entirely or significantly within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site contains land with a 1 in 30 year risk of surface water flooding in its south eastern corner and so the significant negative effect against this objective is correct. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation. If the site were to be allocated via Local Plan policy containing mitigation measures, it would be appraised on a 'policy-on' basis.</p> <p>With regard to SA objective 10: climate change mitigation, a distance of 400m was considered appropriate walking distance to a bus stop. The site is not within close proximity of a railway station. Therefore, the site correctly receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 13: material assets and waste, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p> <p>With regard to SA objectives 3: education, 4: economic growth, 9: soil, 11: climate change adaptation, 12: air quality and 14: housing, respondent has not expressed any disagreement over the effects given for site 59776.</p> <p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. If a site is not consistent with the spatial strategy, it may still be considered a reasonable alternative.</p> <p>Site 59846 has been appraised in line with the site assessment criteria and therefore receives a minor positive effect in relation to SA objective 1: health and wellbeing. The SA is too high-level to give consideration to barriers to pedestrian movement.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Site 59846 does not contain Ancient Woodland but is within close proximity of Ancient Woodland. It correctly receives an uncertain significant negative effect as it contains green infrastructure assets, in addition to falling within is within 250m of areas of Ancient Woodland. In the next iteration of the SA Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). The presence of waterbodies is dealt with separately under SA objective 8: water. The SA correctly acknowledges site 59846 as containing water bodies.</p> <p>Site 59811 contains Ancient Woodland, in addition to green infrastructure assets. Therefore, it correctly receives an uncertain significant negative effect in relation to SA objective 5. The SA correctly acknowledges site 59811 as containing water bodies under SA objective 8.</p> <p>SA objective 6: landscape and townscape does not give consideration to green infrastructure and vegetation cover, which is instead considered under SA objective 5: biodiversity and geodiversity. As mentioned already, the assessment of site 59776 will be corrected to reflect the fact it is located on the edge of a settlement.</p> <p>All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p> <p>The sequential test is a separate assessment process to the SA and will be used at a later stage in the plan-making process to help inform the SA. All sites have been correctly appraised against SA objective 8: water, in line with the site assessment criteria.</p>
44460673	Q8 of the questionnaire	<p>"3.8 We have some concerns with the individual site assessments in relation to our client's site.</p> <p>The site was submitted to TMBC's Call for Sites consultation that took place in January 2022 (ref. 59681). The site has been reviewed by TMBC in accordance with the key objectives surrounding Suitability, Availability and Deliverability as set out within the Sustainability Appraisal.</p> <p>Response to Specific Questions</p> <p>3.9 We have set out the objectives below and our commentary on the individual objectives, as supported by the technical assessments which have been produced for the Planning</p> <p>Application which is due to be submitted to TMBC shortly.</p> <p>SA Object ive 1: To improve human health and well-being</p> <p>Minor positive (+)</p>	<p>It is not the role of the SA to explore the suitability, availability and achievability/deliverability of sites, this is role of other pieces of evidence to inform plan preparation. The purpose of SA is to assess all reasonable alternative development site options, to help the Council determine which sites to allocate and not allocate. The SA is one of many factors that feed into the plan-making process.</p> <p>The site receives a significant negative effect in relation to SA objective 2: services and facilities, as it falls within the Poor Accessibility Band in the Urban Capacity Study (July 2022). The SA states in the site assessment criteria in Appendix D that "The location of employment sites to community facilities and services is relevant as people may make use of the facilities and services near to their workplaces around working hours.</p> <p>With regard to SA objective 4: economic growth, all mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. Site</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within 800m of an existing area of open space/sports facility or walking/ cycle path.</p> <p>3.10 We agree with this observation.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Poor Accessibility Band.</p> <p>3.11 Whilst we recognise that the site is located outside of the settlement boundary of Wrotham, due to its employment use, accessibility to community facilities and services is not necessarily a key consideration compared to housing development, for example. Therefore, we consider that the assessment does not affect the sites continued development potential for employment use. The score should be neutral.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>N/A</p> <p>The location of employment sites is not considered likely to affect this objective.</p> <p>3.12 We agree with this observation.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Minor positive (+)/Negligible (0)</p> <p>The site includes employment development smaller than 5ha in size. The site is not within 800m of a train station or within 400m of a bus stop or cycle path.</p> <p>3.13 We consider that the assessment rating should be 'significant positive'. The development proposals at the site will generate significant economic benefits including employment opportunities during the construction and operational phases of development, with 70 direct on-site employment opportunities with a total net employment of 92 jobs provided at the operational phase. Operations on site will also support approximately 180 drivers, operating</p> <p>Response to Specific Questions as part of Owner Driver Franchisees. The development proposals have the potential to generate £4.1m GVA national from direct and indirect jobs. Support towards local employment and skills and training opportunities. It is not often that brownfield employment sites are located as well as this Site in terms of access to the Strategic Road Network. The Site has excellent connectivity to the Strategic Road Network with the A20 London Road providing direct access to the M26 Junction 2a to the south-east and M20 Junction 2 to the north-west.</p> <p>The M20 accommodates long distance journeys to Maidstone, Ashford, and Folkestone to the south-east and towards the M25</p>	<p>59681 is still expected to have a positive effect in relation to this objective, albeit minor. Although different types of employment development may have different locational requirements, the SA is high-level and so does not look into the different types of employment that may be provided, particularly as this cannot be guaranteed.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain or a landscape strategy). This ensures all sites are appraised to a consistent level of detail.</p> <p>With regard to SA objective 6: landscape and townscape, again this is a 'policy-off' appraisal and consideration is not given to additional information provided by site promoters, so as to ensure all sites are appraised on a consistent basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Junction 3 to the north-west. The M26 provides a link between the M25 Junction 5 and the M20 Junction 3. Due to this level of connectivity the site is particularly well suited to Class B8 storage and distribution uses.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Uncertain significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>3.14 We do not agree with this assessment although note that it is dependent on detailed development proposals coming forward. The development proposals have considered the provision of 10% Biodiversity Net Gain, including both on-site and off-site measures to align with measures within the Environment Bill. In terms of on-site measures, it is considered that a landscape strategy could be progressed at the site that reinforces boundary planting and vegetation, providing species rich habitats. In addition, how biodiversity enhancement measures can be implemented as part of development proposals to support wildlife habitats, as identified within the submitted Ecological Mitigation Strategy.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Uncertain significant negative (--)</p> <p>The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Response to Specific Questions</p> <p>3.15 We do not agree with this assessment although note that it is dependent on detailed development proposals coming forward. Through the preparation of the emerging proposal for the redevelopment of the Site, the visual effects of the proposed development have been found to be predominantly localised to within the setting of the site, with the potential for a comprehensive Landscape scheme to assist in"</p>	
44471521	Q8 of the questionnaire	"The Site has been assessed through the Interim Sustainability Appraisal (site reference: 59773) and there are some parts of the	Site 59773 has been appraised in line with the site assessment criteria as outlined in Appendix D of the Interim SA Report. In accordance

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>appraisal that we agree and support, whilst others we consider incorrect. Our comments on the relevant objectives (that we do not agree with) are outlined below.</p> <p>We therefore consider the Interim Sustainability Assessment Report scores for the objectives as listed above should be higher than set out within the assessment. We therefore request that the interim sustainability Appraisal for the Site is reviewed by the Council and amended in accordance with the above."</p>	<p>with the site assessment criteria, the site receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of open space and walking paths. Housing delivery is considered separately under SA objective 14: housing.</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022). Housing delivery is dealt with separately under SA objective 14: housing. This is a 'policy-off' appraisal and so consideration is not given to mitigation, such as financial contributions towards community facilities and public transport.</p> <p>With regard to SA objective 3: education, again this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. contributions towards education provision). This ensures all sites are appraised on a consistent basis. All effects against this objective are recorded as uncertain due to uncertainty regarding school capacity.</p> <p>With regard to SA objective 4: economic growth, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities. Although it is noted that an SME would undertake the construction work, this is an appraisal of the site and does not take into consideration who is developing the site.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape and 7: heritage, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain and landscaping). If the site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-off' basis.</p>
44459553	Q8 of the questionnaire	<p>"In relation to site references [59637], [59638] and [59686] – No. The ISA has been undertaken in insufficient detail and has not considered measures to offset impacts. Specific comments are made in relation to ISA objectives 5 (bio and geodiversity), 6 (land and townscapes), and 8 (water).</p> <p>In relation to site reference [59615] – No. The ISA has been undertaken in insufficient detail and has not considered measures to offset impacts. Specific comments are made in relation to ISA objectives 5 (bio and geodiversity), 6 (land and townscapes), 7 (cultural heritage) and 8 (water)."</p>	<p>It is correct that the Interim SA Report has not considered measures to offset impacts, as this ensures all sites are initially appraised on a consistent basis (i.e. 'policy-off'). If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>
42821345	Q8 of the questionnaire	<p>"Site [59830] - [INCLUDES A SUSTAINABILITY APPRAISAL REVIEW NOTE]</p> <p>The Sustainability Appraisal Review note at Appendix B provides a site-specific appraisal of Borough Green Gardens against the Sustainability Appraisal objectives based on technical and design work previously completed for the Site.</p>	<p>Annex D of the Interim SA Report contains 'policy-off' appraisals of sites that do not take into consideration mitigation. This ensures all sites are initially appraised on a consistent basis. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>As detailed in the note, TMBC's assessment of the Site within Annex 1 of the Interim Sustainability Appraisal did not include consideration for committed mitigation measures and controls which have been embedded within the design of the development to reduce adverse effects and enhance beneficial effects.</p> <p>Through the consideration of this it is possible to conclude development of the Site has potential to lead to, predominately, significantly positive effects, including in respect of objectives to improve human health and wellbeing, improve levels of education attainment, encouraging sustainable economic growth, reducing greenhouse gas emissions, to protect and improve air quality and to provide a suitable supply of housing. Where negative effects are identified, these are minor and likely to be experienced by alternative allocation options."</p>	
44819617	Q8 of the questionnaire	Site [59822] - [INCLUDES AN INTERIM SUSTAINABILITY APPRAISAL REVIEW - COPY OF REPRESENTATION IN "COPIES FOR LUC" FOLDER]	<p>With regard to the SA framework, the respondent has referred to the sub-objective "To promote the use of more sustainable modes of transport" as incorrectly being located under SA objective 11: climate change adaptation when it should be under SA objective 10: climate change mitigation. However, it is under SA objective 10 in the Interim SA Report.</p> <p>The respondent has requested a map showing the proposed strategic options and reasonable alternative development site options. Consideration will be given to including a map in the next iteration of the SA if appropriate, and depending on the content of the next version of the Plan.</p> <p>The Interim SA Report does not contain an appraisal of cumulative effects due to the high-level nature of the Regulation 18 Local Plan. As TMBC were consulting on issues and options, not policies and allocations, it would not have been possible to explore the cumulative effects of the Plan at this stage.</p> <p>There is a lot of crossover between the SA objectives but this is not something the SA is required to explore. The SA objectives (i.e. the SA framework) were established via the review of plans, policies and programmes (Appendix B) and the key sustainability issues (paragraphs 3.52 to 3.92) identified by the baseline review (Appendix C).</p> <p>The SA has provided an appraisal of all reasonable alternative options and will continue to do so.</p> <p>The respondent has provided a detailed table regarding the SA's compliance.</p> <ul style="list-style-type: none"> ■ It is not necessary for the SA to provide an infographic or table showing the timeline and key dates specific to the stages of the Local Plan and SA, rather it is the role of the Local Development Scheme to provide this information. ■ The quality of Figure 3.1 will be improved.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<ul style="list-style-type: none"> ■ It would not be appropriate or proportionate to provide even further detail on existing policies, sustainability issues and mitigation within surrounding and neighbouring local authorities. Appendix B of the Interim SA Report provides enough detail on this currently. ■ However, you can view how we have addressed each comment on the SA Scoping Report in Appendix A of the Interim SA Report. It is not usual practice to show what has changed in each iteration of the SA, as there are often many changes throughout the plan-making process. ■ With regard to the changing policy context, this is addressed under paragraphs 1.11 and 3.4 of the Interim SA Report. As there is a lot of uncertainty over these changes, further detail is not available. ■ It is not within the scope of the SA to explain how all international, national and sub-national plans and agendas will work holistically to achieve sustainable growth. ■ With regard to the baseline information, it is not usual practice to show what has changed in each iteration of the SA, as there are often many changes throughout the plan-making process. ■ In Chapter 3 of the Interim SA Report the heading 'Likely Evolution of the Issue without the Local Plan' is used throughout, under each key sustainability issue identified. In line with the SEA Regulations, the SA correctly explores what will happen without the Local Plan. Further detail will be added to the sentence regarding the historic environment, in addition to references to vehicle technologies where relevant. ■ 'Do nothing' options result in negligible effects against all SA objectives, as they do not change the existing baseline. ■ A sub-objective regarding net zero has been added under SA objective 10: climate change mitigation. SA objective 10 explores climate change mitigation whereas SA objective 11 explores climate change adaptation. Climate change mitigation relates to the reduction of CO2 emissions whereas climate change adaptation relates to adapting to the effects of climate change (e.g. extreme weather events). ■ LUC was commissioned to undertake SA of the Local Plan, not HRA. The HRA is a separate, standalone document to the SA that will inform the SA at later stages in the plan-making process. ■ As mentioned already, the Interim SA Report does not contain a cumulative effects section due to the high-level nature of the Regulation 18 Local Plan. ■ The reasonable alternative development site options were appraised using the site assessment criteria outlined in Appendix D of the Interim SA Report, not the SA objectives and sub-objectives, which the policies and appraised against.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<ul style="list-style-type: none"> ■ In the next iteration of the SA, consideration will be given to short, medium and long-term effects, and permanent and temporary effects. This will be in the cumulative effects section which as explained already, was not provided in the Interim SA Report as there were no policies and allocations to clearly identify the overall effects of the Plan, just options. ■ The site appraisals are 'policy-off' not 'policy-on', as consideration has not yet been given to mitigation. This ensures all sites are initially appraised on a consistent basis. If a site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-on' basis. <p>The Interim SA Report does not contain an appraisal of cumulative effects due to the high-level nature of the Regulation 18 Local Plan. As TMBC were consulting on issues and options, not policies and allocations, it would not have been possible explore the cumulative effects of the Plan.</p> <p>It is important to note that the SA is one of many factors that feed into the plan-making process. The appraisals in Annex 1 of the Interim SA Report have been undertaken on a 'policy-off' basis, which means that the sites have been appraised on their physical constraints only. This ensures they are all appraised to a consistent level of detail. If sites are allocated in the Local Plan via policy that contains mitigation measures, the sites will be appraised on a 'policy-on' basis (i.e. taking into consideration mitigation).</p> <p>The respondent has provided their own appraisal of site 59822. As mentioned already, this is a 'policy-off' appraisal and so consideration is not given to mitigation at this stage.</p> <p>With regard to SA objective 1: health and wellbeing, Air Quality Management Areas (AQMA) are considered separately under SA objective 12: air quality.</p> <p>With regard to SA objective 2: services and facilities, the site receives a minor negative effect, as it falls within the Fair Accessibility Band in the Urban Capacity Study (July 2022). Therefore, it correctly receives a minor negative effect which is in accordance with the site assessment criteria outlined in Appendix D of the Interim SA Report.</p> <p>The minor positive effect against SA objective 3: education is recorded as uncertain because the actual effect will also depend on whether there is capacity at nearby schools to accommodate new pupils.</p> <p>With regard to SA objective 4: economic growth, the site receives a minor positive effect instead of a significant positive effect because it is smaller than 5ha. This is in accordance with the site assessment criteria, which distinguishes between smaller and larger employment and mixed-use sites.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59822 receives an uncertain significant negative effect as in addition to containing green infrastructure assets (thick trees and vegetation), it is within 250m of some areas of Ancient Woodland. In the next iteration of the SA Report, the proforma will clearly distinguish</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>between internationally and nationally designated sites, and Ancient Woodland (Ancient Woodland is currently covered under international and national biodiversity and geodiversity sites).</p> <p>With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect as it is not located near any settlements in a rural location and so cannot be as easily integrated into existing development than if it were located inside of or on the edge of a settlement.</p> <p>With regard to SA objective 7: heritage, the SA does not utilise independent historic appraisals that have been undertaken and submitted by some site promoters, as this would mean that the sites are not appraised on a consistent basis. The site receives an uncertain significant negative effect as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, the site receives a significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding. The site is also located in Source Protection 3 but this is not the reason for its significant negative effect. Again this is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively used for agriculture. Contamination is different to the Agricultural Land Classification. It is correct that the site receives an uncertain significant negative effect in relation to this objective.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. The SA correctly identifies the site as falling within 400m of a bus stop but not 800m of a railway station.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, 59822 receives a negligible effect as it is not within 100m of an Air Quality Management Area (AQMA).</p> <p>With regard to SA objective 13: material assets and waste, the SA at this stage does not take into consideration mitigation and so even if the site will be extracted prior to development, the effect should remain as it is. This is because information like this may not be available for other sites and so they would not all be appraised on a consistent basis.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.
45325537	Q8 of the questionnaire	<p>"While we endorse that site ref. 59682 (Land South Of Church Lane) scores more favourably against other sites promoted for development at East Peckham, Snoll Hatch and Hale Street, we do not agree with the assessment of the Site at Appendix D of the SA for the reasons explained below.</p> <p>We consider that this Site has a greater potential to score more positively than the 'Minor Negative' scored with regard to SA2 'improving equality and access to community facilities and services'. This is because the site is sustainably located in proximity to the facilities and services available at East Peckham, which are all accessible via foot, cycle or bus. In addition, we would highlight that the Site is currently subject to a planning application (ref. 21/03353/FL) that includes a new community facility, designed specifically to provide accommodation for providers delivering health care for older people as well as preserving WWII heritage asses such as a Pillbox.</p> <p>With regards to SA5, we consider that the site has the potential to scope more positively than an 'uncertain minor negative' and certainly should not be scored any worse than a 'minor negative'. This is because while we acknowledge the SA does not take into account the potential for landscape mitigation, we would highlight the current planning application for the Site demonstrates how a scheme could be progressed that sensitively responds to its landscape context. This can be achieved via the sensitive placement of development, retention and incorporation of key landscaping feature and mitigation measures within the Site including native tree planning. This is evident from the Landscaping scheme submitted to support the planning application at Church Lane. The Landscaping scheme provides a landscape strategy comprising the retention of the existing hedgerows and trees that border the Site and those which currently divide the two parcels of land. The proposal will also add generous buffer zones to the edges of the Site. The Site will also provide good areas of public open space. The public open space will provide new landscaping such as wildflower and grass meadows.</p> <p>SA6 relates to the character and appearance of streetscapes of development in relation to existing settlements, particularly how new development should enhance or reflect the existing pattern of development. We consider that the Site has potential to score more positively than 'uncertain minor negative', and certainly should not be scored any worse than a 'minor negative'. This is because, the SA does</p>	<p>Site 59682 receives a minor negative effect in relation to SA objective 2: services and facilities, as it falls within the Fair Accessibility Band in the Urban Capacity Study (July 2022). This is in accordance with the site assessment criteria. The SA acknowledges under SA objective 10: climate change mitigation that although the site is more than 800m of a railway station, it is within 400m of a bus stop.</p> <p>Although the respondent notes that the site is subject to a planning application that includes a new community facility, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. provision of a community facility). The SA is too high-level to give consideration to individual planning applications for sites, and giving consideration to supporting documents would result in not all sites being appraised on a consistent basis.</p> <p>SA objective 5: biodiversity and geodiversity does not cover landscape, which is covered separately under SA objective 6: landscape and townscape. Site 59682 receives an uncertain minor negative effect in relation to SA objective 6 as it is located on the edge of a settlement and so there's potential for it to be more easily integrated into existing built development, compared to more rural and isolated sites. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. a landscaping scheme). All adverse effects against this objective are recorded as uncertain, as the actual effects are dependent on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The site receives a significant negative effect against SA objective 9: soil, as it is greenfield and comprises Grade 2 agricultural land. The SA looks at whether sites comprise best and most versatile agricultural land, not whether proposals would or would not represent significant development on best and most versatile agricultural land.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>not consider the potential for mitigation, the current planning application has demonstrated a way in which a development could be progressed at the site provide a range of typologies, building heights and streetscapes reflective of the mixed character of the settlements of Hale Street and East Peckham.</p> <p>SA9 relates to the conservation and enhancement of soil resources and the guarding against land contamination. SA9 scores the site as a 'Significant Negative'. We do not agree with how the Site has been assessed, as the Site has been incorrectly identified as Grade 1 agricultural land. However, the Agricultural Land Classification Report (Appendix C) submitted in support of the planning application at Land South of Church Lane identifies that all East Peckham and the surrounding land is covered by Grade 2-3 agricultural land. We believe the score for SA9 should be scored as a 'Minor Negative' in light of the above.</p> <p>In addition, at 3.2ha of BMV land, the proposals would not represent "significant development" of agricultural land in NPPF terms as the site falls well below the guideline figure of 20ha in order to constitute "significant development". Accordingly, the loss of the site would comply with the NPPF (para 174) in terms of the loss of BMV.</p> <p>SA10 relates to reducing greenhouse gas emissions to minimise climate change. The Site was scored a minor positive. We endorse this score given to the Site from TMBC.</p> <p>The Site was assessed as a 'Minor Positive' against SA14, which relates to providing a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures. The submitted planning application clearly shows that through the efficient use of the Site the land has capacity to deliver 69 residential units towards the 839dpa Standard Method target for the Borough if the allocation were to come forward. The Site is therefore, considered to be a medium size which could be delivered in the first few years of the Plan period. We consider that this would provide more than a minor positive benefit. Thus, the score should be upgraded to 'Positive'.</p> <p>Indeed, we would highlight that Site 59682 scored sufficiently highly in the SA for the previous draft Local Plan to support the proposed released of the Site from the Green Belt in that draft local plan and its allocation for residential development under draft Policy LP25 (t) and (v).</p> <p>With regard to Site 59782 we endorse TMBCs assessment in the interim SA."</p>	<p>SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
24925793	Q8 of the questionnaire	<p>"No. In our opinion, the scoring for some of the Objectives is questionable*, especially for sites in south-west Tonbridge. It also does not seem to reflect the potential negative impacts of the developments, given the infrastructure/highway capacity and air quality issues**, in our local area.</p> <p>Our initial abbreviated comments, for each of the locally listed development sites, are as follows.</p> <p>□ Sites 59550 & 59552 (Brindle's Field playground) – the loss of open space/recreational areas, which are locally valuable (so should be listed as Local Green Spaces – see Q.34), reduces access to recreational opportunities and local community facilities (like play areas). As such, the scoring should be negative for both SA1 and SA2 (not "--?/+", or "0"). Also, given the current lack of local primary school places* and the additional cumulative demand from other granted developments (inc. Site 59869: 125 houses), then SA3 should be slightly negative.</p> <p>□ Sites 59571 & 59572 (nr Milton Gardens) – the loss of open green spaces in residential areas again reduces access to recreational opportunities and so is detrimental to Objective SA1, which seeks to promote health/wellbeing. As such, SA1 should have a negative score (not "--?/+"). Again, given the current lack of local primary school places*, SA3 should be slightly negative. In addition, Site 59572 provides a buffer, minimising the landscape harm (SA6).</p> <p>□ Site 59641 (land adjoining Lower Haysden, on east side) – generally has the lowest Objective scores, than most other sites, so is least likely to deliver sustainable development and should not be taken forward. Furthermore, with reference to SA6 that rightly acknowledges the "significant negative impact", but the justification for this being "uncertain" (i.e. "--?") is questionable on balance. Firstly, as the justification text incorrectly states that "The site is not located near any settlements in rural locations", but this site adjoins the rural hamlet of Lower Haysden and so the scoring may have underestimated the impact.</p> <p>Secondly, having such a disproportionate amount of development, compared to existing hamlet, will cause significant harm (i.e. "--") to the character of this rural Conversation Area.</p> <p>Thirdly, such disproportionate development in this rural location is likely to cause significant harm to the landscape setting of the ANOB (<500m, as noted in L.P. Para. 5.21.92) and the surrounding countryside, regardless of it's design, especially given the flat open farmland.</p> <p>Lastly, this Green Belt site provides an important buffer to preserve the separate identity of Lower Haysden and prevent coalescence with the Tonbridge urban confines. As noted below (in Q.11, as stated by TMBC1) a minimum of 500m is required as an effective Green Belt buffer, but this loss green field buffer (at the western-edge) could be compounded by development within the eastern-half of this small</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Sites 59550, 59552, 59571 and 59572 are recorded as having uncertain significant negative effects in relation to SA objective 1: health and wellbeing, due to the fact they contain an open space that could be lost as a result of development, although this is uncertain. The effects are coupled with a minor positive effects, as both sites are within 800m of other areas of open space, as well as walking paths.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Site 59572 receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is within 500m of the AONB.</p> <p>All adverse effects against SA objective 6: landscape and townscape are recorded as uncertain, as the actual effects will also depend on the final design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect against SA objective 6: landscape and townscape when they are not located near any settlements. Although the respondent has raised the point that sites 59641 is located on the edge of Lower Haysden, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for the site is therefore correct (it should receive a significant negative effect). In the next iteration of the SA, we will add this limitation to the section entitled 'Difficulties and Data Limitations'. Site 59641, in addition to site 59869 are not located within 500m of the AONB.</p> <p>Site 59695 is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. This is as a result of the percentage overlap between the site and settlement boundaries. In the next iteration of the SA Report, the effect will remain the same, as the site is located within 500m of the AONB. As mentioned already, all adverse effects against this objective are recorded as uncertain.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Green Belt buffer. For instance, if Site 59764 was taken forward, then Tonbridge would come within 200m of this site and Lower Haysden.</p> <p>□ Site 59695 (Lower Haysden Ln. south side, eastern land parcel) – as above, given the current lack of local primary school places*, SA3 should be negative; in view of the large number of new homes proposed, on top of the other granted developments (inc. Site 59869: 125 homes).</p> <p>This site will also have a “significant impact” on the landscape setting of the AONB, which overlooks this site, as acknowledged in the SA6 justification text. However, given the lack of natural screening along southern-boundary of the site, compared to the trees that screen the edge of the existing town confines, it is likely that any development here (regardless of it’s design, scale) would probably have a more certain detrimental landscape setting impact. Note to maintain an minimum effective Green Belt buffer of 500m (as per TMBC1), between Tonbridge and Lower Haysden, either this site or Site 59641 cannot be taken forward. □ Site 59764 (Lower Haysden Ln. south side, western land parcel) – as above, given the current lack of local primary school places*, SA3 should be negative; in view the even larger number of new homes proposed here, on top of the other granted developments (59869: 125 homes).</p> <p>Similarly, to Site 59695, this has a more certain “significant impact” on the landscape setting of the AONB, given the lack of natural screening. The scoring may also have underestimated the impact (i.e. “---”), given that the justification text incorrectly states that “The site is not located near any settlements in rural locations”, but this site is within 500m of rural Lower Haysden. Moreover, this site is located midway into the small Green Belt buffer that separates Tonbridge’s urban confines from the separate hamlet of Lower Haysden. As such, it would render this vital Green Belt buffer ineffective (<500m1), with the edge of the town extending to within 200m of Lower Haysden and would be contrary to its purpose to prevent coalescence.</p> <p>□ Site 59869 (Lower Haysden Ln. north side) – in the previous Draft Local Plan, this site had provision for a new primary school, which is needed, given the current lack of local primary school places*. However, the omission of new primary school at this site and increase in the proposed number of new houses (now 125), will put more pressure on local school places, together with the demand from other new housing sites (e.g. West [now North] Kent College).</p> <p>As such, development here without the proposed school should have SA3 negative score. On the basis that the site is over-looked by the AONB, which is 500m of the site, and given the potential “significant impact” on the landscape setting, robust policies need to be adopted for this site, to limit the visual impact; e.g. houses limited to 2-storeys, as noted below (see Q.19).</p> <p>(continues in comments)"</p>	<p>not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
45712961	Q8 of the questionnaire	PLEASE SEE SEPARATE PDF DOCUMENT ATTACHED TO EMAIL SUBMISSION: Objections to Local Plan Sites In & Around Kings Hill_Norma Watters ME19 4EG.pdf	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is not within the scope of the SA to consider the capacity of rail services. The SA is too high-level to give consideration to the availability of car parking spaces, road width and congestion. To inform plan-making, the Council will commission additional evidence on matters including traffic and air quality.</p> <p>With regard to healthcare facilities, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The SA also does not take into consideration the capacity of schools. The site assessment criteria for SA objective 3: education in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA acknowledges that development of sites 59797 and 59800 would result in the loss of open space, under SA objective 1: health and wellbeing. The sites are expected to have mixed uncertain significant negative and minor positive effects in relation to this objective. The minor positive effects are due to the fact both sites are close to other areas of open space and walking paths.</p> <p>Although not explicitly stated in the proforma, the SA does acknowledge the fact sites 59797 overlaps a Local Wildlife Site (Kings Hill Golf Course, Cattering & Hoath Woods) and areas of Ancient Woodland. In the next iteration of the SA Report, the proforma for the site will be updated to state "The site is within 250m of one or more internationally or nationally designated biodiversity sites, geodiversity sites, or Ancient Woodland, or contains a locally designated site." Although site 59800 does not overlap a Local Wildlife Site, it is located directly adjacent to the Kings Hill Golf Course, Cattering & Hoath Woods Local Wildlife Site and areas of Ancient Wodland.</p> <p>Site 59797 receives a significant negative effect in relation to SA objective 9: soil, as it is greenfield land and contains Grade 1 and 2 agricultural land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>With regard to the respondent's 'Example reasons for objections', the SA gives consideration to Ancient Woodland, Local Wildlife Sites and green infrastructure assets, but does not specifically explore Defra's National Forest Inventory (NFI), which is used to monitor woodland and trees within the UK. As the SA is high-level, the NFI is considered too detailed for use in the SA. The SA is also too high-level to consider Tree Protection Orders (TPOs).</p> <p>Consideration is given in the SA to development outside of settlements under SA objective 6: landscape and townscape. If development is not located near any settlements in a rural location, a site is likely to have significant adverse effects in relation to landscape, as development cannot as easily be integrated into existing built development than if it were within or on the edge of a settlement, and therefore has more potential for adverse effects in relation to landscape character. This objective also looks at which sites are within close proximity of an AONB or not.</p> <p>As mentioned already, the SA is too high-level to give consideration to traffic congestion. To inform plan-making, the Council will commission additional evidence on matters including traffic.</p> <p>Historic environment is dealt with under SA objective 7: heritage and if a site is within 250m of a heritage asset as recorded in the Kent Historic Environment Record, it receives an uncertain significant negative effect. All effects against this objective are uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The Agricultural Land Classification is considered under SA objective 9: soil. If sites comprise Grade 1 or 2 agricultural land, they receive a significant negative effect. If sites comprise Grade 3 agricultural land, they receive an uncertain significant negative effect as the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p> <p>Lastly, loss of public open space is addressed under SA objective 1: health and wellbeing.</p>
