

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
25315361	Non-technical summary	"Projected population growth has the potential to increase greenhouse gas emissions from a variety of lifestyle choices such as private vehicle use. Actions and objectives to reduce the borough's carbon emissions will need to take this into account. New development could reduce associated emissions relative to existing developments through appropriate selection of sustainable building design and materials." These statements are misguided. The use of sustainable building materials gives a one-off climate advantage, the use of private vehicles gives an ongoing, continuing and unbounded climate disadvantage. The reduction of private vehicle use is primary, the other considerations are secondary. The reduction of private vehicle use can be best tackled by the judicious spatial distribution of development sites, in terms of minimising car journeys and by creating sustainable configurations for economically viable public transport. In any case, the selection of development sites on the basis of minimising of private vehicle use does not preclude good building practice and sustainable development. Any reduction of private vehicle use is an additional saving over and any savings from other initiatives.	<p>In the next iteration of the SA Report, this paragraph will be reworded and separated as follows:</p> <p>"Projected population growth has the potential to increase greenhouse gas emissions from a variety of lifestyle choices such as private vehicle use. However, there is potential to minimise private vehicle use through the siting of development and providing a mix of uses, in addition to encouraging walking, cycling and public transport use.</p> <p>Tonbridge and Malling Borough Council declared a climate emergency in July 2019. Actions and objectives to reduce the borough's carbon emissions will therefore need to be taken into account in the new Local Plan. New development could reduce building emissions through the appropriate selection of sustainable building design and materials."</p>
25315361	Non-technical summary	'Within 400m of an existing bus stop' is too crude to be an Indicator. Eccles, Burham and Aylesford were promised a bus service of up to 2 buses per hour as part of the Peters village proposal. The bus service has recently been reduced to 2 buses per week. Some sites are within 400m of a bus stop which has 2 buses per week, some sites are within 400m of a bus stop which has a bus every 15 minutes. There is a clear distinction between such cases, they should not be lumped together. 'No major development within AONBs', in the case of the North Downs this target is too restrictive. The views from and of the North Downs are also a consideration. If development is allowed right up to the boundary of the ANOB, then the North Downs could become little more than a backdrop to a clutter of development. Some of the most uplifting views within the Borough are those of the North Downs escarpment viewed across and from the distinctive rural setting below.	<p>As explained in the full Interim SA Report (paras 2.38 and D.2), the site assessment criteria include a number of distance-based criteria used to estimate the likely effects of site options. A number of the appraisal assumptions refer to accessibility from site options to services, facilities, employment, etc. There are a number of pieces of research that give a variety of recommended guidance distances for walking. For example, the Institute of Highways and Transportation found that the average length of a walk journey is one kilometre. Further to this, it categorises distances depending upon the location and purpose of the trip, as 'desirable', 'acceptable' or 'preferred maximum'. Given the wide range of services and facilities normally considered in SAs, LUC has developed some guideline distances that it uses in its SA work, and which are therefore reflected in the site assessment criteria.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>One of the targets in the SA is "No major development within AONBs other than in exceptional circumstances and where it can be demonstrated that the development is in the public interest". This target was originally developed and included as part of the SA Scoping Report. It is in accordance with the National Planning Policy Framework (NPPF), which states that permission for major development within AONBs should be refused. According to the NPPF, major development "is a matter for the decision maker, taking</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined".</p> <p>With regard to development outside of but near to the AONB boundary, the NPPF states "The scale and extent of development within all these designated areas should be limited, while development within their setting should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas" [emphasis added].</p> <p>The SA gives all sites that are within 500m of the AONB a significant negative (--) effect, in recognition of the potential for development outside of, but near to the AONB, to have an effect.</p>
25315361	Non-technical summary	<p>"Minimise the loss of Grade 1, 2 and Grade 3a ALC land", "Avoid development of 'best and most versatile' soil." With the increase of viticulture within the Borough, this approach is too restrictive. Soil doesn't have to be 'versatile' in order to grow specific specialist crops such as grapes for viniculture. Some of the best wine in the world is produced from some of the poorest quality soil.</p> <p>https://www.vivino.com/wine-news/why-does-poor-quality-soil-make-such-great-wine. In terms of revenue per acre, the economic value of land that is capable of producing good wine is typically far greater than the economic value of Grade 1 land and such land should be regarded as a national asset that should be vigorously protected from development. Furthermore, the terroir for good grape production is a combination of microclimate, soil drainage, and elevation. Within the Borough, land with good characteristics for wine growing is far rarer than is Grade 1 agricultural land. When it comes to protection from development, land suitable for viticulture should be given greater priority than Grade 1 agricultural land. In the first instance, perhaps, there should be a requirement that any developer wishing to build within so many metres of an existing vineyard should have to commission a study on the wine production potential of the proposed development site.</p>	<p>The Agricultural Land Classification (ALC) is commonly used in SA, as it provides a method for assessing the quality of farmland to enable informed choices to be made about its future use within the planning system. It helps underpin the principles of sustainable development.</p> <p>The ALC classifies agricultural land into five grades. Grade 1 is the best quality and Grade 5 is the poorest quality. A number of criteria inform the ALC, including climate (temperature, rainfall, aspect, exposure, frost risk), site (gradient, micro-relief, flood risk) and soil (depth, structure, texture, chemicals, stoniness) for England only.</p>
42487649	Non-technical summary	<p>Site 59703/59617 residential are listed twice but are the same. I am not sure why? This site (both 59703/59617) on Potash Lane is located in an area of difficult access. Currently the single lanes are used by local people who often walk for exercise and use their cars when needed. On street parking is extremely limited and access via all routes is not easy. A part of Comp Lane is a non HGV route. The turn at the junction of Long Mill lane into Potash Lane is extremely acute for a vehicle/car turning. The site specified is open land and is situated within 250m of a heritage asset as well as being within 250m of one or more internationally/nationally designated biodiversity/geodiversity sites. This area is green open space that would be lost as a result of a new development and negatively affect the street scene of the existing settlement of houses some of which are listed.</p>	<p>Sites 59703 and 59617 are not the same. The boundary for site 59703 does not include the house on Potash Lane whereas the boundary for site 59617 does.</p> <p>The SA is high-level and therefore does not give consideration to site-specific access and turning points. This is something that will instead be considered at planning application stage. Both sites do, however, receive a significant negative effect in relation to SA objective 2: services and facilities, as they are both recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band.</p> <p>The sites both receive an uncertain minor negative effect in relation to the landscape and townscape, and an uncertain significant negative effect in relation to the historic environment. This is in accordance with the site assessment criteria.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42587297	Non-technical summary	SA 1 on Health fails to take into account the role of the local food system and healthy diets in promoting health and wellbeing. Poor diets are one of the biggest drivers of morbidity and mortality. Fuel and food poverty, the local food environment including the positioning of fast food outlets (near schools), advertising, school meals and standards, all impact on local diets. An integrated approach that looks at health, sustainable transport and the local food systems is more likely to help tackle health inequalities. This is missing from the objectives. The linkages between many of these objectives are not taken into account - there are wins to be had by looking across all of these objectives and bringing them together - for example, emissions reduction and growth opportunities arising from the circular economy and better management of waste; health benefits of sustainable transport options; etc.	<p>The SA is limited in how it can assess healthy eating, as this is highly dependent on people's personal eating habits. However, there is potential for the SA to assess access to things like allotments and community gardens where local food growing may be encouraged. In the next iteration of the SA Report, the following sub-objective will be added under SA objective 1: health and wellbeing:</p> <p>"To improve access to allotments and community gardens to encourage local food growing and healthy eating."</p> <p>It is not the role of the SA to limit the positioning of fast food outlets.</p> <p>There is some overlap between the topics covered by the SA objectives. The issues of most relevance to each SA objective have been placed under that SA objective and not any others, so as to avoid duplication of effects.</p>
42171937	Non-technical summary	Regarding SA 9: Avoid development of 'best and most versatile' should be top of the list of sub-objectives in view of recent food shortages and price hikes due to the war in Ukraine.	The sub-objectives in Chapter 3 of the Interim SA Report are not written in order of importance. Therefore, the sub-objective "Avoid development of 'best and most versatile' soil" will remain where it is.
42171937	Non-technical summary	Objective 9 Target – STRONGLY DISAGREE Minimise the loss of Grade 1, 2 and Grade 3a ALC land. Should be ZERO LOSS OF Grades 1,2,3a ALC Land.	This target is considered appropriate, as it would not be possible to deliver the amount of housing needed and avoid development on Grades 1, 2 and 3a agricultural land. Sites that are located on Grades 1 and 2 agricultural land are, however, given a significant negative effect in the SA. Sites located on Grade 3 agricultural land are given an uncertain significant negative effect as it is unknown whether they comprise Grade 3a (high quality) or 3b (not classed as high quality) agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification. The Post 1988 Agricultural Land Classification can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the Borough.
25349153	Non-technical summary	This Sustainability Report could not have been more poorly designed. The choice of colours to score sites against the objectives is not logical (can't easily see whether a particular colour scores highly or not) but, more fundamentally, is impossible to view by those who are colour blind. A numeric score would have been simpler and easier to follow. So many of the comments are very subjective and/or have question marks as the score depends on the design of the development. Similarly, the listing of sites is designed to be unhelpful. A five figure identity number is used when there are only 291 sites. The use of postcodes was also misleading – eg the NAIB site (59856) is in East Malling, not Ditton and site 59756 is in East Malling and not Leybourne. The sites should have been given consecutive numbers within each parish, and within each parish perhaps numbered with regard to geography. Instead, many people will have spent many hours having to look through all 291 sites to find their local ones since they are not even presented in number order. It was only late in the process that sites could be seen by inputting their ID number.	<p>The PDF version of the Non-Technical Summary available online is in an 'Accessible format', which means that it has been formatted to meet the requirements of the Public Sector Bodies (Websites and Mobile Applications) Accessibility Regulations (2018). The template abides by WCAG 2.1 regulations to the highest standard (level AAA). The report is therefore accessible to those who are colour blind.</p> <p>Due to the high-level nature of SA, uncertainty has been added to some of the effects. This is because they depend on the final design, scale and layout of development, which will not be determined until planning application stage.</p> <p>The ID numbers for each site were autogenerated. These site reference numbers are consistent across all Local Plan documents to allow for cross referencing. In the next iteration of the SA Report the proformas will be structured by ward and a Contents page provided.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
25310017	Non-technical summary	Option of not meeting housing requirement hasn't been assessed. The SA confirms that of the two quantum options meeting assessed need (only) performs best in term of the sustainability objectives. It is clear from the SA that option 5 (new settlement) does not perform as well as options 1-3. It is clear from the SA that optimising densities performs better against the sustainability objectives than a conservative application of density.	The full Interim SA Report at paragraph 4.5 states "No option has been considered or assessed that promotes development below the 839 dwellings per annum as it is considered an unreasonable alternative in the context of national policy and local evidence on housing affordability. In addition, given the large pool of sites currently identified and their potential yield, the borough will likely have sufficient available land to deliver the amount of development that the evidence shows is needed. In these circumstances, the Council considers that any option which did not deliver as a minimum the identified housing need does not constitute a reasonable alternative".
42832705	Non-technical summary	For any development to meet its sustainability objectives it needs to recognise the environment in which it is being proposed: to achieve SA 2. it needs to be recognised that any development between East Malling into West Malling from Mill Street along Claire Lane would require new pavements and lighting so that any new housing would have access to existing community facilities without encouraging additional motor vehicle use (SA10); additional pavements and lighting along Claire Lane would cause damage to a distinct countryside environment impacting wildlife habitat (SA 5 and SA 6) through disruption of wildlife habitats and interruption of dark skies environments; the scale of the developments will materially impact what has been described in the East Malling Conservation Study as an areas of Unspoilt beauty and would disturb the distinct, historic characters of East Malling and West Malling villages. Regarding SA 11 and 12: Incomplete ecology impact and air quality surveys need to be completed and associated issues addressed in line with the overall, cumulative impact of changes resulting from proposed development (not on a case-by-case basis) need to be addressed against very localised claims (e.g biodiversity increases in localised developments e.g unqualified/ unquantified 30% increases in biodiversity). Regarding SA 14: Of the proposed developments only a very small proportion are affordable to young buyers in the local demographic.	<p>It is not clear whether the sustainability objectives the respondent refers to are the SA objectives that comprise the SA framework within the Interim SA Report, or different objectives separate to the SA that developments must meet. The SA is a high-level tool used to identify the likely sustainability effects of a plan, and is one of many factors that feed into the plan-making process. The SA objectives provide a guide for the appraisal of options, be it policy options or site options.</p> <p>The SA is too high-level to consider pavements and lighting. This is instead something that is determined once more specific proposals are developed and submitted as part of a planning application. The SA does, however, explore the distance sites are to services and facilities under SA objectives 1: health and wellbeing, 2: services and facilities and 3: education. Biodiversity is covered under SA objective 5: biodiversity and geodiversity and the historic environment is covered under SA objective 7: heritage. Information on how sites have been appraised against each of these objectives is provided in Appendix D of the Interim SA Report.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for things like air quality surveys to be undertaken as part of the work. The Council will, however, commission additional evidence on matters including traffic and air quality. SA objective 12: air pollution looks at the distance sites are to Air Quality Management Areas.</p> <p>SA objective 11: climate change adaptation does not look at biodiversity and air quality, as these issues are separately covered under SA objectives 5 and 12, respectively. Housing delivery, including affordable housing delivery is covered under SA objective 14: housing.</p>
42213665	Non-technical summary	Generally, I think the Interim Sustainability Appraisal has sound methodology and addresses all key issues. I hope that it proves successful in ensuring that there is correct and consistent consideration of all issues across every site identified for potential development and that standards are not watered down over time because of political or economic pressures.	Support noted.
42404257	Non-Technical Summary	Do please check existing levels of infrastructure, for example in the case of Watlingbury the roads are already challenged, the school is a	Infrastructure will be dealt with separately through the Council's Infrastructure Delivery Plan. The SA does not take into consideration the capacity of medical centres or schools, which is more of a matter

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		one class intake and the doctor's surgery is not taking any more onto its roll....	for plan-making and the Infrastructure Delivery Plan. The site assessment criteria do, however, acknowledge that with regards to medical centres "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6). The site assessment criteria also acknowledge that with regards to schools, "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils. New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage".
42437217	Non-Technical Summary	The Grange farmlands fields back on to my house in Fleming Way. The fields are very susceptible to flooding during prolonged rain! There is also the issue of the CLH OIL PIPELINE which runs through/ across these fields!!!! Has anybody thought of this obstacle?? I have lived at my present house for over 40 years and every year there has been various alternating crops grown in these fields and very recently there have been Red kites and different species of bats returning to these fields. The fact that this is green belt area seems to be deemed acceptable in this day and age. I can irrevocably condemn any housing development of any sort on the aforementioned lands.	<p>Flood risk is covered under SA objective 8: water. Sites 59690, 59805 and 59809 all receive significant negative effects in relation to SA objective 8, as they are at a 1 in 30 year risk of surface water flooding. All effects against this objective are recorded as uncertain, as all three sites contain water bodies but it is unknown what effects development could have on water quality.</p> <p>The SA is too high-level to consider the presence of oil pipelines.</p> <p>Biodiversity is dealt with under SA objective 5: biodiversity and geodiversity. All three sites receive significant negative effects in relation to SA objective 5, as they are within close proximity of ancient woodland.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>
38532513	Non-Technical Summary	I agree that option 1 is better for minimising land take, cutting down travel and therefore reducing the impact on traffic congestion and on air quality and climate emissions; but I am worried about the impact on water and on available green space for residents within the town. I feel it very important to ensure that children have access to close play spaces, and also that any mature trees should be left. It seems crazy to be cutting down any trees at the same time as urging people to plant more (thinking of the site on Bishops Oak Ride). I am worried about the impact on water and flooding because almost all of Tonbridge is a high flood risk area.	The SA does give consideration to the impact of development on flood risk, under SA objective 8: water – see site assessment criteria contained in Appendix D of the Interim SA Report. The SA also gives consideration to loss of open space under SA objectives 1: health and wellbeing and 6: landscape and townscape, and biodiversity assets including trees under SA objective 5: biodiversity and geodiversity. Further information is contained in Appendix D.
38532513	Non-Technical Summary	It is very difficult to quantify the affects of the different 3 options for preventing the merging of settlements in the NE of the borough in isolation from the rest of the borough. I say this because if little development is allowed around eg West Malling station, more development will be needed elsewhere in the borough in order to fulfill the housing needs. This is an area that has far less risk of flooding than Tonbridge or Snodland, and so although 6 is improved	The Strategic Policy Options are very high-level and so the appraisal of these options is also high-level. As the specific location of development is unknown, no positive or negative effects have been recorded in relation to SA objective 8: water, which considers flood risk. SA objective 11: climate change mitigation does not specifically relate to flood risk but does cover extreme weather events as a result of climate change, which includes flood risk. As the specific location of

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		for that area of the borough by taking options 1 or 2, 8 and 11 will be very much worsened if other parts of the borough with high flood risk take more development. 4, 11 and 12 would be improved if development took place close to West Malling station because this would minimise traffic congestion.	development is unknown, negligible effects are also recorded against SA objective 11. Option 3 receives a minor positive effect in relation to SA objective 4: economic growth, as this option is more likely to contribute to meeting housing and employment needs within Tonbridge and Malling. The effect is recorded as uncertain, as it is dependent on whether sites for development are allocated in this area or not. Options 1 and 2 instead receive minor negative effects in relation to this objective, as they would restrict land coming forwards to meet the housing and employment needs of the Borough. Negligible effects are expected in relation to SA objective 12: air pollution, due to the high-level nature of these options.
42487649	Non-Technical Summary	Any proposed housing development does not take into account the number of cars per household and base their calculations on outdated government guidelines. Additionally, any apartments that are built have Service Charges that if not managed properly are unaffordable. There are models where owners/residents have an elected board to monitor value for money.	It is not within the scope of the SA to explore the number of cars that will be generated per each new household. The Interim SA Report provides an appraisal of all reasonable alternative development site options to inform the Council's decisions regarding which sites to allocate. The sites they allocate will be determined later in the plan-making process. It is also not within the scope of the SA to explore service charges. It is important to note that the SA is one of many factors that feed into the plan-making process.
42487649	Non-Technical Summary	The need for an efficient broad band provider is a must for the borough. The use of I.T has expanded since the Covid Pandemic and not all areas in Tonbridge & Malling have fibre, which is needed.	The SA does not take into consideration Broadband because this is a very localised issue, the status of which can change very quickly. The Government has several programmes in place with the aim to increase speeds and access to Broadband for homes and businesses.
25315361	Non-Technical Summary	No one can disagree with the objective to reduce crime and antisocial behaviour, but there is a danger that this is addressed by solutions that are too simplistic. One only has to look at mistakes made by planners of the past. Recent planning applications seem to favour wide open spaces lacking in privacy and the removal of back alleys and cut throughs. (Although, interestingly, some of the older neighbourhoods of Kings Hill are attractive because they adopt the opposite approach.) The risk here is that attempts to reduce crime could lead to developments that feel sterile rather than organic so that people feel detached from their environment and no longer identify with their neighbourhood. This lack of identification can itself lead to vandalism. In summary, people who commit crime or display antisocial behaviour are often detached from the community. This can be best addressed by attractive developments with a genuine neighbourhood feel.	There are a number of sub-objectives to SA objective 1: health and wellbeing that cover crime. These sub-objectives act as a starting point for the identification of effects that policies within the Local Plan are likely to have.
42723809	Non-Technical Summary	I live in Watlingbury and the air quality is really under pressure because of the high volume of traffic that uses the A26 and surrounding roads. Any further residential development in this area would not be sustainable and would degrade even further the air quality and consequently local people's quality of life and health.	The SA gives consideration to air quality under SA objective 12: air pollution. If a site is within 100m of an Air Quality Management Area (AQMA), it receives a significant negative effect in relation to this objective. As Watlingbury contains an AQMA, all sites in and around this settlement will have received a significant negative effect against SA objective 12, provided they are within 100m of the AQMA.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			Future iterations of the SA will contain a cumulative effects section, which will consider the overall impact of development on air quality. The Council will also be commissioning additional evidence on matters including traffic and air quality.
42792257	Non-Technical Summary	Measuring sustainability against social, economic and environmental issues is overly simplistic. Sustainability is an ambiguous word that has never been clearly defined. It is however clear that social, economic and environmental demands will always be in conflict and history tells us that the environment will always be the loser when money and human requirements are at stake. I see nothing in your vision, policy or monitoring proposals that alter this basic dynamic.	<p>The most widely used and accepted definition of sustainable development is "development that meets the needs of the present without compromising the ability of future generations to meet their own needs" - World Commission on Environment and Development (1987) 'Our Common Future'. Published in the Brundtland Report, this definition is built around three dimensions: environmental, social and economic. These three aspects of sustainable development arguably complement one another, although it is argued by some that in reality they are in conflict with each other.</p> <p>As explained in paragraphs 1.10 to 1.13 of the Interim SA Report, SA is an assessment of the likely effects of a plan or programme (in this case TMBC's Local Plan) on the environmental, social and economic aspects of sustainable development. SA is the UK transposition of the European SEA Directive into English and Welsh Planning law (SEA considers only the environmental effects of a plan). The National Planning Policy Framework confirms the requirement for SA, and SA should be submitted alongside a plan for examination, as it is examined as part of the evidence base for a plan. The monitoring indicators proposed in Chapter 6 of the Interim SA Report cover environmental, social and economic topics.</p>
42588673	Non-Technical Summary	It is not clear how any of these objectives can be fulfilled without greater and urgent attention to the provision of increased capacity on the highways; better control over traffic speeds; improved community facilities (medical, educational, public transport, water supply etc).	<p>The SA is too high-level to consider specific road networks and traffic congestion. The Council will, however, commission evidence on transport.</p> <p>The purpose of the SA is to appraise all options throughout the plan-making process, be it policy options or site options. Consideration is given to healthcare provision under SA objective 1: health and wellbeing, educational provision under SA objective 3: education and public transport under SA objective 10: climate change mitigation. Water is dealt with under SA objective 8: water, although this objective covers flood risk and water quality more than supply. Information on water supply is, however, provided in the baseline information (Appendix C of the Interim SA Report). If improvements are proposed to community facilities through policies in the Local Plan, these will be subject to SA.</p>
42213665	Non-Technical Summary	Generally, I think the Interim Sustainability Appraisal has sound methodology and addresses all key issues. I hope that it proves successful in ensuring that there is correct and consistent consideration of all issues across every site identified for potential development and that standards are not watered down over time because of political or economic pressures.	Support noted.
42487649	Non-Technical Summary	This appraisal must consider the impact on the area involved - the natural environment area as well as the built environment.	The SA gives consideration to the natural environment under SA objective 5: biodiversity and geodiversity. Consideration is also given

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>to the built environment under SA objectives 6: landscape and townscape and 7: heritage.</p> <p>Further to this, future iterations of the SA will contain a cumulative effects section which considers the overall effects of the Local Plan on the Borough, including the natural and built environment.</p>
42171937	Non-Technical Summary	Objective 9 Target - STRONGLY DISAGREE "Minimise the loss of Grade 1, 2 and Grade 3a ALC land." Should be ZERO LOSS OF Grades 1,2,3a ALC Land.	This target is considered appropriate and in line with government policy. Sites that are located on Grades 1 and 2 agricultural land are, however, given a significant negative effect in the SA. Sites located on Grade 3 agricultural land are given an uncertain significant negative effect as it is unknown whether they comprise Grade 3a (high quality) or 3b (not classed as high quality) agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification. The Post 1988 Agricultural Land Classification can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the Borough.
42587297	Non-Technical Summary	<p>SA 1 on Health fails to take into account the role of the local food system and healthy diets in promoting health and wellbeing. Poor diets are one of the the biggest drivers of morbidity and mortality. Fuel and food poverty, the local food environment including the positioning of fast food outlets (near schools), advertising, school meals and standards, all impact on local diets. An integrated approach that looks at health, sustainable transport and the local food systems is more likely to help tackle health inequalities. This is missing from the objectives.</p> <p>The linkages between many of these objectives are not taken into account - their are wins to be had by looking across all of these objectives and bringing them together - for example, emissions reduction and growth opportunities arising from the circular economy and better management of waste; health benefits. of sustainable transport options; etc.</p>	<p>The SA is limited in how it can assess healthy eating, as this is highly dependent on people's personal eating habits. However, there is potential for the SA to assess access to things like allotments and community gardens where local food growing may be encouraged. In the next iteration of the SA Report, the following sub-objective will be added under SA objective 1: health and wellbeing:</p> <p>"To improve access to allotments and community gardens to encourage local food growing and healthy eating."</p> <p>It is not the role of the SA to limit the positioning of fast food outlets.</p> <p>There is some overlap between the topics covered by the SA objectives. The issues of most relevance to each SA objective have been placed under that SA objective and not any others, so as to avoid duplication of effects.</p>
42171937	Non-Technical Summary	<p>Regarding SA 9:</p> <p>"Avoid development of 'best and most versatile' soil" should be top of the list of sub-objectives in view of recent food shortages and price hikes due to the war in Ukraine.</p>	The sub-objectives in Chapter 3 of the Interim SA Report are not written in order of importance. Therefore, the sub-objective "Avoid development of 'best and most versatile' soil" will remain where it is.
42832705	Non-Technical Summary	For any development to meet its sustainability objectives it needs to recognise the environment in which it is being proposed: \to acheive SA 2. it needs to be recognised that any development between East Malling into West Malling from Mill Street along Claire Lane would require new pavements and lighting so that any new housing would have access to existing community facilities without encouraging additional motor vehicle use (SA10); additional pavements and lighting along Claire Lane would cause damage to a distinct countryside environment impacting wildlife habitat (SA 5 and SA 6) through disruption of wildlife habitats and interruption of "darkskies" environments; the scale of the developments will materially impact	<p>It is not clear whether the sustainability objectives the respondent refers to are the SA objectives that comprise the SA framework within the Interim SA Report, or different objectives separate to the SA that developments must meet. The SA is a high-level tool used to identify the likely sustainability effects of a plan, and is one of many factors that feed into the plan-making process. The SA objectives provide a guide for the appraisal of options, be it policy options or site options.</p> <p>The SA is too high-level to consider pavements and lighting. This is instead something that is determined once more specific proposals are developed and submitted as part of a planning application. The SA does, however, explore the distance sites are to services and</p>

25349153	Non-Technical Summary	This Sustainability Report could not have been more poorly designed. The choice of colours to score sites against the objectives is not logical (can't easily see whether a particular colour scores highly or not) but, more fundamentally, is impossible to view by those who are colour	The PDF version of the Non-Technical Summary available online is in an 'Accessible format', which means that it has been formatted to meet the requirements of the Public Sector Bodies (Websites and Mobile Applications) Accessibility Regulations (2018). The template

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>blind. A numeric score would have been simpler and easier to follow. So many of the comments are very subjective and/or have question marks as the score depends on the design of the development.</p> <p>Similarly, the listing of sites is designed to be unhelpful. A five figure identity number is used when there are only 291 sites. The use of postcodes was also misleading - eg the NAIB site (59856) is in East Malling, not Ditton and site 59756 is in East Malling and not Leybourne. The sites should have been given consecutive numbers within each parish, and within each parish perhaps numbered with regard to geography. Instead, many people will have spent many hours having to look through all 291 sites to find their local ones since they are not even presented in number order. It was only late in the process that sites could be seen by inputting their ID number.</p>	<p>abides by WCAG 2.1 regulations to the highest standard (level AAA). The report is therefore accessible to those whose are colour blind.</p> <p>Due to the high-level nature of SA, uncertainty has been added to some of the effects. This is because they depend on the final design, scale and layout of development, which will not be determined until planning application stage. The ID numbers for each site were autogenerated. These site reference numbers are consistent across all Local Plan documents to allow for cross referencing, In the next iteration of the SA Report the proformas will be structured by ward and a Contents page provided.</p>