42609601	Q8 of the questionnaire	<p>"Here I have used an example of one your Rural Service Centres at East Peckham, site 59682, which is a location I know and as a resident of the Borough I cannot look at all the proposals, but I will focus on the one site ref. 59682 (Land south of Church Lane, East Peckham).</p> <p>I consider that this Site has a greater potential to score more positively than the 'Minor Negative' scored with regard to SA2 'improving equality and access to community facilities and services'. This is because the site is sustainably located in proximity to the facilities and services available at East Peckham, which are all</p>	<p>Site 59682 receives a minor negative effect in relation to SA objective 2: services and facilities, as it falls within the Fair Accessibility Band in the Urban Capacity Study (July 2022). This is in accordance with the site assessment criteria. The SA acknowledges under SA objective 10: climate change mitigation that although the site is more than 800m of a railway station, it is within 400m of a bus stop.</p> <p>Although the respondent notes that the site is subject to a planning application that includes a new community facility, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>accessible via foot, cycle or bus. In addition, I would highlight that the Site is currently subject to a planning application (ref. 21/03353/FL) that includes a new community facility, designed specifically provide accommodation for providers delivering health care for older people.</p> <p>With regards to SA5, I consider that the site has the potential to scope more positively than an 'uncertain minor negative' and certainly should not be scored any worse than a 'minor negative'. This is because while I acknowledge the SA does not take into account the potential for landscape mitigation, I would highlight that current planning application for the site demonstrates how a scheme could be progressed at the site that sensitively responds to its landscape context. This can be achieved via the sensitive placement of development, retention and incorporation of key landscaping feature and mitigation measures within the Site including native tree planning. This is evident from the Landscaping scheme submitted to support the planning application at Church Lane. The Landscaping scheme provides a landscape strategy comprising the retention of the existing hedgerows and trees that border the Site and those which currently divide the two parcels of land. The proposal will also add generous buffer zones to the edges of the Site. The Site will also provide good areas of public open space. The public open space will provide new landscaping such as wildflower and grass meadows.</p> <p>SA6 relates to the character and appearance of streetscapes of development in relation to existing settlements, particularly how new development should enhance or reflect the existing pattern of development. I consider that the Site has potential to score more positively than 'uncertain minor negative', and certainly should not be scored any worse than a 'minor negative'. This is because, the SA does not take into account the potential for mitigation, the current planning application has demonstrated a way in which a development could be progressed at the site provide a range of typologies, building heights and streetscapes reflective of the mixed character of the settlements of Hale Street and East Peckham.</p> <p>SA9 relates to the conservation and enhancement of soil resources and the guarding against land contamination. SA9 scores the site as a 'Significant Negative'. I do not agree with how the Site has been assessed, as the Site has been incorrectly identified as Grade 1 agricultural land. However, the Agricultural Land Classification Report submitted in support of the planning application at Land South of Church Lane identifies that all East Peckham and the surrounding land is covered by Grade 2-3 agricultural land. I believe the score for SA9 should be scored as a 'Minor Negative' in light of the above.</p> <p>In addition, at 3.2ha of BMV land, the proposals would not represent "significant development" of agricultural land in NPPF terms as the site falls well below the guideline figure of 20ha in order to constitute</p>	<p>provision of a community facility). The SA is too high-level to give consideration to individual planning applications for sites, and giving consideration to supporting documents would result in not all sites being appraised on a consistent basis.</p> <p>SA objective 5: biodiversity and geodiversity does not cover landscape, which is covered separately under SA objective 6: landscape and townscape. Site 59682 receives an uncertain minor negative effect in relation to SA objective 6 as it is located on the edge of a settlement and so there is potential for it to be more easily integrated into existing built development, compared to more rural and isolated sites. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. a landscaping scheme). All adverse effects against this objective are recorded as uncertain, as the actual effects are dependent on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The site receives a significant negative effect against SA objective 9: soil, as it is greenfield and comprises Grade 2 agricultural land. The SA looks at whether sites comprise best and most versatile agricultural land, not whether proposals would or would not represent significant development on best and most versatile agricultural land.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>"significant development". Accordingly, the loss of the site would comply with the NPPF (para 174) in terms of the loss of BMV.</p> <p>The Site was assessed as a 'Minor Positive' against SA14, which relates to providing a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures. The submitted planning application clearly shows that through the efficient use of the Site the land has capacity to deliver 69 residential units towards the 839dpa Standard Method target for the Borough if the allocation were to come forward. The Site is therefore, considered to be a medium size which could be delivered in the first few years of the Plan period. I consider that this would provide more than a minor positive benefit. Thus, the score should be upgraded to 'Positive'.</p> <p>Indeed, I would highlight that Site 59682 scored sufficiently highly in the SA for the previous draft Local Plan to support the proposed released of the Site from the Green Belt in that draft local plan and its allocation for residential development under draft Policy LP25 (t) and (v)."</p>	
45742881	Q8 of the questionnaire	<p>"Review of the Interim Sustainability Appraisal – Site Specific</p> <p>Within the Interim Sustainability Appraisal (at Annex 1) an initial summary of all the present 292 sites promoted to the council has been produced. BDW's Land at Bunyards, Beaver Road being identified with reference 59852, at pages 265 to 267 of the Interim SA.</p> <p>The Consultation Plan makes clear in numerous places the Council have not yet committed to any preferred or proposed site allocations across/from within the 292 promoted sites.</p> <p>Given the importance of the SA process in selecting the most sustainable sites for potential allocation we have reviewed the site-specific SA assessment carried out on BDW's land at Bunyards. Overleaf, we present our assessment of the council's analysis for site ref. 59852.</p> <p>Where the level of constraint has been overstated or misunderstood in the Interim SA, we have presented an appropriately revised score.</p> <p>List of Sites – Appendix B: Table 9 of the Main Local Plan Consultation Document</p> <p>Whilst not a matter the Consultation Document specifically raises a question or invites comments to be made upon, for completeness, we note BDW's site ref. 59852 is included to have a potential yield for 372 homes. As demonstrated by BDW's already submitted planning application, ref. TM/22/00409/OAEA, the land at Bunyards is capable</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>These are 'policy-off' appraisals and so sites are appraised on their physical constraints only, with no consideration given to mitigation. This ensures all reasonable alternative development site options are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). Therefore, the minor negative effect it receives in relation to SA objective 2 is correct.</p> <p>The site's proximity to healthcare facilities and open space is considered separately under SA objective 1: health and wellbeing. The site receives a significant positive effect against this objective, as it is within 800m of existing healthcare facilities, open space and walking paths.</p> <p>The site's proximity to schools is considered separately under SA objective 3: education whereby the site receives a minor positive effect as it is within 800m of at least one primary school (Palace Wood Primary School and Allington Primary School). All effects against this objective are uncertain, as school capacity is unknown.</p> <p>Site 59852 contains green infrastructure assets and they are in the form of trees and thick vegetation, which could be lost as a result of development. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>of delivering up to 435 new homes. This is demonstrated by the application's supporting parameter plan drawings, the concept masterplan, the Design and Access Statement, etc.</p> <p>Accordingly, BDW would encourage the Council to recognise the site's development potential as work on the emerging local plan continues here on."</p>	<p>infrastructure assets dataset includes a wide variety of features which may vary in their value". The significant negative effect is recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. It is important to note that this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). If the site was allocated in the Local Plan via policy containing mitigation measures, it would be appraised on a 'policy-on' appraisal.</p> <p>Site 59852 receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is not located inside of or on the edge of a settlement. However, we note that it is within close proximity to Allington in Maidstone, although boundary data was not available for settlements outside of Tonbridge and Malling. In the next iteration of the SA Report, this will be added to the 'Difficulties and Data Limitations' section. This is a 'policy-off' appraisal and so consideration cannot be given to the site promoter's assessment of landscape and visual amenity impacts, as all sites must be appraised on a consistent basis and information like this is not available for other sites. The same applies in relation to SA objective 7: heritage and the Archaeological Statement and Built Heritage Statement submitted by the promoter.</p> <p>The appraisal of site against SA objective 7: heritage is not misplaced, as the site is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. Again, consideration cannot be given to the site promoter's Heritage Impact Assessment, as this level of detail is not available for all sites and they need to be appraised on a consistent basis.</p> <p>With regard to SA objective 8: water, consideration is not given to the supporting documents submitted by the respondent, which includes a flood risk assessment and drainage strategy. This is due to the fact all sites must be appraised on a consistent basis. It is correct for the SA to acknowledge the fact the site contains land with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively being pursued for agricultural purposes.</p> <p>With regard to SA objective 13: material assets and waste, the site has been appraised in line with the site assessment criteria, which states "The effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed".</p> <p>The site receives a significant positive effect in relation to SA objective 14: housing, as it will deliver 100 homes or more. Sites receive minor positive effects if they will provide fewer than 100 dwellings.</p>
45788993	Q8 of the questionnaire	We disagree with SA of site 59811 as promoting health and wellbeing – would harm Green Belt, surrounded by footpaths and open	Site 59811 receives a minor positive effect in relation to SA objective 1: health and wellbeing because, in line with the site assessment

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>countryside. Agree that on all other measures it would represent a negative impact to the identified strategic assessments. As off-grid, most likely domestic heating oil would be used in any large-scale development which would harm air quality. Sustainability Appraisal - Options 4 and 5 are judged to have significant negative impacts on biodiversity and geodiversity, cultural heritage, landscape character, on greenhouse gas emissions and air quality. They have slight negative impacts on access to facilities and services, on health and wellbeing, and on educational attainment. Whereas Options 1, 2, and 3, are judged to significantly positively impact on encouraging sustainable economic growth, business development, and economic inclusion across the borough, and less of a negative impact on the areas above.</p>	<p>criteria, it is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both).</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Noted.</p>
45793505	Q8 of the questionnaire	<p>"Plan number 59735</p> <p>I am writing to OBJECT most strongly to the proposal to build on the site at Horns Lodge Lane plan number 59735</p> <p>I am a resident.</p> <p>My objections to the proposals are as follows:</p> <p>Objective 1 mentions that it is within 800m of an existing healthcare facility.</p> <p>Medical centres in the area are already at capacity and not taking on any further patients.</p> <p>They cannot sustain any more growth in the area without serious impact upon existing residents.</p> <p>Objective 2.</p> <p>Public transport facilities and roads need to be improved first before any more development</p> <p>Objective 3</p> <p>Whilst new developments can stimulate the provision of more education facilities, this cannot be relied upon. Existing school are already at capacity and cannot sustain any more growth without impacting upon pupils.</p>	<p>It is important to note that the Interim SA Report provides an appraisal of all reasonable alternative development site options, so as to help the Council determine which sites to allocate and not allocate in the Local Plan.</p> <p>The proforma for site 59735 states that it is within 800m of either an existing healthcare facility <i>or</i> an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). Specifically, the site is within 800m of open space and a walking path, not a GP surgery. Regardless, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>Access to public transport facilities is considered separately under SA objective 10: climate change mitigation, not SA objective 2: services and facilities.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the significant negative effect is recorded as uncertain as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 4</p> <p>The location of this site will not directly influence sustainable economic growth or the delivery of noticeable employment opportunities in the area.</p> <p>Objective 5</p> <p>The site also contains an existing green infrastructure asset that could be lost as a result of new development. The effect would be adverse, as it would not be possible to conserve this.</p> <p>Objective 6</p> <p>The site is within 500m of the AONB of the area and would result in the loss of designated open spaces. We have to preserve our GREEN BELT and areas for wildlife.</p> <p>Objective 7</p> <p>The site is located within 250m of a heritage asset. Development would impact adversely upon this.</p> <p>Objective 8</p> <p>The site is either entirely or largely ($\geq 25\%$) within Flood Zone 3, within a 1 in 30 year risk of flooding. There are no provisions to deal with this</p> <p>Objective 9</p> <p>The site is a greenfield site, and contains agricultural land which needs to be preserved. It is also surrounded by GREEN BELT. It should therefore be conserved as such.</p> <p>Objective 10</p> <p>Any development will lead to more greenhouse gas emissions, not less.</p> <p>Objective 11</p> <p>The location of this development will not affect an objective to improve climate change.</p> <p>Objective 12</p> <p>The site is not within 100m of an AQMA. (Air Quality Management Area) so this objective could not be measured.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 8: water, if the site is allocated in the Local Plan, it is very possible that mitigation would be provided through policy wording.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 12: air quality, site 59735 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development.</p> <p>With regard to SA objectives 4: economic growth, 7: heritage, 11: climate change adaptation and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p> <p>The SA is too high-level to consider road width and congestion, and so the Council will commission additional evidence on matters including traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 13.</p> <p>The site is within a minerals safeguarding area and as such should be preserved.</p> <p>Objective 14</p> <p>This substantial amount of housing, cannot be supported by existing infrastructure. It cannot therefore be classed as a suitable site for providing high quality housing of a suitable mix of type and tenure.</p> <p>The development would increase the number of cars at a very narrow part of the A227 which would be hazardous.</p> <p>The A227 is already a major bottle neck in the area for all through traffic from the Borough Green to and from Tonbridge. It a rural road and very narrow in places. A development of this size will only further add to the congestion and pollution in the area.</p> <p>I object most strongly to PLAN 59735"</p>	
45934529	Q8 of the questionnaire	<p>"PLEASE SEE SEPARATE PDF DOCUMENT ATTACHED TO EMAIL SUBMISSION:</p> <p>Objections to Local Plan Sites In & Around Kings Hill_Richard Watters ME19</p> <p>4EG.pdf"</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. 			<p>they receive an uncertain significant negative effect as the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p> <p>Lastly, loss of public open space is addressed under SA objective 1: health and wellbeing.</p>
45876449	Q8 of the questionnaire	<p>"Site 59737</p> <p>This is greenbelt land, effectively an extension/arm of the Platt Woods ancient woodland retaining the separation of rural settlements.</p> <p>SA Objective 1 – It will be 2400m to existing health centre – SIGNIFICANT NEGATIVE</p> <p>SA Objective 3 – To improve education – this is dubious as there may not be sufficient educational places available – SIGNIFICANT NEGATIVE</p> <p>SA Objective 5 – To protect and enhance bio diversity – This cannot be the case as there are badgers, slow worms and a host of other wildlife, trees (ancient woodland) and plants in this area – SIGNIFICANT NEGATIVE</p> <p>SA Objective 6 – To protect and enhance the boroughs landscape and townscape character and quality – The site is located on the edge of a settlement. It is greenbelt land. The purpose of greenbelt is to prevent merging of settlements. Development of this site would merge the rural settlements of Platt and Wrotham Heath. The former Platt school site has sat demolished and vacant for over a year. This type of brownfield site should be developed prior to the development of greenbelt land which can only be removed from greenbelt in exceptional circumstances. – SIGNIFICANT NEGATIVE</p> <p>SA Objective 7 – heritage asset – this must not be harmed – SIGNIFICANT NEGATIVE</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination – The site is greenfield land and contains a significant proportion of ancient woodland and agricultural land – SIGNIFICANT NEGATIVE</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change - Unless it is a net zero development greenhouse gas emissions will be increased as a result the development process.</p> <p>Increased car use on the very busy Maidstone Rd will also result in increased gas emissions/air quality/noise pollution – SIGNIFICANT NEGATIVE</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. The presence of Ancient Woodland is dealt with under SA objective 5: biodiversity and geodiversity.</p> <p>With regard to SA objective 1: health and wellbeing, the proforma for site 59737 states is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). As the site is within 800m of open space and walking path, it receives a minor positive effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, as the site is located on the edge of a settlement it receives an uncertain minor negative effect. This is because there is potential for development on the edge of a settlement to be more easily integrated into existing</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 12: To protect and improve air quality Increased car use on the very busy Maidstone Rd will also result in increased gas emissions/air quality/noise pollution – SIGNIFICANT NEGATIVE</p> <p>SA Objective 13: To protect material assets and minimise waste -The site is within a Minerals Safeguarding Area - SIGNIFICANT NEGATIVE"</p>	<p>built development, compared to more rural and isolated sites. As mentioned already, Green Belt is not considered in SA.</p> <p>With regard to SA objective 7: heritage, the site is already recorded as having a significant negative effect. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 9: soil, the site is already recorded as having a significant negative effect. As stated in the proforma for the site, the uncertainty acknowledges that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). Ancient woodland is considered separately under SA objective 5, as has been taken into consideration in the SA.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. Air quality is considered separately under SA objective 12.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59737 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, the SA acknowledges the fact the site is located within a Minerals Safeguarding Area. In line with the site assessment criteria, it receives an uncertain minor negative effect as a result of this.</p>
38435937	Q8	<p>Many Sites are incorrectly described as being near a Railway Station when the railway is on the other side of the river and there is no nearby bridge (59766, 59851, 59674, 59670, 59678, 59847)</p> <p>59676 - Development on the east side of this site would have a negative impact on the setting of Listed Buildings to the north and south.</p> <p>There would also be a negative impact on the view to and from the North Downs AONB.</p> <p>Development on Sites 59831, 59675, 59763, 59702 would have a negative impact on the setting of the North Downs AONB</p>	<p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>Site 59676 is recorded in the SA as receives a significant negative effect in relation to SA objective 7: heritage, due to the fact it is within close proximity of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Sites 59831, 59675 and 59763 are not within 500m of the AONB, and so they are not considered to have an adverse effect on the setting of the AONB. They do, however, still receive significant negative effects in relation to SA objective 6: landscape and townscape due to the fact they are not located near any settlements in a rural location. Site 59702 is within 500m of the AONB and so receives a significant negative effect in relation to this objective. All adverse effects against this objective are recorded as uncertain, as they depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42718401	Q8	<p>1. Site IDs 59735, 59798, 59801, 59804 and 59835 cover a unique area of open greenbelt land which sits between Tonbridge, Hildenborough and Shipbourne and has many bridleways and footpaths and so is accessed and enjoyed by horse-riders, cyclists and walkers. Development on these sights would have a devastating impact on the openness and permanence of the greenbelt land between Coldharbour Land and Horns Lodge Lane.</p> <p>2. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes. Sites 59801 and 59798 correctly have SA2 assessed as '-' and as such are flagged as least suitable for development. Sights IDs 59735, 59835 and relevant parts of 59804 should be equally scored '-' for SA2 and as such should also be ranked amongst the least suitable.</p> <p>3. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), climate change (SA11) and local air quality (SA12).</p> <p>4. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community.</p> <p>Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>5. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>6. Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>7. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.</p> <p>8. Previous application to move a Dutch barn for stables on to sight IDs 59798, 59835 and equivalent section of 59804 was rejected due to impacting the openness of the greenbelt.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>
42373025	Q8	The suggested distances appear rather arbitrary and could lead to over development near schools and surgeries	Further information on the suggested distances is provided in Appendix D of the Interim SA Report, under paragraph D.2.
42036737	Q8	Appendix D sets out the criteria for assessing the various sites. These are fairly standard criteria use in sustainability appraisals.	Due to the high-level nature of SA, it is common to make assumptions regarding sufficient critical mass to support the delivery of new

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The next step needs to be to assess the existing facilities in the various settlements and to see what benefits new planned development could bring.</p> <p>For instance, Addington currently has a pub, café and community hall. Despite a lot of development over recent years no new facilities have been provided. New planned development could go hand in hand with additional facilities and enhanced public transport provision.</p>	<p>essential services and facilities. It is not, however, within the scope of the SA to specifically assess existing facilities and the benefits new planned development will bring, but this is something that will be considered in the masterplans for larger sites and at planning application stage.</p>
42441729	Q8	<p>Site 59758 is not a 'Fair Accessibility Band'. Accessibility is difficult at both ends of Beech Road, and the roads leading off it. Currently it has a 7.5CWT limit for lorries.</p>	<p>This comments relates to site-specific access, which the SA is too high-level to consider. Site 59758 receives a minor negative effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band.</p>
42318689	Q8	<p>59787 would have a negative effect on carbon emission the bus service is now greatly reduced.</p> <p>59818 a large proportion of this land was used for mineral extraction, Margets Pit, and has been used as waste in fill. I do not believe adequate records of waste used to fill this pit have been kept, therefore the health of potential residents is in question. Again, would have a negative effect on carbon emission the bus service is now greatly reduced and the western 1/2 seems to be more than 400 metres from the bus stop. SA Objective 5 is correct and would certainly result in the loss of green land which is now being farmed. There are areas here which have provided for amphibians and have also been encouraged there from the Peters Village development.</p> <p>59784 & 59832 one part of this site (see 51819), adjacent to the southwest side of the school & Bell Lane is already in the planning process; the remainder of this site I had understood was to provide recreational facilities for Burham residents. The health & wellbeing of existing residents would be significantly, adversely affected. All of this site is at present used for very productive arable land. Again, would have a negative effect on carbon emission the bus service is now greatly reduced.</p> <p>59820 There are areas here which have provided for amphibians and have also been encouraged there from the Peters Village development. There is significant bird life using the mud flats at low tide, increasing the adverse effect on biodiversity.</p> <p>59826 has the potential to completely change the character of an existing settlement, it could more than double the housing & population of Eccles, the existing access roads are country lanes which at peak times already suffer congestion. This site has been left as a natural habitat for many years and now has a significant population of wildlife including migratory nightingales & warblers. Sites chosen by nightingales have a particular biodiversity which takes many years to develop & cannot be recreated instantly by man, these endangered birds would simply have nowhere to go.</p>	<p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Sites 59787, 59831, 59666, 59633, 59826, 59702, 59841, 59787, 59818, 59784, 59819, 59832, 50791 and 597992 receive minor positive effects in relation to SA objective 10: climate change mitigation, as they are within 400m of a bus stop but more than 800m from a railway station.</p> <p>The SA acknowledges in the proforma for site 59818 that it is within a Minerals Safeguarding Area, under SA objective 13: material assets and waste. Therefore, it receives a minor negative effect in relation to this objective. The effect is recorded as uncertain, as it is not clear whether the site would offer a viable opportunity for minerals extraction. If it has already been extracted and now used for landfill as suggested by the respondent, this will be addressed later on in the planning process, as part of any planning application.</p> <p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater. As mentioned already, SA objective 10 (and SA objective 4 for mixed use and employment site options) do not take into consideration the frequency of bus services. Site 59818 receives a minor positive effect in relation to SA objective 10: climate change mitigation, as it is within 400m of a bus stop but more than 800m from a railway station.</p> <p>If a site is already going through the planning application process but is not yet built out, it may still be considered a reasonable alternative development site option and so should be subject to SA. Sites 59784, 59832 and 59819 are all considered reasonable alternative development site options. The SA acknowledges each site as comprising best and most versatile agricultural land, and so they all</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59684 again has the potential to completely change the character of an existing settlement. The Northwest end of this site also includes areas with migratory nightingales.</p> <p>59766, 59851, 59674, 59670, 59678, 59847, 59676, 59684, Objective 10 the access to a railway station would be through Aylesford most likely by car, with no commuter bus service this would be a significant negative.</p> <p>59831, 59666, 59633, 59826, 59702, 59841, 59787, 59818, 59784, 59819, 59832, Objective 10 the bus service is now only school service & 2 days a week, significant negative.</p> <p>59763 Objectives 10, 11 & 12 significant negative this is good arable land.</p> <p>59791, 59792, Objective 10 the bus service is now only school service.</p> <p>59787 I believe this land is allotments so would fail to meet Objective 1</p>	<p>receive significant negative effects in relation to SA objective 9: soil. They are also all within 400m of a bus stop but more than 800m of a railway station, and so receive minor positive effects in relation to SA objective 10: climate change mitigation.</p> <p>Sites 59820 and 59684 already receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Site 59826 already receives significant negative effects in relation to SA objectives 5: biodiversity and geodiversity and 6: landscape and townscape. All effects against SA5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. All adverse effects against SA6 are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Sites 59766, 59851, 59674, 59670, 59678, 59847, 59676 and 59684 all receive significant positive effects in relation to SA objective 10: climate change mitigation, as they are within 800m of a railway station. This is in accordance with the site assessment criteria.</p> <p>Arable land is dealt with under SA objective 9: soil, which covers the Agricultural Land Classification. Site 59763 is recorded in the SA as receiving a significant negative effect in relation to SA objective 9, as it comprises Grade 1 and/or 2 agricultural land.</p> <p>Site 59787 is not recorded as comprising allotments, in the GIS data provided to inform the SA at this stage.</p>
39036065	Q8	<p>Site 59740 Broadwater Farm</p> <p>Due to the character limit on responses via this platform I have submitted my full answer to this question via email. Overall I believe the TMBC's published evaluation of this site against the Sustainability Assessment Objectives, although not particularly positive, actually understates the negatives and over-states the positives for many Objectives. This area is rich in heritage, cultural, landscape, community and farming assets. Areas of the site are protected by Listed Building status, Conservation Area status, KCC Ancient Monument guidance and Quiet Lane designations. The farmland of the site is also, overall, better quality than "best and most versatile". TMBC are in possession of a robust bank of data to suggest this site is unsuitable for large scale developments and I believe this site should not go forward in the Local Plan process.</p>	<p>The SA utilises a precautionary approach and is therefore not overly-optimistic in its appraisal of the Regulation 18 Local Plan. Site 59740 is recorded in the SA as having a significant negative effect in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. Site 59740 is also recorded as having a significant negative effect in relation to SA objective 9: soil, as it comprises best and most versatile agricultural land. Please refer to the proforma for this site, which presents the effects it is likely to have in relation to each of the SA objectives.</p>
25400737	Q8	<p>"59708</p> <p>Questions posed are not relevant to small developments (this is for three houses) and therefore the assessment is not helpful. In principle a small development may work in this area however there are</p>	<p>With regard to site 59708, the SA is too high-level to give consideration to site-specific access points and road safety.</p> <p>Site 59840 meets the definition of brownfield land. The SA acknowledges that site 59840 is within the AONB and so receives a significant negative effect in relation to SA objective 6: landscape and townscape. All adverse effects against this objective are recorded as</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>significant access issues (private land) and safety concerns due to close proximity to a successful preschool and well utilized footpath."</p> <p>"59840</p> <p>The Parish Council does not agree that the whole of this site qualifies as brownfield land. The eastern part of the site has derelict buildings and structures, and we agree that this is brownfield and appropriate development might be considered here. Although parts of the remainder of the site were subject to landfill, this has to a certain extent now blended into the landscape and the previous use of the site should not be used to justify extensive built development over the whole site. Development of this site would also be highly visible within the AONB.</p> <p>"59691</p> <p>Agree with assessment, not a sustainable site"</p> <p>"59863</p> <p>Agree with assessment, not a sustainable site"</p> <p>"59864 and 59866</p> <p>Part of this site is in the parish of Birling however this is not acknowledged in the consultation. The site is adjacent to an area of Special Scientific Interest, highly visible from AONB and is Grade 2 farmland."</p>	<p>uncertain, as effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Sites 59864 and 59866 receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity due to the fact they are within close proximity to SSSIs, contain a Local Nature Reserve and Local Wildlife Site, and are within close proximity of numerous areas of Ancient Woodland and Local Wildlife Sites. Site 59866 also contains an area of Ancient Woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. The SA also acknowledges that both sites comprise Best and Most Versatile Agricultural Land.</p>
42831905	Q8	<p>See separate statement. In summary, we have identified inconsistencies of approach to a number of sites at Hadlow within the Regulation 18 SA. These inconsistencies relate to sites 59647, 59635 and 59853 (and the duplicate of the latter, 59857). In addition, we have identified inconsistencies relating to a number of SA scores for site 59842 compared with other sites, as well as inaccurate/misleading assessments for the wider site. In particular the results of SA Objectives 2, 7 and 9 are demonstrably incorrect. We append our full assessment to our letter attached to an email submitted as part of these representations.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). As sites 59647 and 59635 are placed within the Good Accessibility Band in the Urban Capacity Study, they both receive negligible effects in relation to this objective. As sites 59853, 59857 and 59842 fall within the Fair Accessibility Band in the Urban Capacity Study, they receive minor negative effects in relation to this objective.</p> <p>With regard to SA objective 7: heritage, also sites listed are within 250m of numerous other heritage assets, as recorded in the Kent Historic Environment Record. It is therefore correct that all sites receive significant negative effects in relation to this objective. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 9: soil, site 59842 receives an uncertain significant negative effect whereas sites 59647 and 59635 receive significant negative effects. This is because site 59842 contains a significant proportion of Grade 3 agricultural land but it is unknown</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			whether it is Grade 3a (high quality) or Grade 3b (not classed as high quality) agricultural land, hence the uncertainty. Sites 59647 and 59635 on the other hand contain a significant proportion of Grade 1 and/or 2 agricultural land. Grades 1, 2 and 3a are considered best and most versatile agricultural land. Sites 59853 and 59857 receive significant positive effects in relation to SA objective 9: soil, as they comprise brownfield land.
42832225	Q8	<p>The following site numbers are sites containing or adjacent to Ancient Woodland. The Woodland Trust would expect ancient woodland to be identified in the sustainability appraisal, however there is simply general reference made to "internationally or nationally designated biodiversity or geodiversity sites".</p> <p>59406 59424 59425 59506 59521 59524 59599 59603 59612 59624 59627 59630 59634 59646 59653 59655 59665 59668 59669 59676 59679 59684 59690 59712 59722 59723</p>	<p>Ancient Woodland has been considered in the SA, under the SA objective 5: biodiversity and geodiversity. However, it has been covered under the term 'nationally designated sites', despite the fact it is not a national designation. Therefore, the SA has correctly acknowledged when a site contains or is within close proximity of Ancient Woodland. In the next iteration of the SA Report, the site assessment criteria and proformas for each site will clearly distinguish between nationally designated sites and Ancient Woodland.</p>

42442561	Q8	<p>Site 59797 and 598000 Development on any of the golf course would result in the loss of golf course and loss of businesses that operate it (which provides employment for local residents).</p> <ul style="list-style-type: none"> • Impact of Wildlife as Golf Course is designated by the Environment Agency as a Local Wildlife Site as part of the nature conservation sites in their screening report for Nature and Heritage Conservation in 2019. • Area is part of Green Belt • Approval for Kings Hill development was based upon 40% of the area remaining green space with the golf course an agreed amenity. • Loss of Agricultural land • Development risks impacting designated Historic Woodland adjacent to site. • Loss of recreation facilities for golfers, and public footpaths used by walkers, dog walkers, and cyclists would adversely impact health and well-being of local residents in contradiction to SA Objective 1 • Road Infrastructure cannot support current traffic demands with bottlenecks regularly occurring on A228 and no easy options to address 	<p>Sites 59797 and 59800 receive uncertain significant negative effects in relation to SA objective 1: health and wellbeing, as they contain Kings Hill Golf Course. SA objective 4: economic growth relates to the delivery of employment opportunities. Both sites are expected to have a negligible effect in relation to SA objective 4 as "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. Having said that, the promoter of this site has not declared that it contains an existing business.</p> <p>The sites receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity, as they are within 250m of Kings Hill Golf Course, Cattering & Hoath Wood Local Wildlife Site and area of Ancient Woodland. They also contain green infrastructure assets. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Both sites receive significant negative effects in relation to SA objective 7: heritage, as they are within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as effects depend on factors such as the design of development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA is too high-level to consider traffic levels and bottlenecks.</p>
38882465	Q8	<p>The assessment is not balanced. Building on car parks in West Malling can impact the vibrancy of the village with more residents shopping and socialising outside the Borough in Maidstone, Tunbridge Wells and Bluewater. This could lead to economic decline of that area.</p> <p>Hoath Wood has been designated as brownfield even though much is ancient woodland protected by TPOs.</p>	<p>The purpose of SA is to assess all reasonable alternative development site options. Site 59634 contains Hoath Wood and so receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Site 59634 is incorrectly recorded as comprising brownfield land. In the next iteration of the SA Report, it will be recorded as comprising greenfield land and so will receive a different effect in relation to SA objective 9: soil.</p>
42616929	Q8	This is in relation to 59608. It is the only one I really feel I can comment on as I know that site. This is for information. It is a site that	The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>is currently a nursery. This is a going concern and an active business (deliveries come to it and suppliers pick up plants from it regularly). I am surprised that this is being considered as it seems to be a business that can continue and reflects the benefits of economic growth and potential to grow further. It seems that this site is an active and sustainable economic site with potential for employment opportunities, that offers in itself important biodiversity as a green open space close to a heritage asset and AONB.</p> <p>The plan for 37 houses is quite intensive. One of the biggest issues is access. The access in the road is limited; in several places it is only a single track including in a significant single track stretch by the entrance to the site on either side which does not allow for large lorries to go through either due to it being so narrow.</p> <p>The site is opposite a nature reserve –preserving a particular highly specialised flora which could be disrupted by pollution from cars and which depends on a particular water system. https://www.kentwildlifetrust.org.uk/nature-reserves/ivy-hatch .</p> <p>I understand there is some sort of deed of covenant on either the property or the land (perhaps to do with the property being part of the nursery).</p> <p>The survey notes it is possible to get to a bus stop. However, the bus transport is incredibly limited and at the moment the buses to tonbridge were cut over the summer but have had a reprieve from being cut altogether from its one school service and one hourly service that runs for only half the day – there are very limited ways to get to any school (we experience this problem trying to get our children to secondary schools without buses). The route to sevenoaks I think only runs about 2x a day. It would be difficult to see how anyone could live there without one or two cars as there is no other reliable access to transport nor any amenities near by (it being incredibly hilly makes cycling difficult for any but the really fit). It is near a heritage asset (Ightham Mote) which also means congestion is difficult to manage at one end of the road. It is very close to AONB, in itself represents a level of biodiversity and open natural spaces – there are woodpeckers and birds of prey that live at that nursery site as well as the nature reserve opposite. When the main road was shut for repairs due to a sink hole we experienced quite how unable our road was to cope with a lot of traffic.</p> <p>What I assume is desk-based research into the site does in general reflect some recognition of the difficulties of the site including those listed above. The poor accessibility is noted for example. It notes it is nearish some amenities - The primary school is some way away - (my children went there, and in snow we walked and it took about 45 mins with little children) so again cars are necessary; that school is on a site where it would be impossible to build more. Borough Green medical practice is a drive away – certainly not walkable - and currently under so much pressure we do not really get to see a doctor any more. There are aspects noted that would need further exploration – water</p>	<p>directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. Having said that, the promoter of this site has not declared that it contains an existing business.</p> <p>Site 59608 is incorrectly recorded as containing a green infrastructure asset when it does not. Therefore, in the next iteration of the SA Report it will receive a minor negative effect instead of a significant negative effect, with some uncertainty. The minor negative effect acknowledges the fact the site is within 250m to 1km of an SSSI, Local Wildlife Site and Ancient Woodland</p> <p>The SA correctly acknowledges the site as being within 250m of a heritage asset, as recorded in the Kent Historic Environment Record. Therefore, it correctly receives a significant negative effect in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA correctly records the site as within the AONB and for this reason, it receives a significant negative effect in relation to SA objective 6: landscape and townscape. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will also depend on the final design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA is too high-level to consider road width and access to the site.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>The SA is a desk-based, strategic assessment. The site was recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band and for this reason, the site receives a significant negative effect in relation to SA objective 2: services and facilities.</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>for instance due to the brook and areas of water that runs through the nature research that could not be disturbed.</p> <p>SA objective no 9 may be something I am not really understanding but while this is a brownfield site it is a nursery so that might impact the soil assessment – it seems unlikely that building over what is a natural open green-filled space would mean less contamination (or lead to improved soil). This is a space that is natural and full of growing plants. It does in itself contribute positively to biodiversity as it is a green and thriving landscape – bringing housing would actually be detrimental to the current situation around climate change (SA 11); while SA 5 does acknowledge this to some extent it is difficult to see how housing here, even with good landscaping, could improve this.</p>	<p>the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p>
42501633	Q8	<p>Whilst the 14 Sustainability Assessment criteria for each site put forward in the local plan on the face of it makes sense, I do not believe that the assessment of each site against these criteria are accurate or reflect the true position of each site.</p> <p>Sites 59797 & 59800</p> <p>If development were to be approved on either of these two sites it would result in the loss of the Kings Hill Golf Course, which would impact the businesses that operate it, and impact local residents who are employed by them.</p> <p>The approval for Kings Hill development was based upon a 40% area remaining green space with the golf course specifically defined as an agreed amenity</p> <p>The Golf Course is designated by the Environment Agency in their 2019 Nature and Heritage Conservation report as a Local Wildlife Site for nature conservation. This would be lost if development is permitted here.</p> <p>This area provides recreational facilities for golfers, walkers, cyclists and horse riders as there are a number of public footpaths and bridle ways that cross the golf course or run around its boundary. This would adversely impact the health and well being of residents in contradiction of SA objective 1.</p> <p>Development of these sites risks impacting designated Historic Woodland adjacent to the sites.</p> <p>The use of Site 59800 would result in the loss of prime agricultural land.</p> <p>The Road Infrastructure (especially A228 from Kings Hill to Mereworth) cannot support current traffic demands with bottlenecks regularly occurring.</p> <p>Medical facilities and schools cannot support existing demand.</p> <p>Site 59761.</p> <p>This site is designated Ancient Woodland which would be lost if it was developed and is part of the green belt.</p>	<p>Sites 59797 and 59800 receive uncertain significant negative effects in relation to SA objective 1: health and wellbeing, as they contain Kings Hill Golf Course. SA objective 4: economic growth relates to the delivery of employment opportunities. Both sites are expected to have a negligible effect in relation to SA objective 4 as "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. Having said that, the promoter of this site has not declared that it contains an existing business.</p> <p>The sites receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity, as they are within 250m of Kings Hill Golf Course, Cattering & Hoath Wood Local Wildlife Site and area of Ancient Woodland. They also contain green infrastructure assets. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Both sites receive significant negative effects in relation to SA objective 7: heritage, as they are within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as effects depend on factors such as the design of development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA is too high-level to consider traffic levels, bottlenecks, road width and traffic levels, and so the Council will commission additional evidence on matters including transport.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		The road infrastructure of the A228 next to this site cannot support existing traffic demand, the road is narrow and has blind spots and there are regular accidents on this stretch. Access to this site for dwellings (which can only be achieved from A228) would create further major issues on the A228.	<p>objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to school capacity, the site assessment criteria for SA objective 3: education in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>
42635169	Q8	<p>Site #59699.</p> <p>1. The SA Objective 1 appears to be based on out-of-date information. Since the West Mallong GP surgery closed a couple of years ago, the nearest GP surgery is over 2kms away (as the crow flies). Walking to that surgery is not practical; it would involve walking along roads with no footpaths where heavy lorries operate (Teston Road) and crossing a main Trunk Road with no pedestrian crossing facilities.</p> <p>2. Access to and egress from the site would cause critical stress on existing road infrastructure. It should be noted that Fartherwell Road is no more than a single track country lane, often flooded, throughout its length, with a few passing places, that East Street, Norman Road and Sandy Lane are single lane roads with no possibility of widening (and the present cause of congestion at East Street as it approaches West Mallong, especially at school times), and the Offham Road/Teston Road junction sightline is significantly adversely affected by bends and the speed of vehicles.</p> <p>3. The development of the land in the way set out would cause harm to the Quiet Lane scheme, be on designated green belt land and involve the loss of significant Grade 1/2 agricultural land.</p>	<p>The GP surgeries data used to inform the Interim SA Report included West Mallong GP surgery. However this GP surgery is now closed. In the next iteration of the SA Report, the proformas for the sites affected will be updated.</p> <p>The SA is too high-level to consider specific road networks.</p> <p>In the SA, site 59699 receives a significant negative effect (as part of a mixed effect) against SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59699 also receives a significant negative effect in relation to SA objective 9: soil, as it is greenfield and contains best and most versatile agricultural land.</p>
42651073	Q8	<p>1. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes, which does not appear to be credible or logical.</p> <p>2. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>3. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community. Development of these areas for</p>	<p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>The SA is too high-level to give consideration to traffic, and so the Council will commission additional evidence on this. Air pollution is covered under SA objective 12, which looks at the proximity of sites to Air Quality Management Areas.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>4. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.</p>	<p>as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA is high-level and therefore does not give consideration to pipelines. This is something that will instead be considered at planning application stage if the site is allocated.</p>
42675169	Q8	<p>1. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes, which does not appear to be credible or logical.</p> <p>2. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>3. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community. Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>4. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>5. Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>6. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.</p>	<p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>The SA is too high-level to give consideration to traffic, and so the Council will commission additional evidence on this. Air pollution is covered under SA objective 12, which looks at the proximity of sites to Air Quality Management Areas.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. 42720865	Q8	<p>1. Site IDs 59735, 59798, 59801, 59804 and 59835 cover the same and/or largely overlapping areas of land and yet have numerous different assessment outcomes, which does not appear to be credible or logical.</p> <p>2. For site IDs 59735, 59798, 59801, 59804 and 59835 the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>3. Horns Lodge Lane, which abuts site IDs 59735, 59798, 59801, 59804 and 59835 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community. Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p> <p>4. Site IDs 59735, 59798, 59801, 59804 and 59835 show minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>5. Development of site IDs 59735, 59798, 59801, 59804 and 59835 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>6. A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site IDs 59735, 59798, 59804 and 59835 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.</p>	<p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>The SA is too high-level to give consideration to traffic, and so the Council will commission additional evidence on this. Air pollution is covered under SA objective 12, which looks at the proximity of sites to Air Quality Management Areas.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA is high-level and therefore does not give consideration to pipelines. This is something that will instead be considered at planning application stage if the site is allocated.</p>

42657601	Q8	<p>Commenting on Site 59811</p> <p>1]The site is not near any existing play area or sports facility. The nearest Doctors Surgery is in Hadlow. That is several miles from the closest point of the development to Hadlow.</p> <p>2] As observed the proposed site has no accessibility. The area is surrounded by three narrow lanes with no verges, street lights or bus</p>	<p>The proforma for site 59811 states that it is within 800m of either an existing healthcare facility <i>or</i> an existing area of open space/walking and cycle path/play area/ sports facility (but not both). In this instance, the site is within 800m of numerous open spaces and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>services. The traffic is currently too busy and too fast for the size of the roads.</p> <p>3]There are 3 modest size primary schools nearby. The closest is about 4km. away from the site. Again, the roads are inadequate to deal with increased traffic and there are no bises as previously mentioned. The lanes are too narrow to safely accommodate buses and in winter too dark and dangerous for drop off etc. The secondary schools are much further away and again spaces, transport links and safety should be major red flags.</p> <p>4]Agree, it will not</p> <p>5] Some of this statement is true, it is an area of designated biodiversity and green belt. There is an array of wildlife that resides in and lives in this food-providing part of the Borough. As well as fields there are ancient hedgerows and woodlands on this site.</p> <p>6]It would indeed result in the loss, forever of a designated open space.</p> <p>7] Why designate an asset as a Heritage asset and then build all around it.</p> <p>10] Partly agree although I would say it is a major negative</p> <p>14] The document states 100 dwellings or more. The site plan suggests 2000+. The Parish of West Peckham is very small and very rural. Its identity would be lost by even a small settlement being developed.</p>	<p>The SA is too high-level to consider site-specific access points, road width and street lighting. Proximity to bus stops is considered under SA objective 10: climate change mitigation. As the site is more than 400m from a bus stop and cycle route, and more than 800m from a railway station, it receives a minor negative effect.</p> <p>Access to schools is considered under SA objective 3: education. As the site is more than 800m from a primary and secondary school, it receives a minor negative effect in relation to this objective. The effect is recorded as uncertain, as the provision of new residential development could stimulate the provision of new schools and/or school places.</p> <p>The site receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>With regard to SA objective 6: landscape and townscape, the site receives a significant negative effect as it is not located near any settlements in a rural location. The effect is uncertain, as its dependent on the design, scale and layout of development. The site will not result in the loss of any designated open space.</p> <p>With regard to SA objective 7: heritage, the SA acknowledges the site's proximity to heritage assets.</p> <p>The site receives a minor negative effect in relation to SA objective 10: climate change mitigation, in accordance with the site assessment criteria.</p> <p>With regard to SA objective 14: housing, the threshold for distinguishing between significant and minor effects is 100 dwellings. Therefore, any site that will provide 100 dwellings or more receives a significant positive effect in relation to this objective.</p>
42705601	Q8	<p>Shipbourne - sites 59779, 59825, 59827</p> <p>General points applicable to all three sites:</p> <p>1. Green belt and AONB: All three sites are in the Green Belt ("GB") and the Kent Downs Area of Outstanding Natural Beauty ("AONB"), and on that basis alone should not appear in the local plan. As a result, if any of these sites were developed, they would be in conflict with established planning policy and conflict with the Kent Downs AONB Management Plan which sets out how "to conserve and enhance natural beauty" in accordance with the Countryside and Rights of Way (CROW) Act 2000, rather than build over it.</p> <p>2. Conservation Area: Furthermore, Shipbourne is an important heritage village, with the Shipbourne Conservation area and the adopted Shipbourne Design Statement setting out what is special and important about Shipbourne, and how vulnerable it is to development. One of these sites is within the conservation area and the other two on the very edge of the conservation area.</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. None of the sites appraised have yet been allocated.</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>3. Deliverability: All three sites are unsustainable and undeliverable unless huge changes are made to the current policies covering conservation and enhancement of this AONB village in the GB. Development of any of these sites would have a huge impact on the character and landscape of this small village which has no services other than the small primary school (which is already oversubscribed).</p> <p>4. Lack of appropriate transport infrastructure: There are not sufficient transport links to Shipbourne to accommodate housing growth (the bus stop mentioned in relation to site 59779 is only used at school times). It would be more appropriate to build where existing transport links exist.</p> <p>5. Lack of appropriate amenities: Shipbourne does not have any shops or other necessary amenities to accommodate growth (there is only a small primary school and a public house – no shops of any description). This would result in more car journeys. It would be more appropriate to build where shops and the other amenities of daily life are available.</p> <p>6. Lack of appropriate utility infrastructure: The village is not on the gas network so the current electricity grid would need upgrading to sustain any new development in these sites. Sewerage is also under pressure and overflows are already experienced as mentioned on site 59827 below. Current water utilities are inadequate to accommodate new development.</p> <p>7. Impact on nature: The area is haven for nature (deer, badger, hawks etc) and building will dislocate the natural environment.</p> <p>Further points applicable to specific sites in Shipbourne Site 59779</p> <p>In addition to the general points above:</p> <ul style="list-style-type: none"> • Poor drainage on this site, with waterlogging/flooding. • It is in my view incorrect to view the school as an “uncertain minor positive” in relation to SA objective 3, as we understand from the parish council that it is already oversubscribed with no prospect for expansion. This should be a negative. • It is incorrect, in our view to score this site as a minor positive in respect of SA objective 10. The bus stop referred to only provides a school service. As a result, any new residents would be dependent on their cars – with an attendant increase in greenhouse emissions. This in our view should be a significant negative. • For the same reason SA objective 11 should be scored a significant negative, and SA objective 12 at least a minor negative. • This site is directly opposite the school and the dangerous junction of Back Lane with the A227 (potentially causing danger and congestion at pick up and drop off times). 	<p>The SA acknowledges the fact that all three sites are located within the AONB and for this reason, all receive significant negative effects in relation to SA objective 6: landscape and townscape. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA acknowledges the Conservation Area and so all three sites receive significant negative effects in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>These are 'policy-off' appraisals and so consideration is not given to mitigation (e.g. conservation and enhancement of the AONB). This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>Access to services and facilities is considered under SA objective 2: services and facilities, informed by the Urban Capacity Study (July 2022). Access to schools is considered under SA objective 3: education. All three sites are located within 800m of a primary school and so receive minor positive effects in relation to SA3. There is some uncertainty, however, as school capacity is unknown. The site assessment criteria in Appendix D of the Interim SA Report specifically state "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown. specifically states</p> <p>The SA is too high-level to give consideration to the gas network, electricity grid, pipelines and the sewage network, but these are things that will instead be considered at planning application stage if the sites are allocated.</p> <p>Impacts on nature have been addressed under SA objective 5: biodiversity and geodiversity. All sites receive significant negative effects in relation to this objective. The effects are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>• We are also informed by the parish council that there is an active covenant on this land restricting development. It is therefore undeliverable.</p> <p>Site 59825</p> <p>In addition to the general points above:</p> <ul style="list-style-type: none"> • This site is in the conservation area. • As with site 59779, it is in our view incorrect to view the school as an “uncertain minor positive” in relation to SA objective 3, as we understand from the parish council that it is already oversubscribed with no prospect for expansion. This should be a negative. • Similarly, it is incorrect, in my view to score this site as only a minor negative in respect of SA objective 10. New residents would be dependent on their cars – with an increase in greenhouse emissions. This, in our view, should be a significant negative. • For the same reason SA objective 11 should be scored a significant negative, and SA objective 12 at least a minor negative. • In our view it is not correct to score SA objective 4 as a minor positive. In our view negligible is the correct score, as it would be wholly inappropriate in a village of this size, in the GB and AONB, to build industrial or retail opportunities for “economic growth” or “business development” opportunities. <p>Site 59827</p> <p>In addition to the general points above:</p> <ul style="list-style-type: none"> • Importantly, we understand that there are land drainage issues and a watercourse runs along the southern boundary. • The site has issues with sewage overflow. • As with site 59779 and 59825, it is in our view incorrect to view the school as an “uncertain minor positive” in relation to SA objective 3, as we understand from the parish council that it is already oversubscribed with no prospect for expansion. This should be a negative. • Similarly, it is incorrect, in our view to score this site as only a minor negative in respect of SA objective 10. New residents would be dependent on their cars – with an increase in greenhouse emissions. This in our view should be a significant negative. • For the same reason SA objective 11 should be scored a significant negative, and SA objective 12 at least a minor negative. • In our view it is incorrect to say that the significant negatives in respect of SA objectives 5, 6 and 7 should only be “uncertain”. Rather, they are “certain” significant negatives – with this site bordering Dene Wood and there being no cost-effective remediation that could maintain the biodiversity, landscape, character and cultural heritage. 	<p>Sites 59779 and 59827 are recorded as having significant negative effects in relation to SA objective 8: water, as they contain land with a 1 in 30 year risk of surface water flooding. Site 59827 also contains a watercourse and this is recorded in the SA. Site 59825 receives a negligible effect in relation to SA objective 8, as it is not at risk of flooding.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59825 is not within 100m of an AQMA.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. As sites 59779 and 59827 are proposed for residential development, they receive negligible effects in relation to SA objective 4. Site 59825 is proposed for mixed-use development and so receives a minor positive effect, as employment development will be delivered on-site.</p>
42721793	Q8	For each of Site 59803, Site 59845, Site 59728 and Site 59700 the document states	Although sites 59803, 59845, 59728 and 59700 are within fairly close proximity of the AQMA mentioned, they are just over 100m from it.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>"SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>The site is not within 100m of an AQMA."</p> <p>This is incorrect. The site is within 100m as per Drawing DD / 343/3 (Management area No 3 order 2005) This AQMA has the highest levels in the Borough.</p> <p>The development of these sites will significantly increase the already very high levels of congestion on this cross roads every morning and evening with mile+ long tail backs in each direction (check Google traffic historic maps for evidence of this) as well as adding to and expanding the area of air quality concern.</p> <p>It is also the case that there has very recently been the addition of 55 homes in the Meadow View Court development in the centre of the Orpines.</p> <p>Since that development there has been a significant increase in flooding along the main road blocking half or at times the whole road. Throughout this area there are a series of complex water courses and such a major development will lead to much higher levels of water coming down the slope of the valley to cause flooding at the junction.</p>	<p>As such, they receive negligible effects in relation to SA objective 12: air quality.</p> <p>None of the sites have been identified as being at risk of flooding, including surface water flooding.</p>
44459553	Q8	<p>In relation to site references [59637], [59638] and [59686] – No. The ISA has been undertaken in insufficient detail and has not considered measures to offset impacts. Specific comments are made in relation to ISA objectives 5 (bio and geodiversity), 6 (land and townscapes), and 8 (water).</p> <p>In relation to site reference [59615] – No. The ISA has been undertaken in insufficient detail and has not considered measures to offset impacts. Specific comments are made in relation to ISA objectives 5 (bio and geodiversity), 6 (land and townscapes), 7 (cultural heritage) and 8 (water).</p>	<p>It is correct that the Interim SA Report has not considered measures to offset impacts, as this ensures all sites are initially appraised on a consistent basis (i.e. 'policy-off'). If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>
42829313	Q8	<p>KWT has not had the capacity to undertake a detailed assessment of all site allocations included within Annex 1. We have provided commentary below on a number of major development sites, focusing solely on SA Objective 5: To protect and enhance biodiversity and geodiversity.</p> <p>There are number of sites proposed around Eccles and Holborough, some of which KWT are commenting on at planning application stage and/or liasing with the developer regarding impacts. These include (but is not limited to) 59851, 59847, 59684, 59826 and 59864. Cumulative impacts of these schemes on sensitive wildlife sites should be considered. It mitigating for these proposals it is recommended that relevant policies require the long term management of the Local Wildlife Sites in this area.</p> <p>We feel that the presumed uncertainty of negative impacts is misleading. Where designated sites fall within the red line boundary for a site then negative impacts should be assumed. Without further detail being included within the Site Assessments it is not reasonable</p>	<p>All negative effects against SA objective 5: biodiversity and geodiversity are recorded as uncertain. As outlined in the site assessment criteria contained within Appendix D of the Interim SA Report, "Development sites that are within close proximity of an international, national or locally designated biodiversity or geodiversity site have the potential to affect the biodiversity or geodiversity of those sites/features, e.g. through habitat damage/loss, fragmentation, disturbance to species, air pollution, increased recreation pressure etc. Conversely, there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>to assume that impacts will be avoided or mitigated. We advise that designated wildlife sites are excluded from the red line boundaries, however these could be included within a wider blue-line boundary for the express purpose of bringing the Local Wildlife Site into long term management. It is essential that a substantial buffer zone be included from the outset of scheme design.</p> <p>This presumed uncertainty of negative impacts is a common thread that runs throughout the assessment of sites. Other examples include the assessment for 59861. Dog Kennel Wood Ancient Woodland are uncertain at this stage. Further detail is required to decrease the certainty of a negative impact on biodiversity, and would require the east of the site to be allocated through this plan for biodiversity enhancements. Without such commitments there will be severe fragmentation of habitats and isolation of this ancient woodland.</p> <p>In addition, KWT would be very concerned is 59646 were progressed due to the presence of East Peckham Ponds LWS which forms part of a biodiversity corridor along the River Medway. It is not considered that the negative impacts can be assumed as "uncertain" at this stage. This site would represent a prime location for the creation of an off-site BNG scheme.</p> <p>The comments made above apply to a number of other sites and we suggest that all assessments under Objective 5 are re-considered on the basis that mitigation of impacts cannot be assumed.</p>	<p>would be determined once more specific proposals are developed and submitted as part of a planning application".</p>
42606657	Q8	<p>Site 59611. The inclusion of this vacant, brownfield, previously developed site, sandwiched between the A20 and M20, as a potential employment site is welcomed. However, its assessment within the Sustainability Appraisal against the following five of the SA Objectives should be reconsidered:</p> <p>SA Objective 4 - An industrial/warehousing allocation on the former Stocks Nightclub and Spring Villas site would contribute towards diversifying employment opportunities, increasing employment, encouraging economic growth, reducing levels of unemployment and improving physical accessibility to jobs. It therefore satisfies all of the sub-objectives of SA4.</p> <p>The reason given in the Interim Sustainability Appraisal for only attributing a 'minor positive' to the site is because it is not within 800 m of a train station or within 400 m of a bus stop. What the scoring criteria fails to take into account is that there are different types of employment, which have different locational criteria.</p> <p>Whilst it is right for high density office uses to be directed to town centres and to sites in close proximity to public transport nodes, this vacant, scrubland site is being promoted for industrial/warehousing, not offices. The NPPF only seeks to apply such a sequential approach to applications for main town centre uses, such as offices (paragraph 87). It does not apply to industry/warehousing, for which its proximity to the strategic road network, and the motorways in particular, should enable the site to score more highly.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 4: economic growth, the site receives a minor positive effect instead of a significant positive effect because it is smaller than 5ha. It also receives a negligible effect, as it is not within 800m of a train station or 400m of a bus stop or cycle path. SA objective 4 appraises the distance employment sites are to train stations, bus stops and cycle paths, as this gives an indication of how accessible sites are to the local workforce. If a site is within close proximity of a railway station, that it will be easier for workers to reach the site.</p> <p>The SA takes into consideration air quality and due to the fact the site is not within 100m of an Air Quality Management Area, it receives a negligible effect in relation to SA objective 12: air quality.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity because it contains a green infrastructure asset in the form of woodland and thick vegetation. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The fact that industrial/warehousing units could be accessed on this site without the need for HGVs to travel through towns, where they would cause congestion and potential air quality problems, should be taken into account and should be given just as much, if not more weight, than proximity to public transport. The different characteristics of warehousing is also recognised in the NPPG. Whilst most of the guidance is focused on the big strategic facilities, it states that "the logistics industry plays a critical role in enabling an efficient, sustainable and effective supply of goods for consumers and businesses, as well as contributing to local employment opportunities, and has distinctive locational requirements that need to be considered" (my emphasis) paragraph: 031 Reference 2a-031-2019 0722.</p> <p>Currently, the Borough Council is not planning specifically for industry/warehousing and is treating all employment generically. That is not appropriate here. The Council should have regard to its up-to-date Economic Development Needs Study, August 2022. It advises the Council that the largest employment sector in Tunbridge & Malling in 2021 is wholesale and transport. It goes on to identify particular growth opportunities for logistics in the Borough.</p> <p>The Economic Development Needs Study concludes that over the plan period there is a need for 292,940 m² of new industrial and storage/distribution development. This compares to just 53,320 m² of new office space (18% of the total employment requirement). Therefore greater weight should be given to the location requirements for industrial/distribution space, for which this brownfield site (ref: 59611) is ideally suited.</p> <p>It is worth noting that the Borough Council has allocated the Invicta Business Park and Marley site immediately opposite, as employment land under Policy E2 and therefore the Council has already recognised that this is an appropriate location for employment development.</p> <p>In the light of the above, the site should therefore be reclassified as having a 'significant positive' (++) in respect of the economic growth objective.</p> <p>SA Objective 5 - The Sustainability Assessment states that the site contains an existing green infrastructure asset that could be lost as a result of new development and therefore under objectives set out under SA5, the site is classified as an "uncertain significant negative".</p> <p>Having regard to the criteria, the former Stocks Nightclub and Spring Villas site is previously developed land that is not designated for nature conservation, nor are there any known rare endangered species and the landscaping belt along the M20 would remain unaffected. The site does not provide any public access for people to access wildlife or open green spaces. The main central part of the site, which would be subject to the redevelopment, could not be regarded as a green 'asset'. This is derelict scrub land that is vacant and unutilised, with limited biodiversity value. Through redevelopment, there is an opportunity to enhance the biodiversity value of the site, and therefore far from being an "uncertain significant negative", the</p>	<p>Although the respondent states that there is an opportunity to enhance the biodiversity value of the site, this is a 'policy-off' appraisal that does not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>land offers the opportunity to make a positive contribution. The site should therefore be reclassified as a 'minor positive' (+) in respect of biodiversity in the Sustainability Assessment.</p> <p>PLEASE NOTE: How a redevelopment of Site 59611 for industrial/warehousing would sit with objectives SA6, SA7 and SA10 is provided separately, due to the character limit imposed here.</p>	
42768289	Q8	<p>Site 59825: Shipbourne primary school has no capacity and therefore SA objective 3 is significant negative not minor positive. Please explain the employment development in SA4: this is not the case.</p> <p>Site 59827: almost every site in Shipbourne would be within 800m of the common; this is already overused with hundreds of cars parked round it on weekends. SA objective 3 has the same point about Shipbourne primary school and is therefore a double negative. nb SA 4 is marked neutral for this site but positive for the site above. Given their proximity this is surprising. There is no "sustainable economic growth" because there is no employment development.</p>	<p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils". Site 59825 receives an uncertain minor positive effect in relation to SA objective 3: education, as it is within 800m of Shipbourne School but it is unknown whether there is capacity at the school to accommodate new pupils or not.</p> <p>Site 59825 was incorrectly appraised as a mixed use site and in the next iteration of the SA Report will be appraised as a residential site.</p> <p>Site 59827 is located within 800m of a number of open spaces, including the common. Therefore, it receives a minor positive effect in relation to SA objective 1: health and wellbeing.</p> <p>Site 59827 has been appraised as a residential site and so it receives a negligible effect in relation to SA objective 4: economic growth. As stated in the proforma for the site "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA, the site assessment criteria will be updated so that if a residential site contains an existing business that could potentially be lost as a result of development, it receives a minor negative effect.</p>
43779649	Q8	<p>Site Identification Number: 59709</p> <p>Berkeley has some concerns with the ISAR scorings given to this site as explained below.</p> <p>SA Objective 2: The outcome of objective 2 is accepted. Berkeley strongly believes that access to community facilities and services will be improved post development of the site. Two primary schools are located less than 1km from the site, in addition to a secondary school being located approximately 1.8km from the land at Dark Hill Farm.</p> <p>SA Objective 5: Berkeley would ask the council to reconsider the assessment of objective 5 (to protect and enhance biodiversity and geodiversity) as uncertain significant negative. The site's definition as a green infrastructure asset is questionable given the limited public access to it. While Berkeley appreciates the site lies within close proximity to a Local Wildlife Site, it is not within 250m of one or more internationally or nationally designated sites. Development will be unlikely to cause disruption to the Local Wildlife Site.</p> <p>Berkeley endeavours to achieve 10% net-biodiversity gain on all projects and the land at Dark Hill Farm is no exception. There is an</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>The site receives an uncertain significant negative effect against SA objective 5: biodiversity and geodiversity. This is due to the fact the site is within 250m of Bourne Valley Woods Local Wildlife Site and Ancient Woodland. The site also contains existing green infrastructure assets (thick vegetation).</p> <p>Although development of this site offers the opportunity to achieve biodiversity net gain, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is located within the North Downs AONB.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>opportunity as part of the development to retain, enhance and create areas of green space on site and will do so with the upmost respect for the current landscape setting. It is incorrect to assume that development will worsen the surrounding natural environment and not enhance it.</p> <p>SA Objective 6: Berkeley disagrees with regard to scoring the site with an uncertain significant negative for objective 6 – to protect and enhance the borough's landscape and townscape character and quality.</p> <p>Greater certainty about the impacts of development on the landscape is provided by landscape assessment work undertaken by Murdoch Wickham Associates for Berkeley. The analysis explains that the land comprises paddocks with areas of scrub and derelict farm buildings. The characteristics of the site are not typical of the wooded, traditional farmed landscape associated with the Greensand Ridge within the Kent Downs AONB.</p> <p>Residential development on the western fringes of Borough Green is visible in views to the site and other urbanising influences including traffic noise associated mainly with the A25 and the nearby residential development in the former quarry site to the south west further detract from the site's contribution to the AONB.</p> <p>Overall, the site has a relatively high degree of visual enclosure, in particular the fields north of the footpath, which runs across the centre of the site. The northern hedge provides an effective screen between the site and the A25. There are potential views to the land from the west in the vicinity of Oldbury Hill, but this is a densely wooded area, and no viewpoints were identified.</p> <p>The site does not share the dominant characteristics of the Kent Downs AONB. The site serves a much lower function in comparison to the wider area and the land contributes little to the AONB designation. It is concluded that the development of the Dark Hill Farm site would have a negligible impact on the AONB.</p> <p>SA Objective 7: the scoring the site with an uncertain significant negative for objective 7 due to the site's proximity (being within 250m) to a heritage asset requires further analysis.</p> <p>The site does not contain any designated or non-designated heritage assets. Furthermore, there are no listed buildings directly adjacent to the site. The Borough Green conservation area is located on the eastern side of the town and as such would not be impacted.</p> <p>The site is located approximately 135m from the closest heritage asset in Borough Green, with further Grade II listed buildings, found an additional 20m eastward and still within the urban confines of Borough Green. Ightham Court, a Grade II* listed building (Registered Park and Gardens designation) is located approximately 750m from the site north-westward.</p> <p>There is limited or no intervisibility between the site and the nearby heritage assets. The land at Dark Hill Farm will have a negligible impact on any of the surrounding heritage assets and it is incorrect to</p>	<p>With regard to SA objective 7: heritage, the site is recorded as containing Neolithic finds, in addition to falling within 250m of a number of heritage assets. Therefore, it receives a significant negative effect in relation to this objective. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertain significant negative effect is as a result of the site containing land with a 1 in 30 year risk of surface water flooding. Further to this, there is some overlap with a watercourse in the north west of the site and therefore it is uncertain what effect development might have on the watercourse in terms of water quality.</p> <p>With regard to SA objective 9: soils, the site receives an uncertain significant negative effect because it comprises Grade 3 agricultural land but it is unknown whether it is Grade 3a (high quality) or 3b (not classified as high quality) agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>score the site with an uncertain significant negative, purely based on proximity.</p> <p>SA Objective 8 - The SA assesses the site, in line with objective 8 criteria, to have a 'significant negative' impact on enhancing the quality of water features and resources. The assessment states the site to be either entirely or significantly (i.e. >25%) within Flood Zone 3 and/or within an area with a 1 in 30-year risk of surface water flooding.</p> <p>While a proportion of the western boundary is part of Flood Zone 3, it is not in excess of 25% of the site. In fact, much less than 25% of the site resides in Flood Zone 3 as this only affects a small area on the western site boundary.</p> <p>Surface water flooding is also determined to affect more than 25% of the site, alongside the land being associated with a 1 in 30-year risk of surface water flooding. It is evident that only a small proportion of the northern parcel is prone to surface water flooding.</p> <p>Surface water flooding will be dealt with appropriately through respecting existing surface water flows and incorporating mitigation measures (SuDS) within the design proposal.</p> <p>Overall, whilst there is some flood risk on site, which is accepted, this has the potential to be avoided or suitably mitigated. This means that the impact would be negligible.</p> <p>SA Objective 9 - The SA assessment of objective 9 ranks the site as an uncertain significant negative. An agricultural land classification survey will need to be undertaken to determine whether the Option Land is Grade 3a (best and most versatile) or Grade 3b (not best and most versatile). However, either way this should not prejudice the assessment of suitability, as the site is not currently in productive agricultural use and realistically is not of a size of which it could function efficiently as a piece of agricultural land to be commercially farmed.</p>	
42452545	Q8	<p>We have undertaken a review of the Interim SA site assessment for Coblands Nursery - site reference 59746.</p> <p>It is understood that the scoring applied to the site is based on computer modelling which should be a starting point but does not provide sufficient detail.</p> <p>We have provided a finer grain assessment of the scoring for site reference 59746 which has adjusted scoring for human health/wellbeing, biodiversity, landscape character, heritage impact and mineral impact. This is presented with the benefit of a more refined review, taking account of the specific location and impact of development.</p> <p>A response has been provided under Comment ID 31 to the SA Annex 1 consultation but please see attached and submitted document titled Interim SA review - site 59746.</p>	<p>The site appraisals have been generated by GIS, using the site assessment criteria presented in Appendix D of the Interim SA Report.</p> <p>We have responded to the estimated yield provided by TMBC, which was generated using a methodology agreed by the Council and applied to all sites.</p> <p>With regard to SA objective 1: health and wellbeing, the site is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an open space (Waveney Road Woods) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>In the next iteration of the SA Report, Trenchwood Medical Centre will be added and all sites affected updated.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is recorded as having an uncertain significant negative effect because it is located within 250m of an area of ancient woodland, which is also considered a green infrastructure asset. Development of the site could therefore have an adverse effect on this asset. The site is also recorded as containing a green infrastructure asset.</p> <p>The site is incorrectly recorded as containing an open space against SA objective 6: landscape and townscape. In the next iteration of the SA Report the site will not be identified as containing an open space.</p> <p>The site is also incorrectly recorded as not being located near any settlements, even though it borders Tonbridge. In the next iteration of the SA Report, the assessment will be updated to reflect this.</p> <p>With regard to SA objective 7: heritage, the site has been appraised in line with the site assessment criteria.</p> <p>With regard to SA objective 8: water, the site is recorded as having an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. Further to this, it contains a water body. As such, the site is potentially at risk of polluting the water contained within this water body. Although the respondent has stated that water quality will be protected, this is a 'policy-off' appraisal of the site and therefore mitigation is not taken into account. This ensures all sites are appraised consistently.</p> <p>With regard to SA objective 13: material assets, the justification text for the uncertain minor negative effect explains that the effect is uncertain at it will largely depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p> <p>Any development of the Site would avoid locating built form which would affect flood storage such a land raising on land within flood zone 2 and 3. The site lies outside of the SPZ Zone 1, 2 and 3, but lies adjacent to a watercourse (Hilden Brook). During construction, protection of water quality will be carefully managed and monitored.</p>