44275681	Non-technical summary	<p>"The Assessment of the Quantum Options</p> <p>Whilst we note that the SA acknowledges at para 4.5 that 'the Council considers that any option which did not deliver as a minimum the identified housing need does not constitute a reasonable alternative', and agree with that statement; we are, as set out above, somewhat confused as to whether the SA has in fact tested the effects of</p>	<p>The quantum options subject to SA were identified by TMBC. It is reasonable, as a starting point, for one quantum option to be the assessed need generated by the Government's standard method. Quantum Option 2 is the assessed need + up to 10% therefore providing a buffer.</p> <p>The reasoning behind the effects each Quantum Option is expected to have is outlined in paragraphs 4.6 to 4.10 of the full Interim SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>delivering the LHN figure + 10% or a supply that is 10% above the HLN which is a different scenario.</p> <p>With the above in mind, we fail to see why table 4.1 suggests that Option 1 (LHN) scores a minor positive for objectives 1, 2 and 3, yet Option 2 (LHN+10%) scores a mixed minor effect for all three. Option 2 in providing more housing has the ability to help to address the issue of affordability and thus improve the health and well-being of those in housing need, especially the homeless (SA objective 1). Para 4.6 appears to totally ignore the issue of affordability and its effects on health or indeed the fact that housing actively contributes to the delivery of health services. Likewise Option 2 has the greater ability to improve equality and access to community facilities and services (SA objective 2) than Option 1, given its ability to address the issue of homelessness and affordability which we note is a sub objective of objective 2 according to p70 of the SA. Furthermore, Option 2 would definitely help address the need to provide a suitable supply of high quality housing, including an appropriate mix of sizes, types and tenures (SA objective 14). Why Option 2 scores a significant positive (likely effect uncertainty) when Option 1 also scores a significant positive is truly bizarre. Whilst we note that para 4.9 of the SA suggests that the scale of housing delivery associated with Option 2 is 'in excess of what the local housing markets have supported over the past decade, as demonstrated by the Housing Market Delivery Study', and that as a result there is 'uncertainty attached to this option as there is a question mark around its deliverability'; this is not in our opinion a reason for the SA to reduce the score attributed to Option 2. Deliverability is an issue for the planning authority in determining the spatial strategy – not the SA. To this end we note that the Housing Market Delivery Study (HMDS) examines past delivery rates and uses these to make assumptions as to the capacity of the area to deliver homes in the future. Whilst helpful to understand the rate at which homes have been delivered in the past, we would argue against whether this should be used as an indication of future delivery rates. The ability of an area to support housing growth will relate principally to the range of sites allocated through the chosen spatial strategy rather than an innate capacity in the market as to the amount of growth that can be achieved. The Council should not be seeking to limit growth on the basis of what has been achieved in the past.</p> <p>The Assessment of the Spatial Options Reviewing table 4.2 spatial Option 3 (Development focused on sites within as well as adjacent to defined urban and Rural Service Centre settlements) appears to attain the most positive scores, with equal top scores in respect of SA objectives 1, 2, 3, 4, 5, 7, 8, 10, 11, 12, 13 and 14, and second equal on SA objectives 6 and 9. On this basis it would appear to us to be the option that most closely meets the SA objectives, and it is surprising that the SA does not actually say this explicitly.</p> <p>In addition to the above we are, we have to say, somewhat perplexed as to how spatial Option 1 scores so highly on SA objective 2 (to improve equality and access to community facilities and services) when, by directing most growth towards the northern part of the</p>	<p>Report. Quantum Option 2 receives minor negative effects (as part of a mixed minor effect) against SA objectives 1: health and wellbeing, 2: services and facilities, and 3: education because as explained in the report, delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities, services and facilities, and schools. However, the Interim SA Report also acknowledges that the extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities.</p> <p>We note that there is some crossover between the SA objectives and although the delivery of affordable housing will have beneficial effects on health and wellbeing, housing delivery (including affordable housing delivery) is addressed separately under SA objective 14: housing. Quantum Options 1 and 2 will both provide a significant amount of new housing and therefore both receive a significant positive effect in relation to SA objective 14. In terms of Quantum Option 2 delivering more housing than Quantum Option 1, the SA acknowledges in paragraph 4.9 that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents" [emphasis added].</p> <p>Although the significant positive effect for Quantum Option 2 against SA objective 14 is recorded as uncertain, this is not a reduction to its score as suggested by the respondent. The SA states in paragraph 4.9 (see above quote) that Quantum Option 2 has a particularly significant positive effect. The reasoning behind the uncertain effect is appropriate.</p> <p>It is important to note that although Quantum Option 2 receives minor negative effects in relation to SA objectives 1, 2 and 3, it also receives minor positive effects. The fact Quantum Option 2 will help in the delivery of affordable housing is acknowledged in the SA. In the next iteration of the SA Report, the sub-objective "To tackle homelessness more effectively" will be moved to underneath SA objective 14: housing.</p> <p>Spatial Option 3 does perform very strongly in relation to the SA objectives compared to the other options, as does Spatial Option 2. It is important to note that SA is a high-level tool used to identify the likely sustainability effects of a Local Plan, and is one of many factors that feed into the plan-making process.</p> <p>Affordability is not addressed under SA objective 2: services and facilities, and is instead addressed under SA objective 14: housing. Affordability is an issue across the Borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Borough it will not address the affordability issues in the southern part of the Borough, which given the southern part of the Borough's location within the WKHMA and thus the amalgam of the 3 least affordable Boroughs/ district in the county, would suggest anything that directs growth away from this area should obtain a much lower score. To this end</p> <p>we note that para 4.18 of the SA highlights the fact that there is a significant amount of self-containment in terms of the movement of people and activity on a regular basis within the HMA's and that a sustainable pattern of development should seek to address the need where it arises, i.e. within each HMA. Spatial Option 1 simply would not do this and would exacerbate the affordability issue within the southwestern part of the Borough, where it is at its most acute.</p> <p>With regard to the Future Options of Tonbridge, Section 11 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes and other uses and paragraph 124 sets out key considerations that should be taken in this regard.</p> <p>Furthermore, NPPF paragraph 125 states: "plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination" It then follows that, the optimisation of densities on development sites within Tonbridge (Option 1) is recognised on the basis that the best use of previously developed land clearly scores well in SA terms. However, this does not mean that a brownfield alone approach should be taken given that an insufficient amount of sites within the urban area have been identified to accommodate the growth within the Urban Capacity Study and notwithstanding the complexities that can arise with brownfield sites that can affect delivery rates. It is essential that a sufficient amount and variety of land can come forward where it is needed in accordance with NPPF paragraph 60. It should also be noted that the delivery of Brownfield land can be longer due to the risks of complications during construction given the nature of the previous use. Therefore, to ensure the delivery of the housing need within the first five years of the plan period, it is essential that Greenfield land is also allocated and optimised. Thus, aspects of Option 2 can be deemed sustainable, notably where high quality and deliverable development results."</p>	
44275681	Non-technical summary	<p>"The following comments are made in respect of the SA for both sites 59764 & 59765:</p> <p>SA1 – Incorrect assessment. The site may be greenfield land but it is not open space accessible to the public and does not contain sports facilities. PRoW fall adjacent to the west of the site and these could be enhanced and extended as part of a residential development, delivered through an allocation. This would increase recreational opportunities for the community. New public open space, habitats and play space will be provided within the development increasing the ability of this area to improve health and wellbeing. Change to Minor or Significant Positive.</p>	<p>With regard to SA objective 1: health and wellbeing, sites 59764 and 59765 are incorrectly recorded as containing open space. The reason both sites are recorded as containing open space is that they slightly overlap open space and so the GIS analysis identified both sites as containing open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, both sites will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 2: services and facilities, both sites are recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receive a minor negative effect</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA2 - The site is within a short distance of the town centre on the outskirts of Tonbridge; unlike other parts of the borough, there is easy access to local shops and services. Public transport is readily available here. The previously SA for the Reg19 withdrawn plan assessed the site as “adjacent to the Tonbridge urban area, and as such has good access to services and facilities. However the size of the site is unlikely to deliver any new services and may place pressure on existing facilities” in respect of the objective for improved access to services and facilities. The larger site (Ref: 59765) includes additional land that is available for the delivery for such uses of there is a demonstrated need. Thus improving facilities in the immediate It is unclear how TMBC’s assessment has changed so considerably since this earlier conclusion, therefore we disagree with this SA assessment and instead the same score should be given (Neutral or Minor Positive).</p> <p>SA4 – It is agreed that the residential development may not deliver any employment opportunities unless evidence demonstrates a need. However, all residential development will provide local jobs during the construction stage and additionally under any management requirements. As such, a Minor Positive should be included rather than negligible. It must be noted, that in respect of site ref. 59765 Redrow is not promoting the land for any significant employment provision, rather the positive economic benefits cited as associated more with the indirect economic benefits from housing.</p> <p>SA5 – This score should change. The Reg19 SA was neutral for short and medium term; positive for long term. It stated that “The scale of the site provides potential for the provision of multifunctional Green Infrastructure in line with the Councils Open Space Policy which in the long term could enhance the ecological networks of the borough.” Allocation of the site will enable a landscape led scheme to be delivered, that includes significant biodiversity enhancements, including the 10% BNG required from 2023. Thus, a Neutral or Minor Positive score is more appropriate and reflects TMBCs earlier assessment.</p> <p>SA6 – A masterplan has been prepared and will be submitted to TMBC in due course. This demonstrates that townscape and landscape characters are protected. This SA assess that the site is not located near any settlements in rural locations and would result in the loss of designated open space. This is an irrelevant and incorrect assessment, thus it is not relevant whether the site is near to a rural settlement as it is adjacent to the main town in the borough. Furthermore, the site is not designated open space. The withdrawn Reg19 SA for the site recognised that: “This site is adjacent to the Tonbridge urban area, and...has good access to services and facilities”. The Sites’ proximity to the AONB is noted in this SA setting out that the effects on the AONB are uncertain. Regard should be given to the the previous assessment within the Reg19 SA which stated: “This site is located outside of a Biodiversity Opportunity Area. There are no natural or heritage assets present on site. The site is located away from the High Weald AONB but falls within its setting. The elevated section of the A21, to the south of the site, provides some screening, therefore limiting the sites</p>	<p>against this objective. The previous SA is not relevant, as it was an SA of a different plan and so does not form part of this SA.</p> <p>With regard to SA objective 4: economic growth, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities. Site 59765 has been appraised as a mixed use site.</p> <p>With regard to SA objective 5, this relates to biodiversity and geodiversity, not open space which is addressed separately under SA objective 1. This is a 'policy-off' appraisal and so it does not take into consideration mitigation (e.g. landscaping and BNG). This ensures all sites are appraised on a consistent basis. The previous SA is not relevant, as it was an SA of a different plan and so does not form part of this SA.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59764 and 59765 are recorded as having uncertain significant negative effects in relation to this objective, as they are both located within 500 of the AONB. The proforma incorrectly identifies both sites as containing open spaces, which will be corrected in the next iteration of the SA.</p> <p>With regard to SA objective 7: heritage, the effects given for both sites are considered appropriate. These are 'policy-off' appraisals that do not take into consideration mitigation, rather they are based on the physical constraints of each site. This ensures all sites are appraised in a consistent manner.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>impact on the setting. However regard should be had to the views south towards the Bidborough Ridge. As such development in this location protects natural and heritage assets by locating development outside of these constraints. The scale of the site provides potential for the provision of multifunctional Green Infrastructure in line with the Councils Open Space Policy which in the long term could enhance the ecological networks of the borough." The assessment concluded Neutral and Minor Positive effects. The current SA contradicts this and there is no evidence to support the departure from the earlier conclusions , as such, the SA should be amended to a Neutral and Minor Positive effect.</p> <p>SA7 – The SA concludes an uncertain and significantly negative effect given the site's location within 250m of a heritage asset and notes that the impact is dependent on the design of the development and whether the assets are visible from the development. Lower Haysden Conservation Area is circa 150m to the west of the site boundary and the closest listed building (Grade II listed Manor Farm Oast) is approximately 200m to the south west of the site boundary. Thus there is a sufficient physical buffer provided to the development. Furthermore, the proposal can include enhancements to the existing field boundaries which currently comprise mature hedge/tree rows."</p>	
44275681	Non-technical summary	<p>"As such, masterplanning for the site ensures that the heritage assets and their setting is protected. TMBC is aware of this from the withdrawn Local Plan evidence base, reps and submission documents. These remain relevant to the site and its suitability for allocation. In due course, during the site promotion, this further evidence will be shared with TMBC.</p> <p>SA8 – Incorrect assessment. The SA states that the site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. However, an area to the north of the site falls within Flood Zone 2, the remainder of the site is within Flood Zone 1 as set out on the EA Flood Maps. Therefore no residential development will be in this area and a substantial proportion of the Site remains available and suitable for residential development. The Site is shown to be predominantly at 'Low' risk of surface water flooding and SUDs will be incorporated into the proposed layout.</p> <p>The assessment also notes the site's location within the source protection zone. This protection zone covers most of the undeveloped area of Tonbridge so any development within the most sustainable settlement will be subject to this constraint.</p> <p>It is noted that the previous SA rated this objection as 0 stating: "Development of this scale would be expected to include onsite SUDS to manage run-off into water courses in order to minimise opportunities for pollution." This remains relevant and as such the proposed assessment should be Negligible (0).</p> <p>SA9 – Best and Most Versatile agricultural land is graded 1 to 3a. Natural England's Land classification map indicates the site is within</p>	<p>The proformas for sites 59764 and 59765 state that they are either entirely or significantly within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, both sites contain land with a 1 in 30 year risk of surface water flooding. Therefore, it is correct that both sites receive uncertain significant negative effects in relation to SA objective 8: water. These are 'policy-off' appraisals and so consideration is not given to mitigation (e.g. SuDS). This ensures all sites are appraised on a consistent basis. The SA correctly identifies both sites as falling within a Source Protection Zone and as the respondent has said, other sites in this area will also be subject to this constraint.</p> <p>The previous SA is not relevant, as it was an SA of a different plan and so does not form part of this SA.</p> <p>With regard to SA objective 9: soil, the SA correctly identifies the site as comprising Grade 3 agricultural land and so it receives a significant negative effect in relation to this objective. As stated in the proforma, the effect is recorded as uncertain as it is unknown whether the site comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p> <p>SA objective 10: climate change mitigation looks at access to public transport. As both sites are within 400m of a bus stop, they receive minor positive effects in relation to this objective.</p> <p>With regard to SA objective 13: material assets and waste, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Grade 3. It is noted that this map does not divide into the subgrade 3a. Further evidence can be provided to detail this. However, given the scale of the site and the amount of identified Grade 3 land, the development of this site would not have a significant impact on the level of good to moderate quality agricultural land. Thus, this should be amended to a Minor Positive/Negligible.</p> <p>SA10 – The SA concludes that this Site would have a minor positive effect in reducing greenhouse gas emission. It is considered that this assessment should be more positive for the following reasons,</p> <p>The site is adjacent to the most sustainable and accessible town in the whole borough and a prime location to encourage sustainable transport modes and reduce reliance on private cars. It is approximately 1.7km from the train station approximately 20 minutes walking. Improved cycle connections are approved via recent planning approval Ref: TM/19/00014/OAEA which will assist with accessibility to the train station and town centre. Alternative routes are available through Haysden Country Park for daylight hour. Other proportionate transport improvements could be secured via the delivery of the site, reducing reliance on private car. Furthermore, Redrow Homes are committed to delivering 100% EV charging to all houses across the site. Redrow Homes is also committed to delivering sustainable homes. Their model seeks to decarbonise operations and supply chains, improve energy efficiency, reduce the carbon footprint of products, services and processes, and set ambitious emissions reductions targets in line with climate science, and scale up investment in the development of innovative low-carbon products and services. Thus, the 15 homes delivered on this site will assist in reducing greenhouse gas emission. Therefore, the SA assessment of 0 should be changed to Significant Positive (++).</p> <p>SA13 – The SA concludes an uncertain minor negative impact due to the site's location in a Mineral Safeguarding Area. A small part of the Sandstone - Ashdown Formation mineral protection area is identified in the Kent County Council Mineral Safeguarding Maps. KCC Minerals and Waste Local Plan Policy DM7 sets out specific criteria that allow for development to come forward in the location. Evidence can be provided in relation to value of the mineral and viability of its extraction. However, this policy also sets out that material considerations indicate that the need for the development overrides the presumption for mineral safeguarding. In this case, TMBC need to seek sustainable locations to accommodate their housing need. As set out within our response to other SA objectives, this site represents a highly sustainable site adjacent to the urban area of the borough largest and best serviced town. Furthermore, the site is too small to enable mineral extraction. Therefore, it is considered that this site should be assessed as negligible (0).</p> <p>SA14 – The SA concluded that site ref 59764 would have a significant positive effect on supply of high quality housing however, site ref 59765 was considered to have an uncertain minor positive. The assessment of site ref 59764 is correct. The assessment of site 59765 should be updated to reflect this. Housing provision is evidently a</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		significant positive and this score should be changed to reflect that. There is no uncertainty about the ability of this site to deliver housing, in a range of sizes, types and tenures. The site is in the control of a housebuilder seeking to deliver the homes within the early years of the Plan Period via a full planning application. This application will be submitted at the earliest opportunity to assist with TMBC housing delivery. Furthermore, the withdrawn Reg19 SA conclude that "This site has the potential to deliver a substantial number of residential units in the long term. A portion of all units would include a range of affordable housing products on-site in line with the Councils Affordable Housing Policy. 25% of dwellings will provide enhanced accessibility or adaptability in order to meet a range of needs." Long term the site scored a Significant Positive. The same should be concluded now and consistency is required for the assessments of both site ref. 59764 and 59765."	
43629217	SA Report	<p>"2.3 Sustainability Appraisal</p> <p>2.3.1 In accordance with Section 19 of the 2004 Planning and Compulsory Purchase Act, policies set out in Local Plans must be subject to Sustainability Appraisal (SA). Incorporating the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004, SA is a systematic process that should be undertaken at each stage of the Plan's preparation, assessing the effects of the Local Plan's proposals on sustainable development when judged against reasonable alternatives.</p> <p>2.3.2 The Council should ensure that the results of the SA process conducted through the preparation of the Local Plan clearly justify the policy choice made, including proposed site allocations (or decisions not to allocate sites) when considered against reasonable alternatives. In meeting the development needs of the area, it should be clear from the results of the assessment why some policy options have been progressed and others have been rejected.</p> <p>2.2.3 The SA must demonstrate that a comprehensive testing of options has been undertaken and that it provides evidence and reasoning as to why any reasonable alternatives have not been pursued. A failure to adequately give reasons in the SA could lead to a challenge of the Council's position through the examination process. The SA should inform plan making. Whilst exercising planning judgement on the results of the SA in the Local Plan is expected, the SA should still clearly assess any reasonable alternatives and clearly articulate the results of any such assessment.</p> <p>2.3.4 The Interim SA examines the Council's approaches to housing delivery, and contrasts proposed policy requirements and strategies against defined reasonable alternatives to confirm that the strategy outlined represents an appropriate strategy. This includes an appraisal of reasonable site options."</p>	Noted.
43072865	SA Report	"The Local Plan evidence base includes an Interim Sustainability Appraisal Report (hereafter SA Report). The purpose of the SA Report is to consider the reasonable alternative development options in	SA is a desk-based, strategic assessment and all reasonable alternative development site options have been appraised on a 'policy-off' basis. This means they are appraised on their physical

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>relation to the strategic location and quantum of development to be delivered over the Plan Period; together with reporting findings of SA appraisals for each site submitted as part of the Call for Sites process.</p> <p>3.2 The SA Report establishes 14no. objectives against which each site is assessed. The SA acknowledges limitations to the Site Assessments at para 2.38 which includes:</p> <ul style="list-style-type: none"> - Some of the data available was based on reporting of the 2011 census- it recognises that data is now relatively old; - straight line distances were used to define areas within which varying levels of harm to environmental receptors were assumed to exist. In reality, the risk of harmful effects will sometimes depend on non-linear pathways (such as watercourses for water pollution effects) and will depend on the particular vulnerabilities of specific receptors; - Where site options are close to the borough boundary, the spatial analysis was potentially affected by the fact that some spatial data required for proximity-based assessments were not available for neighbouring districts, or for part of them; - The level of detail of the site options appraisal work was commensurate with the level of detail of the Local Plan document. As such, not every local characteristic could be investigated for each site option. For example, in relation to potential effects of the site options on biodiversity assets, it was necessary to base the identified effect on proximity to designated biodiversity sites only. - The available GIS data for agricultural land classification did not distinguish between Grade 3a (considered to be best and most versatile agricultural land) and 3b (not considered to be best and most versatile agricultural land). This resulted in some uncertainty in the scores. <p>3.3 The Site Submissions for the February 2022 Call for Sites had to be made through a consultation portal which only allowed the submission of basic information. As such, it was not possible to provide any details relating to the development proposals or any supporting technical work. This is clearly recognised as a limitation within the SA Report. The SA appraisal was therefore undertaken as a desk study without details of the proposals. For major sites the majority of the objectives considered by the SA appraisal would be addressed by the provision of facilities within the development. This would significantly affect the scoring.</p> <p>3.4 Finally, it is also not possible to assess the impact of development in relation to matters of heritage harm and impact upon biodiversity solely considering distance from protected sites. These matters need careful consideration taking account the detailed development proposals, intervening features and connectivity.</p> <p>3.5 The Site at Postern Quarry was submitted as part of the Call for Sites in February 2022 (Site reference 59834) and therefore has been considered as part of the Interim Sustainability Appraisal (hereafter SA) Report. The SA Appraisal does not provide an accurate assessment of the sustainability of the scheme in light of the detailed</p>	<p>constraints only and not their specific development proposals. This ensures all sites are appraised to the same level of detail (specific development proposals may not yet have been determined for a number of sites).</p> <p>The SA does provide an assessment of the impact of development in relation to heritage (SA objective 7: heritage) and biodiversity (SA objective 5: biodiversity and geodiversity). However, the assessment is high-level and dependent on the evidence available. Further to this, some of the effects would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>The respondent's comments against most of the SA objectives relate to the specific development proposals for this site. As explained already, this is a 'policy-off' appraisal and so consideration is not given to these. If the site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA objective 2: services and facilities is informed by the Urban Capacity Study (July 2022), which specifically explores levels of accessibility across the Borough.</p> <p>With regard to SA objective 7: heritage, the SA gives consideration to all heritage assets recorded in the Kent Historic Environment Record. It is therefore correct that the SA states the site is within 250m of heritage assets.</p> <p>With regard to SA objective 9: soil, the SA correctly acknowledges that the site comprises Grade 3 agricultural land. The significant negative effect is recorded as uncertain, as it is not known whether the Grade 3 agricultural land is 3a (high quality) or 3b (not classed as high quality).</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>development proposals. As such, the below is an updated SA Appraisal undertaken with reference to the development proposals.</p> <p>3.6 This submission is also supported by technical work; together with a Call for Sites document which detail the site specific proposals (included at Appendix 1).</p> <p>Objective Score Commentary</p> <p>1) To improve human health and well being</p> <p>Significant Positive (++) Agree with SA Appraisal</p> <p>2) to improve equality and access to community facilities and services</p> <p>Significant Positive (++) Site will deliver new open space, access to water sports and community facilities</p> <p>3) to improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Significant Positive (++) The Site proposes to deliver water based leisure activities, nature trails, forest school/nursery all of which would contribute to skills enhancement. The facilities would be open to use by local schools and clubs.</p> <p>4) to encourage sustainable economic growth, business</p> <p>Significant positive (++) / Minor Positive (+)</p> <p>Agree with SA Appraisal- site proposes the delivery of development and economic inclusion across the Borough commercial and employment uses</p> <p>5) to protect and enhance biodiversity and geodiversity</p> <p>Minor positive (+) Site is currently unmanaged and is the subject of an incomplete quarry restoration plan. The proposals would seek to improve and diversify habitat on site together with providing new areas of open space to reduce pressure on existing sites with ecological protection.</p> <p>6) to protect and enhance the Borough's landscape and townscape character and quality</p> <p>Significant positive (++) Site is located adjacent to the urban confines of Tonbridge. The existing land is not accessible to the public. The proposals seek to deliver a leisure led development with significant areas of open space, water environment and ecological areas which would all be publicly accessible.</p> <p>7) to protect and enhance the cultural heritage resource</p> <p>Negligible (0) SA Appraisal acknowledges that impact upon heritage assets is unknown. There are no heritage assets on the Site.</p> <p>The closest heritage assets are Listed Buildings located on Mill Lane, separated from the Site by the Cannon Lane Industrial Estate which is an intervening area of built development. Other Listed Buildings are located further away on Postern Lane and Stair Road, Hadlow. The proposals include significant areas of open space between the built development and these Listed Buildings which would negate any</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>impact upon their setting. 8) to protect and enhance the quality of water features and resources</p> <p>Negligible (0) / minor positive</p> <p>The development proposes engineering the land to raise the western element of the Site out of Flood Zones 2 and 3 and creating additional storage capacity to the east through the construction of lakes and a lock system into the river which would mitigate the development impacts. Flood risk would be managed and may be able to provide a lessening of flood risk locally.</p> <p>9) To conserve and enhance soil resources and guard against land contamination</p> <p>Likely effect uncertain (?) SA Appraisal acknowledges that the agricultural land classification is unknown. The land has formally been quarried and has not been restored in accordance with the approved restoration plan. As such, the quality of the agricultural land is questionable.</p> <p>10) to reduce greenhouse gas emissions so as to minimise climate change</p> <p>Minor positive (+) / significant positive (++)</p> <p>The Site is of a substantial size and could therefore accommodate new bus links, encouraging sustainable travel.</p> <p>It is also the intention of the development to create safe, walkable, well lit routes to and from Tonbridge to encourage walking and cycling.</p> <p>11) to improve adaption to climate change so as to minimise its impact</p> <p>Negligible (0) Agree with SA Appraisal.</p> <p>12) to protect and improve air quality</p> <p>Negligible (0) Agree with SA Appraisal; however, it is noted that in order to score positively a Site might need to be located in an AQMA and offer some form of benefit that would improve local air quality from the existing baseline whereas the Site at Postern Quarry is not affected by air quality issues.</p> <p>13) to protect material assets and minimise waste</p> <p>Significant positive (++) The Site is a former quarry and the majority of the mineral resource has been removed. There would therefore be no issue in relation to sterilising mineral resource.</p> <p>14) to provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>Significant positive (++) Given the size of the Postern Quarry Site it would be reasonable to assume a broad mix of types, sizes and tenure of homes including affordable homes.</p> <p>4.0 CONCLUSIONS</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>4.1 Tonbridge and Malling Borough Council is undertaking consultation in relation to its Regulation 18 Local Plan. These Representations are made on behalf of Bowyers Field Developments Ltd which has an interest in the land at Postern Quarry, Postern Lane, Tonbridge.</p> <p>4.2 Bowyers Field Developments Ltd is supportive of the principle of the need for a Green Belt Review and Green Belt land release. It considers the best approach to accommodating growth is through dispersed site allocations in the major urban areas (the Medway Gap, Snodland, Kings Hill, Walderslade and Tonbridge) and Rural Service Centres across the two Housing Market Areas. In light of the Council's previous failure to maintain a 5-year housing land supply, the time it has taken to produce the new Local Plan and the need to release Green Belt land, the level of growth should be above the minimum requirement calculated utilising the Standard Method. This would positively plan for ongoing housing needs and limit the need for further Green Belt review.</p> <p>4.3 The Local Plan consultation is supported by an evidence base of documents including a Sustainability Appraisal (SA) for the Local Plan growth options and for Sites submitted through the previous Call for Sites exercise. These Representations are supported by further information in relation to the Postern Quarry Site Submission to allow the Council to better understand the development proposals to undertake a more specific and accurate SA.</p> <p>4.4 The Site at Postern Quarry proposes a leisure led development, incorporating water based uses together with significant areas of public open space, woodland, community uses and a new marina. These facilities would provide for a substantial increase in high quality publicly accessible open space which is currently inaccessible to the public, together with providing a whole host of water and leisure activities on the doorstep for Tonbridge residents. The residential element of the development is well located in relation to the shops, services and public transport links in Tonbridge. The Site would also provide new shops and facilities together with new walking and cycling routes connecting to Tonbridge. The Site should therefore score highly in relation to the positive impacts of the proposals in the SA and would have a limited impact upon the purposes of the Green Belt."</p>	
24986657	SA Report	<p>"Sustainability Appraisal.</p> <p>1. Treatment of climate change.</p> <p>Chapter 3 of the SA clearly outlines the importance of addressing Climate Change, indicates what is expected of a Local Plan in this regard, and what the implications are of not addressing this issue. The SA understands the relationship of all the objectives to achieving a holistic approach to adaptation and mitigation. The SA rightly indicates how important strong LP development management policies are for reducing the carbon footprint of the Borough and resisting any increase. However scoring the strategic and spatial options in any</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>The SA contains references to TMBC's Climate Change Strategy in Appendices B (Review of Relevant Plans, Policies and Programmes) and C (Baseline Information). Further to this, the Council has commissioned evidence on this topic to support development of the Local Plan and this will feed into the baseline information contained within the next iteration of the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>depth is impossible without an up to date evidence base and detailed topic paper.</p> <p>The Borough has adopted a Climate Change Strategy. The local plans must reflect the aspirations and targets of this strategy. Parishes are producing their own strategies as encouraged and are supporting the Borough's own targets. The only way these targets can be met are if this Local plan reflects the need to build to zero carbon standards and take every opportunity to produce renewable energy either as part of development or off site to provide new infrastructures and district heating. Nothing has been done in producing an evidence base that identifies opportunities. Other Local authorities have and are grasping this 'nettle'. They are requiring building standards higher than building regulations. This Local Plan is to take us to 2040 it must be clear that the Borough will not accept new development that does not meet the highest standards. The opportunities for producing renewable energy should be properly investigated as this could be a major influence in where new development could be the most sustainable. The SA does not have this evidence base from which to test the strategic and spatial options and individual sites.</p> <p>Where are the current areas creating the biggest footprint? What would each choice of option have on them? Could it reduce it? Would it exacerbate it? Which are the locations where there are opportunities for increases in green infrastructure, biodiversity and natural solutions? Where are the opportunities for providing sources of renewable energy and district heating to both new and existing development? Which areas can cope with more development due to existing infrastructure capacity (Electricity and gas grid, waterbodies and different geology (for ground source), road network capacity, water and sewerage capacity). Which is more carbon costly- to upgrade existing infrastructures or build new? Huge areas need investigation before there can be full understanding of the impact of any chosen option on the carbon footprint in the Borough.</p> <p>Without a climate evidence base the SA is flawed.</p> <p>2. The Green Belt – lack of evidence base</p> <p>The SA of individual sites should have screened out sites in the Green Belt to determine what is available outside the Green Belt and how that impacts on emerging alternative spatial options. This would then have informed the 'exceptional circumstances study'.</p> <p>A joint Green Belt study across the 3 Boroughs involved in the 2 HMAs needs to have been undertaken to determine which areas of the Green Belt are most important, and which are least important when judged against the 5 purposes of the Green Belt as set out in the current NPPF. This should have been done with Tunbridge Wells and Sevenoaks at least before they submitted/submit their LPs and was called for by consultees at the previous T&M LP examination. This has not yet been done and without it is impossible to properly identify areas that could be released and qualify as 'exceptional circumstances'."</p>	<p>Appendix C provides the baseline information for Tonbridge and Malling. The purpose of the baseline information is to identify the key sustainability issues affecting the borough (outlined in Chapter 3). These are then used to develop the SA framework against which the Local Plan is assessed (the SA framework can be found in Chapter 4 of the Interim SA Report). There is an entire section in the baseline information dedicated to climate change, containing information from numerous internal and external sources.</p> <p>The baseline information summarised in Appendix C has helped inform the appraisal of the Local Plan, including the strategic and spatial options, and reasonable alternative development site options.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. For this reason, it is not the purpose of the SA to inform an 'exceptional circumstances study'. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