45325537	Q8	<p>While we endorse that site ref. 59682 (Land South Of Church Lane) scores more favourably against other sites promoted for development at East Peckham, Snoll Hatch and Hale Street, we do not agree with the assessment of the Site at Appendix D of the SA for the reasons explained below.</p> <p>We consider that this Site has a greater potential to score more positively than the 'Minor Negative' scored with regard to SA2 'improving equality and access to community facilities and services'. This is because the site is sustainably located in proximity to the facilities and services available at East Peckham, which are all accessible via foot, cycle or bus. In addition, we would highlight that the Site is currently subject to a planning application (ref. 21/03353/FL) that includes a new community facility, designed specifically to</p>	<p>Site 59682 receives a minor negative effect in relation to SA objective 2: services and facilities, as it falls within the Fair Accessibility Band and the methodology for which is set out in the Urban Capacity Study (July 2022). This is in accordance with the site assessment criteria. The SA acknowledges under SA objective 10: climate change mitigation that although the site is more than 800m of a railway station, it is within 400m of a bus stop.</p> <p>Although the respondent notes that the site is subject to a planning application that includes a new community facility, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. provision of a community facility). The SA is too high-level to give consideration to individual planning applications for sites, and giving consideration to supporting documents would result in not all sites being appraised on a consistent basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>provide accommodation for providers delivering health care for older people as well as preserving WWII heritage assets such as a Pillbox.</p> <p>With regards to SA5, we consider that the site has the potential to score more positively than an 'uncertain minor negative' and certainly should not be scored any worse than a 'minor negative'. This is because while we acknowledge the SA does not take into account the potential for landscape mitigation, we would highlight the current planning application for the Site demonstrates how a scheme could be progressed that sensitively responds to its landscape context. This can be achieved via the sensitive placement of development, retention and incorporation of key landscaping feature and mitigation measures within the Site including native tree planting. This is evident from the Landscaping scheme submitted to support the planning application at Church Lane. The Landscaping scheme provides a landscape strategy comprising the retention of the existing hedgerows and trees that border the Site and those which currently divide the two parcels of land. The proposal will also add generous buffer zones to the edges of the Site. The Site will also provide good areas of public open space. The public open space will provide new landscaping such as wildflower and grass meadows.</p> <p>SA6 relates to the character and appearance of streetscapes of development in relation to existing settlements, particularly how new development should enhance or reflect the existing pattern of development. We consider that the Site has potential to score more positively than 'uncertain minor negative', and certainly should not be scored any worse than a 'minor negative'. This is because, the SA does not consider the potential for mitigation, the current planning application has demonstrated a way in which a development could be progressed at the site provide a range of typologies, building heights and streetscapes reflective of the mixed character of the settlements of Hale Street and East Peckham.</p> <p>SA9 relates to the conservation and enhancement of soil resources and the guarding against land contamination. SA9 scores the site as a 'Significant Negative'. We do not agree with how the Site has been assessed, as the Site has been incorrectly identified as Grade 1 agricultural land. However, the Agricultural Land Classification Report (Appendix C) submitted in support of the planning application at Land South of Church Lane identifies that all East Peckham and the surrounding land is covered by Grade 2-3 agricultural land. We believe the score for SA9 should be scored as a 'Minor Negative' in light of the above.</p> <p>In addition, at 3.2ha of BMV land, the proposals would not represent "significant development" of agricultural land in NPPF terms as the site falls well below the guideline figure of 20ha in order to constitute "significant development". Accordingly, the loss of the site would comply with the NPPF (para 174) in terms of the loss of BMV.</p> <p>SA10 relates to reducing greenhouse gas emissions to minimise climate change. The Site was scored a minor positive. We endorse this score given to the Site from TMBC.</p>	<p>SA objective 5: biodiversity and geodiversity does not cover landscape, which is covered separately under SA objective 6: landscape and townscape. Site 59682 receives an uncertain minor negative effect in relation to SA objective 6 as it is located on the edge of a settlement and so there's potential for it to be more easily integrated into existing built development, compared to more rural and isolated sites. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. a landscaping scheme). All adverse effects against this objective are recorded as uncertain, as the actual effects are dependent on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The site receives a significant negative effect against SA objective 9: soil, as it is greenfield and comprises Grade 2 agricultural land. The SA looks at whether sites comprise best and most versatile agricultural land, not whether proposals would or would not represent significant development on best and most versatile agricultural land.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Site was assessed as a 'Minor Positive' against SA14, which relates to providing a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures. The submitted planning application clearly shows that through the efficient use of the Site the land has capacity to deliver 69 residential units towards the 839dpa Standard Method target for the Borough if the allocation were to come forward. The Site is therefore, considered to be a medium size which could be delivered in the first few years of the Plan period. We consider that this would provide more than a minor positive benefit. Thus, the score should be upgraded to 'Positive'.</p> <p>Indeed, we would highlight that Site 59682 scored sufficiently highly in the SA for the previous draft Local Plan to support the proposed released of the Site from the Green Belt in that draft local plan and its allocation for residential development under draft Policy LP25 (t) and (v).</p> <p>With regard to Site 59782 we endorse TMBCs assessment in the interim SA.</p>	
25406913	Q8	<p>Within Annex 1: Reasonable alternative development site options of the Sustainability Appraisal there are some important factual inaccuracies which skew the assessment of our submitted sites. We set out below the corrected facts. Due to word limits, the full response is also submitted under the SA Annex 1 section of the consultation.</p> <p>Site 59825: Land north of Back Lane, Shipbourne (5 Acre Field) SA states: "The Site is within an area of open space or currently accommodates a sports facility and this may be lost as a result of development" Correction: There is no public access to this site, it is private land owned by the Fairlawne Estate. There are no public footpaths crossing the site nor are there any sports facilities to be lost. SA states: "The Site includes employment development smaller than 5ha in size." Correction: This is not applicable given only residential development is proposed and there are no existing employment uses on the site. Site 59823: Oast Lane, Tonbridge SA states: "The Site is located in the Fair Accessibility Band". Correction: The site should be within the Very Good or Excellent accessibility band. The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within 1km of an existing bus stop and within walking distance to a number of services and facilities including a convenience store, school and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site's position on the edge of Tonbridge and the broad range of services and facilities in the Town, the site must logically be placed in a higher accessibility zone. The SA states: "The Site includes employment development smaller than 5ha in size." Correction: The site is only proposed for housing and supporting infrastructure. It does not include employment development. The SA states: "The site contains an existing green infrastructure asset that could be lost as a result of new development". Correction: The site contains no green</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, site 59825 is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an existing open space (Shipbourne Common) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>Sites 59825, 59823 and 59821 have been appraised as mixed use sites. The positive effects these sites are expected to have in relation to SA objective 4: economic growth are as a result of the fact these sites would include employment development.</p> <p>Site 59825 will be reappraised as a residential only site in the next iteration of the SA.</p> <p>Sites 59823 and 59821 are identified as falling within the Fair Accessibility Band. Site 59804 is recorded as falling within the Good Accessibility Band and site 59801 is recorded as falling within the Poor Accessibility Band. This information has fed into the SA.</p> <p>Site 59823 does contain an existing green infrastructure asset in the form of a line of woodland/thick vegetation to its east.</p> <p>With regards to SA objective 8: water, sites 59823, 59779 and 59801 receive a mixed significant negative and negligible effect. The significant negative effect is as a result of the sites falling within an</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>infrastructure asset, adjoins the built-up edge of Tonbridge, is not a designated open space and has no public access. SA states: "The Site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources. SA states: "The Site is within a Minerals Safeguarding Area". Correction: On the basis of the Kent Minerals and Waste Local Plan 2013-2030 the site is not within any minerals safeguarding area. Site 59821: Oast Lane, Tonbridge SA states: "The Site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development." Correction: The site is not a designated open space, has no public access and does not accommodate a sports facility. SA states: "The Site is placed in the Fair Accessibility Band." Correction: The site should be within the Very Good or Excellent accessibility band. The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within 1km of an existing bus stop and within walking distance to a number of services and facilities including a convenience store, school and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site's position on the edge of Tonbridge and the broad range of services and facilitates in the Town, the site must logically be placed in a higher accessibility zone. SA states: "The site includes employment development more than 5ha in size." Correction: The site is only proposed for housing and supporting infrastructure. It does not include employment development. SA states: "The Site is not located near to any settlements in rural locations." Correction: The statement is nonsensical. The site adjoins the built-up edge of the principal urban area of Tonbridge. A highly sustainable location. SA states: "The Site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources SA states: "The site is within a Minerals Safeguarding Area." Correction: On the basis of the Kent Minerals and Waste Local Plan 2013-2030 the site is not within a minerals safeguarding area (it is in close proximity). Site 59778: Allotment Site, The Street, Plaxtol SA states: "The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development." Correction: The Site does not accommodate outdoor sports facilities; however it does include a private allotment site. The land which accommodates the allotments is wholly owned by</p>	<p>area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the sites not containing a water body or watercourse or falling within a Source Protection Zone. Sites 59821 and 59804 receive an uncertain significant negative effect. This is because site 59821 falls within an area with a 1 in 30 year risk of surface water flooding and partially falls within Source Protection Zone 2. Site 59804 falls within an area with a 1 in 30 year risk of surface water flooding, in addition to containing a watercourse and slightly overlapping Source Protection Zone 3.</p> <p>Sites 59823, 59821 and 59801 are identified as falling within a Minerals Safeguarding Area. Therefore, they receive an uncertain minor negative effect in relation to SA objective 13: material assets.</p> <p>With regard to SA objective 1: health and wellbeing, site 59821 is also incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an existing open space (Tonbridge Farm Sportsground) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59821 and 59823 are recorded as having significant negative effects in relation to this objective. In the next iteration of the SA, these effects will be upgraded to minor negative effects. This is because the GIS analysis identified some sites as not located near any settlements in a rural location when they are in fact on the edge of a settlement, as there was no percentage overlap with the settlement boundaries.</p> <p>It is correct that site 59778 receives uncertain significant negative effect in relation to SA objective 1: health and wellbeing, as it contains an open space in the form of allotments. Although the respondent notes that the land which accommodates the allotments (owned by the Fairlawne Estate) could be retained or relocated, these are 'policy-off' appraisals of the sites that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis. The uncertain significant negative effect is mixed with a minor positive effect,</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the SA acknowledges that site 59779 is within 250m of Ancient Woodland through the sentence "The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites". LUC acknowledge that this sentence does not explicitly refer to Ancient Woodland, even though Ancient Woodland was included in the GIS analysis. In the next iteration of the SA, the sentence will be revised to state "The site is within 250m of one or more internationally or nationally designated biodiversity sites, geodiversity sites or Ancient Woodland". The SA also now acknowledges that the site is within 250m of Shipbourne Common Local Wildlife Site.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		the Fairlawne Estate and the allotments could be retained or relocated if required. Commentary on other FECL sites continued in SA response due to word limit restrictions	<p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect against SA objective 6: landscape and townscape when they are not located near any settlements. Although the respondent has raised the point that the site is located on the edge of a hamlet, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for the site is therefore correct. In the next iteration of the SA Report, we will add this limitation to the 'Difficulties and Data Limitations' section of the SA..</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not state that site 59779 comprises open space.</p> <p>However, site 59804 does contain an open space, as acknowledged in the SA. Frogbridge Wood is located in its north eastern corner.</p> <p>As only a small percentage of site 59804 overlaps the settlement of Tonbridge, the GIS analysis does not identify it as adjoining the settlement of Tonbridge. In the next iteration of the SA, we will refine the GIS analysis so that sites where there is very little overlap with existing settlements are still recorded as bordering those settlements. However, the effect will remain the same, as the site contains an open space that could be lost as a result of development.</p> <p>With regard to SA objective 7: historic environment, site 59801 is located within 250m of a heritage asset (Horns Lodge), as recorded in the Kent Historic Environment Record.</p> <p>As only a small percentage of site 59801 overlaps the settlement of Tonbridge, the GIS analysis does not identify it as adjoining the settlement of Tonbridge. In the next iteration of the SA, the site will receive an uncertain minor negative effect in relation to SA objective 6: landscape and townscape.</p>
42716289	Q8	<p>Assessments too generic and not reviewed in enough detail</p> <p>Site no 59850 - East Street, Addington The assessment is far too generic This site is clearly unsuitable :-</p> <p>Green-belt land</p> <p>Protected OS1a land as shown in TMBC strategy policy</p> <p>75m away from Area of outstanding natural beauty</p> <p>Size of site would double size of Addington Village</p> <p>No schools close by</p> <p>Infrastructure is already busy for a village</p> <p>Important open space - current golf course</p> <p>Public rights of way with beautiful open views</p> <p>Loss of amenity value for the village</p> <p>Wildlife habitat - newts, bats, dormice, badgers, slow worms, important birds</p>	<p>The site has been appraised to a level considered appropriate. The SA does not determine whether a site can be considered suitable or not, but rather provides an objective assessment of its sustainability.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The Interim SA Report provides an appraisal of different options that the Council is considering for the emerging Local Plan. Consideration is not given in SA to existing policies in adopted Local Plans.</p> <p>The SA acknowledges the site's proximity in relation to the AONB, and so it receives a significant negative effect in relation to SA objective 6: landscape and townscape. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes depends on the design, scale and layout of development.</p> <p>The SA also acknowledges that the site is not within 800m of an existing primary or secondary school. For this reason, the site</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Overdevelopment likely</p> <p>No special circumstance could ever arise that would mean development would be a better option in this instance.</p>	<p>receives an uncertain minor negative effect in relation to SA objective 3: education.</p> <p>The SA also acknowledges the fact the site comprises the West Malling Golf Course, under SA objective 1: health and wellbeing. For this reason, the site receives an uncertain significant negative effect (as part of a mixed effect) in relation to SA1.</p> <p>The SA also acknowledges the fact the site contains a green infrastructure asset and is within close proximity of other biodiversity assets. For this reason, it receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p>
42376993	Q8	<p>WPC welcomes the amendment made to table 9 of the local plan consultation document that links the SA reports, site references and site plans. However, it is noted that Appendix D of the Interim Sustainability Appraisal Report relates to site assessment criteria and not to individual site assessments suggested by this question. Has this question been incorrectly drafted, when it should in fact refer to Table 1.6 (residential site options) in the Interim Sustainability Appraisal Report: Non-technical summary, and crossed referenced to Annex 1 of the Interim Sustainability Appraisal Report (site plans)?</p>	<p>Question 8 of the consultation was "Do you agree with the findings of the individual site assessments in Annex 1 of the Interim Sustainability Appraisal? Yes/No Please explain and quote the individual site reference number".</p> <p>Table 16 in the Non-Technical Summary presents the findings of the residential site options. This table is also presented in the Interim SA Report, in Table 5.1.</p> <p>Annex 1 of the Interim SA Report provides a proforma for each site appraised in the SA, whilst Appendix D of the Interim SA Report presents the site assessment criteria.</p>
42765537	Q8	<p>Annex 1 is not referenced on the index of the Interim Sustainability Appraisal Report, so this is question must be excluded.</p>	<p>Annex 1 is not listed on the Contents page of the Interim SA Report. However, it was published on the website as part of the Regulation 18 consultation. In the next iteration of the SA Report, the Annex will be added to the Contents page.</p>
42514977	Q8	<p>Appendix D (non technical summary) seems to outline the objectives not assess the sites. It is only Annex 1 that gives detail for sites. The criteria used are not of equal importance and so it is difficult to give weight to conflicting criteria. Less and more focussed and weighted criteria would have been better.</p> <p>The approach taken seems to have been to include any area of land that might be developed irrespective of practical suitability. This is disappointing and means that we are obliged to review a mass of unsuitable detail.</p> <p>As examples sites 59709, 59720, 59793, 59872 and 59871 vary greatly in size, but the estimated housing is only identified as ',100' or 100+'. This tells us very little to make a detailed comment.</p> <p>However, no consideration is given to existing pressures on infrastructure - a huge weakness of the analysis. e.g. medical facilities available - but already very busy, especially at peak times. School exists but few available places - and only a primary school close. My confidence that the required investment would be made is very low.</p> <p>Road network is not identified as a bottleneck but with larger developments would be a nightmare, eg 59709, 59720. Village would</p>	<p>The purpose of the SA is to assess all reasonable alternative development site options, as identified by TMBC.</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		effectively be joined up with the Borough Green urban area. Larger developments should be rejected in small village environments unless there is a very good reason, with supporting infrastructure.	
42255521	Q8	Appendix D related to objective and not individual sites. Unless the question is asking for something different. I would expect there to be a map etc with noted locales on it.	Appendix D presents the site assessment criteria. The individual site appraisals can be found in Annex 1 of the Interim SA Report, and the findings summarised in Chapter 5 of the Interim SA Report.
42616641	Q8	Generally agree on site assessments. But for site 59811, disagree that is positive on Objective 1 (Improve human wealth and well being). It is within 800 metres of a footpath, but not open space or healthcare facility and is inappropriate in respect of 2262 homes in view of appalling access off existing single track road (Matthews Lane)	Site 59811 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of at least one publicly accessible open space and a walking path.
39036065	Q8	Site 59740 Broadwater Farm Due to the character limit on responses via this platform I have submitted my full answer to this question via email. Overall I believe the TMBC's published evaluation of this site against the Sustainability Assessment Objectives, although not particularly positive, actually understates the negatives and over-states the positives for many Objectives. This area is rich in heritage, cultural, landscape, community and farming assets. Areas of the site are protected by Listed Building status, Conservation Area status, KCC Ancient Monument guidance and Quiet Lane designations. The farmland of the site is also, overall, better quality than "best and most versatile". TMBC are in possession of a robust bank of data to suggest this site is unsuitable for large scale developments and I believe this site should not go forward in the Local Plan process.	The SA utilises a precautionary approach in its appraisal of the Regulation 18 Local Plan. Site 59740 is recorded in the SA as having a significant negative effect in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. Site 59740 is also recorded as having a significant negative effect in relation to SA objective 9: soil, as it comprises best and most versatile agricultural land. Please refer to the proforma for this site, which presents the effects it is likely to have in relation to each of the SA objectives
42376993	Q8	WPC welcomes the amendment made to table 9 of the local plan consultation document that links the SA reports, site references and site plans. However, it is noted that Appendix D of the Interim Sustainability Appraisal Report relates to site assessment criteria and not to individual site assessments suggested by this question. Has this question been incorrectly drafted, when it should in fact refer to Table 1.6 (residential site options) in the Interim Sustainability Appraisal Report: Non-technical summary, and cross referenced to Annex 1 of the Interim Sustainability Appraisal Report (site plans)?	Question 8 of the consultation was "Do you agree with the findings of the individual site assessments in Annex 1 of the Interim Sustainability Appraisal? Yes/No Please explain and quote the individual site reference number". Table 16 in the Non-Technical Summary presents the findings of the residential site options. This table is also presented in the Interim SA Report, in Table 5.1. Annex 1 of the Interim SA Report provides a proforma for each site appraised in the SA, whilst Appendix D of the Interim SA Report presents the site assessment criteria.
24925793	Q8 of the questionnaire	No. In our opinion, the scoring for some of the Objectives is questionable*, especially for sites in south-west Tonbridge. It also does not seem to reflect the potential negative impacts of the developments, given the infrastructure/highway capacity and air quality issues**, in our local area. Our initial abbreviated comments, for each of the locally listed development sites, are as follows. □ Sites 59550 & 59552 (Brindle's Field playground) – the loss of open space/recreational areas, which are locally valuable (so should be listed as Local Green Spaces – see Q.34), reduces access to recreational opportunities and local community facilities (like play areas). As such, the scoring should be negative for both SA1 and SA2	All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report. Sites 59550, 59552, 59571 and 59572 are recorded as having uncertain significant negative effects in relation to SA objective 1: health and wellbeing, due to the fact they contain an open space that could be lost as a result of development, although this is uncertain.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>(not "--?/+", or "0"). Also, given the current lack of local primary school places* and the additional cumulative demand from other granted developments (inc. Site 59869: 125 houses), then SA3 should be slightly negative.</p> <p>□ Sites 59571 & 59572 (nr Milton Gardens) – the loss of open green spaces in residential areas again reduces access to recreational opportunities and so is detrimental to Objective SA1, which seeks to promote health/wellbeing. As such, SA1 should have a negative score (not "-- ?/+"). Again, given the current lack of local primary school places*, SA3 should be slightly negative. In addition, Site 59572 provides a buffer, minimising the landscape harm (SA6).</p> <p>□ Site 59641 (land adjoining Lower Haysden, on east side) – generally has the lowest Objective scores, than most other sites, so is least likely to deliver sustainable development and should not be taken forward. Furthermore, with reference to SA6 that rightly acknowledges the “significant negative impact”, but the justification for this being “uncertain” (i.e. "--?") is questionable on balance. Firstly, as the justification text incorrectly states that “The site is not located near any settlements in rural locations”, but this site adjoins the rural hamlet of Lower Haysden and so the scoring may have underestimated the impact. Secondly, having such a disproportionate amount of development, compared to existing hamlet, will cause significant harm (i.e. "--") to the character of this rural Conversation Area. Thirdly, such disproportionate development in this rural location is likely to cause significant harm to the landscape setting of the ANOB (<500m, as noted in L.P. Para. 5.21.92) and the surrounding countryside, regardless of it’s design, especially given the flat open farmland. Lastly, this Green Belt site provides an important buffer to preserve the separate identity of Lower Haysden and prevent coalescence with the Tonbridge urban confines. As noted below (in Q.11, as stated by TMBC1) a minimum of 500m is required as an effective Green Belt buffer, but this loss green field buffer (at the western-edge) could be compounded by development within the eastern-half of this small Green Belt buffer. For instance, if Site 59764 was taken forward, then Tonbridge would come within 200m of this site and Lower Haysden.</p> <p>□ Site 59695 (Lower Haysden Ln. south side, eastern land parcel) – as above, given the current lack of local primary school places*, SA3 should be negative; in view of the large number of new homes proposed, on top of the other granted developments (inc. Site 59869: 125 homes). This site will also have a “significant impact” on the landscape setting of the AONB, which overlooks this site, as acknowledged in the SA6 justification text. However, given the lack of natural screening along southern-boundary of the site, compared to the trees that screen the edge of the existing town confines, it is likely that any development here (regardless of it’s design, scale) would probably have a more certain detrimental landscape setting impact. Note to maintain an minimum effective Green Belt buffer of 500m (as per TMBC1), between Tonbridge and Lower Haysden, either this site or Site 59641 cannot be taken forward.</p>	<p>The effects are coupled with a minor positive effects, as both sites are within 800m of other areas of open space, as well as walking paths.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Although site 59869 was included in the previous Draft Local Plan and was going to provide a new primary school, this is not the current baseline against which the Local Plan is being appraised. Site 59868 correctly receives an uncertain significant positive effect in relation to SA objective 3, as it is within close proximity of a primary school and a secondary school.</p> <p>Site 59572 receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is within 500m of the AONB.</p> <p>All adverse effects against SA objective 6: landscape and townscape are recorded as uncertain, as the actual effects will also depend on the final design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect against SA objective 6: landscape and townscape when they are not located near any settlements. Although the respondent has raised the point that sites 59641 is located on the edge of Lower Haysden, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for the site is therefore correct (it should receive a significant negative effect). In the next iteration of the SA, we will add this limitation to the section entitled 'Difficulties and Data Limitations'. Site 59641, in addition to site 59869 are not located within 500m of the AONB.</p> <p>Site 59695 is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. This is as a result of the percentage overlap between the site and settlement boundaries. In the next iteration of the SA Report, the effect will remain the same, as the site is located within 500m of the AONB. As mentioned already, all adverse effects against this objective are recorded as uncertain.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>□ Site 59764 (Lower Haysden Ln. south side, western land parcel) – as above, given the current lack of local primary school places*, SA3 should be negative; in view the even larger number of new homes proposed here, on top of the other granted developments (59869: 125 homes). Similarly, to Site 59695, this has a more certain “significant impact” on the landscape setting of the AONB, given the lack of natural screening. The scoring may also have underestimated the impact (i.e. “---”), given that the justification text incorrectly states that “The site is not located near any settlements in rural locations”, but this site is within 500m of rural Lower Haysden. Moreover, this site is located midway into the small Green Belt buffer that separates Tonbridge’s urban confines from the separate hamlet of Lower Haysden. As such, it would render this vital Green Belt buffer ineffective (<500m1), with the edge of the town extending to within 200m of Lower Haysden and would be contrary to its purpose to prevent coalescence.</p> <p>□ Site 59869 (Lower Haysden Ln. north side) – in the previous Draft Local Plan, this site had provision for a new primary school, which is needed, given the current lack of local primary school places*. However, the omission of new primary school at this site and increase in the proposed number of new houses (now 125), will put more pressure on local school places, together with the demand from other new housing sites (e.g. West [now North] Kent College). As such, development here without the proposed school should have SA3 negative score. On the basis that the site is over-looked by the AONB, which is 500m of the site, and given the potential “significant impact” on the landscape setting, robust policies need to be adopted for this site, to limit the visual impact; e.g. houses limited to 2-storeys, as noted below (see Q.19).</p> <p>*For instance, for Objective SA3, the justification text for the above-mentioned sites acknowledges the positive scorings (“++?”) “depends on there being capacity available at those [school] facilities” and “residential development could stimulate the provision of new schools”. However, as noted above there is a current lack of local primary school places and KCC withdrew support for a new primary school, which was meant to be delivered as part of the new housing development at Site 59869. As such, given the lack of local school places in south-west Tonbridge, it would surely be better to focus development closer where there are other schools in the town have more capacity. Otherwise, it will result in more private car trips and congestion on local roads, as parents have to take their children to the other side of town. This cannot be considered to be consistent with sustainable development, so a fairer score reflecting the lack of local places would be a “+?” or “-”. Furthermore, as advocated in Q.11, we need to adopt an ‘infrastructure first’ approach to ensure that the much-needed local school spaces will be provided, to support sustainable development, before building more houses in this part of Tonbridge; as KCC could still refuse a new local school. **There are other local infrastructure issues, in south-west Tonbridge, such as insufficient highways capacity. For instance, the at the Brook Street/Quarry Hill junction is operating above practical capacity</p>	<p>The SA is too high-level to consider highways capacity but the Council will commission additional evidence on matters including traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		(>95%), as acknowledged by KCC Highways, even before Site 59869 was granted outline planning permission for 125 new houses. However, since this application was approved, other plans have been granted, including at the Judd School for an extended sixth from entry and a possible Haysebrook School extension that will generate more peak-time traffic on Brook Street. As such, this junction would likely to have cope with something like 120% of it's capacity, even without any further development in this part of town. As noted in Q.21, there limited room in which to widen the junction, to provide capacity, so further development is likely to cause a severe cumulative impact and congestion. This would likely worsen the local air quality (incl. the High St). Note local cycle-way improvements will not address car use, given the lack of local school places. Also, there is a lack of sewer capacity, with insufficient connections to this part of town. As such, further development within south-west Tonbridge could increase the local flooding and risks the site deliverability/viability, which are key considerations in determining exceptional circumstances.	
43309729	Q8 of the questionnaire	<p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>1.2.33 In respect of this question, our client only wishes to comment upon the site they are promoting. In this regard, we agree with the positive assessment with strategic objective 1 and the benefits that the housing will deliver. However, there are a number of inaccuracies as a consequence of not properly addressing the site in detail.</p> <p>1.2.34 In our view there are no landscape, heritage or flood reasons to prohibit development. The site is inherently appreciated in a residential context and is well-related to day-to-day services and amenities within the settlement of Borough Green, identified as a rural service centre.</p> <p>1.2.35 The site is located approximately 150m east of the Kent Downs Area of Outstanding Natural Beauty ('AONB') boundary. Nonetheless, by virtue of the topography of the area and intervening built form and mature woodland vegetation, the application site is visually and spatially unrelated from the AONB and is very limited in its visibility from public vantage points within the AONB. Consequently, the site is limited in its potential to impact upon the setting of the AONB.</p> <p>1.2.36 Considering wider environmental constraints, the site itself is not identified to be any of any particular ecological or alternative landscape value, however land immediately to the south is identified as a Local Wildlife Site 'South Bourne Valley Woods'.</p> <p>1.2.37 In terms of flood risk, the site area falls within Flood Zone 1 (least likely zone to flood) and comprises a site of <1 hectare. Consequently, the submission of a Flood Risk Assessment is not required.</p> <p>1.2.38 Considering heritage matters, the application site does not contain any heritage assets and there are no Listed Buildings, Scheduled Monuments or Conservation Area within the site locality.</p>	<p>Site 59767 receives a significant negative effect in relation to SA objective 6: landscape and townscape, as it is within 500m of the AONB. All effects against SA objective 6 are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects. The SA acknowledges that the site is adjacent to the settlement (uncertain minor negative effect) but because it is within 500m of the AONB, the significant negative effect overrides the minor negative effect. The SA is too high-level to consider topography and vegetation is covered separately under SA objective 5: biodiversity and geodiversity.</p> <p>The site receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it partially falls within Bourne Valley Woods Local Wildlife Site and is within 250m of Ancient Woodland. All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. Further to this, it contains a watercourse. The effect is recorded as uncertain, as it is unknown what effect development might have on water quality.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 7: heritage because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. The effect is recorded as uncertain, as the actual effect will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA is too high-level to consider site-specific access points.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>1.2.39 Vehicular and pedestrian access is achieved via an existing access route from the adjacent roundabout between Quarry Hill Road / Thong Lane / Hazelbourne Avenue (serving Isles Quarry West 'allocations policy H2' / Dark Hill Road. The access spur currently serves Borough Green Medical Practice, Reynolds Health Spa & Retreat and nine residential dwellings adjacent to the site. Public Right of Way 'MR310' runs to the east of the site but would not be impacted by the proposed development</p> <p>1.2.40 Consequently, the SA requires a more detailed assessment of the site constraints if it is to inform credible decisions.</p>	
43485985	Q8 of the questionnaire	<p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>1.2.29 In respect of this question, our client only wishes to comment upon the site they are promoting.</p> <p>1.2.30 With respect to site 59705 we support the positive that will be achieved in respect of the provision of new job opportunities (Objective 4) and in particular we would reiterate that a shortfall of 147,550 sq.m light/general industrial and storage and distribution requirements across the period 2021-40, which our client's land has a role in helping to address.</p> <p>1.2.31 However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>1.2.32 For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. Provision of employment uses with dedicated species rich features would result in substantial betterment and this should represent a strong positive.</p> <p>1.2.33 Based on a human judgement it is clear that there are not any significant heritage, environmental or landscape constraints to development and that the impacts are likely to be neutral or positive. Furthermore, the land is well related to the established employment hub of Wrotham.</p> <p>1.2.34 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.</p>	<p>SA utilises a precautionary approach. Delivering growth beyond the assessed housing need could result in some capacity issues, whilst also stimulating the provision of new services and facilities. This is acknowledged in the Interim SA Report.</p> <p>Site 59705 is incorrectly recorded as having an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as there is some overlap with green infrastructure assets and so the GIS picked it up as containing green infrastructure. In the next iteration of the SA Report, the site will be recorded as having an uncertain minor negative effect in relation to SA objective 5. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>All sites are appraised on a 'policy-off' basis, meaning consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59705 is correctly recorded as having an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59705 is correctly recorded as having an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is within 500m of the AONB. All adverse effects against this objective are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p>
43545921	Q8 of the questionnaire	<p>Question 8: Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>In respect of the TMBC Interim SA Report Objectives, we would like to make the following comments/corrections to the Council's consideration and appraisal of the individual land parcels which we have submitted to the initial Call for Sites (February 2022). These comments need to be taken into account by TMBC as they reflect the current position and therefore could fundamentally change the Council's consideration of the sites as potential future development opportunities, feeding into the emerging Local Plan. Accordingly, the additional information should be used to inform and review the appraisal of the individual or cumulative land parcels. We have also prepared GANT programmes for each land parcel to further assist and inform the Council's consideration of the deliverability of the submitted sites.</p> <p>In addition, following recent discussions with TMBC Planning Policy Officers, we have been specifically asked to provide further details on each submitted land parcel, identifying:</p> <ul style="list-style-type: none"> • The landowner • The lawful planning use of the site • Whether the site is deliverable (0-5 years) • Whether the site is developable (6 -10 years) • The development capacity of the site • The proposed use(s) of the site • The development agent/party 	<p>relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>
43676929	Q8 of the questionnaire	<p>Q8 Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report?</p> <p>1.2.29 In respect of this question, our client only wishes to comment upon the site they are promoting- (i.e. site 59855)</p> <ul style="list-style-type: none"> • SA Objective 1: To improve human health and well-being <p>The SA scores the site as minor positive. Whilst this isn't contested, it should be noted that in the context of an employment site, this is considered less relevant in respect of the merits of the site as other objectives.</p> <ul style="list-style-type: none"> • SA Objective 2: To improve equality and access to community facilities and services <p>The site lies within the Council's Fair Accessibility Band and is therefore scored as minor negative. This is not considered to be representative of the site's accessibility having regard to its context as a proposed industrial employment allocation for the following reasons:</p> <ul style="list-style-type: none"> - The scoring methodology as set out in the Urban Capacity Study is geared heavily towards assessing potential residential sites and not directly suited to employment sites (particularly industrial). For example, weighting is given to distance to healthcare facilities is the same whether a site is being assessed for residential or employment uses. That is not to say that proximity to healthcare facilities isn't of 	<p>With regard to SA objective 1: health and wellbeing, this is noted. As set out in the site assessment criteria contained in Appendix D of the Interim SA Report, "It is assumed that people would make use of healthcare facilities near to their homes rather than their workplaces. However, proximity to open spaces, walking and cycle paths, recreation and sports facilities will provide employees access to these types of features around their working hours and access to walking and cycle routes may present opportunities to travel to work using active travel".</p> <p>With regard to SA objective 2: services and facilities, this is informed by the Urban Capacity Study (July 2022). As outlined in paragraph D.3 of the Interim SA Report, "Sites have been assessed by TMBC for accessibility to local services (including transport infrastructure, education facilities, healthcare facilities and essential services) using accessible walking distances informed, in part, by guidance such as Planning for Walking [See reference 53]. Sites have also been assessed on their location, with sites within settlements placing higher in the settlement hierarchy being considered more accessible. Sites have then been given an overall accessibility score, and placed in to one of the following bands outlined in Table D.1 below".</p> <p>Although the Urban Capacity Study focusses on housing , the location of employment sites to community facilities and services is still</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>any relevance, but alternative weighting should be applied dependant on the uses being promoted.</p> <p>- It is not clear if the site has been scored based on a Rural Service Centre location or Other Rural Settlements location. Whilst the site lies directly adjacent to Hale Street (Other Rural Settlements), it lies very close to East Peckham and in the context of the proposed strategic employment allocation relates as much to the Rural Service Centre setting.</p> <p>- The scoring does not account for how a scale of development promoted could add to the sustainability of the site in terms of the potential to provide additional shuttle bus services to Paddock Wood and its very regular mainline train service and wide range of services and facilities. Please refer to the accompanying Transport Note (Appendix 1) for more details.</p> <ul style="list-style-type: none"> • SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society <p>N/A</p> <ul style="list-style-type: none"> • SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough <p>The site scores significant positive and minor positive based on its location relative to a train station. This does not factor in the potential for dedicated shuttle bus services to the site given the scale of development proposed. There would be no impacts upon any internationally or nationally designated biodiversity or geodiversity sites, or a locally designated site.</p> <ul style="list-style-type: none"> • SA Objective 5: To protect and enhance biodiversity and geodiversity <p>The site scores as uncertain. The intended design approach for the site is to include structural landscaping and maximise opportunities for biodiversity gains and enhancement. Accordingly, whilst it is agreed that at this formative stage of any design development effects are uncertain, it is not considered likely that they could amount to significant negative.</p> <ul style="list-style-type: none"> • SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality <p>The site is not located within any landscape designation and is marked by existing development to the west and south and a main A road to the east and north. The SA scores the site as uncertain significant negative on the basis that "the site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces". This is factually incorrect as it will not result in the loss of any designated open space and is located on the edge of a settlement. The potential negative effects are therefore overstated.</p> <ul style="list-style-type: none"> • SA Objective 7: To protect and enhance the cultural heritage resource 	<p>considered relevant as people may make use of those facilities and services near to their workplaces around working hours.</p> <p>With regard to SA objective 4: economic growth, the site receives a minor positive effect, as it is within 400m of a bus stop. The sites have been appraised on a 'policy-off' basis and so consideration is not given to mitigation (e.g. provision of a dedicated shuttle bus service).</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives an uncertain significant negative effect. The site is incorrectly recorded as containing a green infrastructure asset. Therefore, in the next iteration of the SA Report, the site will receive an uncertain minor negative effect. This is due to the fact the site is within 250m and 1km of a number of Local Wildlife Sites.</p> <p>Site 59855 incorrectly receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect. This is due to the fact the site is on the edge of the settlement and development on the edge of settlements can more easily be integrated into existing development. All adverse effects against this objective are recorded as uncertain, as actual effects on landscapes and townscapes are dependent on the design, scale and layout of development, which may help mitigate adverse effects.</p> <p>With regard to SA objective 7: heritage, the sites have been appraised on a 'policy-off' basis and so consideration is not given to mitigation. Therefore, the appraisal of this site does not take into consideration how harm may be mitigated. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site has been appraised on a 'policy-off' basis and so consideration is not given to mitigation on supporting documents submitted by site promoters. This ensures all sites are appraised to a consistent level of detail.</p> <p>With regard to SA objective 9: soil, consideration cannot be given to additional documents submitted by the site promoter. This ensure all sites are appraised consistently.</p> <p>With regard to SA objective 10: climate change mitigation, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. improved linkages with Paddock Wood and its train service). This ensures all sites are appraised consistently.</p> <p>With regard to SA objective 13: material assets and waste, the site is correctly identified as falling within a Minerals Safeguarding Area. Therefore, the uncertain minor negative effect against this objective is correct.</p> <p>The SA does include an objective relating to employment provision, see SA objective 4: economic growth.</p> <p>SA is a desk-based, strategic assessment and all reasonable alternative development site options have been appraised on a</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Based on the SA assessment and scoring criteria, the noted Uncertain significant negative effect is correct, however this does not account for the nature of the heritage asset in question and whether development of the site would actually likely lead to any impact on its significance. In this regard, the site lies close to a listed building but any impacts will be capable of mitigation through sensitive design and layout.</p> <ul style="list-style-type: none"> • SA Objective 8: To protect and enhance the quality of water features and resources <p>Please refer to the attached drainage note (Appendix 2). The site falls part within Flood Zone 1, part Flood Zone 2 and part Flood Zone 3 with a high risk of surface water flooding along and close to the existing watercourse along the site's northern boundary. Away from the watercourse, the risk reduces with most of the site having a low risk of surface water flooding. As a less vulnerable use is proposed, development is appropriate on this site and an exception test would not need to be applied. In the event of more vulnerable uses being provided, these would be located within the area of the site that is within Flood Zone 1.</p> <p>The drainage note sets out the principles that will be followed for sustainable surface water drainage, which will ensure run-off to the pre-developed greenfield rate and avoid any increased risk of flooding off site.</p> <p>Any development would be subject to the sequential test, which the Local Plan allocation process will in effect perform. It can be seen that the majority of the site has low surface water flood risk and that the site can be developed in a way which would not increase the risk of flooding elsewhere. The proposed uses are suitable as a matter of principle based on the flood risk profile of the site and accordingly, it is not considered that significant negative effects would occur.</p> <ul style="list-style-type: none"> • SA Objective 9: To conserve and enhance soil resources and guard against land contamination <p>The SA notes a significant negative effect as "the site is greenfield land and contains a significant proportion ($\geq 25\%$) of Grade 1 and/or 2 agricultural land". This assessment is assumed to be based on high-level mapping and so a more bespoke Agricultural Land Quality Assessment (Appendix 3) is provided here, based on available survey data. This identifies that the majority of the site is in fact Subgrade 3a land, having coarser textures and/or gravel at shallower depths. The scoring system set out in the SA provides wide-ranging bands that do not allow for more detailed comparative assessment of sites and their agricultural land value. Given that the lower grade 3a is predominant across the site, the SA scoring is considered to overstate the potential effects.</p> <ul style="list-style-type: none"> • SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change <p>As with objective 4 (see above), the scoring does not account for the potential to provide improved linkages with Paddock Wood and its train service.</p>	<p>'policy-off' basis. This means they are appraised on their physical constraints only and not mitigation or supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<ul style="list-style-type: none"> • SA Objective 11: To improve adaptation to climate change so as to minimise its impact <p>N/A, although it is intended that any development of the site would strive to deliver highly sustainable design.</p> <ul style="list-style-type: none"> • SA Objective 12: To protect and improve air quality <p>No comment</p> <ul style="list-style-type: none"> • SA Objective 13: To protect material assets and minimise waste <p>Having reverted to the Kent Minerals and Waste Local Plan, it does not appear that the site is materially affected by a Minerals Safeguarding Area (see image below – picture quality is best available online via Kent County Council's website)</p> <p>[image inserted]</p> <p>The image shows East Peckham and Hale Street – although the large scale makes it difficult to draw any definitive conclusions, it appears that the northern boundary and would not therefore materially impact the proposed allocation site or its developable area. The uncertain minor negative impact noted in the SA is therefore overstated.</p> <ul style="list-style-type: none"> • SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures <p>N/A – although it is notable that the SA does not include an objective relating to the mix of employment premises and ability to meet employment needs. Given the scale of the site and its location, it is well suited to providing a range of premises type and size, including a high proportion of smaller units that would help meet more localised need in addition to broader Borough-wide needs.</p> <p>1.2.30 The desktop nature of the site assessment is also of concern and more detailed assessment will be required, having regard to the supporting technical assessments now available and the case for the site with regard to the wider economic development strategy for the Borough.</p> <p>1.2.31 In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information. As the comments above demonstrate, the SA appraisal of site 59855 is simplistic in the methodology that is deployed, which in turn is not best suited to considering employment sites and as a result largely overstates the potential effects of future development of the site.</p>	
39036065	Q8 of the questionnaire	<p>[Site reference 59740]</p> <p>o Question 8, Site 59740.</p> <p>[redacted]</p> <p>[address redacted]</p> <p>Comments:</p> <p>Having reviewed this TMBC's site assessment against the Sustainability Assessment Objectives (SAOs), it appears that this site</p>	<p>With regard to SA objective 1: health and wellbeing, the 'Difficulties and Data Limitations' section of the SA states that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater. The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). Site 59740 is incorrectly recorded as containing an open space due to the fact it overlaps with an existing area of open space. In the next iteration of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>does not score well at all. However I believe that even though this is the case, the "positives" are still overstated and some of the "negatives" are underplayed in the Local Plan documentation as follows:</p> <p>SAO 1: Rating Should be “Significant negative” as not all of the site is within easy reach of a healthcare facility and anyway the existing facility is already under performing. An assessment of the subobjectives also supports a negative ratings:</p> <p>Promotion of health lifestyles Area currently openly accessible including Quiet Lanes and Rural Footpath, development would only harm this.</p> <p>Antisocial Behaviour Experience from Kings Hill shows an increase in antisocial behaviour in large developments, not a decrease.</p> <p>Safe by Design Current access via the Quiet Lanes encourages safe road usage, if you add in traffic associated with another c.900homes, outcomes will be worse.</p> <p>SAO 2: I agree with the “Minor negative” rating as there is no evidence that yet another large scale commercially-led development would help alleviate the T&M housing affordability crisis and, experience from Kings Hill shows that road traffic just gets worse and any measures to get people out of their cars have limited, if any, success.</p> <p>SAO 3: I disagree with the rating which I believe should be “Negligible” based on current educational provision and the lack of information relating to any site proposals.</p> <p>SAO 4: I strongly disagree with TMBC’s assessment against this criteria of “Significant positive” and believe it should be “Uncertain minor positive” at most; very little information is presented to support TMBC’s rating. Less than 5% of the site is proposed for business development and, although some land will be within 800m of West Malling station, there is no information about what would actually be proposed for this area. The commuter traffic into Kings Hill in the morning, and leaving again in the evening, shows that proximity to a train station does not discourage car travel. In the real world people who can, drive to work. Also, the facts that so much of the originally planned business zoning for Kings Hill has been reallocated for housing and that so many units remained empty for so long around Liberty Square respectively show that planned business development will not necessarily pan out as envisaged and that the commercial rent charged for such new developments prices out small players, adding to the argument that “significant positive” is probably, on balance, not achievable.</p> <p>SAO 5: I believe the rating for this should be “Significant Negative” with no uncertainty. TMBC are in possession of a wealth of information regarding the rich biodiversity of this area, not least from Consultees and Residents regarding the application TM/21/02719. I believe this site would definitely score poorly against the following subobjectives:</p>	<p>the SA Report, the site will receive a minor positive effect only in relation to this objective.</p> <p>SA objective 2: services and facilities is informed by the Urban Capacity Study (July 2022). As such, the site correctly receives a minor negative effect in relation to this objective, as it is placed within the Fair Accessibility Band in the Urban Capacity Study. This is in accordance with the site assessment criteria (please refer to Appendix D of the interim SA Report). Housing affordability is dealt with separately under SA objective 14: housing. The SA is too high-level to consider traffic levels and so the Council will commission additional evidence on matters including traffic.</p> <p>Site 59740 receives an uncertain minor positive effect in relation to SA objective 3: education, as it is within 800m of a primary school. All effects against this objective are recorded as uncertain, as "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Site 59740 is proposed for mixed-use development and therefore receives a significant positive effect in relation to SA objective 4: economic growth, as it will provide new employment opportunities.</p> <p>With regard to SA objective 5: biodiversity, all effects against this objective are recorded as uncertain for the reasons outlined in the site assessment criteria (Appendix D of the Interim SA Report). The site receives an uncertain significant negative effect.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as being in a rural location and not within close proximity of any settlements when it is on the edge of a settlement. Therefore, in the next iteration of the SA Report, it will receive an uncertain minor negative effect in relation to this objective. As outlined in the site assessment criteria "Site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites". All adverse effects against this objective are recorded as uncertain, as actual effects are dependent on the design, scale and layout of development, which may help mitigate any adverse effects. The historic environment is dealt with separately under SA objective 7: heritage.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain for the reasons outlined in the site assessment criteria (Appendix D). The site receives an uncertain significant negative effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>To protect and enhance designated sites of nature conservation importance</p> <p>Harm would be caused to the New Barns & Broadwater Farm Conservation Area.</p> <p>To protect and enhance wildlife especially rare and endangered species. Harm would be caused as the site as a whole provides habitats for both resident and migratory, red-listed species</p> <p>To protect and enhance habitats and wildlife corridor Any development of this site would damage habitats not “protect and enhance”.</p> <p>To provide opportunities for people to access wildlife and open green spaces. Any development would restrict existing opportunities.</p> <p>To increase biodiversity net gain. This site currently provides a range of rich wildlife habitats, including meadows, orchards, hedgerows and wooded areas, no information is provided which would support an increase in biodiversity net gain.</p> <p>To protect and enhance priority species and habitats of conservation importance that contribute to reversing the trend of ecological decline. Development of this area would not protect and enhance priority species</p> <p>To protect, enhance and expand ecological networks and their interconnectivity. There is no current evidence to support the achievement of this objection, in fact the opposite is apparent.</p> <p>To protect and enhance sites designated for geodiversity. The Broadwater area is an area of geological interest, highlighted by the area’s names such as “Broadwater” and “Well Street”, which would neither be protected nor enhanced by development.</p> <p>SAO 6: I believe the rating should be “Significant Negative” with no uncertainty. TMBC are in possession of a significant bank of information about this site, including information from the consultation exercise associated with TM/21/02719. The landscape character and quality is formed from an unique mix of natural features (rolling open vistas, the Cwylla which is an historic Anglo Saxon monument) and important historic buildings, many of them both Listed and protected by their positions within Conservation Areas. TMBC itself designated the New Barns and Broadwater Farm Conservation Area in 1993, in part, due to the quality of views into, out of and across the area between the New Barns hamlet and the Broadwater Farmstead with substantial oast house complexes at either side. The typically Kentish view would definitely be harmed by further development. I believe this site scores poorly against the subobjectives as follows:</p> <p>To protect and enhance landscape character and quality ,given the nature of the landscape & its current protections, development would only cause harm and not protect.</p> <p>Protect and enhance the integrity and quality of the borough’s urban and rural landscapes, maintaining local distinctiveness and sense of</p>	<p>With regard to SA objective 8: water, the significant negative effect is recorded as uncertain as the site contains a water body but it is unknown what effect development might have on water quality. The site receives a significant negative effect, as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people’s behaviour.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, all adverse effects are recorded as uncertain as they largely depend on factors such as whether they would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p> <p>The respondent does not disagree with the findings of the SA with regard to SA objectives 9: soil and 11: climate change adaptation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>place. I believe this subobjective to be of particular importance as, not only is the rural landscape “distinct”, it is also unique containing the only instance of a “Cwylla” and is encompassed by a network of ancient sunken roads or hollow ways which are designated now as “Quiet Lanes”.</p> <p>To protect and enhance AONBs within the borough and their settings further development would harm the settings of the Kent Downs AONB.</p> <p>SAO 7: I believe the rating should be “Significant Negative” with no uncertainty. As above, TMBC are in possession of a significant bank of information about this site, including information from the consultation exercise associated with TM/21/02719. The area currently enjoys various statutory protections through its many listed buildings and Conservation Areas. Additionally, I believe the site scores poorly against the following subobjectives:</p> <p>To protect and enhance historic buildings and sites Within this area are numerous listed buildings including The Barracks and Derbies on Well Street, East Malling which are Grade2* listed. Such assets would neither be protected nor enhanced by development.</p> <p>To protect and enhance historic landscape/townscape value.</p> <p>With reference to the local Conservation Areas in particular, the historic landscape is currently protected. For New Barns and Broadwater, its Conservation Area designation and the associated visual amenity would undoubtedly be significantly harmed through further development.</p> <p>Cultural Heritage the cultural significance of the area reflects not only the hop farming heritage which endures through the proliferation of oast buildings across the site, but also goes back to the English Civil War and beyond a thousand years to the Anglo Saxon period.</p> <p>SAO 8: I believe the rating should be “Significant Negative” with no uncertainty. The Hydrogeology report commissioned by the Broadwater Action Group and submitted to TMBC during the consultation for application TN/21/02719 provides robust data regarding the existence of aquifers across this site which importantly feed the ancient Cwylla, contribute greatly to the productivity of Broadwater Farm and also give rise to what becomes the Ditton Stream which actually rises at Well Street. Development of this area would cause damage to these water features. (The information submitted by the applicant and the consultee response about this area from the Environment Agency is incomplete and should not be relied on.) I believe this site scores poorly against the following subobjectives:</p> <p>To protect and enhance ground and surface water quality.</p> <p>The Broadwater area is, as the name confirms, rich in ground and surface water resources which development would neither protect nor enhance.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Reduce the risk of flooding to existing communities and ensure no new developments are at risk. I am very concerned that any development mitigation would lead to serious harm to the Anglo Saxon Cwylla, which, is a KCC listed monument. Mitigation would also affect the water which has been accessible to the historic properties of Well Street and Broadwater Road. The water flow to the Ditton Stream would be impacted also. The New Barns Oast complex to the west of the New Barns Hamlet is situated in a hollow and would be at risk of flooding from any development to the south which interrupted the natural surface water drainage flows.</p> <p>To protect and enhance water quantity, such as through high standards of water efficiency.</p> <p>Any development would risk the water flowing to the Ditton Stream..</p> <p>SAO 9: I agree that a rating of "Significant Negative" is appropriate for this SA Objective as it is a greenfield site of 49% Grade 1 & 2 soil with 100% of the soil being Grade 3 or above, i.e. overall the soil quality is better than the threshold for "Best and Most Versatile". To support my rating for this SA, comments on the subobjectives are given below:</p> <p>To reduce the amount of derelict, contaminated, and vacant land.</p> <p>None of the land involved is of this type so this objective is not met.</p> <p>To encourage development of brownfield land where appropriate.</p> <p>Only the current farm buildings could be classified as "brownfield", possibly less than 1% of the site, so this objective is substantially unmet.</p> <p>To protect soil functions and quality.</p> <p>Developing this land would remove actively farmed land so this objective cannot be met.</p> <p>Avoid development of 'best and most versatile' soil.</p> <p>All of the farmland on the site is even better than "best and most versatile" so development should be avoided.</p> <p>SAO 10 I strongly challenge the rating of "significant positive" given by TMBC and I believe the rating should be "Minor negative" as it is difficult to see just how a 112 ha development could reduce greenhouse gas emissions overall, certainly no information is provided which would support this. The nearby Kings Hill development shows that although there are non-vehicular links to West Malling station, the car remains "king" and this is particularly noticeable during the twice daily rush hour. Developments of the proposed size of this site actively encourage families and others to relocate from higher cost areas to achieve "more house" for their money and the reality is that ICE car journeys and other fossil fuel using activities would only increase. Other than 1/3 of the site being within 800m of a railway station no information is provided to allow further analysis against the subobjectives for this SA.</p> <p>SAO 11: To improve adaptation to climate change so as to minimise its impact I was not able to find any further evidence to assess how the</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>site is rated against this objective so have no reason to disagree with TMBC's assessment of Negligible.</p> <p>SA Objective 12: I believe the rating for this objective should be "Minor negative" and not "Negligible" as suggested by TMBC. I also think an AQMA for A228 from the south of Kings Hill through to Leybourne should be established due to the increase in daily traffic in recent years, which is often slow moving or stationary. Local air quality is being affected and the road noise from the A228 across large parts of the site is evidence of the prevailing winds which indicate that the traffic pollution will also be present. Any further large scale building would only increase these harmful effects. I know air quality in this area is of concern to TMBC councillors as when I listened to the Planning Committee discussions regarding application TM/18/03034/OAEA, a significant concern of the Councillors was the proximity of the proposed playground site to the A228 and the potential risk from pollution. This confirms that TMBC are aware of and are sensitive to air quality issues in the vicinity of the western portion of this site. Additionally, I would add the following in regards to the subobjective:</p> <p>To protect and improve local air quality.</p> <p>Given the site is mainly green fields, orchard, hedgerows and trees, it is difficult to see how air quality could be improved by development.</p> <p>SAO 13: A vast amount of building materials including sand would be needed to develop this site which could be sourced from local sites such as Ryarsh or Borough Green or other local sites so even if this SA does not impact on this site, it could well have a negative effect on the material assets of the borough as a whole. Consequently this SA should probably have a "Minor negative" rating rather than "Uncertain minor negative".</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures. As the only publicly-available information available about the possible number and mix of houses for this site comes from Berkeley Homes application TM/21/02719 for the land covered by this site, TMBC's assessment "Uncertain minor positive" does not seem unreasonable.</p>	
43781249	Q8 of the questionnaire	<p>Q.8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>Chapel Street, Ryarsh (Site 59744)</p> <p>1.3.35 In regard to SA objective 3, the SA states that the site is within 800m of an existing secondary or primary school, but that there may not be capacity for additional pupils. If there is need for additional educational provision, then this development will be required to contribute to improving that provision.</p> <p>1.3.36 Whilst the school may be currently at capacity, it is likely that its catchment area goes beyond the village and its immediate surroundings. It may well be the case that any school age children living in the development would have greater priority over other</p>	<p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report state "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils. New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage" [emphasis added].</p> <p>Site 59744 has been appraised in accordance with the site assessment criteria against SA objective 6: landscape and townscape. The appraisal has been undertaken on a 'policy-off' basis and so consideration is not given to mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>applicants for those spaces, who may have alternative provision closer to their homes. The current capacity of the school should not represent a constraint to a proportionate expansion of the village.</p> <p>1.3.37 In relation to SA objective 6, whilst the site is within an AONB, it should be noted that the whole village is washed over by the AONB. This should not prevent well-designed proportionate growth of the village.</p> <p>1.3.38 SA Objective 8 incorrectly scores the site down due to being in Flood Risk zone 2. In fact, the site lies in flood zone 1, as highlighted on the map below. The score should be adjusted accordingly.</p> <p>1.3.39 Furthermore, SA objective 9 has been addressed as a 'significant negative' for the site. However, no detailed agricultural study has been carried out, and so that actual agricultural land quality is not definitively known here.</p> <p>Hermitage Court (Site 59738)</p> <p>1.3.40 In regard to SA objective 3, the site is being proposed for employment purposes, and therefore the proximity of the site to a school is not a relevant consideration. This factor has no effect on the suitability for employment purposes. The SA should differentiate residential and employment schemes and their relevance to certain factors.</p> <p>1.3.41 SA objective 6 the site is being scored as 'uncertain significant negative' on the basis that the site is said not to be located near any settlements in rural locations. It is unclear as to how this conclusion has been reached, as the site is almost adjacent to the boundary of Maidstone and has a continuous footpath from the site into the almost adjacent urban area.</p> <p>1.3.42 SA objective 9 should be highlighted. Whilst the site is greenfield land, it is not currently being used for agricultural purposes, and for this reason there would be no loss of agricultural land from developments on this site. Again, no detailed agricultural study has been carried out, and so that actual agricultural land quality is not definitively known here.</p>	<p>Site 59744 is correctly given a minor negative effect in relation to SA objective 8: water, as it contains land with a 1 in 100 year risk of surface water flooding. The proforma for the site states that the site is within Flood Zone 2 <i>and/or</i> contains land with a 1 in 100 year risk of surface water flooding.</p> <p>The Agricultural Land Classification has informed SA objective 9: soil and so the site correctly receives a significant negative effect in relation to this objective.</p> <p>As site 59738 is proposed for mixed use development which could include residential uses, it has correctly been appraised against SA objective 3: education. The SA does differentiate between different proposed uses, specifically residential, employment and mixed use. Please refer to Appendix D of the Interim SA Report, which presents the site assessment criteria for these different types of sites.</p> <p>With regard to SA objective 6: landscapes and townscapes, site 59738 is correctly recorded as not located near any settlements in a rural location. It is near Maidstone but not on the edge of Maidstone.</p> <p>With regard to SA objective 9: soil and site 59738, the Agricultural Land Classification still applies when a site is not actively being used for agricultural purposes. As mentioned already, the Agricultural Land Classification has informed SA objective 9: soil.</p>
42832833	Q8 of the questionnaire	<p>Q.8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number The Site has been assessed through the Interim Sustainability Appraisal (site reference: 59773) and there are some parts of the appraisal that we agree and support, whilst others we consider incorrect. Our comments on the relevant objectives (that we do not agree with) are outlined below.</p> <p>[formatted in table]</p> <p>Interim Sustainability Appraisal Objective Documentary Commentary Our Commentary</p>	<p>With regard to SA objective 1: health and wellbeing, the site receives a minor positive effect instead of a significant positive effect as although it is within 800m of existing areas of open space and walking paths, it is not within 800m of a GP surgery. This is in accordance with the site assessment criteria presented in Appendix D of the Interim SA Report.</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022). The SA acknowledges in the site assessment criteria under SA objective 2 "The location of residential sites, as well as mixed use sites incorporating residential development, could affect this objective by influencing people's ability to access existing services and facilities, although it is noted that</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). The proposal would facilitate improved health and well-being by providing much needed housing. We therefore suggest the Site is scored ‘++’ (significant positive effect likely) rather</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Poor Accessibility Band. Whilst it is acknowledged that the settlement of Crouch has limited community facilities and services, in line with paragraph 79 of the NPPF, the development of the Site for housing has the potential to help improve community facilities and public transport through financial contributions and the viability of an increased population in the area. Given the above and the Council's assessment in respect of SA Objective 1 and our subsequent re-assessment, we suggest the Site is scored ‘+’ (minor positive effect likely) rather than – (significant negative effect likely).</p> <p>Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor negative (-?)</p> <p>The site is more than 800m of an existing secondary school and a primary school. However, uncertainty exists as the effects will depend on there being capacity available at those facilities to The necessary financial contributions would be made to mitigate any likely impact of the Site in respect of education provision. We therefore suggest the Site is scored ‘0’ (Negligible effect likely) rather than (-?) Uncertain minor negative.</p> <p>TONBRIDGE & MALLING BOROUGH COUNCIL – LOCAL PLAN (REGULATION 18) CONSULTATION (NOVEMBER 2022) – LAND AT BASTED LANE, CROUCH Page 7 of 11</p> <p>accommodate new pupils. It is also noted that the provision of new residential development could stimulate the provision of new schools and/or school places, however this cannot be assumed at this stage and is therefore uncertain</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)/Negligible (0)</p> <p>The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities The development of the Site does have the potential to influence sustainable economic growth, through the construction phase. The development of the Site is also likely to be undertaken by a SME</p>	<p>larger scale development could potentially incorporate the provision of new services" [emphasis added]. This is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>With regard to SA objective 3: education, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. contributions towards education provision). This ensures all sites are appraised on a consistent basis. All effects against this objective are recorded as uncertain due to uncertainty regarding school capacity.</p> <p>With regard to SA objective 4: economic growth, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities. Although it is noted that an SME would undertake the construction work, this is an appraisal of the site and does not take into consideration who is developing the site.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape and 7: heritage, again this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain and landscaping). If the site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>builder. Further, once the dwellings are occupied, the additional local population will have a positive effect on the local economy. We therefore suggest the Site is scored '+' (minor positive effect) rather than (0) Negligible.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity Uncertain significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In accordance with the emerging Local Plan alongside the legislation within the Environment Act, the development of the Site would need to deliver at least a 10% net gain in biodiversity. With good landscaping and design plus generous planting of native trees any biodiversity disbenefits would be easily off-set on the site. We therefore suggest the Site is scored '++' (significant positive effect likely) rather than (--) Uncertain significant negative.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--)</p> <p>The site is located on the edge of a settlement. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is enclosed with good opportunities for strengthening its screening along its boundaries. The site's visibility from surrounding areas is also limited so its development would have minimal impact on the area. Whilst the character of the Site would change (development of a greenfield site), with a robust landscaping strategy and careful layout, it is suggested that the long-term impact would be minimal/negligible.</p> <p>TONBRIDGE & MALLING BOROUGH COUNCIL – LOCAL PLAN (REGULATION 18) CONSULTATION (NOVEMBER 2022) – LAND AT BASTED LANE, CROUCH Page 8 of 11</p> <p>We therefore suggest the Site is scored '-' (minor negative effect) rather than (--) Uncertain significant negative.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative (--)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. It is suggested with mitigation that would be incorporated into the development, the heritage asset and its setting (Winfield House) would not be affected. We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (--) Uncertain significant negative.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		We therefore consider the Interim Sustainability Assessment Report scores for the objectives as listed above should be higher than set out within the assessment. We therefore request that the interim sustainability Appraisal for the Site is reviewed by the Council and amended in accordance with the above.	
44200193	Q8 of the questionnaire	<p>Q8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report? Yes/No Please explain and quote the individual site reference number</p> <p>In respect of this question, our client only wishes to comment upon the site they are promoting. In this regard, we support the double positive that will be achieved in respect of the provision of housing. However, we believe the SA takes an overly negative stance in respect of wider objectives.</p> <p>For example, the land is currently of little or no ecological value and would need to achieve biodiversity net gain if it were to be developed. The provision of housing would therefore result in substantial betterment, and this should represent a strong positive.</p> <p>The desktop nature of the site assessment is also of concern. Based on a human judgement it is clear that there are not any significant heritage or landscape constraints to development and that the impacts are likely to be neutral or positive.</p> <p>In summary, it is essential that sites are properly appraised to ensure that decisions are made on credible information.</p>	<p>Site 59851 receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains existing green infrastructure assets, in addition to an SSSI (Holborough to Burnham Marshes), a Regionally Important Geological Site (Aylesford Pit) and Local Wildlife Site (Eccles Old Pits). All effects against SA objective 5 are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Although the respondent has stated that the site would need to achieve biodiversity net gain, this is a 'policy-off' appraisal and so consideration is not given to things like biodiversity net gain, as this is a form of mitigation. If the site is allocated in the Local Plan via policy, it will be appraised on a 'policy-on' basis.</p> <p>With regard to the historic environment, the site receives a significant negative effect because it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against SA objective 7: heritage are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to the landscape, the site receives a minor negative effect in relation to SA objective 6: landscape and townscape, as it is located adjacent to a settlement. Sites located adjacent to settlements may be more easily integrated into existing built development. All effects against SA objective 6 are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to explore heritage and landscape constraints in more detail.</p>
25368033	Q8 of the questionnaire	<p>I am writing to you having also completed our formal response to the 'Regulation 18' consultation using the online portal system as is the Council's preferred method of comment.</p> <p>As you are aware, the online system has been designed such that whilst it is possible in some instances to elaborate on answers to questions, a maximum of 6,000 characters can be used in each case (This equates on average to approximately 800 words).</p> <p>Whilst this is sufficient in the main, in the case of the Site Assessment responses (Question 8), it does not enable a full response to be provided.</p>	<p>The reasoning behind any uncertain effects is provided in Appendix D of the Interim SA Report.</p> <p>Site 59748 receives an uncertain significant negative effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect), as it contains an existing area of open space. This open space may be lost as a result of development, although this is uncertain. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. open space provision). This ensures all sites are appraised to a consistent level of detail. The SA does acknowledge the fact site 59748 is within close proximity of a GP surgery and open space and for this reason, also receives a significant positive effect in relation to SA objective 1.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>There is similarly no facility to attach plans or drawings which can be necessary to assist in explaining the points being made.</p> <p>Whilst appreciating the reasoning behind the use of the online system, (which we have utilised), I would ask that the Council consider the following additional points in relation to our client's land at Dryland Road, Borough Green (Site Reference 59748) as in many cases the assessment summaries appear either incorrect or uncertain of the effects that would result from its development.</p> <p>We highlight a number of the main areas of concern below.</p> <p>SA Objective 1: To improve human health and well-being</p> <p>1.The Sustainability Appraisal (SA) lists the site as likely to have significant positive effects and also uncertain negative effects. We agree with the positive effects categorisation but not the reference to uncertain negative effects.</p> <p>* Paragraph 5.4 of the SA states that negative effects under this category are likely to relate to sites that contain “an area of open space or accommodate an outdoor sports facility that may be lost as a result of development. However, these negative effects are uncertain as the effects will depend on the exact scale, layout and design of development and whether these existing features are in fact lost to new development.”</p> <p>* Our clients site is private land, it does not include any public open space or sports facilities that would be lost through development. The site proposals include the provision of new publicly accessible footpaths and open space which would result in a significant improvement in terms of access to open space in this area. An indicative site plan is included to demonstrate this provision to the south of the built development.</p> <p>* It is noted that site number 59710 (Land near the garden centre at Borough Green Road) has been ranked as a significant positive in terms of improving human health and well-being. The assessment states that this is because the site lies within 800m of an existing healthcare facility and an area of open space/play area/sports facility. Our client site lies close to a bowling club, (50m) and a recreation ground (100m) and within easy walking distance of the Borough Green Medical Centre (260m) but these aspects are not referenced in the text in the same way.</p> <p>* The attached context and facilities plan demonstrated the ease of access to nearby local facilities including the medical centre.</p> <p>* We ask that the reference to uncertain negative effects is therefore removed from the assessment.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>* The site is noted as having ‘fair’ accessibility to facilities and services. The SA notes that “Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing</p>	<p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). As the site falls within the Fair Accessibility Band in the Urban Capacity Study, it receives a minor negative effect in relation to SA objective 2. The straight-line distances the respondent refers to are used to inform SA objectives 1: health and wellbeing and 3: education. The site's access to walking paths is recognised under SA objective 1. The site's proximity to a railway station (and bus stops) is considered under SA 10: climate change mitigation, and schools under SA objective 3.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59748 contains green infrastructure assets. Additionally, it is adjacent to Ancient Woodland (Bourne Valley Woods). In the next iteration of the SA Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). Therefore, the site correctly receives an uncertain significant negative effect in relation to SA objective 5. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. biodiversity net gain).</p> <p>Site 59748 is correctly recorded as being within 250m of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, the site correctly receives an uncertain significant negative effect in relation to SA objective 7: heritage.</p> <p>With regard to SA objective 8: water, the proforma for the site states that it is within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site is within an area with a 1 in 30 year risk of surface water flooding. Therefore, the site is correctly recorded as receiving a significant negative effect.</p> <p>It is important to note that that SA is one of many factors that feed into the plan-making process.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>services and facilities, and therefore actual walking distances could be greater."</p> <p>* Given the above there is clearly potential for sites to score well based on a straight line distance whilst in reality, due to inaccessible third party land and the locations of footpaths to key facilities, to perform far more poorly in reality. Our client's site 59748 has the ability to link directly to existing footpaths and so access services directly and easily. The site similarly has the potential to deliver new links across and through it and so improve accessibility for new and existing residents. Please see the indicative site plan attached.</p> <p>* Notwithstanding this, if straight line distances are to be used, the accompanying facilities plan demonstrates that the site lies within a reasonable walking distance of the following:</p> <ul style="list-style-type: none"> * Bowling Green - 50 metres * Sports Ground - 100 metres * Medical centre - 260 metres * Bus Stop - 380 metres * Public House - 400 metres * High Street (Various Shops) - 450 metres * Primary School - 550 metres * Railway Station - 700 metres * Secondary School - 1000 metres <p>* The site sustainability credentials were noted as part of the previous 2016 call for sites process where the Council's summary assessment report concluded:</p> <p>"In terms of access to services, this site is in a sustainable location, adjacent to the built-up confines of Borough Green"</p> <p>* The overall assessment was that the site should be categorised as 'green' and so considered "suitable and deliverable".</p> <p>* Given the above we do not agree that the site accessibility should be considered as only 'fair' under this category, it is clearly very well related to shops and facilities and so offers a highly sustainable option for new development.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>* The appraisal assesses the site as having "uncertain significant negative" effects. The associated text states:</p> <p>"The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites.....</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of development. The effect is uncertain as it may be possible to conserve or even enhance the asset through design and layout of the new development."</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* This is incorrect. The DEFRA 'Magic' Map confirms that the site is approximately 1km away from the Bourne Alder Carr SSSI and over 310m from the Kent Downs AONB. No other sites are highlighted.</p> <p>* The site should be considered to have a neutral impact on this basis not uncertain negative as currently listed.</p> <p>* In terms of the reference to the site containing a "green infrastructure asset", it is noted that the site is all private agricultural land. It is not publicly accessible. Notwithstanding this, as part of the sites development it is proposed to deliver a significant biodiversity net gain. This has been assessed by Corylus Ecology Consultants in this regard. In summary, the whole of the site comprises 7.6834ha with 2.5ha shown as holding potential for development of approximately 45 – 50 new homes directly adjoining the settlement edge. This leaves 5.1516ha of wider land remaining.</p> <p>* It is proposed that 3ha is designated as a biodiversity net gain area to provide 20% net gain for another site within the district. A further area is capable of providing at least 30% biodiversity net gain for the site, along with general amenity open space, footpaths and walking routes as indicated on the accompanying site plan.</p> <p>* This aspect of the assessment should be updated to note the site as having a significant positive effect i.e. delivering a biodiversity net gain well beyond standard policy requirements.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>* The SA suggests "uncertain significant negative" effects under this category on the basis that the site lies within 250 metres of a heritage asset.</p> <p>* Having reviewed the heritage mapping system provided by Historic England it is understood that the closet asset is Hunts Farmhouse (grade II) which is approximately 230m away at No.77 Maidstone Road.</p> <p>* There are a number of intervening buildings, the bowls club and a large playing field between the site and this property. It is very clear that development at our client's site would have absolutely no impact upon the setting of the farmhouse.</p> <p>* This assessment should be amended to confirm that there would be no negative impact and the site should be ranked as at least neutral in this respect.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>* The appraisal highlights the site as falling with a range of from "significant negative to uncertain minor negative effects".</p> <p>* The text suggests that up to 25% of the site may be located in Flood Zone 3.</p> <p>* This is incorrect.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* The flood map for planning (below) demonstrates that Flood Zone 3 only touches the far northern edge of the site. The site itself is not at risk from flooding.</p> <p>* The accompanying plan demonstrates that the development would be retained south of the Flood Zone 3 area.</p> <p>* The assessment should be amended to remove any negative scoring associated with the site in respect of flood risk. This should be a neutral category.</p> <p>[map showing flood zone 3 included]</p> <p>Conclusions</p> <p>* The weight that may be attributed to the site assessment scores which are currently set out in the SA Appraisal when determining potential allocations for the plan period is unclear.</p> <p>* If the site assessments are to form the basis of and the evidence base for these decisions it is respectfully submitted that it is important that they are accurate and fair.</p> <p>* This submission with reference to the accompany plans seeks to ensure that the Council has accurate information regarding our client's Dryland Road site.</p> <p>* We trust that this will be taken into account and the current inaccuracies corrected as part of the Council's further assessment of the submitted sites.</p> <p>[site layout and site context documents also included]</p>	
43629217	General	<p>In accordance with Section 19 of the 2004 Planning and Compulsory Purchase Act, policies set out in Local Plans must be subject to Sustainability Appraisal (SA).</p> <p>Incorporating the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004, SA is a systematic process that should be undertaken at each stage of the Plan's preparation, assessing the effects of the Local Plan's proposals on sustainable development when judged against reasonable alternatives.</p> <p>The Council should ensure that the results of the SA process conducted through the preparation of the Local Plan clearly justify the policy choice made, including proposed site allocations (or decisions not to allocate sites) when considered against reasonable alternatives. In meeting the development needs of the area, it should be clear from the results of the assessment why some policy options have been progressed and others have been rejected.</p> <p>The SA must demonstrate that a comprehensive testing of options has been undertaken and that it provides evidence and reasoning as to why any reasonable alternatives have not been pursued. A failure to adequately give reasons in the SA could lead to a challenge of the Council's position through the examination process.</p> <p>The SA should inform plan making. Whilst exercising planning judgement on the results of the SA in the Local Plan is expected, the</p>	<p>Noted.</p> <p>SA is a high-level tool used to help identify the likely sustainability effects of a plan. It is therefore normal for the SA to include references to "potential" issues and effects.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA should still clearly assess any reasonable alternatives and clearly articulate the results of any such assessment.</p> <p>The Interim SA examines the Council's approaches to housing delivery, and contrasts proposed policy requirements and strategies against defined reasonable alternatives</p> <p>2 PPG ID: 61-020-20190315</p> <p>Tonbridge & Malling Local Plan Reg. 18 Representations</p> <p>6</p> <p>to confirm that the strategy outlined represents an appropriate strategy. This includes an appraisal of reasonable site options.</p> <p>Gladman's comments on the Interim Sustainability Assessment Report can be found later in this representation, at section 4.3.</p> <p>Gladman broadly agree with the findings of the strategic policy option assessments in Chapter 4 of the Interim Sustainability Appraisal Report (ISA), however, have some concerns regarding the methodology. Harm being assessed as minor or significant whilst also being a determined 'potential' suggests a nuance that has not been fully explored. It is not robust to determine the scale of a harm that may or may not occur, whilst referencing that there is the potential for mitigation. Gladman recommend the ISA is reviewed before the next round of consultation to ensure that it is clear how the conclusions have been reached. This will allow the preferred options to be suitably assessed.</p>	
42442561	General	<p>One of the Sustainability Appraisal (SA) objectives is 'to reduce greenhouse gas emissions to minimise climate change' further Development can only make matters worse,</p>	<p>It is likely that future growth will contribute to an increase in greenhouse gas emissions unless development can be designed in a way that reduces reliance on the private car and seeks to achieve net zero. This will be reflected in the cumulative effects section of the next iteration of the SA.</p>
42746209	General	<p>Some general points of concern</p> <ul style="list-style-type: none"> * Inconsistency: Some sites have been give different assessments but the commentary is exactly the same. * Access: It is stated that access to schools or public transport are within a specific distance of the designated sites but this cannot be the case for the whole area of the site. * Local knowledge: Equally, access to a school site may be via a woodland or for public transport to a bus stop with limited services – there is no way that all new residents would use these services. * Health: There is now no GP service in West Malling, the closest is Kings Hill or Leybourne. The Sustainability Objective also conflates health facilities with access to sporting facilities/playgrounds! * Highways: Sustainability Appraisal objectives do not include impact on the local road system. 	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to measuring straight-line distances from the edge of a site option, this was done using the smallest distance between a site and existing services and facilities. The SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater".</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However this GP surgery is now closed. In the next iteration of the SA Report, the proformas for the sites affected will be updated.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			There is considered to be a lot of crossover between access to healthcare facilities and areas of open space and sports facilities, as these can encourage more physical activity with beneficial effects on people's health. The site assessment criteria for SA objective 1: health and wellbeing are considered suitable and appropriate.