44049057	SA Report	<p>"Comments on Specific Objectives</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>It is stated that the site is within 800m of an existing area of open space/walking and cycle path\play area\sports facility.</p> <p>The site will in fact destroy walking and cycle paths, and bridle paths and by-ways, in a large area of countryside that is protected green belt and contains vital farmland.</p> <p>The existing high volume of traffic on the local narrow lanes already means that walking and cycling are hazardous and unsafe.</p>	<p>Site 59811 receives a minor positive effect in relation to SA objective 1: health and wellbeing because, in line with the site assessment criteria, it is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path/play area/sports facility (but not both).</p> <p>The site is recorded as having a significant negative effect in relation to SA objective 2: services and facilities, as it falls within the Poor Accessibility Band.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown. This objective does not look at traffic congestion on local roads.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 2: To improve equality and access to community facilities and services.</p> <p>See comments above on lack of community facilities and public transport.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society.</p> <p>See comments above on lack of schools in immediate vicinity and lack of capacity in existing near-by schools.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity.</p> <p>'The site contains an existing green infrastructure asset that could be lost as a result of new development.'</p> <p>See comments above.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p> <p>As you are aware, the site is within 250m of a heritage asset, historic Oxenhoath, a grade II* listed house with driveway containing ancient trees, parkland and a walled garden. Its unique character and position should be preserved and safeguarded.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact.</p> <p>SA Objective 12: To protect and improve air quality.</p> <p>The provision of 2362 houses in an area that lacks local services and public transport suggests these will probably be two-car households and, with home deliveries, this could result in around 5,000 additional vehicle using the lanes, with consequent negative impact on air quality and climate change.</p>	<p>Site 59811 contains Ancient Woodland, in addition to green infrastructure assets. Therefore, it correctly receives an uncertain significant negative effect in relation to SA objective 5.</p> <p>Site 59811 is expected to have a significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59811 is not within 100m of an AQMA.</p> <p>The SA is too high-level to consider water supply, although information on water supply is provided in the baseline information (Appendix C of the Interim SA Report).</p> <p>With regard to SA objective 14: housing, the site receives a significant positive effect because it will deliver a significant number of new homes. The SA acknowledges under SA objective 2: services and facilities that the site falls within the Poor Accessibility Band. For this reason, the site receives a significant negative effect in relation to SA2. The SA also acknowledges that the site is more than 800m from a railway station and more than 400m from a bus stop and cycle route. Therefore, it receives a minor negative effect in relation to SA objective 10: climate change mitigation.</p> <p>The site assessment criteria do not take into consideration Broadband because this is a very localised issue, the status of which can change very quickly. The Government has several programmes in place with the aim to increase speeds and access to Broadband for homes and businesses, and it is likely Broadband connectivity will change very rapidly in a number of areas over the Plan period. It is not within the scope of the SA to consider mobile phone signal.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Climate change is already affecting our water supply and this summer we were left without water on a number of occasions. If the existing water supply is already unable to meet local demand, it is not going to be possible to provide water to an additional 2362 homes.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The provision of affordable housing is seen as a significant positive in the proposal, but for anyone who is struggling financially it is impracticable to provide affordable housing in an area that lacks both local facilities and public transport.</p> <p>Finally, consideration also needs to be given to the very poor local internet connection and lack of mobile phone signal in much of this area, with old fashioned telephone lines at risk of being brought down by falling trees every time there is a storm. Much of the area also does not have access to gas."</p>	
25333345	SA Report	<p>"Surface Water Quality It is encouraging to see the inclusion of Sustainability Appraisal Objective 8 in the Interim Sustainability Appraisal Report, "To protect and enhance the quality of water features and resources". Although the heading and main points in this section have correctly identified that the quality of our water bodies should be protected and enhanced, this objective should go further in clearly stating what the problems are with water quality. In the context of this objective, what is meant by water quality? Who is responsible for ensuring these problems are addressed?</p> <p>Objective 11 that deals with adaptation to climate change is another important but has not gone far enough in identifying the main problems and solutions, especially when dealing with water quality. Objectives 8 and 11 should identify the links between water quality and our changing climate."</p>	<p>Appendix C provides the baseline information for Tonbridge and Malling, the purpose of which is to identify the key sustainability issues affecting the borough (outlined in Chapter 3). These are then used to develop the SA framework against which the Local Plan is assessed.</p> <p>The SA objectives which comprise the SA framework should be concise and focus on outcomes, which in the instance of SA objective 8 is "To protect and enhance the quality of water features and resources". Further information on what is meant by water quality is outlined in the baseline information, which contains an entire section dedicated to the borough's water environment.</p> <p>As set out in Chapter 6 of the Interim SA Report, the SEA Regulations require that "the responsible authority shall monitor the significant environmental effects of the implementation of each plan or programme with the purpose of identifying unforeseen adverse effects at an early stage and being able to undertake appropriate remedial action" and that the environmental report should provide information on "a description of the measures envisaged concerning monitoring". Chapter 6 provides indicators for monitoring significant sustainability effects that may give rise to irreversible damage.</p> <p>In terms of climate change, again the baseline information in Appendix C is used to identify key sustainability issues affecting the borough, and these inform the SA framework. It is not the role of the SA objective to identify problems and solutions, rather it is used as a framework for appraising each aspect of the Local Plan. As mentioned already, SA objectives should be concise and focus on outcomes.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42684641	SA Report	<p>"Table 4.2</p> <p>Option 1 points 5 to 13 would all be positive not a question mark. This is misleading to state otherwise."</p>	<p>Due to the high-level nature of SA and the Spatial Options, and the fact the exact location of development is unknown, uncertainty has been added to some of the effects.</p>
42684641	SA Report	<p>Chapter 6 [Monitoring] If you want to keep these objectives you won't with the choices north of Hadlow and Mereworth.</p>	<p>The SA objectives provide a framework against which the effects of the Local Plan will be assessed. The SA objectives and sub-objectives act as a starting point for the identification of effects and the appraisal work considers wider issues as appropriate.</p> <p>The SA is one of many factors that feed into the plan-making process.</p>
44274145	SA Report	<p>"SA Objective 1: To improve human health and well-being</p> <p>The analysis identifies that site 59707 provides a minor positive contribution to this objective. This is agreed with; the site is located adjacent to the existing limits to built development of Wrotham and is suitably placed to provide access to healthcare and is well served by footpaths. The site has the opportunity to provide open space within it as part of any scheme, and as identified by the indicative concept drawing in Figure 1.</p> <p>Figure 1 Indicative layout concept drawing</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>The analysis considers that site 59707 is within the Fair Accessibility Band, which is understood to mean that some accessibility to facilities and services exist. It is therefore disputed that this would create a minor negative impact. Wrotham is a well serviced village with a wide range of amenities. It has a church, village hall, three pubs, village shop, doctors, hairdressers, mobile library as well as having its own primary school and two secondary schools. These are all accessible by the site.</p> <p>Wrotham is one mile north of Borough Green and its connecting services, and 5 miles east of Sevenoaks with its wider range of extensive amenities.</p> <p>Wrotham is highly accessible by public transport; with 16 bus routes stopping in the village, making access to Maidstone, Tonbridge, Tunbridge Wells, Sevenoaks and Gravesend with intervening stops in between, easy for the village occupants. Wrotham is well placed for transport links given its proximity to the M20, M25, A20 junctions and their corresponding link roads. It is therefore considered that the summary should be changed to a positive at the very least.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>It is understood that because of uncertainties around school capacity, the significant positive of being within 800m of an existing primary and secondary school is classed as 'uncertain'. Whilst this perception is understood, it is strongly put forward that capacity is an issue</p>	<p>Support noted with regards to the effect site 59707 is expected to have in relation to SA objective 1: health and wellbeing. In terms of the indicative layout concept drawing provided by the respondent, this is a 'policy-off' appraisal and so consideration is not yet given to mitigation (e.g. provision of open space). In other words, each reasonable alternative development site option is appraised on its physical constraints only so as to ensure all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59707 has been appraised in accordance with the site assessment criteria (Appendix D of the Interim SA Report), and so has correctly been given a minor negative effect against SA objective 2: services and facilities.</p> <p>With regard to SA objective 3: education, all sites that are recorded as falling within close proximity of a school receive uncertainty, as school capacity is unknown. Site 59707 is recorded as having a significant positive effect in relation to SA objective 3, albeit uncertain.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities rather than access to employment opportunities. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 5: biodiversity and geodiversity, this is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>With regard to SA objective 6: landscape and townscape, the proforma incorrectly states that the site is not located near any settlements when it is in fact on the edge of a settlement. This is due to the fact the GIS analysis identified some sites as not located near any settlements when they are in fact on the edge of a settlement, as there was no percentage overlap with the settlement boundaries. In the next iteration of the SA Report, this will be corrected. However, the site will still receive an uncertain significant negative effect as it is within the AONB.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>borough wide, so the consideration that education facilities are so close should be given much greater weight</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>The analysis sets out that “the location of residential sites will not directly influence sustainable economic growth or the delivery of development opportunities.” This statement is disagreed with. The ability to provide residential development, such as at site 59707 in close proximity to a wide range of services, being in a highly accessible, will provide the workforce and opportunities to provide and support business development. Providing a residential development on the edge of a village will also ensure that economic growth and the influx of people to support growth is not just concentrated within urban areas.</p> <p>Paragraph 79 of the NPPF sets out that “housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby.” It is inherently inclusive and sustainable to link the provision of housing and economic growth, as the people who reside within the allocated housing development will, in the vast majority, require places of work and local areas within the vicinity to spend their earnings.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>The analysis of this objective is agreed with, in part. Although the site may be within proximity to designated sites, this does not mean that mitigation, biodiversity net gain and enhancements cannot be provided and designed within an scheme. It is recognised that the analysis identifies this, but it is put forward that this therefore cannot be counted as a negative.</p> <p>SA Objective 6: To protect and enhance the borough’s landscape and townscape character and quality</p> <p>The analysis sets out that the site “is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces.” This is wholly inaccurate. Site 59707 is located immediately adjacent to the settlement of Wrotham in a rural location, as shown in Figures 2 and 3. It is not currently designated as open space. It cannot therefore be said that the site would result in the loss of a designated open space, or that it is not located near any settlements.”</p>	
44274145	SA Report	<p>"The comments regarding the potential effects of the proposed residential development at the site as being uncertain are agreed with, in part. When considering the suitability of the site in respect of the landscape designation of the Kent Downs AONB, it is put forward that site 59707 is a more favourable site for allocation to meet the Council's housing requirement than other sites in the locality which are more prominent in their landscape position. The proposed development would be designed to be of a scale and layout to</p>	<p>The SA uses 500m as a threshold for determining effects on the AONB. Site 59707 is located within 500m of the AONB and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>mitigate any potential effects on the landscape. The indicative layout illustrations demonstrate how this could be achieved. It is put forward that if the effects are uncertain and can be mitigated by the design, this cannot now be considered as a significant negative. The proposed residential developments design put forward will be lead by a Landscape and Visual Impact Assessment to ensure that the proposal will not negatively impact the landscape, with suitable mitigation proposed and provided should this be necessary.</p> <p>Figure 4 - Illustrative concept aerial view</p> <p>Figure 5 - Illustrative 3D concept, looking from Wrotham to the south west</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>The analysis identifies that the site is located within 250m of a designated heritage asset and that the potential effects of this are uncertain at this early stage. This is agreed with, but it is put forward again that if the effects are unknown, then this cannot be designated as a significant negative at this early stage. The proposed residential development will be lead and accompanied by a Heritage Statement, which will be included within the overall designing and layout output process to ensure that heritage assets will not be negatively impacted upon.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>The analysis of this objective is disagreed with. The analysis output states that the "site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with 1 in 30 year risk of surface water flooding." As can be seen from Figure 6, the site is not located within a flood risk zone.</p> <p>Figure 6 Flood map for planning extract</p> <p>Figure 7 Surface water flood map</p> <p>It does appear that part of the site is at low to medium risk from surface water flooding. However, this does not preclude residential development. Any application for a residential development would include a sustainable drainage strategy and flood risk assessment, ensuring that any proposal would not increase the flood risk elsewhere. It is surmised that the SUDS design could be used to improve any potential risks from surface water for underlying topography whilst incorporating Biodiversity Net Gain.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>The analysis sets out that the site is greenfield and contains a significant proportion of Grade 1 or 2 agricultural land. When consulting the Natural England Defra online mapping resource, the land is identified as being Grade 2. The allocation of the proposal site for housing would not alter the Council's ability to conserve and enhance soil resources, as it would not alter the value of the soil. The provision of housing on the land would ensure that Grade 2</p>	<p>'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p> <p>With regard to SA objective 7: heritage, the SA utilises a precautionary approach. As the site contains a heritage asset (Outfarm south of Town House), as recorded in the Kent Historic Environment Record, and is adjacent to a Conservation Area containing numerous other heritage assets, the significant negative effect is considered appropriate. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. As stated in the proforma "The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding" [emphasis added]. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. SuDS). This ensures all sites are appraised consistency.</p> <p>With regard to SA objective 9: soils, development of the site would result in the loss of best and most versatile agricultural land. For this reason, the site is expected to have a significant negative effect in relation to this objective.</p> <p>Support noted with regards to the effect site 59707 is expected to have in relation to SA objective 10: climate change mitigation. The site receives this minor positive effect, as it is within 400m of at least one bus stop.</p> <p>With regard to SA objective 11, this objective relates to climate change adaptation, not climate change mitigation as identified under SA objective 10. Climate change adaptation is how we respond to climate change, such as through the inclusion of SuDS and the use of materials which withstand climate change impacts (e.g. extreme heat). Things like access to services and facilities helps mitigate the effects of climate change, not adapt to the effects of climate change.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59707 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, a negligible effect is correct as the site not falling within a Minerals Safeguarding Area does not change anything.</p> <p>Support noted with regards to the effect site 59707 is expected to have in relation to SA objective 14: housing.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>agricultural land is actually not depleted in quality as a resource. Furthermore, the extent of land in the applicant's ownership that it si considered unviable in supporting an agricultural enterprise given its limited size and proximity to the built settlement.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>The analysis completed for this objective, as a positive is agreed with. The proposal site is situated within a well serviced village with a wide range of amenities. It has a church, village hall, three pubs, village shop, doctors, hairdressers, mobile library as well as having its own primary school and two secondary schools.</p> <p>Wrotham is one mile north of Borough Green and its connecting services, and 5 miles east of Sevenoaks with its wider range of extensive amenities. Wrotham is also highly accessible by public transport; with 16 bus routes stopping in the village, making access to Maidstone, Tonbridge, Tunbridge Wells, Sevenoaks and Gravesend with intervening stops in between, easy for the village occupants. Wrotham is well placed for transport links given its proximity to the M20, M25, A20 junctions and their corresponding link roads.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>The overall analysis for this objective is not understood. The location of a development will directly impact how sustainable it is, which in turn has a direct bearing upon the ability to minimise the impacts of climatic change. The provision of services close by, which are accessible by foot or by public transport reduces the reliance upon a car. At a high level, this will contribute to the ability to adapt to climate change, as it will promote more environmentally friendly living practices. The proposed residential development at site 59707 will be designed in a way to include sustainable living practices, utilising renewable energy technologies, water and energy efficiency whilst also utilising sustainable construction materials and methodology. This will comply with the objective.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>The analysis of negligible is a disagreed with; the sustainable location of site 59707 will reduce emissions which will in turn protect air quality in the area.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>The analysis of negligible is again disagreed with. If site 59707 is not located in a mineral safeguarding area, then this is a positive contribution to this objective. Should housing be proposed in a mineral safeguarding area, then there is the potential for mineral extraction reduction due to the construction of housing. As site 59707 is not in a mineral safeguarding area, there will be no restrictions.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		The analytical outcome of this objective is endorsed. Site 59707 would provide the opportunity to deliver a high-quality housing development of between 100 and 130 homes, with green space, sustainable drainage systems and biodiversity net gain. This would include an appropriate mix of sizes, types and tenures."	
44275681	SA Report	<p>"The Assessment of the Quantum Options</p> <p>Whilst we note that the SA acknowledges at para 4.5 that 'the Council considers that any option which did not deliver as a minimum the identified housing need does not constitute a reasonable alternative', and agree with that statement; we are, as set out above, somewhat confused as to whether the SA has in fact tested the effects of delivering the LHN figure + 10% or a supply that is 10% above the HLN which is a different scenario.</p> <p>With the above in mind, we fail to see why table 4.1 suggests that Option 1 (LHN) scores a minor positive for objectives 1, 2 and 3, yet Option 2 (LHN+10%) scores a mixed minor effect for all three. Option 2 in providing more housing has the ability to help to address the issue of affordability and thus improve the health and well-being of those in housing need, especially the homeless (SA objective 1). Para 4.6 appears to totally ignore the issue of affordability and its effects on health or indeed the fact that housing actively contributes to the delivery of health services. Likewise Option 2 has the greater ability to improve equality and access to community facilities and services (SA objective 2) than Option 1, given its ability to address the issue of homelessness and affordability which we note is a sub objective of objective 2 according to p70 of the SA. Furthermore, Option 2 would definitely help address the need to provide a suitable supply of high quality housing, including an appropriate mix of sizes, types and tenures (SA objective 14). Why Option 2 scores a significant positive (likely effect uncertainty) when Option 1 also scores a significant positive is truly bizarre. Whilst we note that para 4.9 of the SA suggests that the scale of housing delivery associated with Option 2 is 'in excess of what the local housing markets have supported over the past decade, as demonstrated by the Housing Market Delivery Study', and that as a result there is 'uncertainty attached to this option as there is a question mark around its deliverability'; this is not in our opinion a reason for the SA to reduce the score attributed to Option 2. Deliverability is an issue for the planning authority in determining the spatial strategy – not the SA. To this end we note that the Housing Market Delivery Study (HMDS) examines past delivery rates and uses these to make assumptions as to the capacity of the area to deliver homes in the future. Whilst helpful to understand the rate at which homes have been delivered in the past, we would argue against whether this should be used as an indication of future delivery rates. The ability of an area to support housing growth will relate principally to the range of sites allocated through the chosen spatial strategy rather than an innate capacity in the market as to the amount of growth that can be achieved. The Council should not be seeking to limit growth on the basis of what has been achieved in the past.</p>	<p>The quantum options subject to SA were identified by TMBC. It is reasonable, as a starting point, for one quantum option to be the assessed need generated by the Government's standard method. Quantum Option 2 is the assessed need + up to 10% therefore providing a buffer.</p> <p>The reasoning behind the effects each Quantum Option is expected to have is outlined in paragraphs 4.6 to 4.10 of the full Interim SA Report. Quantum Option 2 receives minor negative effects (as part of a mixed minor effect) against SA objectives 1: health and wellbeing, 2: services and facilities, and 3: education because as explained in the report, delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities, services and facilities, and schools. However, the Interim SA Report also acknowledges that the extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities.</p> <p>We note that there is some crossover between the SA objectives and although the delivery of affordable housing will have beneficial effects on health and wellbeing, housing delivery (including affordable housing delivery) is addressed separately under SA objective 14: housing. Quantum Options 1 and 2 will both provide a significant amount of new housing and therefore both receive a significant positive effect in relation to SA objective 14. In terms of Quantum Option 2 delivering more housing than Quantum Option 1, the SA acknowledges in paragraph 4.9 that "For Option 2, there is likely to be a particularly significant positive effect as delivering a higher level of housing supply has more potential to address housing affordability in the plan area and deliver a wider range of homes in terms of sizes, tenure and type to meet the needs of more residents" [emphasis added].</p> <p>Although the significant positive effect for Quantum Option 2 against SA objective 14 is recorded as uncertain, this is not a reduction to its score as suggested by the respondent. The SA states in paragraph 4.9 (see above quote) that Quantum Option 2 has a particularly significant positive effect. The reasoning behind the uncertain effect is appropriate.</p> <p>It is important to note that although Quantum Option 2 receives minor negative effects in relation to SA objectives 1, 2 and 3, it also receives minor positive effects. The fact Quantum Option 2 will help in the delivery of affordable housing is acknowledged in the SA. In the next iteration of the SA Report, the sub-objective "To tackle</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Assessment of the Spatial Options Reviewing table 4.2 spatial Option 3 (Development focused on sites within as well as adjacent to defined urban and Rural Service Centre settlements) appears to attain the most positive scores, with equal top scores in respect of SA objectives 1, 2, 3, 4, 5, 7, 8, 10, 11, 12, 13 and 14, and second equal on SA objectives 6 and 9. On this basis it would appear to us to be the option that most closely meets the SA objectives, and it is surprising that the SA does not actually say this explicitly.</p> <p>In addition to the above we are, we have to say, somewhat perplexed as to how spatial Option 1 scores so highly on SA objective 2 (to improve equality and access to community facilities and services) when, by directing most growth towards the northern part of the Borough it will not address the affordability issues in the southern part of the Borough, which given the southern part of the Borough's location within the WKHMA and thus the amalgam of the 3 least affordable Boroughs/ district in the county, would suggest anything that directs growth away from this area should obtain a much lower score. To this end we note that para 4.18 of the SA highlights the fact that there is a significant amount of self-containment in terms of the movement of people and activity on a regular basis within the HMA's and that a sustainable pattern of development should seek to address the need where it arises, i.e. within each HMA. Spatial Option 1 simply would not do this and would exacerbate the affordability issue within the southwestern part of the Borough, where it is at its most acute.</p> <p>With regard to the Future Options of Tonbridge, Section 11 of the NPPF requires planning policies to promote an effective use of land in meeting the need for homes and other uses and paragraph 124 sets out key considerations that should be taken in this regard. Furthermore, NPPF paragraph 125 states: "plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible. This will be tested robustly at examination" It then follows that, the optimisation of densities on development sites within Tonbridge (Option 1) is recognised on the basis that the best use of previously developed land clearly scores well in SA terms.</p> <p>However, this does not mean that a brownfield alone approach should be taken given that an insufficient amount of sites within the urban area have been identified to accommodate the growth within the Urban Capacity Study and notwithstanding the complexities that can arise with brownfield sites that can affect delivery rates. It is essential that a sufficient amount and variety of land can come forward where it is needed in accordance with NPPF paragraph 60. It should also be noted that the delivery of Brownfield land can be longer due to the risks of complications during construction given the nature of the previous use. Therefore, to ensure the delivery of the housing need within the first five years of the plan period, it is essential that Greenfield land is also allocated and optimised. Thus, aspects of Option 2 can be deemed sustainable, notably where high quality and deliverable development results."</p>	<p>homelessness more effectively" will be moved to underneath SA objective 14: housing.</p> <p>Spatial Option 3 does perform very strongly in relation to the SA objectives compared to the other options, as does Spatial Option 2. It is important to note that SA is a high-level tool used to identify the likely sustainability effects of a Local Plan, and is one of many factors that feed into the plan-making process.</p> <p>Affordability is not addressed under SA objective 2: services and facilities, and is instead addressed under SA objective 14: housing. Affordability is an issue across the Borough.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
44304385	SA Report	<p>"59424 Clearheart Lane</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Negative (-)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is over-subscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Negative (-)</p> <p>The local environment has limited community facilities. The community centre is inadequate for the current population and further competition would result in decreased availability for existing service users. The sports park is largely football (a new rugby pitch has been built, but not used significantly to-date, raising concerns about its viability) with four tennis courts, two of which have been permanently assigned to a single tennis club, limiting availability for ad-hoc hirers. The status of facilities, all being leased from one of the parties developing the site, means that there is potentially no long-term benefit to the community of the significant S.106 investments raising further concerns about long-term viability.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area,</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>The site assessment criteria for SA objective 2: services and facilities consider the accessibility band that each site has been placed within in the Urban Capacity Study (July 2022), as this provides an indication of the overall accessibility of a site in relation to access to services and site location. Site 59424 falls within the Good Accessibility Band and therefore receives a negligible effect in relation to SA objective 2.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as being within a settlement when it is on the edge of a settlement. This is as a result of the GIS analysis identifying a high percentage overlap between the site and settlement boundaries. In the next iteration of the SA, this site will receive an uncertain minor negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>The site is a major wildlife corridor joining the woods of Warren Wood and Cattering Wood. Loss of this important</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Negative (-)</p>	<p>With regard to SA objectives 7: heritage and 8: water, respondent has not expressed any disagreement over the effects given.</p> <p>SA objective 9: soil considers whether a site is greenfield or brownfield, in addition to the Agricultural Land Classification. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. Priority Habitats are not specifically considered in the SA but almost all Priority Habitats in the Borough are covered by the green infrastructure assets layer under SA5. The site receives a minor negative effect in relation to SA objective 9 because it comprises greenfield land and contains less than a significant proportion of Grade 1, 2 or 3 agricultural land.</p> <p>With regard to SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options), the criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, site 59424 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 13: material assets and waste, respondent has not expressed any disagreement over the effects given for site 59424.</p> <p>With regard to SA objective 14: housing, this deals with housing delivery only. Ancient woodland is considered separately under SA objective 5 (see above). The SA does not give consideration to TPOs.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>This site is located outside a settlement. The boundaries of the settlement were sold off separately by MOD to protect the surrounding countryside and concentrate development on the brownfield land.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (-)</p> <p>The site is greenfield land that contains a less than significant proportion (<25%) of Grade 1, 2 or 3 agricultural land. The area is registered by DEFRA as 'Priority Habitat Inventory - Deciduous Woodland (England)'. Site contains Ancient Woodland and TPO protected trees.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Major negative (--)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negative (-)</p> <p>The Site is an area of woodland surrounding the existing development. This provides a green lung for the area, and helps prevent some of the worst excesses of temperature on hot days; it is well documented that trees have a cooling effect on the environment and that is evidenced when walking around Kings Hill on a hot day in Summer, where a walker will experience a wall of heat when re-entering the village from the surrounding woodland.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negative (-)</p> <p>The site is not within 100m of an AQMA. However, the secondary access has been determined to be via the Teston Road, for which the primary access to the trunk road network is likely to be through Wateringbury. The addition of houses with access along the Wateringbury Road is likely to increase the number of vehicles turning right at the A26 / Red Hill traffic lights, which will significantly impact the throughput of the junction and the increase in pollution in that area. In addition, the main access road would be through a quiet residential cul-de-sac which already has significant parking problems, resulting in potential issues with access."</p> <p>"SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Uncertain positive (+)</p> <p>The site is initially expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, this would be at the expense of destruction of Ancient Woodland, and mature trees that are subject to TPO; previous estimates of housing densities for this site are below 100 dwellings and hence the value is uncertain.</p> <p>"* The proposed development is not exceptionally justified, and the compensation/ mitigation measures cannot re-establish or enhance the nature features that will be lost. As such the development is contrary to the requirements of Policy NE2.</p>	
44304385	SA Report	<p>59531Tower View SE</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--?)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). However, the existing healthcare facility is massively over-subscribed.</p> <p>The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. Only by reducing the use would there be any chance of reducing the impact, and that would immediately put into question the viability of this site.</p> <p>SA Objective 2: To improve equality and access to community facilities and services Significant negative (--)</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). As development of the site may result in the loss of open space, the site receives an uncertain significant negative effect in relation to this objective (as part of a mixed effect).</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, the site has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor positive effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Although the site is placed within the Very Good Accessibility Band, the requirement to provide access to the core Kings Hill road network would result in significant disruption to that road network impacting on large numbers of the existing population.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor positive (+?)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both). However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)/Negligible (0)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Negative (-)</p> <p>The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site. The site is an existing green infrastructure asset that would be lost as a result of new development.</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a minor negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objectives 6: biodiversity and geodiversity, 7: heritage, 8: water, 9: soil, 11: climate change adaptation and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p> <p>With regard to SA objective 10: climate change mitigation (and SA objective 4: economic growth), the criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 12: air quality, site 59531 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, site 59531 has been appraised in line with the site assessment criteria. As it has the potential to provide fewer than 100 dwellings, it receives a minor positive effect.</p>

The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negligible (0)</p> <p>The site is not within 100m of an AQMA However, the conservation area currently contributes to the improvement of air quality in the area.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Negligible (0)</p> <p>The site is expected to provide only a few dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would, and the infrastructure requirements would likely make them economically unviable unless the solution was totally inappropriate for the environment.</p>	
44304385	SA Report	<p>59547 Discovery Drive</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--?)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). However, the existing healthcare facility is massively over-subscribed.</p> <p>The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). As development of site 59547 may result in the loss of open space, the site receives an uncertain significant negative effect in relation to this objective (as part of a mixed effect).</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, site 59547 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor positive effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>development. The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. Only by reducing the use would there be any chance of reducing the impact, and that would immediately put into question the viability of this site.</p> <p>SA Objective 2: To improve equality and access to community facilities and services Significant negative (--)</p> <p>Although the site is placed within the Very Good Accessibility Band, the requirement to provide access to the core Kings Hill road network would result in significant disruption to local residents. Access would need to be across a bridleway.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor positive (+?)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both). However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p>	<p>of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59547 is recorded as having an uncertain significant negative effect as it contains an open space that could be lost as a result of development. Biodiversity and geodiversity sites are dealt with separately under SA objective 5: biodiversity and geodiversity.</p> <p>With regard to SA objective 7: heritage, site 59547 does not contain a heritage asset. However, as it is located within 250m of a heritage asset, it receives an uncertain significant negative effect in relation to this objective.</p> <p>With regard to SA objectives 8: water, 11: climate change adaptation and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p> <p>With regard to SA objective 9: soil, the site receives a minor negative effect because it comprises greenfield land and contains less than a significant proportion of Grade 1, 2 or 3 agricultural land. Biodiversity is dealt with separately under SA objective 5, which gives consideration to locally designated sites.</p> <p>With regard to SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options), the criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negative (-)</p> <p>The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site. The site is an existing green infrastructure asset that would be lost as a result of new development.</p> <p>.</p> <p>SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Uncertain significant negative (--?)</p> <p>The site would result in the loss of a designated conservation area. Such building would radically change the nature of the area in a detrimental way.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site contains a heritage asset. The value of this asset would be essentially lost, even if the asset itself could be maintained, by building residential dwellings around it.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1."</p> <p>"The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p>	<p>Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 12: air quality, site 59547 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, site 59547 has been appraised in line with the site assessment criteria. As it has the potential to provide fewer than 100 dwellings, it receives a minor positive effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negative (-)</p> <p>The site is a conservation area that contains a less than significant proportion (<25%) of Grade 1, 2 or 3 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant Negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Negligible (0)</p> <p>The site is expected to provide only a few dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would, and the infrastructure requirements would likely make them economically unviable unless the solution was totally inappropriate for the environment.</p>	
44304385	SA Report	<p>59634 Hoath Wood</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant Negative (--)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is over-subscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>Also, the KCC Strategic plans for cycle connectivity included a cycle route directly through the middle of this site, and this would be lost if the development proceeded.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). Sites 59634 and 59655 have been appraised in accordance with the site assessment criteria.</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network and flooding. Flooding is considered separately under SA objective 8: water. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, site 59634 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor negative effect in relation to this objective. Site 59655 has also been appraised in accordance with the site assessment criteria and correctly receives a minor positive effect.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relate more specifically to the Local Plan than they do the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is placed within the Fair Accessibility Band. However, access would either need to be via the quiet lanes to the North of Kings Hill, or through the public open space that is currently used for soak-aways for the Kings Hill road network potentially resulting in more frequent flooding of the roads on Kings Hill.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>T</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites.</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, sites 59634 and 59655 are both recorded as having a significant negative effect. This is due to the fact both sites contain some Ancient Woodland and green infrastructure assets. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59634 is recorded as having a minor negative effect as it is located on the edge of a settlement. The effect is uncertain, as the actual effect is dependent on the final design, scale and layout of development. Site 59655 is incorrectly recorded as having an uncertain minor negative effect in relation to this objective, as it is not on the edge of a settlement but rather not located near any settlement in a rural location. In the next iteration of the SA Report, the site will have an uncertain significant negative effect. The SA gives all sites that are within 500m of the AONB a significant negative (--?) effect, in recognition of the potential for development outside of, but near to the AONB, to have an effect. Site 59634 is not within 500m of the AONB. The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to identify which sites are actually visible from an AONB. All sites have been appraised consistently using the same buffer distance.</p> <p>With regard to SA objective 7: heritage, 8: water, 13: material assets and waste, respondent has not expressed any disagreement over the effects given for both sites.</p> <p>With regard to SA objective 9: soil, site 59634 is incorrectly recorded as comprising brownfield land and so receives a significant positive effect in relation to this objective. In the next iteration of the SA Report, the site will receive a significant negative effect as it mainly comprises greenfield land, and Grade 2 agricultural land. Site 59655 receives a significant negative effect, as it is greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>With regard to SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options), the criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2:</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site contains an existing green infrastructure asset that would be lost as a result of new development; much of the site is Ancient Woodland, and is bordered by more ancient woodland to the West. In addition, the site provides a wildlife corridor from the Warren Wood nature park and the ancient woodland to the North of Amber Lane through Warren Wood Ancient Woodland to Coalpit Wood Ancient Woodland. The effect of development would be devastating to the biodiversity in the area.</p> <p>SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The site would be visible from the AONB of the North Downs and from points along the North Downs Way public footpath, reducing the character of the views. In addition, the development of the site would significantly and detrimentally change the vista from existing dwellings along the North edge of Kings Hill and many other dwellings with visibility in that direction.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--) /Negligible (0)</p> <p>The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p>	<p>services and facilities. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas for both sites that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, sites 59634 and 59655 have been appraised in line with the site assessment criteria. As neither site is within 100m of an AQMA, both receive a negligible effect.</p> <p>With regard to SA objective 14: housing, sites 59634 and 59655 have been appraised in line with the site assessment criteria. As both sites have the potential to provide 100 dwellings or more, each receives a significant positive effect. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland.</p>

		<p>Negative (-)</p> <p>The site is not within 100m of an AQMA. However, the increase of traffic on the Watringbury Road associated with this development will impact the AQMAs on the A20 and at the Watringbury traffic lights</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Uncertain Significant positive (++)</p> <p>The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, the site is not sustainable, given the transport links and access to a service centre, and hence the practicability of the site is in question.</p>	
44304385	SA Report	<p>59884 Tower View NE</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--?)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). However, the existing healthcare facility is massively over-subscribed.</p> <p>The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). As development of site 59884 may result in the loss of open space, the site receives an uncertain significant negative effect in relation to this objective (as part of a mixed effect). The respondent has not expressed any disagreement over the effect given for site 59752 against this objective.</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, site 59884 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor positive effect in relation to this objective. Site 59752 has also been appraised</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>development. The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. Only by reducing the use would there be any chance of reducing the impact, and that would immediately put into question the viability of this site.</p> <p>SA Objective 2: To improve equality and access to community facilities and services Significant negative (--)</p> <p>Although the site is placed within the Very Good Accessibility Band, the requirement to provide access to the core Kings Hill road network would result in significant disruption to that road network impacting on large numbers of the existing population.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor positive (+?)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both). However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)/Negligible (0)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p>	<p>in accordance with the site assessment criteria and it correctly receives a minor negative effect against this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relates more specifically to the Local Plan than they do the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, sites 59884 and 59752 are recorded as having minor negative and significant negative effects, respectively. Site 59752 receives a significant negative effect because it contains some Ancient Woodland and green infrastructure assets. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59884 is recorded as having an uncertain significant negative effect as it contains an open space that could be lost as a result of development. Site 59752 is recorded as having an uncertain minor negative effect as it adjoins a settlement and so may be more easily integrated into existing built development.</p> <p>Site 59752 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets, including Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard tor SA objective 8: water, site 59752 receives an uncertain significant negative effect, as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negative (-)</p> <p>The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site. The site is an existing green infrastructure asset that would be lost as a result of new development."</p> <p>"SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Uncertain significant negative (--?)</p> <p>The site would result in the loss of designated open spaces. Such building would radically change the nature of the area in a detrimental way.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p>	<p>With regard to SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options), the criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, sites 59884 and 59752 have been appraised in line with the site assessment criteria. As neither site is within 100m of an AQMA, both receive a negligible effect.</p> <p>With regard to SA objective 14: housing, sites 59884 and 59752 have been appraised in line with the site assessment criteria. As site 59884 has the potential to provide fewer than 100 dwellings, it receives a minor positive effect. As site 59752 has the potential to provide 100 dwellings or more, it receives a significant positive effect.</p> <p>With regard to SA objectives 7: heritage, 8: water, 9: soil, 11: climate change adaptation and 13: material assets and waste, respondent has not expressed any disagreement over the effects given for site 59884.</p> <p>With regard to SA objectives 9: soil and 13: material assets and waste, respondent has not expressed any disagreement over the effects given for site 59752.</p> <p>Respondent notes that sites 59755, 59758, 59759 and 59760 are in the Green Belt. However, Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA has provided an appraisal of five Spatial Options in Chapter 4 for the distribution of development, all of which are high-level with no specific reference given to certain sites.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negative (-)</p> <p>The site is greenfield land that contains a less than significant proportion (<25%) of Grade 1, 2 or 3 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant Negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>The site is not within 100m of an AQMA However, it is a core route through Kings Hill, and any impact on through-traffic would have an overall detrimental impact on the air quality within Kings Hill.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Negligible (0)</p> <p>The site is expected to provide only a few dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would, and the infrastructure requirements would likely make them economically unviable unless the solution was totally inappropriate for the environment.</p> <p>Downs and Mereworth</p> <p>59752 East of A228 South of Lapins Lane</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both).</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. 44304385	SA Report	<p>"59761 Kate Reed Wood</p> <p>SA Objective 1: To improve human health and well-being</p>	<p>With regard to SA objective 1: health and wellbeing, sites 59761 and 59630 receive mixed uncertain significant negative and minor positive effects. The uncertain significant negative effects are due to the fact both sites contains open space, which could be lost as a result of development although this is uncertain.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Minor positive (+)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both).</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. However, the A228 at that point is very narrow for a trunk road, and any access via it is likely to impact on safety on that road; linking in via the A26 may be considered, but the immediate effect on the AQMA at the Wateringbury traffic lights would need to be taken into account. The distance to service centres also needs to be determined; West Mallings is at capacity and would not cope with such additional load, and Kings Hill only has a limited scope of services.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is within 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p>	<p>SA objective 2: services and facilities relates to accessibility, rather than the road network. AQMAs are dealt with separately under SA objective 12: air quality. Therefore, site 59761 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor negative effect in relation to this objective. Site 59630 has also been appraised correctly in that it receives a significant negative effect in relation to this objective. In terms of access to site 59630, the SA is too high-level to give consideration to site-specific access points. This is something that will instead be determined at planning application stage, if the site is allocated.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relate more specifically to the Local Plan than they do the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, sites 59761 and 59630 are recorded as having significant negative effects. This is due to the fact site 59761 contains some Ancient Woodland and green infrastructure assets, and site 59630 contains a green infrastructure asset and is adjacent to some Ancient Woodland. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59761 and 59630 are recorded as having significant negative effects because although they are located on the edge of a settlement, both contain open space that could be lost as a result of development.</p> <p>Site 59761 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. However, it is not within 250m of Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. This includes ancient woodland at least some of which that would be lost by such a development.</p> <p>SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The impact on the view from the South would be disastrous. The impact on the A228 would be disastrous, with country views replaced by urban sprawl for a significant distance.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Significant negative (--)</p> <p>The site is located within 250m of a heritage asset. The change of vista associated with such a development would be disastrous. For example, Mereworth Castle would lose its setting.</p>	<p>and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Sites 59761 and 59630 receive negligible effects in relation to SA objective 8: water, as neither is at risk of flooding or contains a water body or watercourse, or falls within a Source Protection Zone.</p> <p>With regard to SA objective 9: soil, both sites receive a minor negative effect, as they are greenfield land and contain a less than significant proportion of Grade 1, 2 or 3 agricultural land. Most of site 59630 is classified as Non Agricultural, with a smaller proportion of the site classed as Grade 2 agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In terms of site 59630 containing a green infrastructure asset, this is dealt with separately under SA objective 5.</p> <p>With regard to SA objective 10: climate change mitigation, the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, sites 59761 and 59630 have been appraised in line with the site assessment criteria. As neither is within 100m of an AQMA, both receive a negligible effect in relation to this objective.</p> <p>With regard to SA objective13: material assets and waste, respondent has not expressed any disagreement over the effect given.</p> <p>With regard to SA objective 14: housing, sites 59761 and 59630 have been appraised in line with the site assessment criteria. As both sites have the potential to provide fewer than 100 dwellings, they receive</p>

		<p>59450 Bradbourne Park Road</p> <p>Small site, no comment</p> <p>59630 Fields North or Amber Lane</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--?)</p> <p>The site is within 800m of either an exitsing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both).</p> <p>The site is within an area of open space that was originally provided by one of the parties developing the site, in-line with the description of the Site for the Phase 2 submission as agreed by the inspector. However, the site has been withdrawn by one of the parties developing the site, much to the disgust of the local residents, with a fence, which is regularly vandalised, even though it was registered as an Area of Community Value. Indeed, the only planned access is via Warren Woods Nature Park, with the planned removal of trees, even though one of the parties developing the site has agreed a maintenance plan for the area, which would clearly be invalidated by turning some of the woods into a road!.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Poor Accessibility Band. The access would be via Amber Lane which is not wide enough to support the number of dwellings that would make the site economically viable.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>The site is a major wildlife corridor joining the woods of Warren Wood and Hoath Wood. Loss of this important link would result in the deterioration of both sites.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. On appeal, the inspector rejected the appeal including the impact on the vista. The development would be out of character with the rest of Kings Hill and clearly not part of that development, being separated from it by an area of ancient woodland.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land that is Grade 2 agricultural land. The area is designated by DEFRA as: Priority Habitat Inventory - Traditional Orchards (England) and, although one of the parties developing the site dug up all of the apple trees, one of the options they suggested to</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the inspector at the Phase 2 planning appeal was that the area could be used as an orchard.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negative (-)</p> <p>The site is not within 100m of an AQMA. However, the restricted access to the Kings Hill road network will result in local areas of congestion which will impact on local residents. The existing increased numbers of residents in the area has resulted in increased traffic to the Kings Hill sports centre, and such traffic will impact on congestion for access to this site.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Uncertain Negligible (0?)</p> <p>Previous rejected plans for the site included fewer than 100 dwellings. The impact on the environment outweighs the benefits gained from such a development.</p>	
44304385	SA Report	<p>59631 Heath Farm, Wateringbury Road</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Negative (-)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both), the only vehicular access to the facilities is along a route which is in excess of 10 miles round-trip. The open fields that had been provided as part of the Warren Woods nature park, including this site, have now been identified as potential development sites. The site overlaps the recently-created trim trail, which would need to be re-routed to allow for this development.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Poor Accessibility Band.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p>	<p>The SA states in the 'Difficulties and Data Limitations' section that distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore actual walking distances could be greater.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 4: economic growth related to the delivery of employment opportunities rather than access to employment opportunities. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect. This is due to the fact there is a green infrastructure asset in its southern corner. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Significant negative (--)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both). However, only primary schools are provided, and the direct access is via unlit fields, unless going by car, which would be a round-trip of in excess of 10 miles.</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health. In addition, the bus routes for school pupils do not currently support this location.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The location of this residential site means that transport to employment locations is largely through narrow roads that are limited in their capacity, restricting the opportunities for employment.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The location was identified by one of the parties developing the site in the Kings Hill Phase 2 submission as public open space with good connectivity to the public footpath network, and on appeal, the inspector agreed to the development on the basis that the development was in line with the descriptions provided for the use of Heath Farm.</p>	<p>assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59631 is recorded as having an uncertain significant negative effect as it is not located near any settlements in rural locations</p> <p>With regard to SA objectives 2: services and facilities, 7: heritage, 8: water, 9: soil, 10: climate change mitigation, 11: climate change adaptation, 12: air quality, 13: material assets and waste and 14: housing, respondent has not explicitly expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		Travel to Kings Hill centre or West Malling village (assuming parking spaces are available) would result in a significant round-trip distance, so even though the site is physically close to built-up areas, it is not strategically connected to it, and nearby roads are designated as quiet lanes; development would impact on their intended use.	
44304385	SA Report	<p>59740 Broadwater Farm</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is over-subscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>The site would be over the KCC strategic cycle route and hence prevent implementation, resulting on a negative impact on the wellbeing of existing residents of Kings Hill.</p> <p>The site currently provides countryside for Kings Hill residents. The withdrawal of open space within Heath Farm by one of the parties developing the site has restricted the available options for Kings Hill residents, and further restrictions should be avoided.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Negative (-)</p> <p>The site is placed within the Fair Accessibility Band. Travel to Kings Hill centre or West Malling village (assuming parking spaces are available) would result in a round-trip distance of around 5 miles, so even though the site is physically next to Kings Hill, it is not strategically connected to it.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an open space (Heath Farm Country Park) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 2: services and facilities, site 59740 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Significant negative (--)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on the site, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health. Adding a further stop for students in this site would further increase journey times increasing the issues.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may</p>	<p>would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlement of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p> <p>Site 59740 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the fact the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater". This SA objective does not look at impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p> <p>With regard to SA objectives 9: soil, 11: climate change adaptation, 13: material assets and waste and 14: housing, respondent has not expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>As determined in the previous Local Development Framework, the site is a major wildlife corridor joining the East Malling Heath and beyond to West Malling and beyond. Loss of this important link would result in the deterioration of wildlife in the overall area.</p> <p>SA Objective6: To protect and enhance the borough's landscapeand townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located next to a number of small villages, and its implementation would result in a complete change from a rural area with villages to a continuous urban sprawl from Maidstone to West Malling and beyond. This would be a complete change of the character of the whole area from villages in a rural environment to urban sprawl and should be avoided. In addition, the value of conservation areas in the site would be largely lost.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Significant negative (--)</p> <p>The site is located within 250m of a heritage asset. These would be severely reduced in value by development. These include the Cwylfa, the searchlight and generator buildings from the second world war, and land anchors for the previous hop fields as noted in the deeds for the area.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--)</p> <p>The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The site contains a water body or water course or falls within or partially within Source Protection Zone 1. However, these effects are</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. The water from the site drains into an area where it is extracted, and pollution from development would impact on the quality of the extracted water</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land and contains a significant proportion (>=25%) of Grade 1 and/or 2 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Negative (-)</p> <p>Most of the site, including the areas where the developer previously indicated that the dwellings would be built, is more than 800m of a railway station. There are multiple areas of concern regarding how the site could be effectively linked into the road system without impacting on quiet lanes and further work is required before this site should be considered for progressing further with regards to viability.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is not within 100m of an AQMA. However, the major road networks: the A20 and M20 are both subject to AQMA and additional traffic from this development would impact significantly on those links.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p>	
44304385	SA Report	<p>"Wateringbury</p> <p>59624Pizien Well South of A26</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59654 Red Hill near traffic lights</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59664Red Hill near traffic lights</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. If a site is not consistent with the spatial strategy, it may still be considered a reasonable alternative.</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59797 receives a mixed uncertain significant negative and minor positive effect in relation to SA objective 1: health and wellbeing because it contains an area of open space that could be lost as a</p>

		<p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59700Tonbridge Road near traffic lights</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59722Pizien Well, A26</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59723Pizien Well</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59728 Off Red Hill</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59729 Off Red Hill</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further</p> <p>59797 West part of Kings Hill Golf Course</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)</p>	<p>result of development, although this is uncertain. The site is also within 800m of an open space and walking path.</p> <p>With regard to SA objective 2: services and facilities, site 59797 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective. The SA is too high-level to consider road width. Air Quality Management Areas (AQMA) are considered separately under SA objective 12: air quality. As site 59797 is not within 100m of an AQMA, it receives a negligible effect. In terms of distance to service centres, the SA utilises the Urban Capacity Study, which considers distance to service centres. The capacity of service centres is not considered and would be difficult to quantify.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59797 is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59797 is recorded as having an uncertain significant negative effect as it contains an open space that could be lost as a result of development, although this is uncertain.</p> <p>Site 59797 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. However, it is not within 250m of Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both).</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. However, the A228 at that point is very narrow for a trunk road, and any access via it is likely to impact on safety on that road; linking in via the A26 may be considered, but the immediate effect on the AQMA at the Wateringbury traffic lights would need to be taken into account. The distance to service centres also needs to be determined; West Mallings is at capacity and would not cope with such additional load, and Kings Hill only has a limited scope of services.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is within 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p>	<p>and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 10: climate change mitigation, the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59797 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect in relation to this objective.</p> <p>With regard to SA objectives 8: water, 9: soil, 13: material assets and waste and 14: housing, respondent has not expressed any disagreement over the effects given for site 59797.</p>

		<p>to get a space when it becomes available. Any significant number of additional dwellings in the area will result in overloading of the infrastructure at the centre of West Malling, making Kings Hill unsustainable if it cannot access an appropriate local service centre.</p> <p>59863South of M20 next to Junction 4</p> <p>It is assumed that access would be via Bull Road. Bull Road is a narrow road, with limited visibility. Adding an employment area at this point would have a disproportionate impact on the traffic in the area, including to/from Kings Hill and Leybourne Chase, leading to reduced throughput availability and reduced road safety.</p>	
44304385	SA Report	<p>"59424 Clearheart Lane</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Negative (-)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is over-subscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Negative (-)</p> <p>The local environment has limited community facilities. The community centre is inadequate for the current population and further competition would result in decreased availability for existing service users. The sports park is largely football (a new rugby pitch has been built, but not used significantly to-date, raising concerns about its viability) with four tennis courts, two of which have been permanently assigned to a single tennis club, limiting availability for ad-hoc hirers. The status of facilities, all being leased from one of the parties developing the site, means that there is potentially no long-term benefit to the community of the significant S.106 investments raising further concerns about long-term viability.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to SA objective 2: services and facilities, site 59424 is recorded in the Urban Capacity Study (July 2022) as falling within the Good Accessibility Band and therefore receives a negligible effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59424 is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may</p>	<p>biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application. This is a 'policy-off' appraisal that does not take into consideration mitigation so as to ensure all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape and townscape, site 59424 is incorrectly recorded as being within a settlement when it is on the edge of a settlement. This is as a result of the GIS analysis identifying a high percentage overlap between the site and settlement boundaries. In the next iteration of the SA, this site will receive an uncertain minor negative effect in relation to this objective.</p> <p>SA objective 9: soil considers whether a site is greenfield or brownfield, in addition to the Agricultural Land Classification. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. Priority Habitats are not explicitly considered in the SA but almost all Priority Habitats in the Borough are covered by the green infrastructure assets layer under SA5. The site receives a minor negative effect in relation to SA objective 9 because it comprises greenfield land and contains less than a significant proportion of Grade 1, 2 or 3 agricultural land.</p> <p>With regard to SA objective 10: climate change mitigation, the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59424 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>The site is a major wildlife corridor joining the woods of Warren Wood and Cattering Wood. Loss of this important</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Negative (-)</p> <p>This site is located outside a settlement. The boundaries of the settlement were sold off separately by MOD to protect the surrounding countryside and concentrate development on the brownfield land.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (-)</p>	<p>With regard to SA objectives 7: heritage and 8: water, respondent has not expressed any disagreement over the effects given for site 59424.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is greenfield land that contains a less than significant proportion (<25%) of Grade 1, 2 or 3 agricultural land. The area is registered by DEFRA as 'Priority Habitat Inventory - Deciduous Woodland (England)'. Site contains Ancient Woodland and TPO protected trees.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Major negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negative (-)</p> <p>The Site is an area of woodland surrounding the existing development. This provides a green lung for the area, and helps prevent some of the worst excesses of temperature on hot days; it is well documented that trees have a cooling effect on the environment and that is evidenced when walking around Kings Hill on a hot day in Summer, where a walker will experience a wall of heat when re-entering the village from the surrounding woodland.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negative (-)</p> <p>The site is not within 100m of an AQMA. However, the secondary access has been determined to be via the Teston Road, for which the primary access to the trunk road network is likely to be through Wateringbury. The addition of houses with access along the Wateringbury Road is likely to increase the number of vehicles turning right at the A26 / Red Hill traffic lights, which will significantly impact the throughput of the junction and the increase in pollution in that area. In addition, the main access road would be through a quiet</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		residential cul-de-sac which already has significant parking problems, resulting in potential issues with access."	
44422593	SA Report	<p>"PRoW</p> <p>The County Council welcomes the inclusion of the PRoW network within 1.42 Material Assets but would emphasise that the increase in population leads to inherent demands on the network. The existing PRoW network, particularly when improved and enlarged, could make a significant contribution to realise the Plan's aims for the future community and the prominence of walking and cycling should place this to the fore in future development plans.</p> <p>The Objectives proposed within this Interim Sustainability Appraisal Report all connect and overlap with the aims of the ROWIP, particularly:</p> <p>SA Obj 1 / SA Obj 2 / SA Obj 4 / SA Obj 5 / SA Obj 6 / SA Obj 10</p> <p>And the following from the Proposed SA Monitoring Framework:</p> <p>SA Obj 1 / SA Obj 2 / SA Obj 4 / SA Obj 6 / SA Obj 10 / SA Obj 12</p> <p>Waste Management</p> <p>The County Council, as Waste Disposal Authority, notes that paragraph C.63 in Appendix C Baseline Information needs to be updated to reflect the newly opened Allington HWRC within the Borough.</p> <p>Indicators and Targets for SA Objective 13 needs to recognise that these will only be met if sufficient infrastructure is provided. The County Council's commentary in respect of waste infrastructure and spatial distribution notes the current and future pressure on Waste Transfer Station infrastructure. Much emphasis is put on reduction of waste to landfill but Kent already sends less than 2%. Focus needs to be on providing infrastructure to facilitate increased recycling. "</p>	<p>Noted.</p> <p>In the next iteration of the SA Report, paragraph C.63 will be updated to reflect the fact Allington Household Waste Recycling Centre has now opened.</p>
45009345	SA Report	<p>"SA Objectives : 1/6/10/11/12 : these relate to health and well-being of residents, air pollution and protecting/enhancing the Borough's landscape and townscape whilst retaining character and quality. Surely by allowing development on 'greenbelt land' is contradictory to these statements.</p> <p>Increase in housing results in an increase in cars on roads which increases air pollution. Regardless of the fact that Councils rely heavily on people using public transport people will continue to use their own means of transport since it is the easier / quicker option for most."</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>In the next iteration of the SA Report, the cumulative effects section will give consideration to the increase in cars on the road as a result of growth and the adverse effects this may have on air quality. It is acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p>
42819617	SA Report	<p>"Interim Sustainability Report</p> <p>4.1 Under the Planning and Compulsory Purchase Act 2004, Sustainability Appraisal (SA) is mandatory for Development Plan Documents. 		<p>vehicular parking space to meet the existing population and service needs in the village centre.</p> <p>Please advise me of the next stage in the Local Plan.</p> <p>Note - rep contains several images</p> <p>Sites 59410 and 59601</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: To improve human health and well-being Significant positive(++)</p> <p>Comment: should be uncertain minor positive(+) as Hadlow medical centre fully subscribed.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain minor negative(-?)</p> <p>Should be significant negative(--). The area is Green Belt. And any development would have a significant negative impact on views of Hadlow Tower and the conservation area of the village on the approach from Tonbridge.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative(--?)</p> <p>Should be significant negative (--) As above: any development would have a significant negative impact on views of Hadlow Tower and the conservation area of the village on the approach from Tonbridge.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources Significant negative (---)/Uncertain significant negative(---?)</p> <p>Agree with TMBC finding: the site is within Flood Zone 3 and is prone to flooding. Run-off from any development could have a harmful effect on the river Bourne which runs alongside the site.</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 8': To protect and enhance the quality of water features and resources Negligible (0)</p> <p>Should be uncertain minor negative (-?). The site, along with other sites north of the A26, helps absorb flood water at times of run-off from the fields down from West Peckham parish.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+)</p> <p>Should be minor negative(-). There is no footpath or cycle path linking to Hadlow village and the A26 is a fast road and dangerous for pedestrians at that point. The likelihood of any residents using any</p>	<p>Sites 59410 and 59601 receive significant positive effects in relation to SA objective 1: health and wellbeing for the reasons outlined in the proformas. The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to SA objective 6: landscape and townscape, Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. In terms of Hadlow Tower and the Conservation Area, these heritage assets are considered separately under SA objective 7: heritage.</p> <p>Sites 59410 and 59601 are both expected to have significant negative effects in relation to SA objective 7: heritage, as they are within 250m of numerous heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, site 59410 receives a mixed significant negative and negligible effect, as it contains land with a 1 in 30 year risk of surface water flooding. The site is not located in Flood Zone 3. The negligible effect is due to the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p> <p>Site 59601 receives an uncertain significant negative effect in relation to SA objective 8, as it falls within Flood Zone 3 and also contains land with a 1 in 30 year risk of surface water flooding. A watercourse also runs along the western edge of the site. The effect is recorded as uncertain, because the presence of a watercourse could result in significant negative effects on water quality, although this is uncertain at this stage of assessment.</p> <p>Sites 59601 receives a minor positive effect in relation to SA objective 10: climate change mitigation, as although it is more than 800m from a railway station, it is within 400m of a bus stop. This is in accordance with the site assessment criteria.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		form of transport other than private car is negligible. And due to the lack of parking space in the village, residents of any developments on this site would be more likely to use shops further afield with consequent increase in car use."	
45646081	SA Report	<p>"Site 59637 (note - rep contains images)</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:~</p> <p>SA Objective 1: To improve human health and well-being. Significant positive (++)/Uncertain significant negative(--?)</p> <p>Disagree with the possible rating of(++). Should be negligible (0)/Uncertain significant negative (--?) Any development on the site would have a negative effect for existing users of the footpath on their enjoyment of the countryside.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative(--?)</p> <p>Should be significant negative(--). The site is Green Belt with a well-used footpath running across it. For visitors to the Cemetery next to the site, it would adversely impact cherished views across the existing countryside to the Grade II listed Hadlow Tower.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative(--?).</p> <p>Should be significant negative(--), the site affects the setting of the cemetery next to it, with its Grade II listed war memorial.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources. Significant negative (--)/Negligible (O).</p> <p>Should be just Significant negative(--). The site is prone to flooding and run-off from any development could affect the health of the nearby pond.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor positive(+).</p> <p>Should be minor negative(-). There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>Site 59638</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: To improve human health and well-being Significant positive (++)</p> <p>The junction of the access road with the A26 is dangerous due to visibility and the speed of traffic using the A26.</p>	<p>Sites 59637, 59638 and 59647 receive significant positive effects in relation to SA objective 1: health and wellbeing for the reasons outlined in their proformas. This is in accordance with the site assessment criteria. With regard to site 59647, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>With regard to site 59638 and SA objective 5: landscape and biodiversity, the site is recorded as having a significant negative effect. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application. Water quality is dealt with separately under SA objective 8: water.</p> <p>With regard to SA objective 6: landscape and townscape, site 59638 is incorrectly recorded as not located near any settlements in a rural location, when it is in fact on the edge of a settlement. This is due to the fact the GIS analysis identified no percentage overlap between the site and settlement boundary. In the next iteration of the SA Report, this site will receive an uncertain minor negative effect in relation to SA6. Site 59637 is correctly recorded as not located near any settlements in a rural location. Although it is close to the settlement, it does not border it as site 59638 does. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. In terms of the Green Belt, this is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. Heritage assets are considered separately under SA objective SA objective 7: heritage.</p> <p>Site 59637 is expected to have a significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p>

		<p>Should be significant negative (--). The site is Green Belt. Any development would adversely impact the setting of Williams Field, the main open space in the village.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative(-).</p> <p>Should be significant negative. Minor negative(-)/significant negative(--) depending on the exit points from the development. There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>Site 59795</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality. Uncertain significant negative(--?)</p> <p>Uncertainty as to location of site. If it is not the brownfield site as claimed by TMBC, but the field with trees next to it as shown on the TMBC map, the site would be Green Belt.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination. Significant positive(++)</p> <p>Uncertain whether site is brownfield land. The TMBC map shows the site to be the field with trees, and not the brownfield site next to it.</p> <p>Site 59811</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: To improve human health and well-being. Minor positive(+).</p> <p>Should be significant negative(--) due to the adverse effect on the well-being of Hadlow residents from a large amount of increased traffic. Hadlow is the nearest large village and is where much of the traffic from the site would access the A.26. This would most likely lead to much-increased congestion in Carpenters Lane and at the junction with the A26 which already sees queues of traffic exiting onto the main road.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative(--?)</p> <p>Should be Significant negative (--). The site is Green Belt. It forms part of the parkland of historic Oxenhoath estate and is crossed with footpaths affording sweeping views across the countryside to the Grade II listed Had low Tower and beyond.</p>	<p>Site 59811 is expected to have a significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Sites 59859, 59842 and 59834 receive uncertain significant negative effects in relation to SA objective 8: water for the reasons outlined in their proformas. The reason the effects are recorded as uncertain are due to the fact all three sites contain watercourses or water bodies but effects on water quality are uncertain at this stage of assessment. Site 59834also falls within Source Protection Zones 1, 2 and 3.</p> <p>With regard to SA objective 9: soil, sites 59795 and 59853 comprise brownfield land and so receive significant positive effects in relation to SA objective 9. TMBC informed LUC that both these sites comprise brownfield land.</p> <p>Sites 59686, 59776, 59853 receive minor positive effects in relation to SA objective 10: climate change mitigation, as although they are more than 800m from a railway station, they are within 400m of a bus stop. This is in accordance with the site assessment criteria. Sites 59811 and 59747 receive minor negative effects as they are not within close proximity of a railway station, bus stop or cycle route.</p> <p>There is no proforma for site 59865.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 7: To protect and enhance the cultural heritage resource. Uncertain significant negative(--?). Should be Significant negative (--). The site almost completely surrounds the historic grade II listed Oxenhoath and its gardens and parkland.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative (-). Should be significant negative (--). No nearby public transport and no cycle paths to allow safe cycling means that all road journeys will be by car.</p> <p>Site 59853</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: To improve human health and well-being Significant positive(++).</p> <p>Should be Uncertain significant negative(--?): The increase in traffic from the site and the congestion caused would have an adverse effect on the well-being of residents of Court Lane. Neither Court Lane nor Victoria Road are suitable to take a large amount of increased traffic. It would also cause congestion and long delays at the narrow junction with the A26. There is inadequate infrastructure to enable safe walking from the site to Had low to access village facilities, although a footpath could be added as part of a development. However, the distance from the village centre would lead many residents to use their cars rather than walk. There is no infrastructure to allow safe cycling around Had low and further to Tonbridge. Had low medical centre is over-subscribed with no room for expansion</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination. Significant positive (++).</p> <p>Should be minor negative(-). Only about 50% of the site is brownfield. The rest is grass with some under agricultural cultivation.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive(+). Should be minor negative: most of the site is more than 400m from a bus stop.</p> <p>Site 59859</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: To improve human health and well-being Significant positive (++)/Uncertain significant negative(--?)</p> <p>Should be just Uncertain significant negative(--?): the access on to Carpenters Lane is on a dangerous bend with poor visibility.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 5: To protect and enhance biodiversity and geodiversity. Uncertain significant negative(--?). Should be Significant negative(--): the site runs alongside the river Bourne and would impact the biodiversity of the river, particularly due to flooding of the site.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--) / Uncertain significant negative (--)</p> <p>Should be just Significant negative. The site is on the flood plain of the river Bourne; it is prone to flooding and is in Flood Zone 3. Any run off will adversely impact the quality of water in the Bourne.</p> <p>Site 59842</p> <p>Agree with TMBC's assessment of the effects of any prospective development on this site except for the following:</p> <p>SA Objective 1: To improve human health and well-being Significant positive (++).</p> <p>Should be Significant negative (--): The size of the development would adversely impact the well-being of Had low residents as traffic from the development would increase congestion in the village centre.</p> <p>Had low medical centre is fully subscribed with no room for expansion.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain minor negative(-?)</p> <p>Should be Uncertain Significant negative(--?): The site lies between two well-used footpaths and any development would adversely impact walkers' enjoyment of the countryside.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources. Significant negative(--) / Uncertain significant negative(--?)</p> <p>Should be Significant negative (--): The site is prone to flooding, but it also has a valuable role in absorbing run-off of excess water during heavy rainfall from the fields north of the A26 towards West Peckham parish, thereby helping prevent flooding of Hadlow village. Development of the site could lead to serious flooding of homes in the village - particularly along Maidstone Road. There are two streams crossing the site, ultimately feeding into the river Bourne. Any development would therefore affect the quality of the water in the streams and the Bourne.</p> <p>Sites 59834 and 59865</p>