43485921	General	<p>[Site reference 59740]</p> <p>Executive Summary</p> <p>In summary, this Regulation 18 Consultation response focuses on responding to Question 8 for Site 59740 and BAG believes there is sufficient compelling evidence to exclude this site from going forward for development in the next draft of the Local Plan. Each of the fourteen Sustainability Assessment (SA) objectives and their sub-objectives have been reviewed by BAG and in many cases, based on the evidence provided in the Interim Sustainability Appraisal Annex 1 and what is known about the site, BAG does not agree with the initial assessments given by TMBC. BAG has offered its own assessment of each of the SA objectives including appropriate supporting evidence as necessary.</p> <p>Section A below gives a general overview of BAG's assessment of the suitability of the site and Section B gives an assessment of how BAG believes the Broadwater Farm site should be rated against the Sustainability Assessment objections and sub-objectives.</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>The SA does acknowledge the heritage assets within 250m of the site (including within the site). For this reason, the site receives a significant negative effect in relation to SA objective 7: heritage. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA also acknowledges the fact the site is greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land. For this reason, the site receives a significant negative effect in relation to SA objective 9: soil. It is not possible to exceed Grade 1 or 2 best and most versatile agricultural land.</p> <p>This is a 'policy-off' appraisal and so the site is appraised on its physical merits only. This ensures all reasonable alternative development site options are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>In LUC's SA, all reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, the site is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1. With regard to the respondent's point on uncertainty, if a site is recorded as containing a designated open space it receives some uncertainty, as it is unknown whether the open space will be lost or not, or integrated into development. With regard to healthcare facilities, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 2: services and facilities, site 59740 is recorded in the Urban Capacity Study (July 2022) as falling within the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, all mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59740 is 5ha or more, it receives a significant positive effect in relation to this objective. The fact it is also within 800m of a train station also contributes to this significant positive effect.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlement of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the fact the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, the minor negative effect is recorded as uncertain as although the site is within a Minerals Safeguarding Area, the actual effect will depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p> <p>The respondent has not provided a reason as to why they consider the uncertain minor positive effect against SA objective 14: housing unreasonable. Site 59740 is proposed for a mix of uses but it is unknown what percentage of the site will be provided for housing, hence the uncertainty.</p>
43629217	General	<p>Site 59824- East Mallong</p> <p>Under SA Objective 6 (to protect and enhance the borough's landscape and townscape character and quality), the site is considered to have an 'Uncertain minor negative (-?)' impact. The site is located on the edge of a settlement and it is considered that these effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale, and layout of development, which may help mitigate any adverse effects.</p> <p>Gladman disagree with the assumption that development in this location will negatively affect the landscape and townscape. The development proposals for site will be thoughtfully designed to consider the scale and layout to ensure that harm to the landscape is mitigated and the townscape on the settlement's edge is improved.</p> <p>Gladman have commissioned a Landscape and Visual Impact Assessment which concludes that the proposed development is well related to the settlement of East Mallong and due to the limited visibility of the proposed development, there will be no material effect on the landscape/townscape character of the wider area. The development will form a logical extension to the settlement and, while it will be visible from the immediate surroundings, it will be seen within the context of the existing settlement edge which is already visible. Therefore, it will not appear discordant or out of character with the surrounding area.</p> <p>Tonbridge & Mallong Local Plan Reg. 18 Representations 19</p> <p>Under SA Objective 7 (to protect and enhance the cultural heritage resource), the site's impact is considered 'Uncertain significant negative (-?)' as the site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p>	<p>All reasonable alternative development site options have been appraised on a 'policy-off' basis and so consideration has not been given to mitigation and supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail (specific development proposals may not yet have been determined for a number of sites). If a site is allocated in a Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>All site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects site options are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Gladman disagree with the potential for significant negative impacts on a heritage asset. The site can be designed and delivered in a way that is sensitive to heritage and conservation considerations.</p> <p>As part of our due diligence process, Gladman have commissioned a Heritage Desk-Based Assessment by Pegasus. This report concludes that the proposed development on the site will not result in any harm to the heritage significance of the Grade II Listed office building at Invicta Works through changes to its setting.</p> <p>The site was identified as contributing to the heritage significance of the Grade II Listed Westbrook House and Grade II Listed Cobb's Hall. The site also contributes a minor amount towards the overall special heritage interests of the Mill Street East Malling Conservation Area. The report concludes that the proposed development will result a less than substantial amount of harm at the lowest end of the spectrum to the three aforementioned designated heritage assets through changes to setting.</p> <p>Under SA Objective 14 (to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types, and tenures), the site is considered to have a 'Significant positive (++)' impact. The site is expected to comprise 100 dwellings or more and it is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs.</p> <p>Gladman agree that the provision of housing in this location should be considered a significant positive impact.</p>	
45943201	General	<p>59602 19 Houses</p> <p>Objective 3. I question whether this is within 800m of a primary or secondary school Objective 14. I question whether a positive . I don't believe the site would be a mix of tenures due to it's size.</p> <p>.Further the site is in greenbelt, countryside ,outside the confines of West Malling,loss of agricultural land.</p> <p>Development on this side of King Hill would be a further expansion of Kings Hill commenced by the Lancaster Park development and would be the commencement of development towards Offham Village. I further understand that an application for the northern part of the site was refused by TMBC in May 12.</p> <p>If allowed it would result in further traffic through Offham Village using Teston Road as a "rat run" to the M20.</p>	<p>Site 59602 is within 800m of Valley Invicta Primary School at Kings Hill. Therefore, the site correctly receives a minor positive effect in relation to SA objective 3: education, as development at this site will ensure new residents are within close proximity or a primary school. The effect is recorded as uncertain, as capacity at this school is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA acknowledges that site 59602 is outside the settlement confines of West Malling. The proforma for the site specifically states that the site is not located near any settlements in a rural location. For this reason, the site receives a significant negative effect in relation to SA objective 6. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA also acknowledges that site 59602 contains best and most versatile agricultural land. For this reason, it receives a significant negative effect in relation to SA objective 9: soil.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
45943201	General	<p>59603 30 Houses</p> <p>Objective 3. I question whether rtfs is within 800m of a primary or secondary school Objective 9. As this includes 56902 in it's entirety which is classified as greenfield ,how can this site be assessed as brownfield?</p> <p>Objective 14. I question why this is a positive,I don't believe the site would give a mix of tenures, Does it double count the site it encompasses 59602?</p> <p>I make the same observations as I did in the last 3 lines concerning 59602</p>	<p>Site 59603 is within 800m of Valley Invicta Primary School at Kings Hill. Therefore, the site correctly receives a minor positive effect in relation to SA objective 3: education, as development at this site will ensure new residents are within close proximity or a primary school. The effect is recorded as uncertain, as capacity at this school is unknown.</p> <p>Site 59603 receives a minor positive effect in relation to SA objective 14: housing, as it will deliver fewer than 100 dwellings. The SA has separately appraised sites 59602 and 59603.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA acknowledges that site 59603 is outside the settlement confines of West Malling. The proforma for the site specifically states that the site is not located near any settlements in a rural location. For this reason, the site receives a significant negative effect in relation to SA objective 6. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA acknowledges that site 59603 contains a significant proportion of Grade 3 agricultural land. Therefore, it receives a significant negative effect in relation to SA objective 9: soil. The effect is recorded as uncertain, as it is unknown whether the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>
45943201	General	<p>59699 260 Houses</p> <p>Objective1. With the closing of the West Malling surgery the site is not within 800m of an existing health facility Objective 3. I question whether this is within 800m of a primary or secondary school.</p> <p>Objective 4, The site is not all within 400m of a bus stop, nor would all 260 households be able to use this limited bus service or cycle. It is also unclear what business opportunities this mixed used site would deliver and therefore it's impact on the local economy.</p> <p>Objective 6. This would be a significant negative as it will have a major impact on the landscape.</p> <p>Objective 10. The majority of the site is not within 400m of a bus stop and the bus service is extremely limited-it would increase car/highway movements significantly.</p> <p>Further the site is in Green Belt, countryside, outside the confines of West Malling, would increase traffic in restricted Offham Road and West Street and would be a loss of best and most versatile agricultural land. Close to conservation areas, not submitted in previous local plan.</p>	<p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated, including site 59699.</p> <p>Site 59699 is correctly recorded as within 800m of a school, namely West Malling Church of England Primary School. Therefore, it correctly receives a minor positive effect in relation to SA objective 3: education. The effect is recorded as uncertain, as capacity at this school is unknown.</p> <p>As site 59699 is located on the edge of West Malling, it receives a minor negative effect in relation to SA objective 6: landscape and townscape. This is because site options adjacent to the existing urban edge could be more easily integrated into existing built development.</p> <p>The SA correctly acknowledges site 59699 as being within 400m of a bus stop, under SA objective 10: climate change mitigation. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA also acknowledges that site 59699 contains best and most versatile agricultural land. For this reason, it receives a significant negative effect in relation to SA objective 9: soil.</p>
45943201	General	<p>59716 28 Houses</p> <p>Objective 1. Contradictory, no explanation is given. It can't be both significantly negative and significantly positive.</p> <p>Objective 10. I question whether all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited.</p> <p>Objective 14. I question why a positive ,I don't believe the site would give a mix of tenures due to it's size.</p> <p>Further the site is in countryside, Green Belt, outside the confines of West Malling, conservation area, harm to the setting of St Leonards Tower and Malling Place, loss of agricultural land sand would cause increase of traffic in restricted Offham Road and West Street, not submitted in previous local plan.</p>	<p>In line with the site assessment criteria presented in Appendix D of the Interim SA Report, it is possible for sites to receive mixed effects against some of the SA objectives.</p> <p>Due to an error, justification text was not provided for the effect site 59716 is expected to have against SA objective 1: health and wellbeing. In the next iteration of the SA Report, the justification text will be provided.</p> <p>Site 59716 is incorrectly recorded as receiving a significant positive effect in relation to SA objective 1: health and wellbeing when it should have received a minor positive effect. This is because the GP surgeries data used to inform the Interim SA Report included West Malling GP surgery, which is now closed. The site should receive a minor positive effect because although it is not within close proximity of a GP surgery, it is within close proximity of some open spaces and walking paths.</p> <p>Site 59717 is incorrectly recorded as containing an open space and so incorrectly receives an uncertain significant negative effect in relation to SA objective 1. This is due to the fact there is some overlap with a neighbouring open space. In the next iteration of the SA Report, the site will not receive a negative effect against SA1.</p> <p>With regard to SA objective 10: climate change mitigation, the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The SA acknowledges the site as not located near any settlements in a rural location and for this reason, receives a significant negative effect in relation to SA objective 6: landscape and townscape. All effects against this objective are recorded as uncertain, as effects on landscapes and townscape will also depend on the final design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59716 received a significant negative effect in relation to SA objective 7: heritage, due to its proximity to heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59716 also receives a significant negative effect in relation to SA objective 9: soil, as it is greenfield land and contains a significant proportion of best and most versatile agricultural land.</p>
45943201	General	<p>59733 27 Houses</p> <p>Objective 9. Brownfield?</p> <p>Objective 10. Majority of site not within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited</p> <p>Objective 14. Why is this a positive?. I don't believe the site would give a mix of tenures due to it's size.</p> <p>Further this is outside the confines of West Malling and would leave no boundary between Kings Hill and West Malling</p>	<p>Site 59733 meets the definition of brownfield land.</p> <p>With regard to SA objective 10: climate change mitigation, the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The SA acknowledges the site as not located near any settlements in a rural location and for this reason, receives a significant negative effect in relation to SA objective 6: landscape and townscape. All effects against this objective are recorded as uncertain, as effects on landscapes and townscape will also depend on the final design, scale and layout of development, which may help mitigate any adverse effects.</p>
45943201	General	<p>59406 20 Houses</p> <p>Objective 2. This should be the same as for site 59596 ie significant negative as it is immediately next door Objective 3. Stated that it is within 800m distance walking but this would be through woodland, dark at each end of a winter's day and very muddy if weather is inclement. It is also inconsistent-the site across the road [59648]is classified as a minor negative Objective9. Is this all Brownfield Land?</p> <p>Objective 14. Why is this a positive?I don't believe the site would give a mix of tenures due to it's size Further part of this site is outside the confines of Offham and within Green Belt and countryside . Planning application for 7 houses has been accepted.</p>	<p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). In the Urban Capacity Study, site 59406 is identified as falling within the Fair Accessibility Band, whilst site 59596 is identified as falling within the Poor Accessibility Band. For this reason, sites 59406 and 59596 receive minor negative and significant negative effects, respectively.</p> <p>With regard to SA objective 3: education, the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater. Site 59406 is within 800m straight-line distance from the nearest school, whereas 59648 is not, hence the difference in effects.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>Site 59406 is not entirely outside of the settlement confines of Offham as defined under Policy CP13, rather some of it is within the boundary. Therefore, the site receives a negligible effect in relation to SA objective 6: landscape and townscape.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.
45943201	General	<p>59596 23 Houses</p> <p>Objective 3. Stated that it's within 800m distance walking but this would be through woodland ,dark at the end of each winter's day and very muddy if the weather is inclement.It is also inconsistent -the site across the road[59648] is classified as a minor negative Objective 14. Why is this a positive? I do not believe the site would give a mix of tenures due to it's size .</p> <p>Further the site is in the countryside outside the confines of Offham and in Green Belt. There would be a loss of agricultural land Successive applications for 15 and 7 Houses have been refused. If the development took place there would be further traffic pressure on Offham Village.</p>	<p>With regard to SA objective 3: education, the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater. Site 59596 is within 800m straight-line distance from the nearest school, whereas 59648 is not, hence the difference in effects.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>Site 59596 is adjacent to the settlement confines of Offham, as defined under Policy CP13. Therefore, the site receives a minor effect in relation to SA objective 6: landscape and townscape. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p>
42513281	General	<p>[59694]</p> <p>1.0 INTRODUCTION AND CONTACT DETAILS</p> <p>1.1.1 AXIS, on behalf of FCC Environment, are submitting this written representation as part of the current Tonbridge and Malling Local Plan Consultation, under Regulation 18 of The Town and Country Planning (Local Planning) (England) Regulations 2012.</p> <p>1.1.2 The written submission relates specifically to a proposed allocation at Allington Quarry (the Site), which was referred to as 'Site ID 59694' as part of the site review and sustainability appraisal (SA) process. The Site was put forward during the original Call for Sites process undertaken by Tonbridge & Malling Borough Council (TMBC), which ended in February 2022.</p> <p>1.1.3 We feel that the assessment of the merits of the Site against the Sustainability Appraisal (SA) objectives has been undertaken using basic criteria and limited information, resulting in unduly harsh scoring against several of the SA objectives. This has resulted in the site to seemingly underperform, when in truth, development of the site presents a strong and realistic opportunity to enhance well established employment provision at a strategic location within the Borough.</p>	<p>SA objective 3: education explores the proximity of sites to schools. As site 59694 is proposed for employment uses, SA objective 3 is not relevant. Although there is potential for employment sites to offer opportunities for work experience and apprenticeships, this cannot be guaranteed.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, due to the proximity of the site to an area of Ancient Woodland and the fact it contains green infrastructure assets, it receives a significant negative effect. The effect is uncertain as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). This ensures all sites are appraised on a consistent basis. If the site is allocated in the Local Plan via policy containing site-specific mitigation measures, it will be appraised on a 'policy-on' basis. The SA does not utilise Natural England's SSSI Impact Risk Zones.</p> <p>As the site is located within a settlement, it receives a negligible effect in relation to SA objective 6: landscape and townscape. Sites do not tend to receive positive effects against landscape objectives as SA utilises a precautionary approach and it is likely that any change to the baseline would have adverse effects.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>1.1.4 The purpose of this document is therefore:</p> <ul style="list-style-type: none"> □ To review the scoring against the SA framework and to highlight where new information, or a more detailed interpretation of existing information, is likely to warrant a different scoring. □ To propose new scoring against the SA framework, supported by evidence, for the Site to be considered appropriately within the aspirations of the emerging Local Plan. □ To demonstrate how the Site would support aspirations of the emerging Local Plan and is in turn supported by emerging policies. 	<p>With regard to SA objective 7: heritage, the SA utilises Kent's Historic Environment Record. Site 59694 is located within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>Site 59694 receives an uncertain significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. The uncertainty is due to the fact effects resulting from Source Protection Zones are uncertain. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>Site 59694 comprises Grade 2 agricultural land. Therefore, it is correct that it receives a significant negative effect in relation to SA objective 9: soil. The fact the site is not connected to any current agricultural use does not change the fact it comprises agricultural land.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>Site 59694 receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste as it is within a Minerals Safeguarding Area. Although the site promoter states that the site has already undergone aggregate abstraction, this level of information is not available for most of the sites. So as to ensure consistency, all sites within a Minerals Safeguarding Area are recorded as having an uncertain minor negative effect in relation to this objective.</p> <p>SA objective 14: housing specifically relates to the delivery of housing. As the location of employment sites will not influence housing delivery, this objective is not relevant. However, the proforma incorrectly states 'TBC' under this objective. In the next iteration of the SA Report, it will state "The location of employment sites is not considered likely to affect this objective".</p> <p>It is important to note that the SA findings are not the only factors taken into account when determining a preferred option to take forward in a plan. Factors such as public opinion, deliverability and conformity with national policy are also taken into account by plan-makers when selecting preferred options for a plan.</p> <p>The appraisals in Annex 1 of the Interim SA Report have been undertaken on a 'policy-off' basis, which means that the sites have been appraised on their physical constraints only. This ensures they are all appraised to a consistent level of detail. If sites are allocated in the Local Plan via policy that contains mitigation measures, the sites will be appraised on a 'policy-on' basis (i.e. taking into consideration mitigation).</p>
43779649	General	<p>(SITE REF: 59709)</p> <p>Landscape & Green Belt</p>	<p>All reasonable alternative development site options have been appraised on a 'policy-off' basis and so consideration has not been given to mitigation and supporting documents submitted by site</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Landscape analysis for the site that has been undertaken by Murdoch Wickham Associates (see Appendix 1). This explains that the land comprises paddocks with areas of scrub and derelict farm buildings the characteristics of the site do not reflect the wooded, traditional farmed landscaped which typifies the qualities associated with the Greensand Ridge within the Kent Downs AONB.</p> <p>Furthermore, the site is well-enclosed by a variation of hedgerows and shrubbery, particularly along the northern and eastern boundary. The northern boundary runs parallel to the strategic route of the A25, Borough Green Road and the natural boundary of the hedgerow, which provides a sense of enclosure and privacy, will be maintained. The site is well-related to the edge of Borough Green and is well situated to accommodate the expansion of the town. The site is more closely associated with the existing built form in Borough Green than it is with the open countryside further out to the west of the site. Whilst the southern parts of the site are identified as being of greater visual sensitivity than the more visually enclosed and flatter northern part of the site, on this basis the assessment supports the release of the site from the AONB designation as part of the Local Plan review.</p> <p>The assessment of the site against sustainability assessment objective 6 would benefit from review. We are concerned with scoring the site as an uncertain significant negative in to landscape and townscape quality.</p> <p>From the more detailed analysis we have undertaken we suggest that landscape impact would be limited and reconsideration of the score to negligible or, at worst, minor negative, to account for a degree of local impact, would be more appropriate.</p> <p>In relation to Green Belt purposes, the site makes a contribution to openness. However, it is surrounded on all sides by either existing development or roads, which form clear boundaries. As above the site is closely related to the settlement edge with urbanising influences from existing development and road infrastructure. The site's contribution to preventing urban sprawl and preventing towns from merging is limited and, following a Borough wide Green Belt Review, the land could be released without undermining the wider purposes of the Green Belt.</p>	<p>promoters. This ensures all sites are appraised to the same level of detail (specific development proposals may not yet have been determined for a number of sites). If a site is allocated in a Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59709 receives a significant negative effect in relation to SA objective 6: landscape and townscape due to location within the AONB. All adverse effects against this objective are recorded as uncertain, as actual effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>
43779649	General	<p>[Site reference 59709]</p> <p>Heritage</p> <p>The site does not contain any designated or non-designated heritage assets. Borough Green is home to numerous Grade II listed buildings, all of which are situated within the existing urban context. There are a number of heritage assets present in the wider surrounding area such as the Grade I listed Church of St Peter in Ightham, alongside two further Grade II* listed buildings residing approximately 650m south-west of the site.</p> <p>The justification of the sites low score for sustainability assessment objective 7 appears to be the proximity of the heritage assets in Borough Green. Two listed buildings, The Red Lion Public House and</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 7: heritage, the site is recorded as containing Neolithic finds, in addition to falling within 250m of a number of heritage assts. Therefore, it receives a significant negative effect in relation to this objective. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>35-39 Sevenoaks Road (both Grade II listed) are situated 135m and 155m from the site's northern boundary. Despite the site's proximity to these assets, there is no intervisibility between the site and these buildings. Therefore, development of the site would not cause any harm to these designated heritage assets and the impact would be negligible.</p> <p>The site is approximately 750m south-east of a Registered Park and Gardens designation, Ightham Court (Grade II*). The A25 Borough Green Road and the railway line provide a significant barrier between the site and Ightham Court and, in view of this and the separation distance, it is also reasonable to assume a negligible impact.</p> <p>In terms of archaeology there are no statutory designations affecting the site. Further work will be undertaken to assess the site's archaeological potential prior to planning including any recommended investigations. Archaeology is not expected to be prohibitive to development.</p> <p>Ecology</p> <p>The site is not subject to any statutory or non-statutory nature designations and any ecological interest is likely to be local in terms of its importance. The edges of the fields on the site include hedgerows and there are some existing trees located on the site. Our proposal will seek to retain and enhance these landscape features thereby retaining existing habitat. Ecological surveys will be undertaken as part of a future planning application to include identifying any necessary mitigation measures required. Berkeley commits to achieving a net biodiversity gain on all its developments and so opportunities to enhance the site's ecological value will be incorporated.</p> <p>Sustainability Assessment Objective 5 scores as an uncertain significant negative due to 'the site within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites' alongside 'the site containing existing green infrastructure assets'. The site's definition as a green infrastructure asset is questionable given the limited public access to it. The site is close to a Local Wildlife Site, the Bourne Valley Woods. However, the criteria for the objective specifies distance from internationally and or nationally designated biodiversity or geodiversity sites, not a local designation.</p> <p>Whilst the openness of the site and its proximity to a local designation are noted, on this basis we would suggest that this objective should be scored as negligible or, at worst, uncertain minor negative at this stage.</p> <p>Flooding & Drainage</p> <p>The Environmental Agency Flood Maps show that a small proportion of the western site boundary is within Flood Zone 3 meaning it is at the highest risk of flooding as shown within the Transport, Infrastructure and Environmental Review (see Appendix 1). In addition part of the north of the site is affected by surface water flooding, but the vast majority of the site is not affected by flood risk. There is the potential for development to avoid areas of flood risk and implement</p>	<p>The site receives an uncertain significant negative effect against SA objective 5: biodiversity and geodiversity. This is due to the fact the site is within 250m of Bourne Valley Woods Local Wildlife Site and Ancient Woodland, and contains green infrastructure assets (thick vegetation).</p> <p>Although development of this site offers the opportunity to achieve biodiversity net gain, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is located within the North Downs AONB.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertain significant negative effect is as a result of the site containing land with a 1 in 30 year risk of surface water flooding. Further to this, there is some overlap with a watercourse in the north west of the site and therefore it is uncertain what effect development might have on the watercourse in terms of water quality. Although the respondent has said that flooding will be dealt with appropriately through respecting existing surface water flows and incorporating mitigation measures such as SuDS, this is a 'policy-off' appraisal that does not take into consideration mitigation. Each reasonable alternative development site option has been appraised on a 'policy-off' basis, which means that it has been appraised on its physical constraints only. This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via a policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>sustainable drainage strategies to ensure that the risk of flooding from surface water is fully mitigated.</p> <p>It is noted that the SA assesses the site as significant negative in relation to flooding (objective 8) and, as highlighted in our questionnaire response, this would benefit from further consideration as the flooding constraint affects only part of the site. There is potential to mitigate the impacts of development through locating the development outside of the flood zones and incorporating a sustainable drainage strategy.</p> <p>Overall</p> <p>Overall there are no technical or environmental issues that would prohibit development, including in relation to the impact of development on Kent Downs AONB, highways, landscape, ecology and flooding considerations.</p> <p>The site is well contained by existing residential development to the east as well as north and roads to the north and south and well related to the existing edge of Borough Green. It does not reflect the typical characteristics of the AONB and it could be released from both the AONB and Green Belt designations as part of the Local Plan review given the existence of exceptional circumstances.</p> <p>The site is sustainably located as well as suitable, available and achievable for development in the first five years of the Local Plan and, given its limited contribution to Green Belt purposes, we consider that it should be allocated.</p>	
38330753	General	<p>Site 59791 and 5979</p> <p>SA1: The medical centre quoted, does not exist at the present time or in the near future. The local GP surgery is unable to cope with the present level of patients, any additions could reduce the service to a dangerous level. The site is within an area of open space and much needed for the well-being of the local residents, including allotment space.</p> <p>SA2: The exit roads from the development would come out onto a single/narrow country lane with bad visibility.</p> <p>SA3: The primary is full and there are no secondary schools within 3 miles.</p> <p>SA5: The taking of agriculture land for would not enhance the well-being of local residents, but also reduce food supplies.</p> <p>SA6: The AONB mentioned is only 100 mtrs from the proposed development and this development will have an effect on local wildlife, including badgers. The area also rises to an SSSI risk area and is next to a rural settlement which would have their views of the AONB ruined.</p> <p>SA8: The rainfall on the North Downs which is at present absorbed by agricultural fields would not have any natural soak-away if these fields are replaced by roads and properties. The gradient means that surface water would drain to the houses below increasing the risk of</p>	<p>The proformas for sites 59791 and 59792 state that they are either within 800m of an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both). Specifically, both sites are within 800m of an area of open space and some walking paths. The SA acknowledges that both sites contain an area of open space that could be lost as a result of development, although this is uncertain. The overall effect for both sites against this objective is mixed uncertain significant negative and minor positive.</p> <p>The SA is too high-level to give consideration to sight lines.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to the respondent's comment on SA objective 5: biodiversity and geodiversity, agricultural land is dealt with separately under SA objective 9. Sites 59791 and 59792 are recorded as having significant negative effects in relation to SA objective 9L soils, as they</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>flooding the in the village. KCC already state that the water system cannot cope with the current amount of water passed into it during extreme weather events, drains are already becoming overloaded, causing flooding towards the river.</p> <p>SA10: There is no bus service, the bus stop is now redundant. This means that residents of any new properties would need to use their cars for all journeys, therefore increasing gas emissions. This is not a minor positive, but a major negative.</p> <p>SA11: The lack of public transport and the increased use in private vehicles will only increase emissions which will additionally contribute to climate change and NOT minimise any impact.</p> <p>SA12: Air quality in Wouldham has been a bone of contention and more vehicles with the congestion they bring will only add to the poor air quality.</p> <p>To summarise these answers to sites 59791 and 59792. It is very obvious that these sites are not suitable for housing due to the lack of infrastructure, including no schools, no medical centre and no bus service. The road infrastructure is already unable to cope with the increased traffic caused by Peters Village and the bridge. KCC have continually investigated options for road improvements but are unable to implement any solution even to alleviate the present traffic problems.</p>	<p>are greenfield and contain a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>With regard to the respondent's comment on SA objective 11: climate change adaptation, sustainable transport is considered separately under SA objective 10: climate change mitigation. Sites 59791 and 59792 receive minor positive effects in relation to SA10, as they are more than 800m from a railway station but within 400m of a bus stop. Air quality is dealt with separately under SA objective 12: air. With regard to SA12, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). The sites listed are not within 100m of an AQMA.</p> <p>The SA uses 500m as a threshold for determining effects on the AONB. Due to the fact both sites are within 500m of an AONB, both receive an uncertain significant.</p> <p>Neither site has been identified as being at risk of flooding, including surface water flooding.</p> <p>With regard to SA objective 10: climate change mitigation, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>
42527265	General	<p>Site 59791</p> <p>SA1 is incorrect. There is no health facility within 800 mtrs.</p> <p>SA3 is incorrect. There is no secondary school within 800mtrs which is an issue as the bus service is not secure. The primary school is already full and current students already need to travel to schools outside of the area.</p> <p>SA6. The site rises to an AONB and an SSSI risk area. It is next to a rural settlement which would have their views of the AONB ruined.</p> <p>SA8. The gradient of the site means that by changing the land from farmland (which soaks up water) to buildings, means that surface water would drain to the houses below increasing the risk of flooding in the village. KCC already state that the Southern Water system cannot cope with the amount of water being currently passed to it during extreme weather events. This was reported to them as recently as 21/09/2022 under their Ref No: 4431246</p> <p>SA10 is incorrect. There may be a bus stop within 400 mtrs, but there is only a bus twice a week.</p> <p>Your hierarchy statement says that 'rural' areas would not have major development.</p> <p>Also, with the lack of buses, more cars are needed. The road infrastructure is already unable to cope with the increase in traffic caused by the Peters Village development and the bridge. KCC have</p>	<p>The proformas for sites 59791 and 59792 state that they are either within 800m of an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both). In the next iteration of the SA Report, this limitation will be added to the section in the SA entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>
42651073	General	<p>* Site IDs 59735 overlaps with site IDs 59798, 59804 and 59835 and yet these sites have numerous different assessment outcomes, which does not appear to be credible or logical.</p> <p>* The SA assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>* Horns Lodge Lane, which abuts site ID 59735 is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role in supporting the physical and mental well-being of a wide cross-section of the local community. Development of these areas for residential and/or mixed use will significantly increase traffic, noise and local pollution with significant detriment to these current community benefits.</p>	<p>The site boundaries for 59735, 59798, 59804 and 59835 are not the same, but similar. Due to the fact the boundaries differ and different types and sizes of development are proposed on each, the SA effects differ between them.</p> <p>The SA is too high-level to give consideration to traffic, and so the Council will commission additional evidence on this. Air pollution is covered under SA objective 12, which looks at the proximity of sites to Air Quality Management Areas.</p> <p>All five sites have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p>

		<p>* Site ID 59735 assessment shows minor positive outcomes for SA3, yet local schools are limited and already at maximum capacity. Hence additional development of these land areas will NOT improve educational attainment in their own right.</p> <p>* Development of site ID 59735 will result in the loss of vitally important local Green Belt, destroy or compromise woodland areas, and significantly increase local traffic with negative impact on congestion and local air quality.</p> <p>* A large oil pipeline which is essential to energy supplies in the wider region passes through the land in site ID 59735 and is understood to have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.</p>	<p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA is high-level and therefore does not give consideration to pipelines. This is something that will instead be considered at planning application stage if the site is allocated.</p>
42660705	General	<p>Site ID 59735 overlaps with site id's 59798, 59804 and 59835 under Hildenboro' ward yet has several different assessment outcomes which don't appear logical or credible.</p> <p>For all sites the assessments need to take greater account of impact of development of the land on human health SAI greenhouse emissions and SA10 local air quality</p> <p>Horns Lodge Lanne which is next to site id 59735 is a popular exercising route/location for joggers, walkers, dog walker, cyclist etc and a vital area for physical well -being and mental well health of the local community. 		have protection orders preventing development of the land around and above it. This fact alone must significantly reduce the suitability of the areas for development.	SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. The SA is high-level and therefore does not give consideration to pipelines. This is something that will instead be considered at planning application stage if the site is allocated.