		<p>allocation of Land to east of Ismays Road, Ivy Hatch (Site 59608) for residential development.</p> <p>Context</p> <p>The National Planning Policy Framework (NPPF)[1] (#_ftn1) [1] provides the overarching framework used for preparing Local Plans based on the Government's aims for the planning system, the purpose of which is to contribute to the achievement of sustainable development. It sets out in paragraph 8 that sustainable development has three interdependent objectives that need to be pursued in mutually supportive ways:</p> <ul style="list-style-type: none"> * an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure; * a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and * an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. <p>So that sustainable development is pursued in a positive way, at the heart of the NPPF is a presumption in favour of sustainable development. Paragraph 11 states that for plan-making this means that all plans should promote a sustainable pattern of development that seeks to meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects.</p> <p>The Regulation 18 Local Plan sets out how the hierarchy of settlements should be used to guide decisions on where development should be focussed. It acknowledges that settlements at the top of the hierarchy (Urban Areas), are most likely to provide opportunities for sustainable development because they contain a variety of services, are well connected by public transport and offer opportunities for</p>	<p>AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. The site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA, this limitation will be added to the 'Difficulties and Data Limitations' section of the SA. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>active travel. They also contain opportunities for making use of previously developed land. Beyond the Urban Areas are Rural Service Centres and Other Rural Settlements. At the bottom of the hierarchy are Rural Areas within the open countryside and where development should be restricted.</p> <p>The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social, environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report[2] (#_ftn2) [2] is also subject to the Regulation 18 consultation.</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW) that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility, or recreational opportunities such as children's play areas or sports facilities.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of this Site would not represent sustainable development through actively reducing health inequalities, improving access to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons we submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p> <p>The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.'</p> <p>It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical accessibility jobs. It would be in direct conflict with the objective to encourage sustainable economic growth, business development and economic inclusion across the borough. We submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.'</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs.</p> <p>Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan[3] (#_ftn3) [3]. In our view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape.</p> <p>The Site is highly visible in views from the adjacent PRoW and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1). We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development.</p> <p>It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land.</p> <p>None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p> <p>The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.'</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them.</p> <p>We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination.</p> <p>The SA states: 'The site is located on brownfield land.'</p> <p>The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section 336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nursery grounds. Agricultural uses are exempt from the definition of previously developed land in Annex 2 of the NPPF. Annex 2 defines 'brownfield land' with reference to 'previously developed land'. The Site cannot therefore be classified brownfield land for the purposes of the NPPF.</p> <p>With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p> <p>The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'</p> <p>The Site is located approximately 350m from bus stops on Ightham Road via a PRoW adjacent to the site. The PRoW is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physical infrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday.</p> <p>The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location.</p> <p>With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location.</p> <p>In recognition of this we submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.'</p> <p>The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures that would meet local housing need.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Conclusion</p> <p>The Site is located outside of any settlement boundary and within a Rural Area in part of the countryside designated as Green Belt. The Site is in existing agricultural use. It is not brownfield or previously developed land and therefore its allocation for residential development would, by definition, be inappropriate. The Site is also located within the AONB and allocation of the Site would result in significant negative effects to a landscape of scenic beauty which the Government affords the highest status of protection to.</p> <p>The Site is poorly accessible and not located near to schools, facilities or amenities that are important for health and well-being. As existing, the Site contributes to employment and economic growth which would be lost. The Site is sensitively located within an Archaeological Priority Area and near to designated heritage assets of national importance. The Site is also located over a Source Protection Zone and effects on water features and resources are unknown. The Site is not served by public transport and would not encourage walking or cycling. Occupiers of any future development would be dependent on use of a private car which would be in direct conflict with objectives to reduce greenhouse gas emissions and minimise climate change.</p> <p>In summary, the NPPF requires plans to provide a positive vision for the future of each area; a framework for addressing housing needs and other economic, social and environmental priorities; and a platform for local people to share their surroundings. It requires plans to be prepared with the objective of contributing to the achievement of sustainable development.</p> <p>We consider that the Interim Sustainability Review Report contains errors and that the Site has been incorrectly scored in relation to a number of the Sustainability Objectives. In our view, allocation of this Site would in fact result in a greater number of negative effects, many of which would be significant in scale. Allocation of the Site would fail to comply with the economic, social or environmental objectives required to achieve sustainable development in the plan-making process. It would not be consistent with the emerging spatial strategy or in any way contribute to the core aim of achieving sustainable development in the borough and we request that the Site is not allocated in the emerging Local Plan.</p>

		<p>(#_ftnref1)</p> <p>(#_ftnref2)</p> <p>(#_ftnref3) "</p>	
42473025	SA Report	<p>"Ightham and Ivy Hatch are within MGB and the Kent Downs Area of Outstanding Beauty.</p> <p>I believe those protections should be applied in the Local Plan and I concur with the NPPF (July 2021):</p> <p>Para 137 The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.</p> <p>Para 176 Great weight should be given to conserving and enhancing landscape and scenic beauty in AONB which has the highest status of protection in relation to planning issues.</p> <p>Dark Hill Farm 59709 – I object to the development of this site for the following reasons:</p> <p>SA Objective 1:</p> <p>There is no capacity in the local GP surgery to absorb the potential increase in numbers for this size of development.</p> <p>SA Objective 2:</p> <p>Public transport links in Ightham and Ivy Hatch are severely limited. The traffic on the A227 and A25 is routinely at a standstill into Sevenoaks and Borough Green. Development of this site would put unacceptable pressure on these A roads and the narrow country lanes in the villages of Ightham, Ivy Hatch and Borough Green.</p> <p>SA Objective 3:</p> <p>The primary and secondary schools in Ightham and Borough Green are currently full or oversubscribed.</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA acknowledges that sites 59709, 59720, 59871, 59872, 59608, 59770 and 59830 are located within 500m of the AONBs and for this reason, they receive significant negative effects in relation to SA objective 6: landscape and townscape. This wording is used for sites that are within the AONBs, as well as within 500m of them. All adverse effects against the landscape objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>SA objective 2: services and facilities relates to accessibility, rather than public transport links, the road network and traffic congestion. Access to public transport is dealt with separately under SA objective 10: climate change mitigation. Therefore, sites 59709, 59720, 59871, 59872, 59608, 59770 and 59830 have been appraised in accordance with the site assessment criteria and receive the correct effects against SA objective 2, utilising the information contained within the Urban Capacity Study (July 2022).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. If a site contains an existing business that could be lost as a result of residential</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 4:</p> <p>The employment opportunities are impossible to assess as no detail are provided.</p> <p>SA Objective 5:</p> <p>This site is in the Kent Downs AONB and MGB. The development of this site would have a negative effect on the biodiversity of both of these designated areas.</p> <p>SA Objective 6:</p> <p>This development will have a detrimental effect on the local character and distinctiveness of the historic villages of Ightham and Ivy Hatch. It will result in the coalescence of Borough Green and Ightham. It will result in the loss of 'green space' and will have a harmful effect on the Kent Downs AONB and impact on the openness of the Green Belt.</p> <p>SA Objective 7:</p> <p>This site is close to the Heritage asset of Ightham Court protected as an Historic Park and Garden. It is within 100m of a Conservation Area.</p> <p>SA Objective 8:</p> <p>This site is entirely or significantly within Flood Zone 3 and has evidence of low-lying water.</p> <p>SA Objective 9:</p> <p>This development on a greenfield (currently agricultural) site would adversely impact the soil quality and contribute to land contamination.</p> <p>SA Objective 10:</p>	<p>development, it receives a minor negative effect. All mixed use and employment site options are expected to have positive effects on this objective, as they provide opportunities for new jobs.</p> <p>The Kent Downs AONB is dealt with under SA objective 6: landscape and townscape, not SA objective 5: biodiversity and geodiversity. AONBs and the Green Belt are not recognised for their biodiversity value, rather they relate to landscape. The five purposes of Green Belt as outlined in the NPPF are not inherently sustainability issues and therefore consideration is not given to the Green Belt in SA.</p> <p>The historic environment is dealt with under SA objective 7: heritage, not SA objective 6: landscape and townscape. Loss of open space is dealt with under SA objectives 1: health and wellbeing and 6: landscape and townscape.</p> <p>Sites 59709, 59770 and 59830 receive uncertain significant negative effects in relation to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 8: water and 9: soil. Sites 59720 and 59608 also receive uncertain significant negative effects against these objectives, with the exception of SA objective 8: water. Sites 59871 and 59608 also receive these effects against the same objectives, with the exception of SA objectives 5: biodiversity and geodiversity and 8: water. Site 59608 is expected to have a significant positive effect in relation to SA objective 9: soil, as it comprises brownfield land. TMBC informed LUC that site 59608 comprises brownfield land.</p> <p>Sites 59709 and 59830 receive significant positive effects in relation to SA objective 10: climate change mitigation, as they are within close proximity of a railway station. This may encourage people to use public transport over the private car. Sites 59720, 59871, 59872, 59608, 59770 are not within close proximity of a railway station but are close to bus stops and so may also help reduce reliance on the private car but to a lesser extent.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>The proformas correctly acknowledge when a site is within 100m of an AQMA or not, against SA objective 12: air quality. They also correctly acknowledge when a site is within a Minerals Safeguarding Area, against SA objective 13: material assets and waste.</p> <p>SA objective 14: housing relates solely to the delivery of new housing, not the location of sites on the edge of historic villages.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The distance from a railway station and the poor bus links would result in increased traffic movements and therefore are likely to increase greenhouse gas emissions.</p> <p>SA Objective 11:</p> <p>Not quantifiable at this stage in the planning process.</p> <p>Objective 12:</p> <p>This development is within 100m of the AQMA in Borough Green so the increased traffic movements will adversely impact the air quality in that area.</p> <p>Objective 13:</p> <p>This site is within a mineral safeguarding area.</p> <p>Objective 14:</p> <p>This development is wholly unsuitable in size and position, on the edge of the historic village of Ightham. Its scale will significantly and adversely impact the community and have an detrimental effect on this small historic rural settlement.</p> <p>Gracelands 59720</p> <p>And Borough Green Road 59793 - I object to the development of these sites for the following reasons:</p> <p>SA Objective 1:</p> <p>There is no capacity in the local GP surgery to absorb the potential increase in numbers for this size of development.</p> <p>SA Objective 2:</p> <p>Public transport links in Ightham and Ivy Hatch are severely limited. 42473025	SA Report	<p>Further to my response to The Regulation 18 Consultation, I am concerned about the consistent use of the term 'this site is within 500m/250m of the AONB' (Objective 6 of the Sustainability Assessments) when the sites appear to sit wholly within the Kent Downs AONB. Eg 59709, 59720 and others. Maybe my mistake, but, please can this be noted.</p>	<p>Sites receive uncertain significant negative effects when they are within, or within 500m of, an AONB. The SA gives all sites that are within 500m of an AONB a significant negative (--) effect, in recognition of the potential for development outside of, but near to the AONB, to have an effect.</p>
46103169	SA Report	<p>"Sustainability Appraisal</p> <p>The Regulation 18 version of the Local Plan is accompanied by a Sustainability Appraisal (SA) report which is a legal requirement derived from the Planning and Compulsory Purchase Act 2004 (Section 19). Section 39 of the Act requires local plans to be prepared with a view to contributing to the achievement of sustainable development.</p> <p>The requirement for Strategic Environmental Assessment (SEA), in addition to the SA, is set out in the European Directive 2001/42/EC adopted into UK law as the "Environmental Assessment of Plans or Programmes Regulations 2004".</p> <p>In line with best practice the SEA has been incorporated into the SA of the Regulation 18 Plan. The planning practice guidance sets out detailed consideration as to how any sustainability should assess alternatives and identify likely significant effects:</p> <p>The sustainability appraisal needs to consider and compare all reasonable alternatives as the plan evolves, including the preferred approach, and assess these against the baseline environmental, economic and social characteristics of the area and the likely situation if the plan were not to be adopted. In doing so it is important to:</p> <ul style="list-style-type: none"> • outline the reasons the alternatives were selected, and identify, describe and evaluate their likely significant effects on environmental, economic and social factors using the evidence base (employing the same level of detail for each alternative option). Criteria for determining the likely significance of effects on the environment are set out in schedule 1 to the Environmental Assessment of Plans and Programmes Regulations 2004; • as part of this, identify any likely significant adverse effects and measures envisaged to prevent, reduce and, as fully as possible, offset them; • provide conclusions on the reasons the rejected options are not being taken forward and the reasons for selecting the preferred approach in light of the alternatives. Any assumptions used in 	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report. This means that each reasonable alternative development site option is appraised on its physical constraints only. This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>assessing the significance of the effects of the plan will need to be documented. Reasonable alternatives are the different realistic options considered by the plan- maker in developing the policies in the plan. They need to be sufficiently distinct to highlight the different sustainability implications of each so that meaningful comparisons can be made. The development and appraisal of proposals in plans needs to be an iterative process, with the proposals being revised to take account of the 5 Local Plan Regulation 18 Consultation November 2022 appraisal findings. Paragraph: 018 Reference ID: 11-018-20140306 Revision date: 06 03 2014 The appendix to the Sustainability Appraisal sets out an assessment of the individual sites in the HELAA against the Sustainability Objectives of the SA. The objectives are considered to be relevant and comply with the guidance in this regard.</p> <p>The Vision Document as submitted alongside these representations considers how the Land to the North of Offham Road performs against the individual criteria and a reassessment of the scoring has been made where appropriate. This shows that the site would bring about significant benefits against a number of the Sustainability Objectives. Where impacts are recorded, these are minimal and can be addressed through appropriate mitigation. The overall summary of scoring against the Sustainability Objectives shows the site to be highly appropriate for allocation in future versions of the Local Plan.</p> <p>As the plan progresses through to the next stages of the consultation process, further information and technical studies will be produced in order to provide a more accurate scoring against the sustainability appraisal which will demonstrate the suitability of the site for allocation."</p>	
42722497	SA Report	<p>I would like to object to the proposed potential Residential Development of the site 59617 and 59703 in Potash Lane, Platt. This plot is in the Green Belt and is outside the village envelope. It is located in Potash Lane which effectively is a single track road which makes it extremely difficult for HGV vehicles to gain access. The roads are already congested for the existing homeowners to use and we already suffer from a lack of parking in Potash Lane. Furthermore, it is adjacent to an Area of Natural Beauty and a Conservation area and it would obscure the view from The Barn which is a Listed Building. I have spoken with several neighbours and they are all in agreement with my comments. yours faithfully Richard & Anne Self</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Sites 59617 and 59703 receive minor negative effects in relation to SA objective 6: landscape and townscape, as they are both located on the edge of a settlement. The effects are recorded as uncertain, as the actual effects are dependent on the design, scale and layout of development, which may help mitigate any adverse effect.</p> <p>The SA is too high-level to consider road width, traffic congestion and lack of access to car parking, and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA acknowledges that both sites are located adjacent to the Platt Conservation Area which contains numerous heritage assets and for this reason, both sites receive a significant negative effect in relation to SA objective 7: heritage. The effect is recorded as uncertain, as the actual effect is dependent on factors such as the design of development and whether there are lines of sight between the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			development site and nearby heritage assets. Neither site is located adjacent to the AONB.
42438273	SA Report	59750, 59749, 59599, 59597, 59752, 59816, 59598, 59759, 59760, 59755, 59758, 59754, 59757, 59761 - all of these sites represent significant destruction of greenbelt, loss of rural classification and potential devastation of the character of the village of Mereworth. There is little infrastructure in the village already - these would put further pressure on traffic, environment, local services such as schools, health and public transport. While a small number of additional houses (in single figures) would not be an issue the scale of these proposals is devastating. Mereworth would be subsumed into a greater Kingshill. 59884, 59634, 59603 - Represent excessive loss of green space in Kingshill which is increasingly densely populated and has relatively less and less green space. 59797, 59866, 59811, 59830 are excessive in size, represent major loss of greenbelt/rural landscape, significant increase in traffic, loss of environmental quality and pressure on infrastructure.	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration is given to the landscape under SA objective 6: landscape and townscape. If a site is not located near any settlements in a rural location and/or would result in a loss of designated open space, it receives an uncertain significant negative effect. The effect is uncertain, as the actual effect is dependent on the final design, scale and layout of development.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic. The environment is considered under SA objective 5: biodiversity and geodiversity, whilst schools and healthcare are considered under SA objectives 3: education and 1: health and wellbeing, respectively. Public transport is considered under SA objective 10: climate change mitigation.</p> <p>The SA acknowledges that development of site 59884 will result in a loss of open space, under SA objective 1: health and wellbeing, and therefore receives a significant negative effect in relation to this objective (as part of a mixed effect). The effect is recorded as uncertain, as the actual effect will depend on the exact scale, layout and design of development and whether the open space is lost or incorporated into the development.</p> <p>Site 59634 does not contain designated open space, but does contain a large area of Ancient Woodland which is acknowledged in the SA. For this reason, the site receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. The effect is recorded as uncertain, as there may be opportunities to promote habitat connectivity if new development includes green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for adverse effects, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Site 59603 does not contain designated open space, but does contain a green infrastructure asset in its northern corner. Therefore, the site receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. The effect is uncertain for the reasons outlined in the previous paragraph.</p> <p>All sites listed have been subject to SA, which provides an objective assessment of their performance against the fourteen SA objectives.</p>
42643873	SA Report	The sustainability objectives completely ignore the protection of Green Belt Land. There should be an objective to avoid the loss of Green Belt land.	Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.
42562465	SA Report	The colour coding of the summaries and the + / - / ? marks are completely unclear and have no legend or explanation as to what they mean and how they can be compared.	Table 2.1 in the Interim SA Report provides a key to the symbols and colour coding used in the SA. The PDF version of the Report available online is in an 'Accessible format', which means that it has been formatted to meet the requirements of the Public Sector Bodies (Websites and Mobile Applications) Accessibility Regulations (2018). The template abides by WCAG 2.1 regulations to the highest standard (level AAA).
42798817	SA Report	Please could we include an additional aim here which commits to identifying and securing innovations in energy production from waste, e.g. biofuels from agricultural waste products and/or biochar from agricultural waste to enhance soil quality?	In the next iteration of the SA Report the following sub-objective will be added under SA objective 10: climate change mitigation: "To encourage the production of energy from waste."
25361537	SA Report	In respect of landscape - Appendix D of the Interim sustainability Report provides the Site Assessment Criteria: SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality D.22. In addition, proximity to the Kent Downs and High Weald AONB's can provide an indication of the potential for development to have adverse impacts on those designated landscapes. Sites that are within 500m of the AONB could have a significant negative (- -?) effect. We would raise a concern that sites further than the specified 500 metres from the AONB boundary have potential to have significant negative effects on designated landscapes, particularly strategic scale sites. We therefore consider that the criteria should be amended to be up to 2 km where likely to be visible from an AONB. It should also be clarified that D22 also applies to sites that lie within an AONB boundary.	500m was considered a reasonable distance and has been used in other SAs for Local Plans elsewhere which have been found sound and adopted. This is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to identify which sites are actually visible from an AONB at 2km. All sites have been appraised consistently using the same buffer distance. Tonbridge and Malling Borough Council has commissioned a Landscape Sensitivity Assessment, which will focus on larger strategic sites outside of the Green Belt and the impacts development might have on the landscape.
42798817	SA Report	Please could we include an additional aim here which commits to identifying and securing innovations in energy production from waste, e.g. biofuels from agricultural waste products and/or biochar from agricultural waste to enhance soil quality?	In the next iteration of the SA Report the following sub-objective will be added under SA objective 10: climate change mitigation: "To encourage the production of energy from waste."
25315361	SA Report	Under para 3.55, the issue of AONBs must be considered not just in terms of development on the ANOB but in terms of development up against the AONBs. The North Downs AONB is as much an asset when viewed from beyond the base as from the summit. Yet current planning assessments seem to prioritise views from the North Downs and not views of the AONB from within the near landscape below. A recent comment from the North Downs ANOB in response to the Bushey Wood proposal stated that "In order to help the development, recede as far as possible into the landscape when viewed from the AONB, we would request that it is specified that pale coloured facing materials are not used on elevations facing towards views from the AONB". The implication here being that is no problem with bright buildings detracting from the views of the Downs from below, even if those buildings are within 500 metres of the base of the ANOB area. Under para 3.74, flooding is considered only in terms of rainfall and storms. Below Allington lock the river Medway is tidal and the principal issue is (or should be) sea level. Unless the Local Plan	Paragraph 3.55 states "The key sustainability issue affecting landscape character and quality within the borough is the pressure of new development within the AONBs and their setting , and the effects this has on the preservation of the key landscape characteristics" [emphasis added]. Therefore, consideration is given to development within the AONBs and outside of them. With regard to flooding, paragraph 3.74 has been amended to also refer to sea level rise.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		recognises this distinction, there is risk that provisions for flooding could be too liberal or too conservative in areas affected by tidal water.	
25315361	SA Report	There appears to be no facility to comment upon the 'SA Framework' section which follows. I have the following comment. SA Objectives 3 and 4 should have something to say about broadband connectivity and quality. The sub objectives of SA 5 should address the human habitat and its balance with the wildlife habitat. There may be instances where an improved human habitat can be achieved at the expense of the local wildlife habitat and under some circumstances this could be acceptable if biodiversity is improved by accountable and verifiable biodiversity offsets elsewhere in the Borough.	The SA Framework does not take into consideration Broadband connectivity and quality because it is considered a very localised issue, the status of which can change very quickly. The Government has several programmes in place with the aim to increase speeds and access to Broadband for homes and businesses, and it is likely Broadband connectivity may change over the plan period.
42832705	SA Report	For any development to meet its sustainability objectives it needs to recognise the environment in which it is being proposed: to achieve SA 2. it needs to be recognised that any development between East Malling into West Malling from Mill Street along Claire Lane would require new pavements and lighting so that any new housing would have access to existing community facilities without encouraging additional motor vehicle use (SA10); additional pavements and lighting along Claire Lane would cause damage to a distinct countryside environment impacting wildlife habitat (SA 5 and SA 6) through disruption of wildlife habitats and interruption of darkskies environments; the scale of the developments will materially impact what has been described in the East Malling Conservation Study as an areas of Unspoilt beauty and would disturb the distinct, historic characters of East Malling and West Malling villages. Regarding SA 11 and 12: Incomplete ecology impact and air quality surveys need to be completed and associated issues addressed in line with the overall, cumulative impact of changes resulting from proposed development (not on a case-by-case basis) need to be addressed against very localised claims (e.g biodiversity increases in localised developments e.g unqualified/ unquantified 30% increases in biodiversity). Regarding SA 14: Of the proposed developments only a very small proportion are affordable to young buyers in the local demographic	<p>It is not clear whether the sustainability objectives the respondent refers to are the SA objectives that comprise the SA framework within the Interim SA Report, or different objectives separate to the SA that developments must meet. The SA is a high-level tool used to identify the likely sustainability effects of a plan, and is one of many factors that feed into the plan-making process. The SA objectives provide a guide for the appraisal of options, be it policy options or site options.</p> <p>The SA is too high-level to consider pavements and lighting. This is instead something that is determined once more specific proposals are developed and submitted as part of a planning application. The SA does, however, give consideration to the landscape and what effects development will have on the landscape, under SA objective 6: landscape and townscape.</p> <p>Biodiversity is addressed under SA objective 5: biodiversity and geodiversity. Information on how sites have been appraised against this objective is provided in Appendix D of the Interim SA Report.</p> <p>The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for things like air quality surveys to be undertaken as part of the work. The Council will, however, commission additional evidence on matters including traffic and air quality. SA objective 12: air pollution looks at the distance sites are to Air Quality Management Areas.</p>
42387809	SA Report	Nowhere in the Quantum Options SA is a mention of the climate change effects of household energy use which would be a big negative for either option with no upside at all but obviously greater for Option B. Water is only mentioned in terms of quality. Water resources in the South East are already heavily utilised and Climate Change is expected to reduce rainfall and hence water recharge. This will be exacerbated by further increase in impermeable surfaces which increase runoff rates at the detriment of groundwater recharge to our major aquifers and hence longer term decline in river flows and extractable water volumes. Any building will have a negative effect with no upside and Option B will cause greater problems than Option A because of covering a larger area and causing a greater demand.	<p>Household energy use can increase CO₂ emissions. SA Objective 10 seeks "To reduce greenhouse gas emissions so as to minimise climate change". The quantum options have been appraised against this objective, with Option A receiving a mixed minor positive and minor negative effect and Option B receiving a mixed significant negative and minor positive effect. Text has been added to the commentary in paragraph 4.8 to explicitly refer to household energy use.</p> <p>With regard to water, reference is made to water resources throughout the SA. Paragraph 3.62 states "The new Local Plan also offers an opportunity to ensure appropriate mitigation, including SUDs, is required as part of proposed development to mitigate any potential impacts on water resources".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42436577	SA Report	<p>This section muddles cause and effect of the suggested actions - at 4.6 it is not necessary to have more houses to improve the health and wellbeing provision. All new development is likely to make existing shortfalls worse. The improvements to the infrastructure is needed now, not as part of further growth in the numbers of houses. At 4.8 the AQMA improvements should be delivered to benefit the existing local residents who are suffering - adding more houses can only make things worse - let's fix the problems now, not wait for further development. Car use is high because there are limited alternative means of transport - better still would be closer facilities as most people would prefer to be within walking or cycling distance of work, schools, shops and doctors.</p>	<p>The purpose of the SA is to appraise the spatial strategy, policies and site options contained within the Local Plan and the reasonable alternative options.</p> <p>Paragraphs 4.6-4.10 provide an appraisal of the two quantum options. Paragraph 4.6 is not stating that it is necessary to have more houses to improve health and wellbeing provision, rather it is stating that with increased growth comes a requirement for an increased level of service provision. The two quantum options would provide the critical mass needed to support/fund the provision of health and wellbeing related infrastructure. Therefore, they both receive a minor positive effect against SA objective 2: services and facilities. The SA acknowledges under Quantum Option 2 that delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities. Therefore, the minor positive effect for Quantum Option 2 is coupled with a minor negative effect. The SA states that all effects are uncertain at this stage, as there is no evidence indicating a particular threshold at which new development could result in health and other services and facilities becoming overloaded.</p> <p>Paragraph 4.8 explains that new housing growth in the borough is likely to result in increased transport movements, a significant proportion of which are likely to be via private car. As such, both quantum options are identified as having negative effects in relation to SA objectives 10: climate change mitigation and 12: air quality. The negative effect for Quantum Option 2 is significant, as delivering growth beyond assessed needs has particular potential to cause increased congestion. The SA also acknowledges that the growth proposed under both options would provide investment into sustainable transport improvements, which may minimise the number of trips taken via private car within the Borough. As such, both options are also identified as having minor positive effects.</p>
42562465	SA Report	<p>The colour coding of the summaries and the + / - / ? marks are completely unclear and have no legend or explanation as to what they mean and how they can be compared.</p>	<p>Table 2.1 in the Interim SA Report provides a key to the symbols and colour coding used in the SA. The PDF version of the Report available online is in an 'Accessible format', which means that it has been formatted to meet the requirements of the Public Sector Bodies (Websites and Mobile Applications) Accessibility Regulations (2018). The template abides by WCAG 2.1 regulations to the highest standard (level AAA).</p>
42387809	SA Report	<p>I is unfortunate that large villages such as Leybourne are included in Options 4 and 5 as the few positive outcomes identified do not apply the the small villages and other rural area. For these areas there are no possible positive effects for SA 10 and SA 12. There is no prospect of any `sustainable infrastructure', there are no bus routes between most small villages now and no likelihood of any being introduced. Roads are frequently small lanes with insufficient room for vehicles to pass making it unsafe to cycle the lanes for transport reasons. There is</p>	<p>The spatial options have all been appraised in accordance with the SA Framework.</p> <p>As stated in paragraphs 4.15 and 4.16 of the Interim SA Report, Options 4 and 5 would focus development within the urban areas, rural service centres and other rural settlements as identified in Core Strategy Policies CP11, CP12 and CP13. Leybourne forms part of the Medway Gap Urban Area.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		no prospect of cycle lanes, and people would not choose to cycle on muddy dark lanes, and distances to shops, schools etc plus the road danger make walking no an option except for leisure. So any development would lead to the need for probably 2 cars per household which gives strong negative effects on SA10 and 12 plus making it unlikely that new developments would contain much affordable housing as those in need of it could not afford the transport costs.	
42052833	SA Report	<p>We do not agree with the findings of the strategic policy option assessments as set out in table 5.1 in the Sustainability Report as they relate to site 59604 at Addington. We would comment as follows: SA2: Disagree. Expanding the settlement of Addington would allow for new facilities and services to be provided to the benefit of new and existing residents. SA5: Disagree. The land is pasture and is hemmed in between the A20 and the railway. Its development would have a negligible affect upon biodiversity and geodiversity. Indeed, its development and the implementation of a comprehensive landscaping scheme could well enhance biodiversity. SA6: Disagree. The land is poor pasture and is hemmed in between the A20 and the railway. Its development would have a negligible effect upon the boroughs landscape. Indeed, through judicious landscaping it could improve it! SA7: Disagree. The development of the site would not impact upon cultural resources. The nearest listed building, Milestone is more than 500m away. The Addington Conservation Area is more than 700m away and the ancient monuments at Addington Long Barrow are more than 1200m away. SA9: Disagree: The site comprises poorly managed pasture. It is hemmed in by the A20 to the north and the railway line to the south. It does not form part of a larger agricultural holding. The land to the west is in residential use whilst to the east is woodland. SA13: Disagree. The land is hemmed in between the A20 and the railway. It is too small a site to be valuable for mineral exploitation.</p>	<p>Table 5.1 in Chapter 5 of the Interim SA Report presents the likely effects of each reasonable alternative development site option against each of the fourteen SA objectives. Chapter 4 of the Interim SA Report presents the likely effects of each strategic policy option.</p> <p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59604 receives a significant negative effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band.</p> <p>The site receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it is within 250m of three areas of Ancient Woodland. The effect is recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Additionally, the potential impacts on biodiversity and geodiversity would instead be determined once more specific proposals were developed and submitted as part of a planning application.</p> <p>The site receives a significant negative effect in relation to SA objective 6: landscape and townscape, as it is not located near any settlements in rural locations. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development. This is a 'policy-off' appraisal and so it does not take into consideration mitigation (e.g. landscaping). This ensures all sites are appraised on a consistent basis.</p> <p>The site receives a significant negative effect in relation to SA objective 7: heritage, as it is located within 250m of two heritage assets (Oast Southwest of Brook House and Mesolithic flint lithic implement), as recorded in the Kent Historic Environment Record. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p> <p>The site receives a significant negative effect in relation to SA objective 9: soil, as it is greenfield and contains a significant proportion (more than or equal to 25%) of Grade 3 agricultural land. The effect is recorded as uncertain, as it is unknown whether the Grade 3 agricultural land is Grade 3a (high quality) or 3b (not classed as high quality).</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			The site receives a minor negative effect in relation to SA objective 13: material assets and waste, as it is within a Minerals Safeguarding Area. The effect is recorded as uncertain, as the actual effect will depend on whether the site would offer a viable opportunity for minerals extraction, and whether it would be possible for prior extraction to occur before the site is developed.
42643873	SA Report	The sustainability objectives completely ignore the protection of Green Belt Land. There should be an objective to avoid the loss of Green Belt land.	Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.
42213665	SA Report	The Interim Sustainability Appraisal Report is comprehensive and based on sound methodology. I am hopeful that it will be successful in enabling sound decisions to be made in relation to the development of the Local Plan and each decision made in relation to proposed developments during its currency. I also hope that the key issues identified will continue to be addressed to the standards referred to and not be undermined due to political or economic pressures being applied as time passes.	Support noted.
42807617	Annex 1	Site 59808 has been incorrectly assessed against a number of SA objectives. SA Objective 2: The site has been incorrectly given a Fair Accessibility Band and a minor negative score within the corresponding SA Objective. Based on the methodology within the Urban Capacity Study (p16-17), a total percentage of 43.5%, would place the site within the 'Good' band for accessibility. SA Objective 5:- The site relates to a group of fields containing semi-improved grassland. The tree belts are limited to the periphery of the site, where the trees would benefit from active management relating to non-native species and trees with poor health conditions. Given the extent of Berkeley's land holding it may be possible to conserve and enhance the biodiversity of the site, achieving a net gain through the active management of the tree belts, and additional planting within Berkeley's retained land in the wider land holding. Berkeley therefore would suggest that the SA score of uncertain significant negative is overly precautionary.SA Objective 7: A uncertain significant negative score, due the sites setting within 250m of a heritage asset, is overly precautionary. The nearest heritage assets within Coldharbour Lane (The White House), Berkeley's own Oakhill House development, and Hildenborough Conservation Area are not visible from the site, and would otherwise be screened by committed development. SA Objective 8: The SA states that more than 25% of the site is within Flood Zone 3 and/or is within an area with a 1 in 30 year risk of surface water flooding. The entire site is however located within Flood Zone 1, and therefore is at the lowest risk of flooding. Berkeley's initial Flood Risk Assessment prepared by WSP acknowledges that there is a small area within a 1 in 30 year risk of surface water flooding. However, it is noteworthy that this area is under 25% of the site, relates to existing drainage attenuation and depressions in the land, is located in an area of the site that is adjacent to an area	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 2: services and facilities, although 43.5% of the site falls within the 'Good' accessibility band, the remainder of the site falls within the 'Fair' accessibility band. As SA utilises a precautionary approach, the site is recorded as falling within the 'Fair' accessibility band and therefore receives a minor negative effect in relation to SA2.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site has been appraised in line with the site assessment criteria. Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 7: heritage, it is correct for the SA to have utilised a precautionary approach.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. Further to this, the site contains a water body of watercourse or falls within Source Protection Zone 1. The 'policy-off' appraisal of the site in this section of the SA does not take into consideration mitigation, rather it is based on the physical constraints of the site. This ensures all sites are appraised in a consistent manner.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>already the subject of land form changes (Applications 20/02441/FL and 22/01753/F), and can otherwise be mitigated and re-compensated as part of a detailed drainage design strategy and modelling. SA Objective 9: The SA assessment of Objective 9 ranks the site as an uncertain significant negative. However, the site is not currently in productive agricultural use and is landlocked without direct access other than through Berkeley's wider Oakhill House estate, via third party land or the creation of an access onto Woodfield Avenue or Tonbridge Road, as part of a development. Due to known soil conditions within the Oakhill House development site, the majority of the site is expected to be of a moderate quality in Subgrade 3 and in part will be impractical to farm due to land form changes (Applications 20/02441/FL and 22/01753/F).</p>	<p>The Strategic Flood Risk Assessment (SFRA) which informed this SA objective will be updated. Therefore in the next iteration of the SA Report the site appraisals will reflect more up-to-date flood risk data.</p> <p>With regard to SA objective 9: soils, the site has been appraised in line with the site assessment criteria. The site comprises greenfield land, a significant proportion of which is classified as Grade 3 agricultural land. It is irrelevant whether the site is currently in agricultural use or not.</p>
42203041	Annex 1	<p>Individual site reference number: 59714Berkeley is concerned about the SA ratings given to this site. Whilst some scoring may be due to differing judgements applied, there appear to be factual inconsistencies in the assessment, most notably in terms of accessibility where the site is rated as 'fair' (SA Objective 2) and in relation to flood risk (SA Objective 8).SA Objective 2: Berkeley suggests that the above site, relating to land off Offham Road, West Malling, has been incorrectly assessed within the Urban Capacity Study, which has led to its rating within the Fair Accessibility Band and a minor negative within the corresponding SA Objective. Despite uncertainty regarding how the score is calculated for the Bus Stop Service Level, a lowest possible score of 0.4 still takes the site's cumulative score to a total of 10.4. This is a total percentage of 61%, a result that would place the site within the 'Very Good' band for accessibility. SA Objective 5: The site is a field with short grass that contains a small tree belt consisting of approximately a dozen small trees. Other than the site being undeveloped it is unclear as to why the site is considered a 'green infrastructure asset'. The site is not currently publicly accessible and contains no habitat of exceptional biodiversity value. In addition, it may be possible to conserve or even enhance the biodiversity of the site through the design of the landscaping and the new homes. Therefore, the uncertain significant negative assessment should be reconsidered.SA Objective 6: The scoring of uncertain minor negative from the development of the site for landscape and character should instead be negligible. The site is well enclosed, with development to the north and east of the site and further development bordering the site to the south and west. The site is therefore more closely associated with the existing built form of West Malling, effectively sitting within its confines, than it is with the open countryside further out to the south and west of the site.SA Objective 7: Berkeley suggests that the method of scoring the site with an uncertain significant negative due to the site's setting within 250m of a heritage asset may be overly cautious. The key views of these heritage assets are from St. Leonard's Street and the centre of the town. Views between the site and the St. Mary's Church are limited. There are few viewpoints into the Conservation Area from neighbouring properties due to the height of the surrounding vegetation and the relatively recent development at the back of Douces Manor screens the listed</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 2: services and facilities, this comment relates more specifically to the Urban Capacity Study (July 2022) than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the green infrastructure asset the site proforma is referring to is an area of woodland overlapping the south eastern edge of the site. Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 6: landscape, the site has been appraised in line with the site assessment criteria. The site is considered to be on the edge of the settlement of West Malling.</p> <p>With regard to SA objective 7: heritage, it is correct for the SA to have utilised a precautionary approach. Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 8: water, the site receives a mixed significant negative and negligible effect. The significant negative effect is as a result of the site falling within an area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the site not containing a water body or watercourse, or falling within a Source Protection Zone.</p> <p>With regard to SA objective 9: soils, the site has been appraised in line with the site assessment criteria. The site comprises greenfield land, a significant proportion of which is classified as Grade 3 agricultural land. It is irrelevant whether the site is currently in agricultural use or not.</p> <p>With regard to SA objective 13, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>building. Berkeley has previously commissioned a Heritage Assessment, which has concluded there will be no material harm to any of the designated heritage assets or non-designated historic buildings resulting from the development. Additionally, the proposals will be designed sensitively and will have a neutral impact on Sub Areas C and E of the West Malling Conservation Area, meaning the site will not unacceptably impact on the significance or setting of St. Mary's Church. SA Objective 8: Berkeley suggests that the result of this Objective, classified as both a significant negative / negligible effect, may be incorrect. The SA states that more than 25% of the site is within Flood Zone 3 and/or is within an area with a 1 in 30 year risk of surface water flooding. The EA flood risk maps for planning show that in terms of fluvial flooding the entire site is located within Flood Zone 1, and therefore is at the lowest risk of flooding. Berkeley's initial Flood Risk Assessment prepared by WSP acknowledges that there is a small area within a 1 in 30 year risk of surface water flooding, although this area is under 25% of the site. Any issues regarding surface water flooding can be effectively mitigated through the incorporation of sustainable urban drainage systems within the development. SA Objective 9: The site is located to the south-west of West Malling and consists of one field, comprising grass pasture, currently unused for agricultural purposes. The SA assessment of Objective 9 ranks the site as an uncertain significant negative. However, the site is not currently in productive agricultural use and realistically cannot be of a size of which it could function efficiently as a piece of agricultural land to be commercially farmed. It would not be suitable for modern agricultural vehicles to farm for crops and the size of the field would mean that animals could only be grazed temporarily before having to be moved on regularly, which is not practical. SA Objective 13: The site is classed as an uncertain minor negative with regards to protecting material assets and minimising waste. The SA reports that this is due to uncertain effects as to whether the site can viably offer mineral extraction. However, the site is likely too small to viably support mineral extraction. Any extraction prior to development would likely have adverse amenity impacts for residents living adjacent to the site.</p>	<p>uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p>
42831905	Annex 1	<p>Site 59842</p> <p>SA Objective 2</p> <p>Regarding Sustainability Objective 2 "To improve equality and access to community facilities and services", this requires reference to Appendix D of the Interim Sustainability Appraisal (SA) which provides insight as to Accessibility Bandings (in Table D.1). This refers to the methodology "devised by TMBC" and "explained in detail in the Urban Capacity Study" (UCS)[1]. This explanation occurs on pg15-18 of the UCS and indicates a maximum possible score for any site of 17 points, with UCS Table 5 providing the same bandings as SA Table D.1. The latter omits to explain that the banding is based on percentages, however.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 2: services and facilities, the site has been appraised in line with the site assessment criteria.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is recorded as having an uncertain significant negative effect because unlike sites 59647 and 59686, it contains an existing green infrastructure asset that could be lost as a result of new</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response																
		<p>It is clear from this that any site scoring 3.6 points or more[2] would be of "Fair" accessibility, while any achieving 7.0 points or more[3] would be "Good" and any exceeding 10.4pts or more[4] would be "Very Good".</p> <p>Hadlow is a Rural Service Centre in the draft plan, thus all sites at that settlement start from a base of 4 points (by reference to UCS Table 4).</p> <p>We refer you to the promotion document for site 59842. WSP, appointed by the promoter, confirm that the site is within 700 metres of Hadlow village centre, a walking distance of less than 10 minutes. The centre has a range of facilities, including (within 800m walking distance):</p> <table><tr><td>Facility</td><td>Point Score from UCS Table 4</td></tr><tr><td>Primary School</td><td>1 pt</td></tr><tr><td>GP surgery</td><td>1 pt</td></tr><tr><td>Dentist</td><td>0.5 pt</td></tr><tr><td>Pharmacy</td><td>0.5 pt</td></tr><tr><td>Post Office</td><td>0.5 pt</td></tr><tr><td>2x Convenience retail</td><td>0.5 pt</td></tr><tr><td>Two Brewers PH</td><td>0.5 pt</td></tr></table> <p>Thus, even without considering transportation connections, the score for site 59842 exceeds that required for "Good Accessibility". Accordingly, the SA Objective result for Site 59842 should be at least the same as that for 59647, 59635 and 59686, which are all assessed at this level and are "Neutral" (0).</p> <p>However, there is also a bus stop immediately outside the site on Maidstone Road (1pt) from which 3-4 services/hr operate through the week. This frequency constitutes a "Very Good" service, within the context of UCS Table 4a (for a further 1.6 pts).</p> <p>Overall, this assessment indicates Site 59842 would score at least 11.1 pts or 65.3% of the available 17 points. This would place it, comfortably, in the "Very Good" Accessibility range, by reference to TMBC's own scoring methodology.</p> <p>Other sites with "Very Good" Accessibility include withdrawn allocations LP25d (SA Site 59391) and LP25e (SA Site 59392), with these sites afforded a "Minor Positive" (+) assessment.</p> <p>This SA objective score for Site 59842 should therefore be amended to "Minor Positive" (+).</p> <p>SA Objective 5</p> <p>There is a discrepancy within this objective "To protect and enhance biodiversity and geodiversity" between the assessment for Site 59842 and that for Sites 59647 and 59686. All 3 sites retain the same wording: "The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site";</p>	Facility	Point Score from UCS Table 4	Primary School	1 pt	GP surgery	1 pt	Dentist	0.5 pt	Pharmacy	0.5 pt	Post Office	0.5 pt	2x Convenience retail	0.5 pt	Two Brewers PH	0.5 pt	<p>development. Specifically, it contains some areas of thick vegetation/woodland.</p> <p>With regard to SA objective 7: heritage, the SA acknowledges that the site is within 250m of a heritage asset and has therefore been appraised in line with the site assessment criteria.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 8: water because it is within an area with a 1 in 30 year risk of surface water flooding, in addition to containing a watercourse and slightly overlapping a water body on its north eastern edge. The objective relates to flooding, as well as water quality. Although the respondent notes that the watercourse does not represent a significant constraint to delivery, this is a 'policy-off' appraisal that does not take into consideration mitigation. The policy-off appraisal ensures all sites are appraised consistently.</p> <p>With regard to SA objective 9: soils, a significant proportion of the site comprises Grade 3 agricultural land. Therefore, it receives a significant negative effect. The effect is recorded as uncertain, as it is unknown whether the site comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land. As SA utilises a precautionary approach and it is unknown whether the site comprises high quality land or not, the uncertain significant negative effect is considered appropriate.</p> <p>In the next iteration of the SA Report the site assessment criteria for SA objective 9 will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC sometimes provides further information on the quality of agricultural land, but only covers specific areas of the borough.</p>
Facility	Point Score from UCS Table 4																		
Primary School	1 pt																		
GP surgery	1 pt																		
Dentist	0.5 pt																		
Pharmacy	0.5 pt																		
Post Office	0.5 pt																		
2x Convenience retail	0.5 pt																		
Two Brewers PH	0.5 pt																		

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Nonetheless, Site 59842 is assessed as “Significant Negative” (--) while Sites 59647 and 59686 are “Minor Negative” (-).</p> <p>If this derives from the presence of a Tree Preservation Order[5] across site 59842 it is clear from even a cursory review of the plan within the TPO, relative to an aerial photograph, that the A1 area within the TPO is wholly unreflective of the position on the ground. There is no justification for a difference between SA conclusions for Site 59842, compare to those for Sites 59647 and 59686, and this SA objective score for Site 59842 should therefore be amended to “Minor Negative” (-).</p> <p>SA Objective 7</p> <p>This objective “To protect and enhance the cultural heritage resource” has been misapplied in relation to Site 59842. The site has been assessed as “Uncertain Significant Negative” (--?) due to being located within 250m of a heritage asset.</p> <p>This assessment fails to acknowledge that there is only a single, Grade II Listed Building within 250m of the site. That building is James House[6], which lies on the opposite side of Maidstone Road approximately 230m away from the proposed entrance to the Site. James House is wholly obscured by intervening built form and vegetation.</p> <p>In contrast, Sites 59647 and 59635 have at least 45 Listed Buildings within 250m, including the Grade 1 Hadlow Tower and several Grade II* listed buildings. Furthermore, both these sites, together with 59686 and 59853, are demonstrably wholly visible from the top of Hadlow Tower[7]. Accordingly, these 4 Sites must be within the setting of this notable structure.</p> <p>This SA objective score for Site 59842 should therefore be amended to “Neutral” (0)</p> <p>SA Objective 8</p> <p>There is a discrepancy within this objective “To protect and enhance the quality of water features and resources” between the assessment for Site 59842 and that for Site 59647 compared with those for Sites 59635 and 59686.</p> <p>Both sites 59842 and 59647 retain the same wording: “The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.”</p> <p>Nonetheless, Site 59842 is assessed as “Significant Negative” (--) while Site 59647 is assessed as “Neutral” (0). As this same “Neutral” (0) categorisation has been applied to Site 59635 and Site 59686 but those sites are in Flood Zones 1 and 2 respectively, the assessments for both Sites 59842 and 59647 are incorrect, and should be “Minor Negative” (-).</p> <p>In the case Site 59842, it is clear from efforts deriving from the promotion to TMBC that the watercourse running through the site</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>does not represent a significant constraint to delivery, and would not preclude allocation.</p> <p>This SA objective score for Site 59842 should therefore be amended to "Minor Negative" (-).</p> <p>SA Objective 9</p> <p>This objective "To conserve and enhance soil resources and guard against land contamination" has been misapplied in relation to Site 59842. The site has been assessed as "Uncertain Significant Negative" (-?) as it is greenfield land and contains a significant proportion ($\geq 25\%$) of Grade 3 agricultural land.</p> <p>However, this same categorisation has been applied to Sites 59647, 59635 and Site 59686, yet all these include higher grade agricultural land (Grade 1 & 2). It is unreasonable for the assessment to 59842 to be more onerous in this regard, and this SA objective score for Site 59842 should be amended to "Minor Negative" (-).</p> <p>A summary showing how the assessment should be amended is included within our letter sent via email.</p> <p>SITE 59647</p> <p>SA Objective 8</p> <p>There is a discrepancy within this objective "To protect and enhance the quality of water features and resources" between the assessment for Site 59647 and that for Sites 59842, compared with those for Sites 59635 and 59686.</p> <p>Both sites 59647 and 59842 retain the same wording: "The site is either entirely or significantly (i.e. $\geq 25\%$) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding."</p> <p>Site 59647 is assessed as "Neutral" (0). As this same "Neutral" (0) categorisation has been applied to Site 59635 and Site 59686, but those sites are in Flood Zones 1 and 2 respectively, the assessments for both Sites 59842 and 59647 are incorrect, and should be "Minor Negative" (-).</p> <p>A summary showing how the assessment should be amended is included within our letter sent via email.</p> <p>SITE 59635</p> <p>SA Objective 5</p> <p>There is a discrepancy within this objective "To protect and enhance biodiversity and geodiversity" between the assessment for Site 59635 and that for Sites 59647 and 59686. All 3 sites are between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site".</p> <p>Nonetheless, Site 59635 is assessed as "Neutral" (0) while Sites 59647 and 59686 are "Minor Negative" (-).</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>There is no justification for a difference between SA conclusions for Site 59635, compared to those for Sites 59647 and 59686, and this SA objective score for Site 59635 should therefore be amended to “Minor Negative” (-).</p> <p>A summary showing how the assessment should be amended is included within our letter sent via email.</p> <p>SITES 59853 and 59857</p> <p>SA Objective 5</p> <p>There is a discrepancy within this objective “To protect and enhance biodiversity and geodiversity” between the assessment for Site 59853 and that for Sites 59647 and 59686. All 3 sites are between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site”.</p> <p>Nonetheless, Site 59853 is assessed as “Neutral” (0) while Sites 59647 and 59686 are “Minor Negative” (-).</p> <p>There is no justification for a difference between SA conclusions for Site 59853, compared to those for Sites 59647 and 59686, and this SA objective score for Site 59853 should therefore be amended to “Minor Negative” (-).</p> <p>A summary showing how the assessment should be amended is included within our letter sent via email.</p> <p>[1] SA Appendix D, para D.4</p> <p>[2] 21% of 17</p> <p>[3] 41% of 17</p> <p>[4] 61% of 17</p> <p>[5] TPO 83/10082/TPO, issued 1983</p> <p>[6] https://historicengland.org.uk/listing/the-list/list-entry/1070455?section=official-list-entry</p> <p>[7] By reference to photographs that are publicly available from TripAdvisor, taken during the period when the Tower served as a holiday let.</p>	
38330369	Annex 1	<p>These sites are within Hadlow parish. While Hadlow Parish Council agrees with many of the TMBC assessments in Annex 1, we contest the rating given in the following instances: Site ref. 59601 SA Objective 1: We believe the rating should be amended to uncertain minor positive (+?) as Hadlow medical centre fully subscribed. SA Objective 6: The rating should be amended to significant negative (--) The area is Green Belt and is currently the attractive first impression that</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>drivers/visitors will have of the village as they approach Hadlow. Any development would have a significant negative impact on views of Hadlow Tower and the conservation area of the village. SA Objective 7: Should be amended to significant negative (--) As above: any development would have a significant negative impact on views of Hadlow Tower and the conservation area of the village on the approach from Tonbridge. SA Objective 8: Should be uncertain minor negative (-?). The site, along with other sites north of the A26, helps absorb flood water at times of run-off from the fields down from West Peckham parish. SA Objective 10: Should be minor negative (-). There is no footpath or cycle path linking to Hadlow village and the A26 is a fast road and dangerous for pedestrians at that point. The likelihood of any residents using any form of transport other than private car is negligible. And due to the lack of parking space in the village, residents of any developments on this site would be more likely to use shops further afield with consequent increase in car use. Site ref. 59637 SA Objective 1: Disagree with the possible rating of (++). Should be negligible (0)/Uncertain significant negative (--?) Any development on the site would have a negative effect for existing users of the footpath on their enjoyment of the countryside. SA Objective 6: Should be significant negative (--). The site is Green Belt with a well-used footpath running across it. For visitors to the Cemetery next to the site, it would adversely impact cherished views across the existing countryside to the Grade I listed Hadlow Tower. SA Objective 7: Should be significant negative (--), the site affects the setting of the cemetery next to it, with its Grade II listed war memorial. SA Objective 8: Should be just Significant negative (--). The site is prone to flooding and run-off from any development could affect the health of the nearby pond. SA Objective 10: Should be minor negative (-). There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge. Site Ref. 59638 SA Objective 1: Should be minor positive (+): the junction of the access road with the A26 is dangerous due to visibility and the speed of traffic using the A26. SA Objective Should be significant negative (--): the location of the site next to the pond would impact the quality of the water in the pond and the wildlife that use it. SA Objective 6: Should be significant negative (--): The site is Green Belt. Any development would adversely impact the rural setting of the pond, currently with trees and field behind it. SA Objective 10: Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge. Site Ref. 59647 SA Objective 1: Should be Uncertain minor positive (+?): the Hadlow medical centre is over-subscribed with no room for expansion. SA Objective 6: Should be significant negative (--): The site is Green Belt. Traffic from any development of that size would cause unacceptable congestion on Court Lane and at the narrow junction with the A26. SA Objective 10: Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge. Site Refs. 59659 & 59686 SA Objective 1: Should be Uncertain minor positive (+?): the Hadlow medical centre is over-subscribed with no room for expansion. The junction of the proposed access road with</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). Sites 59601, 59686 and 59776 have therefore been appraised in line with the site assessment criteria.</p> <p>Sites 59637 and 59776 have also been appraised in line with the site assessment criteria. The sites are located within 800m of an existing healthcare facility and an existing area of open space/walking and cycle path/play area/sports facility. Therefore, they receive a significant positive effect. In the next iteration of the SA Report the GIS analysis will be refined so that sites that slightly overlap an open space will not be picked up as containing that open space. As a result, these effects will no longer be coupled with uncertain significant negative effects.</p> <p>Site 59859 receives a mixed significant positive and uncertain significant negative effect in relation to SA objective 1 because while it is located within 800m of an existing healthcare facility and an existing area of open space/walking and cycle path/play area/sports facility, it contains an open space that could be lost as a result of development, although this is uncertain.</p> <p>Site 59806 received a mixed uncertain significant negative and minor positive effect in relation to SA objective 1. The uncertain significant negative effect is as a result of the site slightly overlapping an open space. As mentioned already, in the next iteration of the SA Report the GIS analysis will be refined so that when a site slightly overlaps an open space, it is not picked up as containing that open space. As a result, the site will receive a minor positive effect only in relation to this objective, as it is within 800m of an existing area of open space and walking path.</p> <p>Sites 5981, 59747 and 59846 receive a minor positive effect in relation to SA objective 1 because they are within 800m of either an existing healthcare facility or an existing area of open space/walking and cycling path/play area/sports facility (but not both).</p> <p>Sites 59842 and 59834 receive a significant positive effect in relation to SA objective 1 because they are within 800m of an existing healthcare facility and an existing area of open space/walking and cycle path/play area/sports facility.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59858 receives an uncertain significant negative effect because it contains an existing green infrastructure asset (thick vegetation and woodland) that could be lost as a result of new development.</p> <p>With regard to SA objective 6: landscape, the sites referenced by the respondent have been appraised in line with the site assessment criteria. Some errors have, however, been identified regarding whether sites are within, on the edge of or not located near any settlements in a rural location. This is because the GIS analysis identified some sites as not located near any settlements in a rural location even though they are on the edge of a settlement, as there</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the A26 is dangerous. SA Objective 6: Should be minor negative (-) The site is Green Belt. SA Objective 10: Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge. Site Ref. 59776 SA Objective 1: Should be significant negative (--): Carpenters Lane is unsuitable for the amount of traffic that would be generated by the development: this would impact the well-being of local residents. The junction with the A26 would be dangerous with the increased traffic turning on to the main road. The local medical centre is over-subscribed with no room for expansion. SA Objective 6: Should be significant negative (--). The site is Green Belt. Any development would adversely impact the setting of Williams Field, the main open space in the village. SA Objective 10: Should be significant negative. Minor negative(-)/significant negative (-) depending on the exit points from the development. There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge. Site Ref. 59795 SA Objective 6: Uncertainty as to location of site. If it is not the brownfield site as claimed by TMBC, but the field with trees next to it as shown on the TMBC map, the site would be Green Belt. SA Objective 9: Uncertain whether site is brownfield land. The TMBC map shows the site to be the field with trees, and not the brownfield site next to it. Site Ref. 59811 SA Objective 1: Should be significant negative (-) due to the adverse effect on the well-being of Hadlow residents from a large amount of increased traffic. Hadlow is the nearest large village and is where much of the traffic from the site would access the A.26. This would most likely lead to much-increased congestion in Carpenters Lane and at the junction with the A26 which already sees queues of traffic exiting onto the main road. SA Objective 6: Should be Significant negative (-). The site is Green Belt. It forms part of the parkland of historic Oxon Hoath estate and is crossed with footpaths affording sweeping views across the countryside to the Grade I listed Hadlow Tower and beyond. SA Objective 7: Should be Significant negative (-). The site almost completely surrounds the historic grade II listed Oxon Hoath and its gardens and parkland. SA Objective 10: Should be significant negative (-). No nearby public transport and no cycle paths to allow safe cycling means that all road journeys will be by car. Site Ref. 59853 SA Objective 1: Should be Uncertain significant negative (-?): The increase in traffic from the site and the congestion caused would have an adverse effect on the well-being of residents of Court Lane. Neither Court Lane nor Victoria Road are suitable to take a large amount of increased traffic. It would also cause congestion and long delays at the narrow junction with the A26. There is inadequate infrastructure to enable safe walking from the site to Hadlow to access village facilities, although a footpath could be added as part of a development. However, the distance from the village centre would lead many residents to use their cars rather than walk. There is no infrastructure to allow safe cycling around Hadlow and further to Tonbridge. Hadlow medical centre is over-subscribed with no room for expansion SA Objective 9: Should be minor negative (-). Only about 50% of the site is brownfield. The rest is grass with some under agricultural cultivation. SA Objective 10: Should be minor</p>	<p>was no percentage overlap with the settlement boundaries. Therefore, in the next iteration of the SA Report, some of the effects against this objective will be updated to accurately reflect whether sites are on the edge of or not located near any settlements in a rural location. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. All adverse effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 7: heritage, all effects against this SA objective are recorded as uncertain, as the actual effect is dependent on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, sites 59601, 59859, 59842 and 59834 are recorded as having an uncertain significant negative effect because they are either entirely or significantly within Flood Zone 3 and/or a 1 in 30 year risk of surface water flooding. Further to this, they contain a water body or watercourse, or fall within or partially within Source Protection Zone 1. The effect is recorded as uncertain, as effects resulting from Source Protection Zones and water bodies are uncertain.</p> <p>Site 59637 is recorded as having a mixed significant negative and negligible effect against this objective. The significant negative effect is as a result of the site falling within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the site not containing a water body or watercourse, or falling within a Source Protection Zone.</p> <p>With regard to SA objective 9: soils, TMBC informed LUC that site 59853 comprises brownfield land.</p> <p>With regard to SA objective 10: climate change mitigation, the sites have been appraised in line with the site assessment criteria. Sites 59601, 59637 and 59853 are more than 800m from a railway station but within 400m of a bus stop. Therefore, they receive a minor positive effect. Sites 59747, 59806 and 59846 are more than 800m from a railway station and more than 400m from a bus stop and cycle route. Therefore, they receive a minor negative effect.</p> <p>A map showing the location of site 59795 can be found at the top of its proforma. Although the site may not look as though it comprises brownfield land, TMBC has informed LUC that it does.</p> <p>Site 59659 is a duplicate of 59686. 59686 is the definitive reference number for this site.</p> <p>Site 59865 is a duplicate of 59834. 59834 is the definitive reference number for this site.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>negative: most of the site is more than 400m from a bus stop. Site Ref. 59859 SA Objective 1: Should be just Uncertain significant negative (--?): the access on to Carpenters Lane is on a dangerous bend with poor visibility. SA Objective 5: Should be Significant negative (--): the site runs alongside the river Bourne and would impact the biodiversity of the river, particularly due to flooding of the site. SA Objective 8: Should be just Significant negative. The site is on the flood plain of the river Bourne; it is prone to flooding and is in Flood Zone 3. Any run-off will adversely impact the quality of water in the Bourne.</p> <p>Site Ref. 59842 SA Objective 1: Should be Significant negative (--): The size of the development would adversely impact the well-being of Hadlow residents as traffic from the development would increase congestion in the village centre. Hadlow medical centre is fully subscribed with no room for expansion. SA Objective 6: Should be Uncertain Significant negative (--?): The site lies between two well-used footpaths and any development would adversely impact walkers' enjoyment of the countryside. SA Objective 8: Should be Significant negative (--): The site is prone to flooding, but it also has a valuable role in absorbing run-off of excess water during heavy rainfall from the fields north of the A26 towards West Peckham parish, thereby helping prevent flooding of Hadlow village. Development of the site could lead to serious flooding of homes in the village - particularly along Maidstone Road. There are two streams crossing the site, ultimately feeding into the river Bourne. Any development would therefore affect the quality of the water in the streams and the Bourne. Site Refs. 59834 & 59865 SA Objective 1: Should be minor negative (-): Any development on the site would have a negative effect for the many users of the footpath (MT160) on their enjoyment of the countryside. Medical facilities are remote from most of the site.</p> <p>SA Objective 8: Should be just Significant negative (--): development on the flood plain could exacerbate flooding further downstream. The following three sites are proposed for outside Hadlow Parish in the Maidstone direction, but their development would impact the village in similar ways to a lesser or greater extent depending on their size: Site Refs. 59747, 59806 & 59846 SA Objective 1: Should be Significant negative (--): The size of the developments, particularly the huge scale of 59806, would adversely impact the well-being of Hadlow residents as traffic from the developments would increase congestion through the village centre. No medical facilities nearby; Hadlow Medical Centre is the nearest, but is fully subscribed with no room for expansion SA Objective 6: Should be Significant negative (--): due to the loss of Green Belt, including woodland in 59806. SA Objective 10: Should be significant negative (--). No nearby bus stop and lack of cycle paths along the A26 (or A228) to allow safe cycling means that all road journeys will be by car. The following sites are outside Hadlow and all raise similar concerns for Hadlow Parish Council:mSite Refs. 59685 and 59689, 59693 & 59805 SA Objective 6 Should be a significant negative (--) for all the sites: the outward sprawl of Tonbridge towards Hadlow and its outlying hamlets, is contrary to TMBC's anti-coalescence aims as it threatens the individual identity of Hadlow.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
25315361	Annex 1	The following sites have been categorised as being within 800 metres of an existing health care facility. 59702, 59790, 59826, 59847. This is erroneous because the Phoenix Surgery in Burham and the nursing outpost in Eccles will be moved to Peters Village well before the new Local Plan comes into effect. In fact, once the medical facility is moved to Peters village then it will be inaccessible by public transport given the present bus service. This should be recorded as a significant negative for all sites in Eccles and Burham. For sites which are than 800m from a medical facility, there should be a clear distinction between those where the medical facilities can be reached by public transport and those where it cannot. Given that medical facilities will not be accessible by public transport from Eccles, all sites in Eccles should be categorised as being in the Poor Accessibility Band under SA Objective 2. This covers the sites above plus the following. 59702 59666 59826 59790 59841 59768 59831 Although there are two buses a week (Tuesdays and Thursdays), these travel from the new surgery to Eccles on the outward journey and from Eccles to the new surgery on the return journey.	<p>Although the Phoenix Surgery is proposed to be moved to Peters Village, the SA reflects what services and facilities are present at the time of assessment.</p> <p>Access to public transport is dealt with separately under SA objective 10: climate change mitigation.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>
25315361	Annex 1	The following sites are classified for the purpose of SA Objective 4 as being within 400m of a bus stop. 59702 59666 59826 59790 The bus stop is served only by one bus on Tuesday and one on Thursday. This poor level of public transport cannot support regular employment on the designated sites.	SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.
25315361	Annex 1	The following sites are categorised as being within 400m of a bus stop for the purposes of SA Objective 10. 59702 59666 59826 59790 59841 59768 59831. A bus stop is only useful if it supports a bus service. During school holidays, there are only two buses per week to Maidstone: one on Tuesday and one on Thursday. The bus service is sufficiently poor that the designated sites should not be given any credit for their proximity to a bus stop. The two buses allow turnaround times of 90 mins and 150 mins respectively in Maidstone. This creates difficulties for people who wish to make appointments for eye tests, bank consultations or many other services. A villager recently had an appointment which ran late and it cost her a £17 taxi fare to return to the village. The pattern of bus service does not support hospital appointments nor the possibility of travel beyond Maidstone town centre. Given the latter limitations, all the above sites should be classified as within the Poor Accessibility Band under SA Objective 2. Although there are school buses during term term they are not at convenient times and in the morning they do not allow free travel with a bus pass. Furthermore, the travelling public would not wish to impinge upon the available capacity for school children. It cannot be assumed that new sites could support an enhanced bus service. The planning proposal for Peters village mooted a peak service of up to	<p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>The Interim SA Report states at paragraph D.27 "It is possible that new transport links such as bus routes or cycle paths may be provided as part of new developments, particularly at larger sites, but this cannot be assumed" [emphasis added].</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		two buses per hour, but the village is now being served by only two buses per week.	
42452545	Annex 1	<p>SITE 59746 COBLANDS NURSERY, TRENCH ROAD, TONBRIDGE TN11 9NG. Coblands Nursery is identified under reference 59746. The site was submitted as a suitable, available and deliverable housing site within the Call for Sites process. The UCS methodology assesses the potential yield taking account of constraints and local character and provides a broad brushed assessment of the site. As a consequence, the estimated yield was 255 dwellings. Having undertaken more detailed and refined analysis for the site, it can be demonstrated that the site can support around 320 dwellings. The Vision document accompanying this submission provides further details of a proposed development for around 320 units in support of this assessment. In respect to the site scoring in Annex 1 for the site, the following is submitted in response: SA Objective 1: To improve human health and well-being Minor positive (+)/Uncertain significant negative (--?). The site is within 800m of either an existing healthcare facility or an existing area of open space walking and cycle path / play area/ sports facility (but not both). The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. However, these negative effects are uncertain as the effects will depend on the exact scale, layout and design of development and whether these existing features are in fact lost to new development. COMMENT: The Site is not within an area of open space or accommodates an outdoor sports facility as it is entirely occupied by a commercial horticultural nursery. Compared to what exists presently – a closed private site – the proposed development is likely to include local equipped play areas and open space. The site is within 800m of an existing healthcare centre – Trenchwood Medical Centre which is run and managed by the Hildenborough and Tonbridge Medical Group. The site is also within 800m of several outplay play facilities for young and old – including Tonbridge Angels FC, Bowling Club, Cricket club and Play area (Darenth Avenue). Revised marking: SIGNIFICANT POSITIVE (++)</p> <p>SA Objective 2: To improve equality and access to community facilities and services Negligible (0). The site is placed within the Good Accessibility Band. NO CHANGE SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society. Uncertain significant positive (++?)</p> <p>The site is within 800m of an existing secondary school and a primary school. However, uncertainty exists as the effects will depend on there being capacity available at those facilities to accommodate new pupils. It is also noted that the provision of new residential development could stimulate the provision of new schools and/or school places, however this cannot be assumed at this stage and is therefore uncertain. NO CHANGE SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough Negligible (0)/Negligible (0) The location of residential sites will not directly influence sustainable economic</p>	<p>We have responded to the estimated yield provided by TMBC, which was generated using a methodology agreed by the Council and applied to all sites.</p> <p>With regard to SA objective 1: health and wellbeing, the site is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an open space (Waveney Road Woods) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>In the next iteration of the SA Report, Trenchwood Medical Centre will be added and all sites affected updated.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is recorded as having an uncertain significant negative effect because it is located within 250m of an area of ancient woodland, which is also considered a green infrastructure asset. Development of the site could therefore have an adverse effect on this asset. The site is also recorded as containing a green infrastructure asset.</p> <p>The site is incorrectly recorded as containing an open space against SA objective 6: landscape and townscape. In the next iteration of the SA Report the site will not be identified as containing an open space.</p> <p>The site is also incorrectly recorded as not being located near any settlements, even though it borders Tonbridge. In the next iteration of the SA Report, the assessment will be updated to reflect this.</p> <p>With regard to SA objective 7: heritage, the site has been appraised in line with the site assessment criteria.</p> <p>With regard to SA objective 8: water, the site is recorded as having an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. Further to this, it contains a water body. As such, the site is potentially at risk of polluting the water contained within this water body. Although the respondent has stated that water quality will be protected, this is a 'policy-off' appraisal of the site and therefore mitigation is not taken into account. This ensures all sites are appraised consistently.</p> <p>With regard to SA objective 13: material assets, the justification text for the uncertain minor negative effect explains that the effect is uncertain at it will largely depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p> <p>Any development of the Site would avoid locating built form which would affect flood storage such a land raising on land within flood zone 2 and 3. The site lies outside of the SPZ Zone 1, 2 and 3, but lies</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>growth or the delivery of employment opportunities. NO CHANGE SA Objective 5: To protect and enhance biodiversity and geodiversity Uncertain significant negative (--?). The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development. COMMENT: The site is currently used as a commercial horticultural nursery with a manufactured landscape utilising significant areas of hard landscaping to suit the business with extensive use of insecticides and pesticides associated with the business. The new development will expect to achieve an enhancement of the biodiversity and geodiversity of the site with biodiversity net gain through careful design of the development and improvement to the landscape, providing a variety of formal and natural habitats. Revised marking: Uncertain positive (+/?)</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--?). The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. COMMENT: The site does not comprise designated open space and lies adjacent to the main settlement of Tonbridge. The site is used as a commercial nursery and due to the infrastructure and buildings associated with the use, is brownfield. New development will allow the landscape to be improved which will include the creation of new open space. Protected Woodland beyond the northern boundary will be protected with an opportunity for public rights of way through the woodland to be enhanced. Whilst any development alters the landscape of a location, the site is located on the edge of a settlement and this should be scored as a minor unknown negative Revised marking: Minor uncertain negative (-/?)</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource Uncertain minor negative (-?) The site is located between 250m-1km of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. COMMENT: Historic England record two heritage assets within 1km of the Site: 313 Shipbourne Road (Grade II listed): 0.9km from the centre of the site Latters Farmhouse Barn, Hilden Avenue (Grade II listed): 0.9km from the centre of the Site. Both properties are somewhat distant from the Site and neither property will be within sight of any development on the Site. Whilst the two Listed Buildings are within 1km of the site, any development on the Site will have no impact on their setting and contribution to local character. Revised marking: Negligible (0)</p> <p>SA Objective 8: To protect and enhance the quality of</p>	adjacent to a watercourse (Hilden Brook). During construction, protection of water quality will be carefully managed and monitored.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>water features and resources Significant negative (--) / Uncertain significant negative (--) The site is either entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. The site contains a water body or water course or falls within or partially within Source Protection Zone 1. However, these effects are uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. COMMENT: The vast majority of the site falls within Flood Zone 1. A small part (some 0.35ha on the south-western boundary) representing only around 3% of the total Site is located within Flood Zones 2 and 3, given the proximity to the Hilden Brook (EA records). This is as confirmed in the TMBC Level 1 SFRA Site Screening document within the evidence base. Any development of the Site would avoid locating built form which would affect flood storage such as a land raising on land within flood zone 2 and 3. The site lies outside of the SPZ Zone 1, 2 and 3, but lies adjacent to a watercourse (Hilden Brook). During construction, protection of water quality will be carefully managed and monitored. Revised marking: Negligible (0) / Uncertain significant negative (--) SA Objective 9: To conserve and enhance soil resources and guard against land contamination Significant positive (++) The site is located on brownfield land. NO CHANGE SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+) The site is more than 800m from a railway station but within 400m of a bus stop. NO CHANGE SA Objective 11: To improve adaptation to climate change so as to minimise its impact Negligible (0) The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10. NO CHANGE SA Objective 12: To protect and improve air quality Negligible (0) The site is not within 100m of an AQMA. NO CHANGE SA Objective 13: To protect material assets and minimise waste strong Uncertain minor negative (-) The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed. COMMENTS: Kent Minerals and Water Local Plan 2013-30 (adopted 2020) includes maps for TMBC district Mineral Safeguarding Plan (pg 170). This indicates the presence of sub-alluvial river terrace deposits on the banks of Hilden Brook, the extent of which is extremely limited and located within the flood zone. Given the limited extent the mineral is not viable for working. Revised marking (0) - Negligible. SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures Significant positive (++) The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable</p>