42717377	General	<p>Site 59808</p> <p>SA Objective 1 - significantly positive??? There is a tiny oversubscribed medical practice that is bursting at the seams. This is an wrong assessment.</p> <p>SA Objective 5 - Uncertain??? negavite? this is a Green Belt and a wildlife habitat, with several ponds nearby home for Great Crested Newt. It seems absolutely certain negative.</p> <p>SA Objective 14 - any "positive" effect here would be offset by huge negative effect on existing neighbouring housing. The process of building of 222 new homes would have dramatic effect on the well-being of the people leaving there. New residential area there would transform the environment of those houses - from the existing edge-of-the-village quiet place to a middle-of-a-town-with-a-busy-road kind. Therefore ++ assessment is wrong.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). Site 59808 receives a significant positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an existing healthcare facility, in addition to an existing area of open space and walking paths.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect. All effects against this objective are recorded as uncertain as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>SA objective 14 related to housing delivery. As site 59808 is proposed to deliver 100 dwellings or more, it receives a significant positive effect in relation to this objective.</p>
42718401	General	<p>* Site IDs 59735, 59798, 59801, 59804 and 59835 cover a unique area of greenbelt land which sits between Tonbridge, Hildenborough and Shipbourne and has many bridleways and footpaths and so is accessed and enjoyed by horse-riders, cyclists and walkers. Development on these sights would have a devastating impact on the openness and permanence of the greenbelt land between Coldharbour Land and Horns Lodge Lane.</p> <p>* Site IDs 59798, 59801, 59804 and 59835 have overlapping areas, and also overlap with site 59735 under the ward of Cage Geen, yet have numerous different assessment outcomes, which does not appear to be credible or logical.</p> <p>* Sites 59801 and 59798 correctly have SA2 assessed as '--' and as such are flagged as least suitable for development. Sights IDs 59735, 59835 and relevant parts of 59804 should be equally scored '--' for SA2 and as such should also be ranked amongst the least suitable.</p> <p>* For site IDs 59798, 59801, 59804 and 59835 (and others), the assessments need to take greater account of the impact of development of the land on human health (SA1), greenhouse gas emissions (SA10), and local air quality (SA12).</p> <p>* Horns Lodge Lane, which abuts site IDs 59798, 59801, 59804 and 59835, is widely used by walkers, dog walkers, horse riders and cyclists of all ages on a daily basis and as such plays an important role</p>	<p>The site boundaries for 59735, 59798, 59801, 59804 and 59835 are not the same, but similar. 42719233	General	<p>Site 59808</p> <p>SA Objective 1. There is no available health care within 800m! Despite the size of the building, the existing GP surgery is limited and over subscribed for many years. We use a surgery locates 2.2 miles away in Tonbridge. It takes up to 30 mins to get there by bus in the morning.</p> <p>SA Objective 5. Building on Green Belt land can ruin some of the country's most pristine habitats and negatively affect our rarest species. There is Great Crested Newt in ponds around. Loss of green belt and greenfield sites for housing negatively affects the environment, releasing carbon from the land and losing that land's ability to capture new carbon.</p> <p>SA Objective 10. There is no ANY bus from Hildenborough to train station since 2019! 3 years there is no any public transport to the station that locates 40 mins walking distance far from the village!</p> <p>SA Objective 14. The main road in Hildenborough is busy 24/7. I believe that additional housing will create significant traffic jams between 8 am - 9:30am and from 3:30pm till 6pm. My son reaches the school in Tonbridge within 35 mins in the morning by bus. The journey distance is around 3 miles. His classmate leaves in Orpington (Bromley) at the same time (8am) and reaches the school that is from his house 20 miles away within 30 mins by train.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). Site 59808 receives a significant positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an existing healthcare facility, in addition to an existing area of open space and walking paths.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect. All effects against this objective are recorded as uncertain as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The SA acknowledges that the site comprises greenfield land, under SA objective 9: soil.</p> <p>Site 59808 is within 400m of a number of bus stops. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. 42719233	General	<p>SITE 59808</p> <p>SA Objective 1: There is no available health care within 800m! Despite the size of the building, the existing GP surgery is tiny with limited service and it is over-subscribed for many years. We use a surgery locates 2.2 miles away in Tonbridge. It takes up to 30 mins to get there by bus.</p> <p>SA Objective 5: Building on Green Belt land can ruin some of the country's most pristine habitats and negatively affect our rarest species. There is Great Crested Newt in ponds around. Loss of green belt and greenfield sites for housing negatively affects the environment, releasing carbon from the land and losing that land's ability to capture new carbon.</p> <p>SA Objective 10: There is no ANY bus from Hildenborough to train station since 2019! There are no cycling path throw the wood to the train station to reduce carbon emmisiion.</p> <p>SA Objective 14: New 222 houses means extra upto 444 cars in the village. The main road in Hildenborough is busy 24/7. I believe that additional housing will create significant traffic jams in peak hours. My son reaches the school by bus in Tonbridge within 35 mins. The school is less than 3 miles from home. His classmate leaves in Orpington (Bromley) at the same time (8am) and reaches the school at 8:35 am as well. Orpington is 20 miles away from the school.</p> <p>Any extra housing developments around Woodfield avenue will dramatically impact to the noise and pollution level, reduce price of the current houses due to changing from "close-to-nature" and "cul-de-sac" status to "through road".</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). Site 59808 receives a significant positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an existing healthcare facility, in addition to an existing area of open space and walking paths.</p> <p>SA objective 5 relates to biodiversity, not the Green Belt. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59808 receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Site 59808 is within 400m of a number of bus stops. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>SA objective 14 related to housing delivery. As site 59808 is proposed to deliver 100 dwellings or more, it receives a significant positive effect in relation to this objective.</p> <p>The SA is too high-level to give consideration to traffic levels, and so the Council will commission additional evidence on this amongst other matters.</p>
42742753	General	<p>I am flabbergasted at the extent of the proposed development in and around Hildenborough. Allow me to elaborate, taking into consideration a number of the Sustainability Appraisal objectives:</p> <p>Human health and well-being - aside for the complete absence of consideration for the mental and physical health, and well-being of the existing residents of Hildenborough, I would specifically comment that the existing medical centre is already grossly overwhelmed and incapable of dealing with the existing demands. That is before we</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 1: health and wellbeing looks at the proximity of sites to healthcare facilities, in addition to things like open space and walking paths as this can have beneficial effects on mental and physical health and wellbeing. The SA does not take into consideration the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>factor in the impact of the ongoing Oakhill development in the former Fidelity grounds.</p> <p>Improve equality and access to community facilities and services - developers often offer investment in local facilities to appease councils, but it is a well-known fact that these promises are always contingent on contractual conditions that allow developers to reassess this provision if suitable staffing can't be found. The current infrastructure in Hildenborough has already exceeded its viability to local residents.</p> <p>Improve educational attainment - this is no longer possible in Hildenborough as the demand for local school places already outstrips the availability. The two schools that exist today were founded 175 years and 53 years ago. With the school age population of Hildenborough doubling over the last 50 years, it's no surprise that local children are no longer able to attend local schools. Further increasing local housing, will only exasperate this problem.</p> <p>Sustainable economic growth - this will not bring economic growth to Hildenborough. For example, residents buying £1m+ properties in the private gated Oakhill development, are unlikely to be utilising the local hairdressers or buying their weekly shop from the One Stop - providing Waitrose delivery drivers can get past the private gates.</p> <p>Green infrastructure - this is one of the most significant concerns of the proposals. We are surrounded by beautiful countryside, that is the home to considerable wildlife, including a number of protected species, such as great crested newts. The environmental destruction would have a catastrophic impact. Proposals such as the one accessing Coldharbour Lane will place further stress on a road infrastructure that is barely capable of dealing with the current usage. The road is a single track unmarked and unlit road through greenbelt countryside that can not be adapted to handle traffic flow from any of the developed sites. There is already a significant danger to pedestrian users of the road (there is no pavement), which is used daily by local pedestrians to access the network of footpaths that start on the road.</p> <p>Borough landscape and township character - the agreement to allow the building of a monstrously large residential home on the site of the former Volvo garage, is another example of untamed overdevelopment that has changed the borough landscape forever. The fake fibreglass chimney pots really do appropriately cap off what has become a genuine eyesore to the community and character of the area. It's huge and can be seen from far and wide. My thoughts are truly with those families in the immediate shadow of this carbuncle, for whom the pleasure of being in their own homes or gardens will have been shattered forever. It leaves zero confidence that future developments would be any more sensitive to the local character. More probable, is that it will be used as the new low bar for what counts as acceptable.</p> <p>Protect water features - much of the proposed area for development is around streams and water. Hildenborough has a history of flooding,</p>	<p>capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>Access to services and facilities is addressed under SA objective 2: services and facilities, which has been informed by the Urban Capacity Study (July 2022). The criteria for SA objective 2 are found in Appendix D of the Interim SA Report.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. All mixed use and employment site options are expected to have positive effects on this objective, as they provide opportunities for new jobs.</p> <p>Green infrastructure is dealt with under SA objective 5: biodiversity and geodiversity. Most sites within Hildenborough receive significant negative effects against this objective, in the SA. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The effects of development on landscape are considered under SA objective 6: landscape and townscape. All development could have some effect on the landscape depending on the character and sensitivity of the surrounding area. Site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. However, the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects. Therefore, all negative effects are recorded as uncertain.</p> <p>Flood risk is dealt with under SA objective 8: flooding. Most of the sites in and around Hildenborough receive significant negative effects against this objective, as they contain land with a 1 in 30 year risk of surface water flooding. Some also contain water bodies and so development could have an adverse effect on water quality.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>due to overdevelopment around water. With the impact climate change and the expectation of more flood conditions, additional building will only worsen the issue both for new builds and existing properties.</p> <p>Reduce greenhouse emissions - the carbon footprint aligned to a new build is considerably more than the investment needed to upgrade an older property to produce a similar level of greenhouse emissions.</p> <p>Improve air quality - As a local resident who has lived through two years of construction from nearby developments, I can assure you that the construction noise, dust and air pollution, combined with the continuous mud caked roads, has to be lived with to be understood. When I look at the layer of dust that sits on my car, and imagine my children breathing in the same dust filled air, I despair. When coupled with the removal of local woodland to clear development sites and the subsequent increase in local carbon dioxide levels, air quality will deteriorate, cases of asthma will increase and the local collapsing medical centres will be further unable to cope.</p> <p>High quality housing - there is no doubt that developers will be intending to build high quality housing. But this will not be affordable, and certainly won't improve educational attainment for low-income families. Even for families assisted through affordable development initiatives, there are no school places.</p>	<p>this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>Air quality is dealt with under SA objective 12: air quality. As there are no Air Quality Management Areas in Hildenborough, the sites receive negligible effects against this objective. However, impacts on air quality will be discussed in the cumulative effects section of the next iteration of the SA. The amount of growth that will take place in the Borough over the Plan period is likely to have adverse effects on air quality.</p> <p>With regard to affordable housing, developers will be required by the emerging Local Plan to provide a percentage of affordable housing.</p>
42641505	General	<p>ALL HILDENBOROUGH SITES:</p> <p>SA Objective 1 – Access to the healthcare facility is poor and they are running at capacity. The quality and availability of care should be a consideration not just the distance to a building, current wait times for appointments exceed 2 weeks.</p> <p>There is no local facility for dentists.</p> <p>SA Objective 3 – the capacity of educational establishments is low and additional developments would likely need additional facilities to be delivered before building dwellings, the size of any new school would significantly impact on the number of dwellings then available to be developed as well as result in incoming road journeys for families out of the immediate area brining in their children to fill spaces. If not provided then there would be additional road journeys to deliver children to their schools.</p> <p>SA Objective 12 –Additional cars on the already congested A245 would likely lead to more occurrences of the already frequent stationary traffic and further reducing air quality. This road is the alternative route for the A21 when that is closed which frequently leads to long queues and poor air quality. The state of the road is poor and this would likely get worse with additional traffic, during rain the A245 always has large quantities of standing flood water which makes footways impassable and a change of land use would likely make this worse or over strain waste water drainage.</p> <p>All of the above sites listed will impact the local infrastructure (healthcare, schools and buses, water supply/drainage/cleaning,</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). The SA does not give consideration to access to dental treatment.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). As there are no Air Quality Management Areas in Hildenborough, the sites receive negligible effects against this objective. However, impacts on air quality will be discussed in the cumulative effects section of the next iteration of the SA. The amount</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>electricity, gas, wired and wireless telecoms) which are all already at straining point.</p> <p>It doesn't appear to have been taken into account that we are about to have a further 75 rooms in the new care home (thus significant NHS Services) and a further 160+ homes/apartments in the new Oakhill development (previously Fidelity). Transport links are currently strained, with many bus routes reduced and buses over crowded during peak times. A21 closures continue to cause havoc through the village and air pollution is significantly increased during these times.</p> <p>With the exception of 59771, all of the land proposed is Green belt which should by its nature prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence as per government description! Changes to the land will significantly change the setting and special character of Hildenborough as adopted by TMBC in its Adopted Hildenborough Character Areas Appraisal, Hilden park area. Additionally it would likely force a change its status of Urban Service Centre to Urban!</p> <p>The recent developments in Hildenborough (Oakhill, and Hlyden Heights) are developed and promoted to non locals increasing the population by default and at no financial discount from market rates thus perpetuating a situation of UN-affordability.</p> <p>With an ever increasing population through out of city transfer, the need for additional infrastructure and housing is not going to be sustainable for this area or met by the current targets and the need for proposed sites will be endless to feed developer demand.</p> <p>Site ID: 59592, 59808,</p> <p>Response provided as a single block as they likely interact due to proximity.</p> <p>SA Objective 1 – Access to the healthcare facility is poor and GP are running at capacity. The quality and availability of care should be a consideration not just the distance to a building</p> <p>SA Objective 3 – the capacity of educational establishments is low and additional developments would likely need additional facilities to be delivered before building dwellings, the size of any new school would significantly impact on the number of dwellings then available to be developed.</p> <p>SA Objective 4 – there is unlikely to be significant space or capacity for economic or business development at the site or in the immediate area.</p> <p>SA Objective 5 – These two sites cover the habitat and migratory routes (established animal trails) for various animals, I have at this location observed slow worms, newts (crested but not disturbed to confirm), stag beetles, damson/dragon fly, bats, hedgehogs, pheasant, birds of prey (feeding in the field and resting in the trees), mice, small herds of deer (including young), foxes and badger.</p>	<p>of growth that will take place in the Borough over the Plan period is likely to have adverse effects on air quality.</p> <p>Sites 59592 and 59808 are not within 100m of an Air Quality Management Area (AQMA) and so receive negligible effects in relation to SA objective 12: air quality. The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA does not take into consideration currently/recently permitted planning applications, and instead appraises each reasonable alternative development site option on its own merits.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>With regard to affordable housing, developers will be required by the emerging Local Plan to provide a percentage of affordable housing.</p> <p>With regard to SA objective 4: economic growth and sites 59592 and 59808, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities.</p> <p>Sites 59592 and 59808 both receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Sites 59592 and 59808 are incorrectly recorded as receiving significant negative effects in relation to SA objective 6: landscape and townscape. In the next iteration of the SA Report, they will receive minor negative effects, as they are located on the edge of the settlement. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>The SA is too high-level to consider specific road networks, and so the Council will commission additional evidence on matters including traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Investigation should be completed by the relevant public bodies to check if this is also a natural habitat and breeding zone for any protected species. Any development would also lower the natural quality of the natural water source.</p> <p>The land also has a busy designated public footpath that is in regular use by the local and surrounding residents for mental well-being & dog walking (thus reducing capacity on the local NHS services).The appeal of this footpath is its green character easily accessed on the edge of a housing area.</p> <p>SA objective 6 - this site would significantly expand the number of dwellings in the area changing the character of the location and creating urban sprawl and contributing to the coalescing of Hildenborough and tonbridge.</p> <p>There would be limited additional transport possibilities and no additional roads therefore maintaining the one major through road that is already at capacity with regular stationary traffic causing additional pollution and air quality issues. This road is used as an alternative route when the A21 is regularly closed. This would be made worse with additional housing.</p> <p>The site is also fronted by many trees which set the character of the village as defined in the TMBC Adopted Hildenborough Character Area SPD (Hilden park) (https://www.tmbc.gov.uk/downloads/file/1247/hilden-park-area.) This view, Character and aspect of the village should be preserved to maintain the local landscape and historical character and biodiversity.</p> <p>There are a large amount of old trees within the fields, both of which protect the adjacent housing from flooding. Water run-off from the land already impacts the neighbouring main Tonbridge Road, which is regular under pressure during winter months (drains are always spilling over and water is laying on the busy road).</p> <p>SA Objective 8 – There are small bodies of water in on this site that I have observed newts and other aquatic animals, developing this site would put these at risk.</p> <p>During the winter the land here is significantly waterlogged and houses on Orchard Lea are damp and have standing water in the gardens. Reducing the amount of open land on the hill would make this situation worse for the area. Additionally the A245 has standing water with any sort of rain this would likely be worse if this site was developed.</p> <p>SA Objective 10 – Any new development would generate substantial greenhouse gas in its manufacture (especially concrete), this is unavoidable, and would likely significantly offset the distance from public transport.</p> <p>SA Objective 12 – the additional cars on the already congested A245 would likely lead to increases in stationary traffic and further lower air quality. This road is the alternative route for the A21 when that is closed which frequently leads to stationary traffic and poor air quality,</p>	<p>Sites 59592 and 59808 receive significant negative effects in relation to SA objective 7: heritage, as they are within 250m of heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. The sites are not in particularly close proximity of the Hildenborough Conservation Area.</p> <p>With regard to SA objective 8: water, the SA acknowledges the water body present within site 59808. Both sites 59592 and 59808 receive significant negative effects in relation to this objective, as they contain land with a 1 in 30 year risk of surface water flooding, and site 59808 contains a water body. The effect for site 59808 is recorded as uncertain, as it is unknown what effect development might have on water quality.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>Site 59808 receives a significant positive effect in relation to SA objective 14: housing, as it is expected to comprise 100 dwellings or more. Site 59592 receives a minor positive effect, as it is expected to comprise fewer than 100 dwellings.</p> <p>Site 59804 is incorrectly recorded as receiving an uncertain significant negative effect in relation to SA objective 6: landscape and townscape when it should have received an uncertain minor negative effect. This is because it is located on the edge of a settlement. However, it is acknowledged that the size of the site would likely have adverse effects on the landscape.</p> <p>Sites 59669, 59679, 59653, 59656, 59615 and 59692 all receive significant negative effects in relation to SA objective 8: water, as they contain land with a 1 in 30 year risk of surface water flooding. Site 59688 receives an uncertain significant negative effect in relation to SA objective 8, as in addition to containing land with a 1 in 30 year risk of surface water flooding, it contains numerous water bodies and so it is unknown what effect development might have on water quality. The SA also acknowledges the biodiversity present at each of these sites, in addition to 59771, under SA objective 5: biodiversity and geodiversity.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>this road MUST be considered beyond capacity due to its nature as a defined alternative route for a major arterial route (A21)</p> <p>SA Objective 14 – Due to the shape of the site and the gradient of the hill, plus the presence of large old established and protected trees and water sources, it would be likely that the number of dwellings may be less than expected. The access to the site would likely be compromised. I do not think any housing at this location would ever be considered affordable as developers would prioritise larger dwellings at full market price evidenced by the development of the former fidelity site where the open land was developed as a small number of oversized (5+ bed)high value (£1M+) homes, certainly not affordable by any stretch! Berkley Homes would likely look to continue this trend in an expansion of the current development.</p> <p>Site ID 59804</p> <p>The development of this site would be an extreme case of urban sprawl and would coalesce Tonbridge and Hildenborough forcing a complete loss of identity for the village. The loss of green belt and arable land of such a magnitude as well as the coalescence and sprawl is unconscionable.</p> <p>Site:59669,79,53,56, 15,92 &88. All of these sites are within the Flood zone and increase the likihood of flooding to this area and adjacent lower lying areas (Leigh Road and Brookmead) significantly.</p> <p>These fields and trees naturally absorb much of the water run off which would filter through to the adjacent residential area and importantly to the Stocks Green school and high risk area of Brookmead.</p> <p>The land here is home to many large established trees and supports a diverse range of wildlife including but not limited to badgers, deer, bats and foxes. Additional surveys would be required to identify further species especially protected ones.</p> <p>Site: 59771 - The stream and surrounding habitat that is within this site is home to 'rare crested newts', which are endangered and protected by law. They were first discovered during the Oil Pipeline enhancements in 2018. Access is also restricted to Renovo Care home.</p>	
42803969	General	<p>We are residents of Vauxhall Gardens and would like to make our objections clear on the proposed developments at sites 59696, 59697, 59554 and 59555. 59696 & 59697 Objective 1: We appreciate that both sites are within 800m of an existing healthcare facility, but the Council needs to consider that the local healthcare facilities are under much strain due to the increasing population in the area. I agree that there is a walking/cycle path, but this is not a huge amount of space and I am concerned that this will give rise to further congestion. Objective 3: We accept that both sites are within 800m of an existing secondary and primary school. We would like to highlight that it is uncertain whether the schools will have the capacity to accommodate new pupils. Due to the increasing number of children attending the schools in the local area, we can confirm from personal experience that Pembury Road gets increasingly congested and there is not</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). Sites 59696 and 59697 receive significant positive effects in relation to SA objective 1: health and wellbeing, as in addition to being located close to a GP surgery, are also located within close proximity of existing areas of open space and walking paths. The same applies to sites 59554 and 59555, although both these sites also</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>enough space on the pavements to accommodate all of the foot traffic. Development on these sites will increase the population in the area drastically and cause further congestion. There are two secondary schools that already lead out on Pembury Road and one Primary School in close proximity. This already gives rise to a significant amount of vehicle traffic and stimulating the provision of new schools in this specific area would give rise to excessive traffic in an area that is already struggling. Objective 5: We do not believe the development would protect the existing natural environment and cannot stress the importance of maintaining the geodiversity as it stands. We disagree with the view that the council could develop the site while conserving or potentially enhancing the green infrastructure. It is particularly important to note that open spaces in the sites allow for sustainable drainage as much of the rainwater streams into the space and manages the flood risks in the surrounding roads. The sites are also the home of several wildflowers and animals which is essential to our ecosystem especially as we try to manage our carbon footprint. Objective 6: The sites are in close proximity to AONBs and developing in these areas tarnishes the existing green landscape. The trees, wildflowers and animals are part of the historic parks and gardens in the area and are essential parts of our local ecosystem and heritage. Objective 8: We do see surface water flooding on the local residential roads. By developing the sites, we are increasing activity and will give rise to limited access points for surface water to escape. Objective 9: The sites are agricultural land and should be protected instead of being developed. Objective 10: Even though the sites are more than 800m away from the local station, the development would increase our carbon footprint. If we were to leave the land undeveloped, this would in turn help combat climate change and allow the green ecosystem to convert carbon dioxide into oxygen. The dwellings will increase our carbon footprint due to the increase in the number of cars in the area. Objective 11: The development of the sites will have an adverse effect on the climate as it results in a limited amount of open space in the area. Objective 14: This part of Tonbridge is already under significant strain and an additional 100 dwellings would result in a significant strain on the immediate infrastructure (namely Pembury Road). This road is already incredibly congested and we also get large freight vehicles who use the road and this causes a significant amount of traffic. Pembury Road is in use 24 hours a day and an additional 100 dwellings would lead to an increased amount of cars on a road that is already struggling. There simply is not enough space to allow development. 59554 and 59555 We would object to developments on the above-mentioned sites due to the reasons mentioned above. We would also argue that development on sites will result in an already congested road becoming even further congested. The sites will provide fewer than 100 dwellings and result in losing already limited open space. We appreciate that there is a housing crisis and the Council is under pressure to develop new homes to assist with this. That said, it is equally important for the council to protect and avoid developments on sites which play a significant role in our town's</p>	<p>receive uncertain significant negative effects in relation to SA objective 1 as they contain existing areas of open space.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA is too high-level to consider traffic congestion and so the Council will commission additional evidence on matters including traffic.</p> <p>Sites 59696 and 59697 receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity, as they are within close proximity to biodiversity assets. Sites 59554 and 59555 receive minor negative effects as they are not within 250m of biodiversity assets but within 250m to 1km of biodiversity assets. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The SA acknowledges sites 59696, 59697, 59554 and 59555 as located within 500m of the AONB and for this reason both sites receive a significant negative effect in relation to SA objective 6: landscape and townscape. All adverse effects against this objective are recorded as uncertain, as effects on landscapes and townscapes are also dependent on the design, scale and layout of development.</p> <p>Site 59697 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. Sited 59696 and 59555 on the other hand, are recorded in the SA as having minor negative effects in relation to SA objective 8, as they contain land with a 1 in 100 year risk of surface water flooding. Site 59554 receives a negligible effect as it has not been identified by the Environment Agency at risk of flooding.</p> <p>Site 59697 is recorded in the SA as having a significant negative effect in relation to SA objective 9: soil, as it is greenfield and contains a significant proportion of Grade 3 agricultural land. The effect is recorded as uncertain, as it is unknown whether the site comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land. Sites 59696, 59554 and 59555 are recorded in the SA as having a minor negative effect, as they contain less than a significant proportion of Grade 1, 2 or 3 agricultural land.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture.</p> <p>Loss of open space is dealt with separately under SA objective 1: health and wellbeing. Sites 59696 and 59697 will not result in any loss</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>geodiversity and in turn have an impact on the climate. Pembury Road is under significant pressure due to the increasing number of residential roads leading up to it. There is also school infrastructure which has an ongoing effect on the roads. We find that our road (Vauxhall Gardens) gets increasingly congested when parents park up to collect their children from school. By increasing the number of dwellings we are increasing the severity of the problem. We cannot stress the importance of leaving some space undeveloped to ease the pressure on the local health facilities and emergency services. From our own prior experience, it was very difficult to obtain assistance from an emergency ambulance when our baby was in need of urgent medical assistance. The local ambulances were all occupied and we had to take our daughter to A&E ourselves. The population in Tonbridge is increasing and we need to empower our local health service to be able to manage this. We cannot afford to develop without first supporting the local bodies who are key to maintaining the health and welfare of the town. In this current climate, we need to work together as a community to minimise our carbon footprint and give our earth a chance to heal. Any type of development is dangerous to our climate and we need to give importance to the fact that the open space helps to heal the damage that we have caused by developing too quickly without realising the consequences until it was too late.</p>	<p>of designated open space whereas sites 59554 and 59555 will, and this is acknowledged in the SA. With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>SA objective 14 relates to housing delivery. As site 59696 is proposed to deliver 100 dwellings or more, it receives a significant positive effect in relation to this objective. Site 59697 is proposed to deliver fewer than 100 dwellings and so receives a minor positive effect in relation to SA objective 14: housing. Sites 59554 and 59555 are also proposed for fewer than 100 dwellings and so receive minor positive effects.</p>
42442561	General	<p>Kings Hill is over developed and an additional 1228 and 275 units south of Kings Hill is not sustainable, please refer to sites 59797 and 59800.</p> <p>Putting aside the lack of infrastructure specifically the inadequate arterial road network which effects all potential developments.</p> <p>Impact to the above sites includes but is not limited to the following:</p> <p>Loss of Kings Hill Golf Course including loss of local employment, bar, club staff and green keepers - Contrary to SA Objective 4 and 1</p> <p>Loss of enjoyment to golf members, including seniors, juniors and local associations using the club facilities contrary to SA Objective 5 and 1</p> <p>The site contains a body of water contrary to SA Objective 8</p> <p>The site is principally a golf course not agricultural land contrary to SA Objective</p> <p>The site expected to provide 1228 dwellings contrary to SA Objective 14 namely 100 dwellings. If a smaller site is being proposed, it should be shared with the community</p> <p>Loss of restaurant and bar used by non-members (Kings Hill residents)</p> <p>Loss of a local business namely Growing Golf which supports local schools, parents, and children on Kings Hill</p> <p>Loss of the above local amenity - which formed part of the original planning consent</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. None of the sites appraised have yet been allocated.</p> <p>The SA is too high-level to consider specific road networks and so the Council will commission additional evidence on matters including traffic.</p> <p>Sites 59797 and 59800 receive uncertain significant negative effects in relation to SA objective 1: health and wellbeing, as they contain Kings Hill Golf Course. SA objective 4: economic growth relates to the delivery of employment opportunities. Both sites are expected to have a negligible effect in relation to SA objective 4 as "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. Having said that, the promoter of this site has not declared that it contains an existing business.</p> <p>The sites receive significant negative effects in relation to SA objective 5: biodiversity and geodiversity, as they are within 250m of Kings Hill Golf Course, Cattering & Hoath Wood Local Wildlife Site and area of Ancient Woodland. They also contain green infrastructure assets. All effects against this objective are recorded as uncertain, as</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Loss of public footpaths</p> <p>Loss of bridle way</p> <p>Loss of good quality farmland</p> <p>Protection of local habitat.</p> <p>Loss of wildlife including badgers and deer - contrary to SA Objective 5</p> <p>Loss of the scenic views to the river Medway and beyond - contrary to SA Objective 6</p> <p>Most of the site would not be within 800m of the existing health care facility which is unable to cater for the existing demand.</p> <p>Most of the site would not be within 800m of a school contrary to SA Objective 3</p> <p>Partial use of the site would effectively kill Kings Golf Club if it was unable to provide 18 holes to play on.</p> <p>Kings Hill Golf Course have a 125 lease on the land have not been approach by anyone including the landowner. The application is clearly speculative, it did not consider material facts, see to SA Objectives, and should be removed for consideration</p>	<p>appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The SA acknowledges under SA objective 8: water that site 59800 contains a water body. For this reason, it receives a significant negative effect in relation to SA objective 8: water. The effect is recorded as uncertain as it is unknown what effect development might have on water quality.</p> <p>SA objective 9: soil utilises the Agricultural Land Classification, which is a system used in England and Wales to grade the quality of land for agricultural use. A site does not need to be in agricultural use to be classified under this system. Sites 59797 and 59800 comprise best and most versatile agricultural land and so receive significant negative effects in relation to SA objective 9.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The proformas for sites 59797 and 59800 state that the sites are within 800 of either an existing healthcare facility <i>or</i> an existing area of open space/walking and cycle path/play area/sports facility. In this instance, neither site is within 800m of a GP surgery.</p> <p>With regard to proximity to schools, the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater.</p>
44667809	General	<p>[Site 59654]</p> <p>I am writing to OBJECT to the above site [Site 59654] which is on your local plan. My reasons are very much the same as my comments on 59699 but here they are again – apologies for the repetition but I was unsure if I could object to all the sites together.</p> <p>1 – This site is currently used for grazing with open fields near Oast Houses and Douces Manor.</p> <p>2 – This site is in Green Belt. Green Belt sites can only be used in exceptional circumstances. Developers making money is not an exception circumstance.</p> <p>3 – This site would hugely increase the traffic on Offham Road which at rush hour is already a very dangerous road. The only way to avoid this would be by going down Fatherwell Road which is a single-track</p>	<p>The SA does not give consideration to when a site is being used for grazing.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA is too high-level to consider traffic levels, dangerous roads and road width, and so the Council will commission additional evidence on matters including traffic.</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated, including site 59654.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>lane that floods on a regular basis. It is also designated as a Quite Lane.</p> <p>4 - Under your SA Objective 1 (the improvement to human health and wellbeing), you say the site is within 800m of an existing healthcare facility. This is not true so must be old information as we no longer have a surgery in West Malling. It is now going to be luxury flats – also mentioned below.</p> <p>5 – This site would put even more pressure on an already drowning infrastructure, it's very difficult to get a doctor's appointment as it is – especially after losing the West Malling Practice to expensive luxury FLATS. It's impossible to find an NHS dentist (I know as I have tried), and the parking is beyond its limit.</p> <p>6 – There are already a huge number of new homes being built locally, one example is the Crest development off Town Hill. This site is very unlikely to provide affordable housing and will not help those who do invaluable jobs with low salaries in our community. Also, the large proportion of these homes will be for sale so would not contribute to your SA Objective 10 (to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures).</p> <p>7 – There was a recent planning application (Ref 21/02003/FL) which was rejected by TMBC for a number of reasons - including that it was inappropriate development and harmful to the Green Belt and would represent an encroachment of the built-up area into the Countryside. Plus, the traffic concern.</p> <p>8 – West Malling has so much history, enough to suggest it should be a conservation area. We have The Abbey and its grounds, Douces Manor and park, Police Station Lane, Frog Lane, St Leonards Tower – the list of historic buildings in the High Street goes on and on. I feel the area is already being ruined by overdevelopment.</p> <p>On a personal note, I love West Malling but I can see it changing. Small and Large developments are popping up everywhere and the town just cannot cope. There are multiple empty houses on the High Street that should be utilised rather than building ugly new houses that are just not in keeping with the beautiful surroundings, and will not help our most vulnerable residents.</p>	<p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). The SA does not give consideration to access to dental treatment.</p> <p>With regard to affordable housing, developers will be required by the emerging Local Plan to provide a percentage of affordable housing.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>The SA does not take into consideration currently/recently permitted planning applications, and instead appraises each reasonable alternative development site option on its own merits.</p> <p>Site 59654 is within close proximity of a number of heritage assets, as recorded in the Kent Historic Environment Record. Therefore, it receives a significant negative effect in relation to SA objective 7: heritage. All effects against this objective are recorded as uncertain, as effects will also depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p>