		DEFINITION ALSO INCLUDE GRADE 3A AND SHOULD BE PROTECTED, IRRESPECTIVE OF THE SIZE OF THE OVERALL PLOT.	
42643873	Annex 1	<p>These comments specifically refer to Green Belt and BMV agricultural land sites 59693, 59721, 59685, 59805, 59809, 59690, but may be applied more generally. REGARDING AGRICULTURAL LAND: There should be a clearer statement in the Sustainability Appraisal, Sustainability Objectives and Targets against the development of Best, Most Valuable Land as defined by DEFRA. This should include grade 3A land as well as grades 1 and 2. The above sites include, along with grades 1 and 2 land, some grade 3A land which is regularly farmed and which the farmer considers productive. The Placemaker scoring system ignores the presence of grade 3A land. The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site. SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%. SITE 59721: Grade 2 land makes up at least 50% of the site. SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%. I am very concerned that these sites have been amalgamated with the larger Grange Farm (59690) site to make "site" 59805. This has the effect of considerably diluting the % of grades 1 and 2 land on the combined "site". I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging OF sites in this way to reduce the % of grades 1 and 2 land on them could enable all grade 2 land to be developed. THIS WOULD BE A</p>	<p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints.</p> <p>With regard to the Placemaker tool, this comment does not specifically relate to the SA. The SA uses the Agricultural Land Classification to inform SA objective 9: soils. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p>
42705473	Annex 1	<p>Site 59696: fields at the rear of Vauxhall Gardens TN11 0LZ. The appraisal claims the site is within 800m of medical facilities. That may only be true as the crow flies, if it refers to Tonbridge Cottage Hospital, to the south, on the other side of the dual A21; the only viable pedestrian or vehicle route is much longer. The nearest doctors' surgery, Tonbridge Medical Centre is over a mile away. The appraisal says there is no watercourse, but there is seasonal flow down the ditch alongside the track leading to Priory Wood and a pond in the copse on the northern edge of the site. The appraisal does not mention that development would mean the loss of mature oaks and a copse with Tree Preservation Orders, as well as the loss of established hedgerows; the environmental impact would be significant. The site is Green Belt and looks across to the High Weald AONB on Castle Hill slopes. Access to the highway would only be possible via the hazardous Vauxhall Gardens junction to Pembury Road, which would entail skirting the listed Vauxhall pub. Air quality would be worsened by additional traffic entering a frequently congested road and Vauxhall roundabout. There are no schools with spare capacity within walking distance. The site is unsuitable for high density housing. Site 59697: this constricted, sloping, triangular site has been proposed for 'commercial' use. It is bounded by the embankment of the southbound A21 carriageway, the southbound off-ramp down to</p>	<p>As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.</p> <p>The respondent refers to a seasonal flow ditch alongside the track leading to Priory Wood and a pond in the copse on the northern edge of the site. These features are not displayed in the Ordnance Survey GIS data for water. As such, the effect remains the same.</p> <p>The site receives an uncertain significant negative effect against SA objective 5: biodiversity and geodiversity. This is due to the fact the site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. The SA does not give consideration to TPOs.</p> <p>The site also receives an uncertain significant negative effect in relation to SA objective 6: landscape. The SA acknowledges the fact the site is within 500m of the AONBs.</p> <p>The site receives a negligible effect in relation to SA objective 12: air quality, as it is not within 100m of an AQMA. This is in line with the site assessment criteria.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		Vauxhall roundabout and the Vauxhall Lane connection loop from the northbound A21. There is no conceivable junction for vehicular access. The site has no existing access to power or sewerage. If developed with a warehouse or similar it would blight the southern gateway into Tonbridge. Like 59696 it is Green Belt and close to the road gates to the Grade 2 listed Somerhill Park.	<p>With regard to access to schools, the SA states that the site is within 800m of an existing secondary school and an existing primary school. The SA also acknowledges that uncertainty exists, as the effect will depend on there being capacity available at those schools to accommodate new pupils.</p> <p>With regard to site 59697, this was submitted through the Call for Sites exercise, and is therefore considered to be a reasonable alternative and was subject to SA</p> <p>With regard to site 59696, the SA acknowledges that the site is located within 250m of a heritage asset. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>
42642561	Annex 1	59623 A recent application to develop this site was refused by TMBC in March 2022 (21/01677/FL). It was refused on the grounds of; It will cause less than significant harm to the character of the Tonbridge conservation area which when weighted against public benefits was refused under paragraph 11(d) (i) of the NPPF 2021The development would result in an overbearing and incongruous addition failing to accord with the surrounding built form contrary to CP24 of the core strategy, Policy SQ1 of the borough managing development and the environment DPD 2010 and p 130 and 134 of the NPPF 2021. The development would have an overbearing impact on the residential amenities of the neighbouring property resulting in loss of of aspect and increased noise contrary to CP1 and CP24 of the core strategy.These harms are considered to significantly and demonstrably outweigh the benefits of the proposal such that the presumption *in favour of sustainable development in para 11 (d) of the NPPF does not apply. Additionally; contrary to SA Objective 3, the only schools within 800m are private. SA Objective 5, there is known and recorded activity of Bats in immediate vicinity. SA Objective 6, to demolish a house and redevelop the site, in a conservation area, simply cannot (by definition) protect the boroughs townscape character. Surely to redevelop the existing structure would be more beneficial and environmentally more sustainable than knocking down a perfectly good house.	<p>Sites identified through the Call for Sites exercise and Urban Capacity Study have been subject to SA.</p> <p>With regard to SA objective 3: education, the proforma states "The site is within 800m of an existing secondary school or a primary school (but not both)." Specifically, the site is within 800m of Slade Primary School. All schools included in the GIS analysis are state schools.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity and 6: landscape and townscape, the site has been appraised in line with the site assessment criteria, as outlined in Appendix D of the Interim SA Report.</p> <p>With regard to the site falling within the Conservation Area, this is acknowledged by the uncertain significant negative effect against SA objective 7: heritage. SA objective 6 deals with the landscape and townscape whereas SA objective 7 deals with the historic environment.</p>
42587393	Annex 1	The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development "that protects areas of particular importance", which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt? Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge. It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of</p>

		<p>inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply. Rather all other options should be considered first. Best Most Valuable Agricultural Land (BMV) – here should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). i.e. Grade 1. Grade 2 and Grade 3A DEFRA land classifications. This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home. The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site. It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land. The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site. Site Specific Comments with regard to BMV SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%. SITE 59721: Grade 2 land makes up at least 50% of the site. SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%. SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site. This has the effect of considerably diluting the % of grade 2 land on the combined “site”. I contend that “site” 59805 is not a true single site as it is bisected by a road. In theory the further enlarging OF sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.</p>	<p>Grade 1, 2 or 3 agricultural land will have a minor negative effect. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59693, 59721, 59685, 59805 and 59690 have all been appraised as separate sites. All sites, with the exception of 59690, receive a significant negative effect in relation to SA objective 9: soils, as they are greenfield and contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 receives an uncertain significant negative effect, as it is unknown whether it comprises Grade 3a (high quality) or 3b (not classed as high quality) agricultural land.</p>
42718433	Annex 1	<p>Green Belt Land – The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. In the next iteration of the SA, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p> <p>Sites 59805 and 59690 have been appraised as separate sites. Each site receives a significant negative effect in relation to SA objective 9: soils. This is because site 59805 is a greenfield site and contains a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land. Site 59690 is also a greenfield site and contains a significant proportion of Grade 3 agricultural land, but it is unknown whether this is Grade 3a (high quality) or 3b (not classed as high quality) agricultural land and therefore the effect is recorded as uncertain. This is because in some places the Agricultural Land Classification mapping does not distinguish between Grades 3a and 3b agricultural land.</p>
42260449	Annex 1	Green Belt Land – The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development "that protects areas of particular importance", which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt? Without a proper evaluation of the sites in regard to their	Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge. It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply. Rather all other options should be considered first.	
42729569	Annex 1	<p>Site 59661. SA Objective 4 – the potential for economic growth is limited by the fact that the site has major access problems, since it is on a private lane with a public right way only for foot traffic. The lane itself is single track with weak bridges and unsuitable for delivery lorries even if there was a right of way for them (which there isn't). There is no access from Vale Road. This would be a poor area for business. SA Objective 5 – destroying a flood plain would obviously have an adverse effect on biodiversity. SA Objective 8 – This site is a flood plain, surrounded on three sides by rivers (look at a map). Unsurprisingly, therefore, it floods. I have lived in Postern Lane for 11 years and have seen this site completely covered by the Medway three or four times – this isn't a remote eventuality or a one in 30 year risk. It floods ALL THE TIME. In a bad year it floods so heavily that the waters flow from the Medway all across the land, over Postern Lane and into the tributary to the south of the lane. Don't build on it. SA Objective 11 – given that this site already floods all the time, and that climate change is predicted to increase the regularity and severity of flooding, it is wrong to give this site a negligible rating. This site is a complete non-starter for development.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>The SA is too high-level to give consideration to site-specific access points. This is something that will instead be determined at planning application stage, if the site is allocated.</p> <p>The SA acknowledges that the site is at risk of flooding, with the site receiving an uncertain significant negative effect in relation to SA objective 8: water.</p>
42740033	Annex 1	<p>59613. Snoll Hatch East Peckham is a rural community that consists of nine Hamlets. Established anti-coalescence planning policy dictates that the distinct nature of the Hamlets must stay protected and preserved. The three main rivers of the Borough run through the village, flooding of roads, residential and business properties is a regular occurrence. The entirety of the village of East Peckham, including its constituent Hamlets, is surrounded by land designated as green belt. This is not a suitable site for development because: Objective 9 states the site is brownfield. The Site is green belt, not brownfield. The Revised NPPF (2021) indicates at paragraph 137 that openness is an essential characteristic of the Green Belt. The openness of the Green Belt has a spatial aspect as well as a visual aspect. 'Open' can mean the absence of development in spatial terms, and it follows that openness can be harmed even when development is not readily visible from the public realm. Objective 2 states fair accessibility. This is incorrect, accessibility is poor. The only access roads are narrow and regularly flood from the Bourne and Medway Rivers, and flash flooding occurs from run off from hills to the north and east of the Site. All the above roads are the only access to the area that contains site 59613. All are unsuitable for extra traffic, and all will leave the site isolated and inaccessible during the regular flooding. Flooding occurs on this site from both the River Bourne and River Medway, and also from run off from surrounding higher land.</p>	<p>The Green Belt often contains areas of brownfield land, in addition to greenfield land.</p> <p>With regard to flooding, the site receives a mixed significant negative and negligible effect in relation to SA objective 8: water. The significant negative effect is due to the fact the site is either entirely or significantly (i.e. more than or equal to 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the site not containing a water body or watercourse, or falling within a Source Protection Zone.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Leigh Barrier does not protect this area nor will any works to raise the height of the barrier. The majority of flooding of this area is travelling downhill on its way to the Medway. Much does not reach the Medway and therefore sits in Snoll Hatch for days. The site falls within flood zones 2 and 3. Policy CP10 states within the floodplain, development should first seek to make use of areas of no or low risk to flooding before areas of higher risk. Paragraph 167 of the Revised NPPF (2021) advise that when determining planning applications, local planning authorities should ensure that flood risk is not increased elsewhere. Ground water tables are very high in this area. A recent application for a major development in the village (ref 21/03353/FL highlighted the unsuitability of SuDS as there is not enough clearance between maximum groundwater levels and the underside of soakaways. Site 59613 will need considerable ground build up (over 500mm) to achieve the minimum clearances stated in the SuDS Manual. This will have the knock on effect of displacing surface and flood water into existing properties. Any discharge of surface water from this site into surrounding watercourses will create extra flooding downstream. The Pound, Old Rd, Medway Meadows and Branbridges 170oesn'ty suffer from severe flooding from the Medway and Bourne. The Coult Stream regularly floods Hale St, Smithers Lane and further into the Clubbs Quarry. (Photos of those roads and areas below); TMBC's 2016 Green Belt survey specifically mentions the Snoll Hatch Hamlet and the importance of anti-coalescence measures being maintained to keep the Hamlet separate from the main village of East Peckham. Development of site 59613 will directly undermine this long standing anticoalescence policy. The Local Development Framework (para 6.3.35) state East Peckham, Snoll Hatch and Hale Street must be kept separate and not filled in by housing. Developing site 59613 will be in direct opposition to current anti-coalescence policy. Site 59613 does not fall within a Rural Service Centre and never has. East Peckham lost its GP practice in 2018 and should also no longer be classed as a Rural Service Centre. It has also lost its two village pubs and more recently its bakers. Site 59613 is immediately adjacent to Snoll Hatch Character Area, the integrity of which must be preserved. The nearest train station is 2.4km from the site, and is not a commuter station. The roads to it are narrow, without lighting or pavement and regularly flood making it impassable to pedestrian and vehicle. There is no parking at the station. No booking office. No telephone. No toilets. No wheelchair availability. No step free access. No accessible taxis. No impaired mobility set down and no staff. The 6000-8000 homes being built in the Capel and Paddock Wood developments are within 3 miles of East Peckham. This will cause flooding and traffic issues within East Peckham as well as place huge strain on infrastructure. This housing will meet need in the East Peckham area, and to build more locally will completely overwhelm the area in every way imaginable. Flooding, traffic and housing need calculations from the Capel and Paddock Wood developments to be taken into account whilst considering site 59613. Due to the above reasons, East Peckham Parish Council does not consider that this site is suitable for development, and should not be included as part of the</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		Local Plan. It would destroy green belt and increase flooding risk. The ground water levels are unsuitable for the use of SuDs. Anti-coalescence policy also dictates the site is unsuitable. The surrounding roads and lanes are very narrow, and regularly flood from numerous sources. East Peckham has lost important infrastructure in recent years, most notably the GP Surgery, pubs and the bakery. There is no accessible to a commuter railway station. East Peckham should no longer be classed as a Rural Service Centre. Should site 59613 be chosen for development, East Peckham Parish Council would expect sequential testing to evidence that there is no more suitable site for development elsewhere within the Borough.	
42732801	Annex 1	<p>Site 59424. SA Objective 1: The current unbroken walking/cycle/bridle-path would need to be broken to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive to Uncertain significant negative. SA Objective 2: The site may be considered to be in a 'good accessibility' band, but in reality, providing access would involve in the destruction open spaces and therefore adversely impact the ability to achieve SA Objective 1 (Improve human health and well-being) and SA Objective 5 (To protect and enhance biodiversity and geodiversity). This status should change from Negligible to Uncertain significant negative. Site 59531 SA Objective 2: The site may be considered to be in a 'very good accessibility' band, but in reality, providing access to the site would involve breaking a footpath, therefore adversely impacting the ability to achieve SA Objective 1. This status should change from from Minor positive to Uncertain significant negative. Site 59534 SA Objective 2: The site may be considered to be in a 'very good accessibility' band, but in reality, providing access to the site would involve breaking a footpath, therefore adversely impacting the ability to achieve SA Objective 1. This status should change the position from Minor positive to Minor negative. Site 59534 SA Objective 1: The current unbroken walking/cycle/bridle-path would need to be broken to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive to Uncertain significant negative. SA Objective 2: The site may be considered to be in a 'very good accessibility' band, but in reality, providing access to the site would involve breaking a footpath, therefore adversely impacting the ability to achieve SA Objective 1. This status should change the position from Minor positive to Uncertain significant negative. Site 59547 SA Objective 2: The site may be considered to be in a 'very good accessibility' band, but in reality, providing access to the site would involve breaking a footpath, impact on green space and therefore adversely impact the ability to achieve SA Objective 1 or SA Objective 5. This status should change the position from Minor positive to</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 14 relates to housing delivery only. Health and wellbeing is considered separately under SA objective 1, access is considered separately under SA objective 2 and biodiversity is considered separately under SA objective 5.</p> <p>The SA is too high-level to give consideration to site-specific access points. This is something that will instead be determined at planning application stage, if the site is allocated.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Uncertain significant negative. Site 59630 SA Objective 1: The current unbroken walking/cycle/bridle-path would need to be broken to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive/Uncertain significant negative to Uncertain significant negative. Site 59630 SA Objective 1: The current green space would be impeded to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive to Uncertain significant negative. Site: 59634 SA Objective 1: The current green spaces/conservation areas would be impeded to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive to Uncertain significant negative. Site: 59655 SA Objective 1: The current green spaces/conservation areas would be impeded to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive to Uncertain significant negative. SA Objective 2: The site may be considered to be in a 'fair accessibility' band, but in reality, achieving SA Objective 14 would adversely impact attempts to achieve SA Objective 1, SA Objective 3 or SA Objective 5 This status should change the position from Minor positive to Uncertain significant negative. Site: 59740 SA Objective 1: The current green spaces/conservation areas would be impeded to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive/Uncertain significant negative to Uncertain significant negative. Site: 59740 SA Objective 1: The current green spaces/conservation areas would be impeded to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. 		<p>provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive/Uncertain significant negative to Uncertain significant negative. SA Objective 2: The site may be considered to be in a 'fair accessibility' band, but in reality, providing access to the site would involve breaking a footpaths, impact on green space and construction of new significantly sized access roads joining the A26/Tonbridge Road and therefore adversely impact the ability to achieve SA Objective 1 or SA Objective 5. This status should change from Minor negative to Uncertain significant negative. Site: 59800 SA Objective 1: Achieving SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) would likely result in the human health and well-being would not be improved for residents of existing dwellings due to over population of the surrounding area. This status should change from Minor Positive to Uncertain significant negative. Site: 59884 SA Objective 1: The current unbroken walking/cycle/bridle-path would need to be broken to provide accessibility to achieve SA Objective 14 (To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures) as a result human health and well-being would not be improved for residents of existing dwellings, nor provided to residents of any new dwellings. This status should change from Minor Positive to Uncertain significant negative. SA Objective 2: The site may be considered to be in a 'good accessibility' band, but in reality, providing access would involve in the destruction open spaces and therefore adversely impact the ability to achieve SA Objective 1 (Improve human health and well-being) and SA Objective 5 (To protect and enhance biodiversity and geodiversity). This status should change from Negligible to Uncertain significant negative.</p>	
25205729	Annex 1	<p>https://www.dropbox.com/s/s5ecoyha3frakpq/RPP%20final%20Little%20Postern%20Objection%20Statement%20-.pdf?dl=0 rel="noopener Above is a link to a report prepared for the Postern Lane Residents at the time of the last Local Plan on Site 59701. Many of the points remain relevant and can inform the Sustainability Appraisal for this site. Key points are drawn out below: SA4 – This site is considered undeliverable because of access issues arising from the topography of the site, see paragraph 5.7. It will not therefore contribute to economic growth. SA5 – Section 10 of the report highlights the biodiversity aspects of this site and therefore the negative impact that development will have. SA6 – Section 6 highlights the sites adverse impact on residential amenity. Paragraph 7.4 draws attention to the sloping nature of the site which will make it visually prominent in the surrounding landscape. SA7 – Section 9 of the report and Appendices 4, 5 and 6 highlight the sites proximity to a number of cultural assets. The site is less than 200m from 3 listed buildings. SA8 – Flood risks are covered in Section 8 of the report. The site is within Environment Agency Flood Zones and there have been recent (2009) examples of flooding emanating from this site. SA9 – Section 7</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>The SA is too high-level to give consideration to the topography of individual sites.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		describes the site of consisting of Grade 2 and Grade 3 agricultural land, in productive use as orchards for over 50 years.SA12 – Section 5 of the report considers the highway impact if access is possible to the site. Analysis suggests that development is likely to lead to increased congestion on Woodgate Road and Vale Road which will have consequential adverse impacts on air quality. This site also lies within the Green Belt, paragraphs 11.1 to 11.13 suggest that there are not exceptional reasons which would justify the removal of this site from the Green Belt. I hope that the information provided is helpful in determining whether this site should continue to be assessed for development on the next stage of the Local Plan.	
42746209	Annex 1	<p>Some general points of concern. Inconsistency: Some sites have been give different assessments but the commentary is exactly the same. Access: It is stated that access to schools or public transport are within a specific distance of the designated sites but this cannot be the case for the whole area of the site./li> Local knowledge: Equally, access to a school site may be via a woodland or for public transport to a bus stop with limited services – there is no way that all new residents would use these services. Health: There is now no GP service in West Malling, the closest is Kings Hill or Leybourne. The Sustainability Objective also conflates health facilities with access to sporting facilities/playgrounds! Highways: Sustainability Appraisal objectives do not include impact on the local road system. Specific points of concern (by Sustainability Appraisal objective)59594 – 34 houses Objective 10: We question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. 59602 – 19 houses Objective 3: We question if this is within 800m of a primary or secondary school. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. 59603 – 30 houses Objective 3: We question if this is within 800m of a primary or secondary school. Objective 9: As this includes site 59602 in its entirety which is classified as greenfield, how can this site be assessed as brownfield? Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. Does it also double-count the site it encompasses: 59602? 59699 – 260 houses Objective 1: With the closing of West Malling surgery the site is not within 800m of an existing health facility. Objective 4: The site is not all within 400m of a bus stop, nor would all 260 households be able to use this limited bus service or cycle. It is also unclear what business opportunities this mixed use site would deliver and therefore its impact on the local economy. Objective 6: This should be significant negative as it will have a major impact on the landscape. Objective 10: The majority of the site is not within 400m of a bus stop and the bus service is extremely limited – it would increase car/highway movements significantly. 59716 – 28 houses Objective 1: Contradictory, no explanation is given. It can't be both significantly negative and significantly positive. Objective 10: We question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. Objective 14: We</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to measuring straight-line distances from the edge of a site option, this was done using the smallest distance between a site and existing services and facilities. The SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater".</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However this GP surgery is now closed. In the next iteration of the SA Report, the proformas for the sites affected will be updated.</p> <p>There is considered to be a lot of crossover between access to healthcare facilities and areas of open space and sports facilities, as these can encourage more physical activity with beneficial effects on people's health. The site assessment criteria for SA objective 1: health and wellbeing are considered suitable and appropriate.</p> <p>With regard to SA objective 6: landscape and townscape, the site is recorded as having a minor negative effect because it is located on the edge of the settlement of West Malling. The effect is uncertain, as the actual effect is dependent on the final design, scale and layout of development.</p> <p>The proformas for each site accurately state whether they are within 400m of a bus stop or not. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>question why a positive, we don't believe the site would give a mix of tenures due to its size. 59733 – 27 houses Objective 9: Brownfield? Objective 10: Majority of site not within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. 59406 – 20 houses Objective 2: This should be the same as for site 59596 ie significant negative, as it is immediately next door. Objective 3: Stated that this is within 800m distance walking but this would be through woodland, dark at each end of a Winter's day and very muddy if weather is inclement. It is also inconsistent – the site across the road (59648) is classified as a minor negative. Objective 9: We question if this is all brownfield land. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. 59596 – 23 houses Objective 3: Stated that this is within 800m distance walking but this would be through woodland, dark at each end of a Winter's day and very muddy if weather is inclement. It is also inconsistent – the site across the road (59648) is classified as a minor negative. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. 59648 – 17 houses Objective 9: We question if this is all brownfield. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. 59649 – 9 houses Objective 3: This should be the same as site 59648, ie negative?, as it is immediately next door. Objective 9: We question if this is all brownfield. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size.</p>	<p>With regard to SA objective 9: soils, site 59602 comprises brownfield land. The GIS analysis has been updated to reflect this.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The proformas for each site accurately state whether they are within 800m of a primary school or not.</p> <p>The appraisal of site 59603 does not double-count site 59602, which it encompasses. Each of these sites has been appraised separately.</p> <p>Due to an error, justification text was not provided for the effect site 59716 is expected to have against SA objective 1: health and wellbeing. In the next iteration of the SA Report, the justification text will be provided. In accordance with the SA methodology set out in Chapter 2 of the Interim SA Report, sites can have mixed effects.</p>
42746209	Annex 1	<p>Some general points of concern Inconsistency: Some sites have been give different assessments but the commentary is exactly the same. Access: It is stated that access to schools or public transport are within a specific distance of the designated sites but this cannot be the case for the whole area of the site. Local knowledge: Equally, access to a school site may be via a woodland or for public transport to a bus stop with limited services – there is no way that all new residents would use these services. Health: There is now no GP service in West Mallong, the closest is Kings Hill or Leybourne. The Sustainability Objective also conflates health facilities with access to sporting facilities/playgrounds! Highways: Sustainability Appraisal objectives do not include impact on the local road system. Specific points of concern (by Sustainability Appraisal objective) Site ID: 59594 – 34 houses Objective 10: We question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. This site will have a major impact on traffic through Offham. It will also diminish the gap between West Mallong and Kings Hill as one of a number of sites proposed between these settlements. Site ID: 59602 – 19 houses Objective 3: We question if this is within 800m of a primary or secondary school. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. This site will have a major impact on traffic through Offham. It</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>will also diminish the gap between West Malling and Kings Hill as one of a number of sites proposed between these settlements. Site ID: 59603 – 30 houses Objective 3: We question if this is within 800m of a primary or secondary school. Objective 9: As this includes site 59602 in its entirety which is classified as greenfield, how can this site be assessed as brownfield? Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. Does it also double-count the site it encompasses: 59602? This site will have a major impact on traffic through Offham. It will also diminish the gap between West Malling and Kings Hill as one of a number of sites proposed between these settlements. Site ID: 59699 – 260 houses Objective 1: With the closing of West Malling surgery the site is not within 800m of an existing health facility. Objective 4: The site is not all within 400m of a bus stop, nor would all 260 households be able to use this limited bus service or cycle. It is also unclear what business opportunities this mixed use site would deliver and therefore its impact on the local economy. Objective 6: This should be significant negative as it will have a major impact on the landscape. Objective 10: The majority of the site is not within 400m of a bus stop and the bus service is extremely limited – it would increase car/highway movements significantly. This site will have a major impact on traffic through Offham. It will also diminish the gap between West Malling and Kings Hill as one of a number of sites proposed between these settlements. It will impact on Fartherwell Road which is a designated Quiet Lane. Importantly, it is also in the green belt and on prime agricultural land. The sites on St Leonards St/Teston Rd just by Malling Meadows, the Crest and opposite next to Orwell Spike are also close by. Offham already suffers from too much vehicle traffic from Kings Hill. Site ID: 59716 – 28 houses Objective 1: Contradictory, no explanation is given. It can't be both significantly negative and significantly positive. Objective 10: We question if all of the site is within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. This site will have a major impact on traffic through Offham. It will also diminish the gap between West Malling and Kings Hill as one of a number of sites proposed between these settlements. Site ID: 59733 – 27 houses Objective 9: Brownfield? Objective 10: Majority of site not within 400m of a bus stop. Even for those houses within the distance, the bus service is extremely limited. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. This site will have a major impact on traffic through Offham. It will also diminish the gap between West Malling and Kings Hill as one of a number of sites proposed between these settlements. Site ID: 59406 – 20 houses Objective 2: This should be the same as for site 59596 ie significant negative, as it is immediately next door. Objective 3: Stated that this is within 800m distance walking but this would be through woodland, dark at each end of a Winter's day and very muddy if weather is inclement. It is also inconsistent – the site across the road (59648) is classified as a minor negative. Objective 9: We question if this is all brownfield land. Objective 14: We question</p>	<p>The proformas for each site accurately state whether they are within 400m of a bus stop or not. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>The proformas for each site accurately state whether they are within 800m of a primary school or not.</p> <p>The appraisal of site 59603 does not double-count site 59602, which it encompasses. Each of these sites has been appraised separately.</p> <p>Due to an error, justification text was not provided for the effect site 59716 is expected to have against SA objective 1: health and wellbeing. In the next iteration of the SA Report, the justification text will be added to the proforma. In accordance with the SA methodology set out in Chapter 2 of the Interim SA Report, sites can have mixed effects.</p> <p>With regard to the landscape, all reasonable alternative development site options have been appraised in accordance with the site assessment criteria.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