42807617	General	<p>[59714]</p> <p>LAND EAST OF OFFHAM ROAD, WEST MALLING (SA ID: 59714)</p> <p>I write further to the submission of the online Local Plan Regulation 18 consultation response form in relation to the above site to provide supplementary information on behalf of Berkeley Homes (Eastern Counties).</p> <p>Our response includes comments on the policy approaches set out in the draft Local Plan document as well as the Interim Sustainability Appraisal (SA) where we have some concerns about the ratings given to the site. Annex 1 of the SA includes an assessment of the land we</p>	<p>All reasonable alternative development site options have been appraised on a 'policy-off' basis and so consideration has not been given to mitigation and supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail (specific development proposals may not yet have been determined for a number of sites). If a site is allocated in a Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). Therefore, the minor negative effect it receives in relation to SA objective 2 is correct.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>are promoting east of Offham Road, West Malling (ref 59714). A copy of our questionnaire response is included at Appendix 7.</p> <p>Part of this site was previously proposed for an allocation for 12 homes in the draft Tonbridge & Malling Local Plan (ref: LP25 eg) and, prior to this, the whole site was considered in the Local Plan evidence base. Whilst we welcomed the allocation, we were concerned that only developing the part of the site fronting Offham Road would have been a missed opportunity.</p> <p>We have prepared a preliminary site layout to test the capacity of site which is shown at Appendix 1. A development of approximately 66 homes as indicated could be delivered within 5 years, provide a mix of homes, including high quality affordable homes, compared to 12 homes, and make a more meaningful contribution to the Local Plan housing supply. The development would have a density of c. 25 dwellings per hectare and would relate well to the character of West Malling.</p> <p>Sustainability Appraisal</p> <p>It appears from the SA that the site may not have been assessed accurately against all criteria. The site, which measures 2.67 ha, is sustainably located on the edge of West Malling and offers excellent access to local shops and services including two primary schools, a church, a post office, pubs, restaurants, GP surgery, a number of retail outlets and a railway station. The site was however assessed as having 'fair' accessibility and a minor negative result in SA Objective 2: To improve equality and access to community facilities and services.</p> <p>Our response to the questionnaire includes an analysis of the scoring given to the site against the SA objectives including the accessibility criteria. It is clear from the analysis that the site is within 800m of a number of key services and amenities and should have been given a higher rating for accessibility. We therefore kindly request that the site is reassessed against the SA criteria, particularly Objectives 2 and 8 (see below).</p> <p>Highways</p> <p>We understand that one of the previous concerns cited as a reason to limit the size of a development in the draft Local Plan evidence was highways. As part of our preparations for the Local Plan examination in 2020, we undertook further work in relation to highways including seeking pre application advice from KCC.</p> <p>As shown by the correspondence, this reached the conclusion that there is no highways reason to limit the size of development on this site to 12 homes and that a larger development as proposed would be acceptable in terms of site access arrangements and impact on the local road network. A copy of the correspondence from KCC confirming the position is included at Appendix 2 together with a summary transport report by Glanville and a plan showing the proposed site access arrangement.</p> <p>Landscape & Green Belt</p>	<p>The SA is too high-level to consider traffic levels, and so the Council will commission additional evidence on matters including traffic.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59714 receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is located on the edge of a settlement and so development may be more easily integrated into existing built development. All adverse effects against this objective are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects. Consideration cannot be given to the Landscape Appraisal submitted by the site promoter, as all sites must be appraised on a consistent basis and information like this is not available for other sites. The same applies in relation to SA objective 7: heritage and the Heritage Statement submitted by the promoter.</p> <p>Site 59714 contains green infrastructure assets in the form of trees and thick vegetation, which could be lost as a result of development. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value". The site also receives a significant negative effect due to the fact it is adjacent to a Local Wildlife Site (St Mary's Churchyard, West Malling).</p> <p>As noted by the respondent, site 59714 contains a small area of land with a 1 in 30 year risk of surface water flooding. As SA utilises a precautionary approach, the significant negative effect is correct. The effect is recorded as uncertain, as the effects of new development on this objective will depend to some extent on its design and whether it incorporates Sustainable Drainage Systems (SuDS). Although the respondent makes reference to SuDS, this is a 'policy-off' appraisal and so mitigation is not taken into consideration.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively being used for agricultural purposes.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>We were previously concerned that a partial release of the site from the Green Belt for a development of 12 homes sought to establish a revised Green Belt boundary not based on the physical features of the site contrary to NPPF para 143(f) and that the allocation would have left a residual area of Green Belt land behind with no useful purpose.</p> <p>The site as a whole does not contribute strongly to the purposes of the Green Belt, being effectively enclosed by existing development, the local road network and mature landscaping. Although it has an open character, it is not part of the wider countryside. Therefore the whole site is capable of being released from the Green Belt.</p> <p>We note that an uncertain minor negative rating has been given for the site against SA Objective 6, which relates to landscape. The site is well enclosed, with development on four sides, to the north and east of the site and bordering the site to the south and west. The site is therefore more closely associated with the existing built form in West Malling than it is with the open countryside further out to the south and west of the site. The site is effectively within the confines of West Malling and development of the site would establish a more defensible settlement boundary. We suggest therefore that landscape impact of developing this site would in fact be negligible.</p> <p>A landscape appraisal for the site undertaken by Murdoch Wickham Associates is provided at Appendix 3.</p> <p>Heritage</p> <p>A Heritage Statement (see Appendix 4) identifies that the site does not contain any designated or non-designated heritage assets. There are several sections of the site that are adjacent to the West Malling Conservation Area (WMCA). There are also a number of heritage assets present in the surrounding area such as the Grade II* St. Mary the Virgin Church, Grade II* listed Douces Manor and three non-designated historic buildings in Lindum House, St. Marys Church Centre and Oast House, all of which lie to the north-east, east and south east of the site. However, the intervisibility between the site and these assets is limited with strong vegetated boundaries.</p> <p>The critical and most sensitive views to the above assets are from Leonard Street (to the east of the site) and from the centre of West Malling itself. As such, the heritage assessment has concluded that there will be no material harm to any heritage asset resulting from the proposed development and therefore this would not be a constraint to an allocation.</p> <p>The Council's SA Objective 7 is scored with an uncertain significant negative due its proximity to these heritage assets. For the reasons outlined above, there will be no material harm to any of the designated heritage assets or non-designated historic buildings resulting from the development and the impact would be negligible (or, at worst, minor negative in the absence of a detailed assessment of the development proposals).</p> <p>In relation to archaeology, there is some potential on the site. However, as no remains of national significance are anticipated at the</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>site, it is suggested that any further mitigation could follow the grant of planning permission.</p> <p>Ecology</p> <p>The site is not subject to any statutory or non-statutory nature designations. A Phase 1 Habitat Survey conducted for the site by Hankinson Duckett Associates (see Appendix 5) identified that there was no evidence of protected species being located at the site. There are no further surveys required at this time.</p> <p>However further bat, badger and reptile surveys will be undertaken as part of an application for development of the site.</p> <p>SA Objective 5 is scored as an uncertain significant negative due to 'The site containing an existing green infrastructure asset'. We would question the accuracy of this description and rating as the site is a field with short grass that contains a small tree belt consisting of approximately a dozen small trees, and it is inaccessible to the public. Whilst we accept the development of the site would result in the loss of undeveloped land we would suggest that the site could have more public amenity value as an attractive new addition to West Malling and the loss of the existing field would therefore not be significantly negative.</p> <p>Flooding & Drainage</p> <p>The Environment Agency Flood Maps show the site to be entirely within Flood Zone 1 meaning it is at the lowest risk of flooding.</p> <p>A minimal extent of the site to the north-east is found to be located within a 1 in 30 year risk of surface water flooding, as is shown within the Flood Risk Assessment (see Appendix 6). However, this covers very little of the site and there is the potential to use sustainable drainage within any future development of the site to ensure that the risk of flooding from surface water is fully mitigated. The SA assesses the site as significant negative in relation to flooding and as highlighted in our questionnaire response this appears to be inaccurate given the small proportion of the site affected by surface water flooding and the potential for mitigation.</p> <p>Agricultural Land Classification</p> <p>SA Objective 9 is scored as an uncertain significant negative due to the site containing significant proportion of good to moderate grade 3 agricultural land. Whilst this is correct based on Provisional Agricultural Land Classification (ALC) mapping, the scoring system does not take into account practicality of the land being farmed for agricultural purposes. The site is almost entirely enclosed by built form, is disjointed from any other wider land holding and is of a size that could not commercially or practically be farmed, without being unviable or causing harm to the residential area within which it sits.</p> <p>Overall there are no technical or environmental issues that would prohibit development, including in relation to the impact of development on West Malling Conservation Area, highways, landscape, ecology, flooding and agricultural land considerations.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>We consider that the assessment of the site within SA would benefit from review as it appears to be incorrect, particularly in terms of SA Objectives 2, 8, and 9.</p> <p>The site is evidently suitable, available and achievable for development in the first five years of the Local Plan and, given its limited contribution to Green Belt purposes, we consider that it should be allocated.</p> <p>I hope that this information is of assistance in terms of your site assessment and selection work for the new Local Plan. We look forward to discussing this site further in due course.</p>	
42635169	General	<p>* The SA Objective 1 appears to be based on out-of-date information. Since the West Mallig GP surgery closed a couple of years ago, the nearest GP surgery is over 2kms away (as the crow flies) and not within 800m as set out in the assessment. Walking to that surgery is not practical; it would involve walking along roads with no footpaths where heavy lorries operate (Teston Road) and crossing a main Trunk Road with no pedestrian crossing facilities.</p>	<p>The GP surgeries data used to inform the Interim SA Report included West Mallig GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated.</p>
44667809	General	<p>59699. 59714, 59716 Under your SA Objective 1 (the improvement to human health and wellbeing), you say the site is within 800m of an existing healthcare facility. This is not true so must be old information as we no longer have a surgery in West Mallig. It is now going to be luxury flats</p>	<p>The GP surgeries data used to inform the Interim SA Report included West Mallig GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated.</p>
42919937	General	<p>[name redacted] [address redacted] [Telephone no. redacted] [Email addresses redacted] To Whom it May Concern, TMBC Local Plan - Regulation Plan 18 Objection to Site 59432 for Residential Development We strongly object to the residential development of - Site 59432 Leybourne, West Mallig. Location The 'Medway Gap' which includes Leybourne and West Mallig is overpopulated. Little by little areas of precious green space will disappear in this urban oversaturated community. It would not be beneficial to the residents to build it up further and create a concrete jungle. This green open space is important for the wellbeing of residents especially children and families who love to use this area as a recreational space. West Mallig Group Practice (our existing healthcare facility) is struggling to cope with overcapacity along with our local primary school and local roads. Whilst it is understood that there is a need to provide housing, new residences should be spread out over new, sites, in unsaturated areas far away from the Medway Gap which is</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The SA acknowledges that the site contains Willow Mead open space that could be lost as a result of development and so for this reason site 59432 receives an uncertain significant negative effect (as part of a mixed effect) in relation to this objective.</p> <p>With regard to schools, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA is too high-level to consider traffic levels and so the Council will commission additional evidence on matters including traffic.</p> <p>With regard to SA objective 2: services and facilities, site 59432 is recorded in the Urban Capacity Study (July 2022) as falling within the Very Good Accessibility Band and therefore receives a minor positive effect in relation to this objective. This objective does not consider the capacity of existing services and facilities.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59432 is recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>overly built-up. This would provide more of a balance when providing new housing. A suitable supply of housing including a mix of sizes, types and tenures could be provided on those new sites along with new schools and healthcare facilities. Building houses on small green spaces seems to defeat the object where a mix of housing will be limited and would not tie in with the houses in this area which were built in the 1980s.</p> <p>Infrastructure/Parking/Noise/Pollution</p> <p>TMBC's overriding priority in the local plan should be to concentrate on improving the infrastructure by building new schools and GP surgeries along with improving local roads to ease congestion.</p> <p>Residents of Willowmead and Oxley Shaw Lane contend with excess traffic and noise during the day and night.</p> <p>Parking is an issue notably in Willowmead. Individuals tend park their vehicles dangerously, obscuring vision from driveways and the roadside which is made much worse at the local primary school's pick up and drop off time.</p> <p>This traffic problem will worsen if this green space is turned into a residential area, new residents and their visitors will park in Willowmead adding to noisy roads & increasing pollution.</p> <p>Comments on TMBC's Objectives Relative to Site 59432:</p> <p>SA Objective 1: to improve human health and well-being</p> <p>The local healthcare facility is oversaturated with patients which indicates that we are overwhelmed with residents in this area so building houses on this site would not improve human health and well-being. It would take away the beautiful green space that local children and families use which contribute to well-being. Other features such as a cycle path/play area/sports facility may be lost to a new development.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>This site is placed within a very good accessibility to community facilities and services, but our community is oversaturated, and a new development would result in more people needing to use the facilities.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and sectors of society.</p> <p>Although the proposed site is within 800m of an existing primary school, capacity is limited as it is one form entry. Therefore, levels of educational attainment and skills and training development for all age groups and sectors of society would not be improved.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p>	<p>habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>Site 59432 is recorded as having an uncertain significant negative effect in relation to SA objective 6: landscape and townscape as it contains open space that could be lost as a result of development, although this is uncertain. All adverse effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>Site 59432 receives a minor negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding in addition to falling within Source Protection Zone 3.</p> <p>The comment on SA objective 9: soil relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>As TMBC states, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>The site is within 250m of one or more nationally designated biodiversity sites.</p> <p>Building houses here will not protect and enhance biodiversity and geodiversity. There is currently a project in progress on this green space where the County Council is finding ways to get trees to grow with the aim of maximizing benefits for people, wildlife, and the climate. This project is funded by Defra and running in partnership with Natural England, Tonbridge and Malling Borough Council and Medway Valley Countryside Partnership. If new houses were built within this area, they would block out natural light, cause extra pollution and noise which would not encourage wildlife and trees to grow or the project would have to be removed altogether to accommodate extra houses. There is wildlife that inhabits the field & surrounding habitats which would be lost.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>New buildings would result in the loss of a beautiful open space and no matter what the design and would not fit in with existing housing. Developing this site would not enhance the borough's landscape and townscape character and quality.</p> <p>SA Objective 7: To protect and enhance the cultural heritage</p> <p>New buildings, no matter what the design, would not fit in with existing 1980s housing. There would probably not be lines of sight between the development site and nearby heritage assets which your objective states 'is 250m-1km away'.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>As stated in TMBC's Objective 8, 'the site will be within Flood Zone 3 and in an/or within an area with a 1 to 30 risk of flooding'. There is a water inlet/outlet that leads to the lake opposite which will be right next to the site giving a higher potential for flooding.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>As stated by TMBC 'The site is greenfield land and contains a significant proportion of grade 3 agricultural land'. If new houses are built how will the soil resources be conserved and enhanced, and the land be guarded against contamination?</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimize climate change.</p> <p>Greenhouse gas emissions will increase and not be reduced. Leybourne is situated between the A20 and M20 and air quality is questionable. Although there is a train station close by, people will still</p>	<p>Management Area (AQMA). Site 59432 is not within 100m of an AQMA.</p> <p>The comment on SA objective 13: material assets and waste relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>With regard to SA objective 4: economic growth, respondent has not expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>use their cars to commute to the station. People may drive to work locally or further afield as they are in easy reach of M20 and M26.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimize its impact</p> <p>As TMBC stated in Objective 11 'sustainable modes of transport' See comments in Objective 10 as linked to this.</p> <p>SA Objective 12:</p> <p>TMBC states that the site is not within 100m of an AQMA' even so, air quality will definitely decrease if more houses are built and more cars are used.</p> <p>SA Objective 13: To protect material assets and minimise waste.</p> <p>TMBC states that the site is within a 'Minerals Safeguarding Area' how will material assets and waste be minimised and protected if new houses are built?</p> <p>SA Objective 14: To provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures</p> <p>As TMBC have quoted 'This site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer a wider mix of housing. This site will not provide as wider mix of housing or make as greater contribution towards housing needs as a larger site would'.</p> <p>We invite you to visit our home (bordering this site) to verify that these objections are valid.</p> <p>Therefore, we strongly request that Tonbridge & Malling Borough Council to reconsider the development of this site.</p> <p>Should you require any additional information, clarification of any comments made, or would like to arrange a visit to our home; do not hesitate to contact us.</p> <p>Yours faithfully,</p> <p>Daniel & Kerry Hume</p> <p>Cc: Tom Tugendhat</p>	
42197025	General	<p>I am a resident of West Malling. Having looked at your site covering the local plan I could not find a means of commenting on specific sites that have been put forward. Therefore I have included my comments on site 59699 here in order of the SA objectives;</p> <p>Firstly this is grade 1 agricultural land within the greenbelt. If this development goes ahead then no greenbelt land is safe and the term greenbelt will have no future meaning. It would cause West Malling to sprawl westwards towards housing between the villages of West Malling and Offham, leaving a narrow gap between the villages and aiding coalescing of the villages. It is outside the boundary of West Malling. This site was not included in the previous local plan as it was deemed to be unviable.</p>	<p>The SA acknowledges the site as comprising best and most versatile agricultural land under SA objective 9: soil. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 1: health and wellbeing, the GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated, including site 59699.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA1 This “significant +” assessment is incorrect. It claims to be close to a health care centre. In reality there is no longer a doctor’s surgery in West Malling (it closed recently) and new residents are asked to use the NHS phone number as their GP. Lucky ones are taken on by the already stretched King’s Hill practice.</p> <p>SA2 The assessment is given as a negative</p> <p>SA3 The claim is that the site is close to schools. These are already at maximum capacity so travel, most likely by car, would be required to other areas. There are no opportunities for training and skills development obvious in West Malling</p> <p>SA4 The distance to the train station is implied as being 800 metres. The actual distance measured from the western edge of the proposed development is 1 mile in a straight line, approx 1.25 miles by road.</p> <p>The distance to buses is given as 400 metres. The actual distance is 1100 metres in a straight line, possibly 1300 metres by road.</p> <p>Both these journeys would in reality be done by car due to the distance, overloading parking facilities.</p> <p>The development is not within walking distance of any shops, including the only supermarket in West Malling.</p> <p>The assessment claims 5 ha as employment development without explaining how this would be appropriate on greenbelt land.</p> <p>SA5 The site contains an existing green infrastructure asset which would be entirely lost. It is within 250 metres of one or more designated biodiversity or geodiversity sites.</p> <p>SA6 It does not enhance the borough’s landscape and townscape character, but detracts from it. This is due to the site being on high ground and it is therefore visible from afar.</p> <p>SA7 Far from enhancing and protecting cultural heritage, it is within 250 metres of a heritage asset. There will be a line of sight issue because the development site is on high ground.</p> <p>SA8 The site lies within flood zone 3</p> <p>SA9 Far from conserving soil resources this development is entirely on grade 1 and 2 agricultural land.</p> <p>SA10 This claims to be a minor positive effect but the distances used are completely wrong (see SA4). The result therefore is a serious negative effect as all residents will be forced to use a car to travel to shops, buses, trains, schools, recreation facilities and workplaces. None of the roads surrounding it are suitable for heavy traffic, one is a single track road (Fatherwell Road). Access to West Malling would be via the narrow roads within the “New Town” development adjoining the site.</p> <p>SA11,12 and 13 no positive effects</p>	<p>Site 59699 is correctly recorded as within 800m of a school, namely West Malling Church of England Primary School. Therefore, it correctly receives a minor positive effect in relation to SA objective 3: education. The effect is recorded as uncertain, as capacity at this school is unknown.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. All mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59699 is 5ha or more, it receives a significant positive effect in relation to this objective. With regard to access to public transport (also covered under SA objective 10: climate change mitigation), the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater. The SA correctly acknowledges site 59699 as being within 400m of a bus stop.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59699 receives a significant negative effect. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>As site 59699 is located on the edge of West Malling, it receives a minor negative effect in relation to SA objective 6: landscape and townscape. This is because site options adjacent to the existing urban edge could be more easily integrated into existing built development.</p> <p>With regard to SA objective 7: heritage, 59699 receives a significant negative effect. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59699 is not located within Flood Zone 3. It receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>The SA also acknowledges that site 59699 contains best and most versatile agricultural land. For this reason, it receives a significant negative effect in relation to SA objective 9: soil.</p> <p>Site 59699 receives negligible effects against SA objectives 11: climate change adaptation and 12: air quality for this reasons outlines in the proforma. The site receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste for the reasons outlines in the proforma.</p> <p>With regard to SA objective 14: housing, the site receives an uncertain minor positive effect as it is proposed for mixed-use development and so would include some housing. The effect s recorded as uncertain as it is unknown how much of the space would be used for employment purposes.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA14 Uncertain what kind of development would be proposed, but the site is too large and could swamp the resources and facilities of the area.</p> <p>The summary is that there are no positive effects of this development, all are neutral or negative</p> <p>I oppose this site being included in the local plan.</p>	
42557665	General	<p>I live in West Malling on Offham Road which is directly affected by the proposed site 59699 and would like to express my views on this development.</p> <p>Green Belt: site 59699 is situated within the Green Belt which was created to provide a protection ring around our historic town. It is essential that the Green Belt is protected so as to avoid village coalescing and West Malling and its neighbouring villages from becoming one sprawling mass of housing and industrial development which cannot be supported by its already fragile infrastructure.</p> <p>I will list my objections in order of SA objectives:</p> <p>SA1: Health Care Centre, indeed a 'significant assessment' but not positive as stated. The main local doctor surgery in West Malling closed sometime ago and the remaining more distant alternatives are oversubscribed and stretched beyond capacity. It is next to impossible to get an appointment, one has to physically go to Kings Hill, which calls itself "West Malling Group Practice", very early in the morning and queue up in all weathers to be seen or referred if you are lucky. The 'same day' telephone option and the online booking system are a lottery, Even if a new GP practice is conjured up in the near future it would only take some of the pressure off, not solve this dire problem for the community as a whole.</p> <p>SA2: given as a 'negative'</p> <p>SA3: it claims the site is close to schools, which could be a positive factor if only they were not already maxed out. Most of the secondary school children I know have to be driven to schools because they are not within walking distance and/or can't rely on the limited bus service which has recently become even more challenging due to the local transport cuts.</p> <p>SA4: the assessed distances and assumptions are incorrect.</p> <p>The train station is at best 1 mile away as the crow flies, 1.3 miles by road, and parking is already at capacity. There are no dedicated cycle lanes or car charging facilities so green solutions are unavailable. I have already mentioned the lack of regular bus service. The only supermarket on West Malling High Street is half a mile away and parking, again, is scarce.</p> <p>The assessment claims 'employment development' but it does not explain how this would be achieved in Green Belt land.</p> <p>Summing it up, the great majority of these extra journeys would in reality result in more car journeys, more congestion and pollution.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment</p> <p>With regard to SA objective 1: health and wellbeing, the GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated, including site 59699. The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>Site 59699 is correctly recorded as within 800m of a school, namely West Malling Church of England Primary School. Therefore, it correctly receives a minor positive effect in relation to SA objective 3: education. The effect is recorded as uncertain, as capacity at this school is unknown.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. All mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59699 is 5ha or more, it receives a significant positive effect in relation to this objective. With regard to access to public transport (also covered under SA objective 10: climate change mitigation), the SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater. The SA correctly acknowledges site 59699 as being within 400m of a bus stop.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59699 receives a significant negative effect. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA5: The site is an existing green infrastructure asset which would be entirely lost. It is within 250 metres of one or more designated biodiversity or geodiversity sites.</p> <p>SA6: The proposed development would not enhance the borough's landscape and townscape character, but would detract from it. This is due to the site being on high ground, open green space, and it is therefore visible from afar. It is presently used as farm land with alternating crops intercalated with priceless natural vegetation and wildlife.</p> <p>SA7: Far from enhancing and protecting cultural heritage, it is within 250 metres of a heritage asset. There will be a line of sight issue because the development site is on high ground.</p> <p>SA8: Some of the site lies within Flood Zone 3</p> <p>SA9: any new development would NOT conserve soil resources because it is entirely proposed on Grade 1 and 2 Agricultural Land.</p> <p>SA10: This claims to be a minor positive but the distances used are incorrect (see my comments on SA4).</p> <p>The end result therefore is a seriously negative effect as new residents or users would be forced to use a car to travel to shops, trains, schools, recreation facilities and workplaces.</p> <p>None of the surrounding roads are suitable for heavy traffic, Fatherwell Road is a single track road and Offham Road is already compromised by the existing traffic.</p> <p>West Malling would be accessed through small residential streets within the "New Town" development adjoining the site where a bottle neck already provides congestion and opportunities for 'road age' where it joins with West Malling centre.</p> <p>There is no scope for building new roads or widening the country lanes due to the rural character of the area in question.</p> <p>Even now walking along these country roads is hazardous due to the traffic using Offham Road as an 'rat run'. As is, drivers don't respect the speed limits despite numerous blind corners, so this situation would only deteriorate if more traffic was channeled through these narrow roads.</p> <p>SA11, 12 and 13: listed as no positive effects.</p> <p>SA14: It is unclear what type of 'new development' is being proposed. Regardless of its nature the sheer scale of the 'mixed use' or purely housing development would have a detrimental effect on the environment, traffic, resources, character and facilities of the area.</p> <p>In my opinion this development proposal for site 59699 has no positive effects, it is completely unviable and I oppose it being included in the Local Plan.</p>	<p>As site 59699 is located on the edge of West Malling, it receives a minor negative effect in relation to SA objective 6: landscape and townscape. This is because site options adjacent to the existing urban edge could be more easily integrated into existing built development.</p> <p>With regard to SA objective 7: heritage, 59699 receives a significant negative effect. All effects against this objective are recorded as uncertain, as they depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59699 is not located within Flood Zone 3. It receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>The SA also acknowledges that site 59699 contains best and most versatile agricultural land. For this reason, it receives a significant negative effect in relation to SA objective 9: soil.</p> <p>Site 59699 receives negligible effects against SA objectives 11: climate change adaptation and 12: air quality for this reasons outlines in the proforma. The site receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste for the reasons outlines in the proforma.</p> <p>With regard to SA objective 14: housing, the site receives an uncertain minor positive effect as it is proposed for mixed-use development and so would include some housing. The effect s recorded as uncertain as it is unknown how much of the space would be used for employment purposes.</p>
43629217	General	<p>Site 59814 – West Malling</p> <p>Under SA Objective 3 (to improve levels of educational attainment and skills and training development), the site is considered to have an</p>	<p>All reasonable alternative development site options have been appraised on a 'policy-off' basis and so consideration has not been given to mitigation (e.g. financial contributions) and supporting</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>'Uncertain minor positive (+?) impact. The assessment notes that development could provide contributions to education. As previously stated, subject to CIL compliance, any education contributions sought by the Council will be secured via a S106 agreement to ensure suitable provision for new and existing residents.</p> <p>Under Objective 5 (to protect and enhance biodiversity and geodiversity), the site is rated as 'Uncertain significant negative (--?)'. The SA states that the site contains an existing green infrastructure asset that could be lost as a result of new development and that the effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>When considering this site in combination with the land to the north, the Public Right of Way on the site will be retained and enhanced to provide access to the wider countryside for new and existing residents. Biodiversity will also be enhanced on site through the provision of landscaping, native tree planting and SuDS on site increasing habitat creation on the site.</p> <p>Under SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality, the site is rated as 'Uncertain significant negative (--?)'. The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>As previously highlighted, the appeal decision on the site to the north determined that there would not be significant harm to the landscape as a result of development in this location. Although the combined scheme would be larger and provide up to 105 dwellings, the any proposed development will be designed to minimise harm to the landscape with screening and buffers where appropriate.</p> <p>Under SA Objective 7 (to protect and enhance the cultural heritage resource), the site's impact is rated 'Uncertain significant negative (--?)' as the site is located within 250m of a heritage asset. Again, as with the site to the north, any harm to the setting of nearby heritage assets would be less than substantial. As such, the impact should be considered 'uncertain negative' to reflect that suitable mitigation will be provided.</p> <p>This view is confirmed by the Inspector in the aforementioned appeal, who at paragraph 24 states, 'having regard to the extent of harm, the number of assets and the significance of those assets I consider that together this would amount to "less than substantial harm" as set out in Paragraph 202 of the Framework.' The Inspector then later attributed greater weight to the provision of housing, including affordable housing.</p> <p>Under SA Objective 14 (to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types, and tenures), the site is considered to have a 'Minor positive (+)' impact as it is expected</p>	<p>documents submitted by site promoters. This ensures all sites are appraised to the same level of detail (specific development proposals may not yet have been determined for a number of sites). If a site is allocated in a Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59814 is incorrectly recorded as containing a green infrastructure asset, as it slightly overlaps a green infrastructure asset. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective, as it is within 250m to 1km of a Local Wildlife Site.</p> <p>With regard to SA objective 14: housing, the site is appraised independently of other sites. Therefore, it is correct that it receives a minor positive effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		to provide fewer than 100 dwellings. The site is not intended to be delivered in isolation; once combined with the land to the north, approximately 105 homes could be delivered on site. In this regard, the site has the potential to have a significant positive impact.	
43629217	General	<p>The ISA determines that there is an 'Uncertain minor positive (+?)' impact of the site against SA Objective 3, which relates to improving levels of educational attainment and skills and training development. The assessment notes that development could provide contributions to education. Gladman would like to take this opportunity to confirm that, subject to CIL compliance, any education contributions sought by the Council will be secured via a S106 agreement to ensure suitable provision for new and existing residents.</p> <p>Under Objective 5 (to protect and enhance biodiversity and geodiversity), the site is rated as 'Uncertain significant negative (--?)'. The SA states that the site contains an existing green infrastructure asset that could be lost as a result of new development and that the effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>Gladman disagree with this assessment and this representation confirms via the site submission that the Public Right of Way to the south of site will be conserved and enhanced as part of any future development package. All green infrastructure assets on site will be retained and enhanced to ensure the site is well screened with a suitable level of buffering.</p> <p>Under SA Objective 6 (to protect and enhance the borough's landscape and townscape character and quality), the site is rated as 'Uncertain significant negative (--?)'. The SA notes that the site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces, but these effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.</p> <p>Gladman do not consider it appropriate to determine unknown impacts as 'significant' when the site does not impact settlements in rural locations, nor does it result in the loss of designated open space. Development at this location will be sympathetically designed to ensure that the scale and layout of the development mitigates any adverse effects. This is supported by appeal decision APP/H2265/W/20/3254563, which states at paragraph 33 that "due to the topography around the site, its development would have no notable impact on the wider landscape."</p> <p>Under SA Objective 7 (to protect and enhance the cultural heritage resource), the site's impact is rated 'Uncertain significant negative (--?)' as the site is located within 250m of a heritage asset. The effects are considered uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p>	<p>Site 59807 like all other reasonable alternative development site options, has been appraised on a 'policy-off' basis. This means that consideration has not been given to mitigation. Instead, sites have been appraised on their physical constraints only. This ensures all sites are appraised to a consistent level of detail. Therefore, although the respondent has referred to financial contributions and other forms of mitigation, these will not be taken into consideration at this stage of the plan-making process. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA utilises a precautionary approach. Therefore, impacts can be significant but recorded as uncertain if they are dependent on other factors.</p> <p>The SA is too high-level to give consideration to previous applications for sites, including appeal decisions.</p> <p>Site 59807 receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. The 25% threshold only applies to Flood Zones 2 and 3.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". Site 59807 is still expected to have a positive effect in relation to this objective, albeit minor.</p>

		<p>Gladman disagree with the potential for significant negative impacts on a heritage asset and take the opportunity to confirm that the site can be designed and delivered in a way that is sensitive to the conservation considerations. Gladman recognise that there is the potential for minor negative impacts on the wider setting of St Mary's Abbey Complex, the Church of St Mary the Virgin, The Lavenders, St Leonards Tower and West Malling Conservation Area, however, this would amount to less than substantial harm (at the lower end of the spectrum) as defined by the NPPF.</p> <p>Under SA Objective 8 (to protect and enhance the quality of water features and resources), the site is considered to have 'Significant negative (--) / Negligible (0)' impacts. This considers that the site is either entirely or significantly (i.e. $\geq 25\%$) within Flood Zone 3 and/or within an area with a 1 in 30-year risk of surface water flooding and that the site does not contain a water body or watercourse or fall within a Source Protection Zone. However, the site is not within Flood Zone 3 (see Figure 1) and the small area of surface water flood risk along the north-western boundary does not constitute over 25% of the site (see Figure 2)3.</p> <p>Further, as concluded by the Flood Risk Assessment carried out by Enzygo in support of planning application ref. 19/02856/OA, the development of the site can be achieved with minimal risk from flooding and without increasing flood risk elsewhere.</p> <p>Therefore, Gladman consider the significant negative assessment to be inappropriate and should be considered negligible at the very most.</p> <p>Under SA Objective 14 (to provide a suitable supply of high-quality housing including an appropriate mix of sizes, types, and tenures), the site is considered to have a 'Minor positive (+)' impact as the site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.</p> <p>Gladman disagree that the contribution of up to 75 dwellings, of which 40% will be affordable, should be considered 'minor positive'. Smaller development sites are essential to ensuring a range of housebuilders can operate in an area at one time, boosting the supply of housing across the plan period. Gladman consider that the delivery of up to 75 dwellings, on a site located outside the Green Belt and AONB in a significantly constrained authority, should be considered a significant positive.</p> <p>Furthermore, Gladman are promoting the parcel of land immediately south of this site which in combination, could provide circa 105 units. This larger site therefore has the potential to meet the >100-unit threshold to ensure a 'significant positive' contribution to local housing needs.</p>

25366913	General	<p>8.1 Berkeley generally agrees with the methodology and findings of the Interim Sustainability Appraisal (ISA), except for some site-specific matters, which are explored in response to question 8.</p> <p>8.2 The ISA has assessed the options presented in the consultation document and demonstrates that there are advantages and disadvantages to each. As further work is undertaken in narrowing the strategic policy, and spatial strategy, options there will, of course, need to be further analysis through the SA process.</p> <p>8.3 As highlighted in Berkeley's responses to questions 5 and 6, further and more detailed analysis of housing needs is necessary and more uplift options will need to be justified and tested through the SA.</p> <p>9.1 In response to this question Berkeley has focused on the assessment of its site at Broadwater Farm (site ID: 59740).</p> <p>9.2 Berkeley does not agree with the findings for Broadwater Farm (site ID:59740). The findings in the Interim SA are by definition high level and preliminary in nature. In contrast, Berkeley has carried out a detailed, site-specific Environmental Impact Assessment (EIA) in support of its live planning application (LPA Ref. 21/02719/OAEA). The conclusions of that assessment were as follows:</p> <p>"An EIA has been undertaken for the proposed development in accordance with The Town and Country Planning (Environmental Impact Assessment) Regulations 2017. As a result, we have been able to demonstrate that with appropriate mitigation designed into the proposals (during the construction and operational stages of the proposed development), almost all of the potentially adverse effects identified can be appropriately mitigated for or reduced to a level which is not significant in EIA terms.</p> <p>A significant beneficial socio-economic impact is anticipated to arise from the proposed development due to providing for identified housing need, labour supply, increase expenditure and improved healthcare and education provision.</p> <p>As demonstrated by the technical work undertaken there are no significant technical constraints that would preclude the development or harm deliverability. It has been demonstrated that whilst the development would give rise to some adverse impacts, mitigation measures have been proposed to minimise them."</p> <p>9.3 The detailed assessment work that sits behind these conclusions is a much better and more thorough indicator of Broadwater Farm's suitability for a strategic level of housing-led development and has led to agreement between Berkeley and the Council, in the context of the planning application, that development at Broadwater farm is sustainable, suitable for development, available and deliverable.</p> <p>9.4</p> <p>Broadwater Farm (site ID: 59740)</p> <p>9.5 The site is located to the north of Kings Hill in Tonbridge & Malling Borough and extends to approximately 118.5 hectares. The site is in</p>	<p>The assessed need + 10% was appraised as a basis for considering a higher growth scenario as there was not evidence to base specific higher growth figures on.</p> <p>All reasonable alternative development site options have been appraised on a 'policy-off' basis and so consideration has not been given to mitigation and supporting documents submitted by site promoters. This ensures all sites are appraised to the same level of detail (specific development proposals may not yet have been determined for a number of sites). If a site is allocated in a Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

		<p>the sole control of Berkeley. This control by a single developer is particularly important in terms of demonstrating the deliverability of development on the site within the plan period.</p> <p>9.6 In summary, and based on the submitted application plans and supporting documents, development at Broadwater Farm can deliver:</p> <ul style="list-style-type: none"> • Housing: Berkeley expects to be able to deliver 900 homes within the new Local Plan period, and these will be high-quality bespoke designed homes including 30% affordable housing. • Sustainability: a range of measures that will assist in mitigating climate change; both in the layout of the development and the construction of dwellings. Working with existing water flows to create a new waterscape that works in harmony with the landscaping and creates new habitats. • Community: community infrastructure including a GP surgery, primary school, and secondary school. The secondary school in particular would serve the wider area (Kings Hill currently has no secondary school). • Green Infrastructure: a broad and diverse range of green infrastructure including parkland, woodland, small village greens and squares, children's play spaces, and sports pitches. • Heritage: a scheme that has been conceived on the basis of a detailed understanding of the constraints of the site, including the particular significance of the identified heritage assets within the site and surrounding area, including the contribution that is made by setting (including the site). • Biodiversity: a significant net gain in biodiversity comprising a mix of new and improved habitats. • Highways: Local road improvements, including new and improved pedestrian, cycle, and equestrian links to existing public rights of way providing access to the countryside. • Economy: new employment opportunities, training, and investment in the local economy.