		<p>why a positive, we don't believe the site would give a mix of tenures due to its size. This piece of land sits outside the defined rural settlement boundary of Offham Village Together with Site 59596, this would be the equivalent of building another Pepingstraw Close on the edge of the Village. Such a development is not sustainable in a small village. There is one pub, The Kings Arms, only one church – St Michael's, a single form entry primary school and a Farm Shop that is part of the Spadework Charity at the opposite end of the Village to the proposed site. Whilst there is currently a bus service operating the frequency of buses to and from Offham is extremely limited, being under review by KCC and is almost certainly going to be removed, and in general the majority of residents are dependent on private vehicular transport. The traffic generation emanating to and from the site will be of significance to the village. Unfortunately, Offham village is a rat run for Kings Hill and other areas travelling to and from the A20/motorway intersections. At both morning and evening peak times there is a constant stream of traffic along Teston Road and the proposed site entranced is at a particularly point in the road where traffic tends to speed up when leaving the Village. Likewise, for traffic entering the Village from this end, having negotiated the gateway, then tend to speed towards the Village before breaking heavily before the bend in the road just past the proposed entrance. The vehicle movements from 20/43 more houses entering and exiting onto Teston Road would have a detrimental impact on traffic movements through the Village let alone the added dangers due to the location of the access at this particular point. Site ID: 59596 – 23 houses</p> <p>Objective 3: Stated that this is within 800m distance walking but this would be through woodland, dark at each end of a Winter's day and very muddy if weather is inclement. It is also inconsistent – the site across the road (59648) is classified as a minor negative. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. This piece of land sits outside the defined rural settlement boundary of Offham Village, is in zoned Metropolitan Green Belt and also adjacent to old established woodland. Together with Site 59406, this would be the equivalent of building another Pepingstraw Close on the edge of the Village. Such a development is not sustainable in a small village. There is one pub, The Kings Arms, only one church – St Michael's, a single form entry primary school and a Farm Shop that is part of the Spadework Charity at the opposite end of the Village to the proposed site. Whilst there is currently a bus service operating the frequency of buses to and from Offham is extremely limited, being under review by KCC and is almost certainly going to be removed, and in general the majority of residents are dependent on private vehicular transport. 		<p>negotiated the gateway, then tend to speed towards the Village before breaking heavily before the bend in the road just past the proposed entrance. The vehicle movements from 20/43 more houses entering and exiting onto Teston Road would have a detrimental impact on traffic movements through the Village let alone the added dangers due to the location of the access at this particular point. Site ID: 59648 – 17 houses Objective 9: We question if this is all brownfield. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. There will be a solar farm on the adjacent landfill site which would have a direct impact on any properties built at this location. Currently a power station associated with the landfill is still operating in the south section of this site (see below). Gas risk assessment The landfill site is still active with respect to ground gases, still with occasional elevated methane (and CO2) and the exact migration pathway for the gas is uncertain. Offham Parish Council has not seen satisfactory evidence of safety regarding gas and noise within any current planning application. Gas utilisation/electricity generation compound to south of site Residents at the Aldon Lane/Teston Road junction and in the Aldon Conservation area report regular audible noise emanating from this equipment (350 – 500 metres) at night with the prevailing south westerly wind. Any residences at a distance of 50 metres from the equipment is likely to be substantially affected while the equipment is in place. Highway safety The site lines are not perfect because of a slight curve in the road to the east. There are dangers present from the westerly approach, dangers of which Offham Parish Council and the local County Council member are well aware. This is an unsafe location for new houses to exit onto Teston Road. There is a speed unrestricted bend of some 35-40 degrees which is at the westernmost end of the White Ladies site and at the end of a 700 metre straight. Sight lines are limited. In early 2020, following concerns expressed, near miss etc., KCC Highways erected yellow warning signs either side of the bend as a warning of this bend. The yellow background emphasises that one should pay particular attention to the warning information the sign is trying to convey; they are used to give you extra warning in accident-prone spots. The distance of visibility eastwards for vehicles approaching from the west, from the bend to the proposed gateway is 100 metres. Conversely a distance of 100 metres from the current gate eastwards is a straight line and even with the slight curve, the visibility is much better than the western approach with the bend. Vehicles are warned with the signs but many take the bend at speed. For vehicles exiting from the proposed gateway position this will create even more dangerous situations than leaving the gateway in its original position. Moving an exit closer to the bend is more dangerous than concerns about sight lines in the other direction. This land is unsafe for residential development and contains contamination. Site ID: 59649 – 9 houses Objective 3: This should be the same as site 59648, ie negative?, as it is immediately next door. Objective 9: We question if this is all brownfield. Objective 14: We question why a positive, we don't believe the site would give a mix of tenures due to its size. This is immediately adjacent to the edge of a landfilled quarry</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		site, the stability and consistency of the land being quite uncertain, in addition to its risk of gas migration. Access is immediately on to an179oesn'ticted road just outside the village gateway. It will also be coincident with or extremely close to the access roadway into the proposed solar farm site.	
42716961	Annex 1	<p>Site 59827 – Residential – Proposed 82 houses Within AONB, Green Belt, adjacent to Conservation Area. SA Objective 1 – Shipbourne Common and the extensive Public Rights of Way leading from the Shipbourne Conservation Area out across the fields and woodland of the AONB set within the Openness and Permanence of the Green Belt provide the many visitors with an essential well-being and recreational resource. Those unable to access field paths, due to young age or infirmity, tend to enjoy the Common and walk down Upper Green Road along Back Lane, enjoying the open views to Fairlawne and out to the Forestry at Point Wood. This proposal would degrade this experience by providing a high density of housing in the valley between Back Lane / Reeds Lane and Point Wood. The mass of the development being clearly seen from the Rights of Way footpath from Back Lane to Point Wood / Kiln Wood. The size of the proposal would urbanise the valley and be in the line of sight of heritage assets. It may also encourage applications leading to ribbon developmenquot; along Back Lane. SA Objectives 2,3,10 and 12 – Housing development of this scale in a poor accessibility band would greatly increase traffic movements and be contrary to the Sub-Objective to encourage walking and cycling. Journeys to the secondary schools would be either by car (promoting 2 car households) or by increased subsidised bus services. The village infant/junior school is at capacity. SA Objectives 8 and 14 – The foul sewer in Back Lane is frequently blocked and overflows into the ditch (last Event 3pm 24 Oct 2022). Objective 8 notes that the area is in a risk area for flooding. Greater impermeable areas due to development requiring surface water sewers may contribute to flooding. There is no gas in Shipbourne, existing heating tends to be by oil. New development of the scale suggested would need electric heat pumps, car charging points, street lighting, requiring new electric mains supply. Water mains may also need upgrading. Road access from Back Lane would require kirbs changing the rural character of the lane (a principle discussed in Ivy Hatch Conservation Area Appraisal). The A227 / Back Lane junction would need upgrading to safeguard the school. These enabling works will greatly disrupt the highways and the costs will be very high. Reg. 18 Consultation Doc. 1:6:1 states that it is crucial that potential sites are realistically deliverable from a financial perspective....because unviable development means much needed homes will not be delivered....SA Objective 5 – The Green Belt Study 2016, page 53 clearly and correctly recognises the area designated as AONB, with its ancient woodland, local wild life, TPO's. The Common supported by these open fields and surrounding woodland is host to much bio-diversity. SA Objective 6 – Given the nature of the landscape relative to the Conservation Area etc. development would be contrary to the Sub-Objective to protect landscape character and quality and cannot be mitigated by design.SA Objective 7 – The development is in the line</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>The proformas for each site accurately state whether they are within 800m of a primary or secondary school or not. All effects are recorded as uncertain, as the effects will depend on there being capacity at those schools to accommodate new pupils (see paragraph D.14 of the Interim SA Report).</p> <p>With regard to the landscape, all reasonable alternative development site options have been appraised in accordance with the site assessment criteria. SA objective 6 deals with the landscape and townscape whereas SA objective 7 deals with the historic environment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		of sight of heritage assets. Development would be contrary to the Sub-Objective to protect and enhance historic buildings, sites and landscape. The Shipbourne Design Statement identifies a number of buildings dating from the 16 th century and the landscape character around them. So far the village is unmarred by Developers Pastiche architecture.	
42716961	Annex 1	<p>Site 59779 – Residential – Proposed 38 houses. Within AONB, Green Belt, adjacent to Conservation Area. SA Objective 2 and 3Housing development of this scale in a poor accessibility band would increase traffic movements onto Back Lane and particularly to the junction with the A227. The infant and junior school on the junction would need to be safeguarded as parents currently park on Back Lane close to this junction and opposite the likely proposed new site entrance road. Development will increase car journeys by travel to the local secondary schools and train stations (promoting 2 car households) and/or subsidised bus services which must be increased. The village infant / junior school is at capacity.SA Objectives 10 and 11Increased traffic movements would discourage walking and cycling.SA Objectives 8 and 14 New development of the scale suggested would need electric heat pumps, car charging points, street lighting. A question is whether the existing sub-station on the junction has spare capacity without affecting the existing village supply. Similarly for water mains supply. Does the foul sewer at the A227 junction have capacity as the sewer in Back Lane is frequently blocked and overflows into the ditch (last event 3pm 24th Oct 2022). Increased impermeable surfaces will require surface water drainage potentially increasing discharges to water courses. The site is noted in Objective 8 as being in a flood zone. These enabling works may be high when spread over 38 house units and affect the viability of the site for developers – Reg 18 Consultation Doc 1:6:1 refers to unviable development. SA Objective 5 The Green Belt Study 2016, page 53 clearly and correctly recognises the area designated as AONB, with it's ancient woodland, local wild life, TPO's. The common supported by these open fields and surrounding woodland is host to much bio-diversity which is endangered by creeping development. Developments requiring street lighting etc. also creates a glow which removes the night sky which has been a feature on the Common and enjoyed by many. SA Objective 6 and 7The development may permit arguments leading towards further infilling of plots of land along Back Lane causing a tendency towards ribbon development; contrary to the Sub-Objectives to protect landscape character and quality...to protect and enhance landscape. The Shipbourne Design Statement identifies a number of buildings dating from the 16th century and the importance of this landscape in which they exist.</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to the capacity of GP surgeries and schools, this is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The SA is too high-level to give consideration to site-specific access points, water mains supply and foul sewerage.</p>
42764129	Annex 1	Representation to the Tonbridge and Malling Borough Council (TMBC) Regulation 18 Local Plan and Interim Sustainability Appraisal Please find below our representation to the TMBC Regulation 18 Local Plan consultation. This representation objects to the proposed allocation of Land to east of Ismays Road, Ivy Hatch (Site 59608) for residential development. Context The National Planning Policy Framework (NPPF)	All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>provides the overarching framework used for preparing Local Plans based on the Government's aims for the planning system, the purpose of which is to contribute to the achievement of sustainable development. It sets out in paragraph 8 181oesn'tnable development has three interdependent objectives that need to be pursued in mutually supportive ways: an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure; a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy. So that sustainable development is pursued in a positive way, at the heart of the NPPF is a presumption in favour of sustainable development. Paragraph 11 states that for plan-making this means that all plans should promote a sustainable pattern of development that seeks to meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects.The Regulation 18 Local Plan sets out how the hierarchy of settlements should be used to guide decisions on where development should be focussed. It acknowledges that settlements at the top of the hierarchy (Urban Areas), are most likely to provide opportunities for sustainable development because they contain a variety of services, are well connected by public transport and offer opportunities for active travel. They also contain opportunities for making use of previously developed land. Beyond the Urban Areas are Rural Service Centres and Other Rural Settlements. At the bottom of the hierarchy are Rural Areas within the open countryside and where development should be restricted.The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social, environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report is also subject to the Regulation 18 consultation.AssessmentThe Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to</p>	<p>relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, the site is located within 800m of a public open space (Scathes Wood). Therefore, it receives a minor positive effect, in line with the site assessment criteria.</p> <p>With regard to SA objective 4: economic growth, as stated in the proforma for the site "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". In the next iteration of the SA Report, the criteria for this objective will be updated so that if a site proposed for residential development contains an existing business, it will receive a minor negative effect.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.SA Objective 1: To improve human health and well-being. The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (ProW) that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility, or recreational opportunities such as children's play areas or sports facilities. With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of this Site would not represent sustainable development through actively reducing health inequalities, improving access to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons we submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development. SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.' It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical accessibility jobs. It would be in direct conflict with the objective to encourage sustainable economic growth, business development and economic inclusion across the borough. We submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.' This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and</p>	<p>A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs. Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan. In our view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape. The Site is highly visible in views from the adjacent ProW and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1). We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development. It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land. None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.SA Objective 7: To protect and enhance the cultural heritage resource. The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.' The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them. We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.SA Objective 9: To conserve and enhance soil resources and guard against land contamination. The SA states: 'The site is located on brownfield land.' The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section 336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nursery grounds. Agricultural uses are exempt from the definition of</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>previously developed land in Annex 2 of the NPPF. Annex 2 defines 'brownfield land' with reference to 'previously developed land'. The Site cannot therefore be classified brownfield land for the purposes of the NPPF. With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'The Site is located approximately 350m from bus stops on Ightham Road via a ProW adjacent to the site. The ProW is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physical infrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday. The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location. With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location. In recognition of this we submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures. The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.' The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>that would meet local housing need. Conclusion The Site is located outside of any settlement boundary and within a Rural Area in part of the countryside designated as Green Belt. The Site is in existing agricultural use. It is not brownfield or previously developed land and therefore its allocation for residential development would, by definition, be inappropriate. The Site is also located within the AONB and allocation of the Site would result in significant negative effects to a landscape of scenic beauty which the Government affords the highest status of protection to. The Site is poorly accessible and not located near to schools, facilities or amenities that are important for health and well-being. As existing, the Site contributes to employment and economic growth which would be lost. The Site is sensitively located within an Archaeological Priority Area and near to designated heritage assets of national importance. The Site is also located over a Source Protection Zone and effects on water features and resources are unknown. The Site is not served by public transport and would not encourage walking or cycling. Occupiers of any future development would be dependent on use of a private car which would be in direct conflict with objectives to reduce greenhouse gas emissions and minimise climate change. In summary, the NPPF requires plans to provide a positive vision for the future of each area; a framework for addressing housing needs and other economic, social and environmental priorities; and a platform for local people to share their surroundings. It requires plans to be prepared with the objective of contributing to the achievement of sustainable development. We consider that the Interim Sustainability Review Report contains errors and that the Site has been incorrectly scored in relation to a number of the Sustainability Objectives. In our view, allocation of this Site would in fact result in a greater number of negative effects, many of which would be significant in scale. Allocation of the Site would fail to comply with the economic, social or environmental objectives required to achieve sustainable development in the plan-making process. It would not be consistent with the emerging spatial strategy or in any way contribute to the core aim of achieving sustainable development in the borough and we request that the Site is not allocated in the emerging Local Plan.</p>	
42587393	Annex 1	<p>Green Belt Land – The Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt? Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge. It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is not the purpose of SA to prevent development on best and most versatile agricultural land, rather it is the purpose of the Local Plan to set out policy constraints. The SA uses the Agricultural Land Classification to inform SA objective 9: soils. As outlined in site assessment criteria in Appendix D, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1 and/or 2 agricultural land will have a significant negative effect. Greenfield sites that contain a less than significant proportion (less than 25%) of Grade 1, 2 or 3 agricultural land will have a minor negative effect. The</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>year land supply. Rather all other options should be considered first. Best Most Valuable Agricultural Land (BMV) There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications. This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home. The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site. It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land. The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site. Site Specific Comments with regard to BMV SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%. SITE 59721: Grade 2 land makes up at least 50% of the site. SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%. SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site. This has the effect of considerably diluting the % of grade 2 land on the combined site. I contend that "site" 59805 is not a true single site as it is bisected by a road. In theory the further enlarging of sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.</p>	<p>criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In the next iteration of the SA, greenfield sites that contain a significant proportion (more than or equal to 25%) of Grade 1, 2 and/or 3a agricultural land will receive a significant negative effect.</p>
42546145	Annex 1	<p>SITE ID 59641. I have written my comments in bold following the existing comments contained in Annex 1SA Objective 1: To improve human health and well-being Minor positive (+) The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). This site is currently used as a Livery area. Consisting of Stabling,Paddock and Manege area. There are no other facilities providing this in the locality. Removal of this from a rural location would make this a Significant negative to the stated objective SA Objective 2: To improve equality and access to community facilities and services Significant negative (--) The site is placed within the Poor Accessibility Band. Agreed as Significant negative SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society Uncertain minor negative (-?) The site is more than 800m of an existing secondary school and a primary school. However, uncertainty exists as the effects will depend on there being capacity available at those facilities to accommodate new pupils. It is also noted that the provision of new residential development could stimulate the provision of new schools and/or school places, however this cannot be assumed at this stage and is therefore uncertain. All the existing secondary schools in the that area are over 800m. These are also only Boy single sex until 6th form, so any Schooling for secondary aged</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report. All effects are correct.</p> <p>With regard to SA objective 1: health and well-being, the site has been appraised in line with the site assessment criteria. It receives a minor positive effect because it is within 800m of a an area of open space (Haysden Country Park) and a walking and cycle path.</p> <p>With regard to SA objective 3: education, the site has been appraised in line with the site assessment criteria and receives an uncertain minor negative effect due to the fact it is not located within 800m of a primary or secondary school.</p> <p>SA objective 4 relates to economic growth, not the Green Belt. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Girls will not be catered for. Also there are no public footpaths to this site, so the services can not be accessed safely on foot. This should therefore be a Significant negative.SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough Negligible (0)/Negligible (0) The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. This site has Green belt boundaries to the North,South and West and to the east is a Conservation area, so has a Significant negative in this objective.SA Objective 5: To protect and enhance biodiversity and geodiversity Uncertain minor negative (-?) The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial. This site is within 250m of a Green flag country park where light pollution and lack of mains sewage can cause a major impact. It is currently used for keeping horses that add biodiversity to the area, as they do not live elsewhere in the area and they attract all sorts of other species, that only live in horse grazed areas, so has a Significant negative to this Objective. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--?) The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The local plan says the site is not near a rural settlement. This is incorrect, as it is adjacent to the Lower Haysden hamlet which is a Conservation area, is Greenbelt and used as a rural asset, so development would have a Significant Negative on this objective SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative (--?) The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. This is an open flat area that is catagorised as Flood zone. There is no uncertainty of the Development of 29 houses in this area will have a Significant negative on this Objective. SA Objective 8: To protect and enhance the quality of water features and resources Significant negative (--)/Uncertain significant negative (--?) The site is either entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. The site contains a water body or water course or falls within or partially within Source Protection Zone 1. However, these effects are uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. There is no mains sewage supplied to this area and adjacent Hamlet and even with the use of modern sewage treatment plants, attempting to mitigate the effect of 29 houses, using this area to discharge treated sewage and the added</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, the site has been appraised in line with the site assessment criteria. It receives a minor negative effect because it is between 250m and 1km of two locally designated sites (Haysden Nature Reserve Local Nature Reserve and River Medway Local Wildlife Site) and an area of Ancient Woodland. The effect is recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>With regard to SA objective 7: historic environment, the site receives a significant negative effect because it abuts Hayden Conservation Area, which contains a number of heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the site falling within or partially within Source Protection Zones 2 and 3. The effect is recorded as uncertain, as the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>With regard to SA objective 9: soils, it is correct that the effect is recorded as uncertain because the uncertainty acknowledges the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classified as high quality). Please refer to the Agricultural Land Classification for further information on this.</p> <p>With regard to the landscape, site 59641 is already recorded as having a significant negative effect in relation to SA objective 6: landscape. All adverse effects against the landscape objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect when they are not located near any settlements. Although the respondent has raised the point that the site is located on the edge of a hamlet, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for this site is therefore correct. However, in the next iteration of the SA Report we will add this limitation to the 'Difficulties and Data Limitations' section of the report.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the site falling within or partially within Source Protection Zones 2 and 3. The effect is recorded as uncertain, as the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>With regard to SA objective 9: soils, it is correct that the effect is recorded as uncertain because the uncertainty acknowledges the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classified as high quality). Please refer to the Agricultural Land Classification for further information on this.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>issue of a expected flood of these facilities every 30 years mean it is not uncertain that it will have a Significant negative on this objective. SA Objective 9: To conserve and enhance soil resources and guard against land contamination Uncertain significant negative (--) The site is greenfield land and contains a significant proportion (25%) of Grade 3 agricultural land. The uncertainty acknowledges that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). Making this uncertain due to not knowing if this is Grade 3a or 3b is incorrect. Development of any grade 3 agricultural land is a Significant negative to this objective. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Negligible (0) The site is more than 800m from a railway station and more than 400m from a bus stop but has a cycle path within 400m. The Cycle path is a rural exercise route leading to Penshurst place. It does not give access to public amenities. Without footpaths it means transport to the amenities of Tonbridge can only be by car, so making it a Significant negative to the objective.</p>	<p>With regard to SA objective 10: climate change mitigation, the site has been appraised in line with the site assessment criteria. It is recorded as having a negligible effect as it is more than 800m from a railway station and more than 400m from a bus stop, but has a cycle path within 400m. The respondents comments regarding the cycle path are noted.</p>
42436577	Annex 1	<p>Site 59830: This vast area is owned by mineral extraction companies who are bound by their planning agreements to restore the land as green belt after the cessation of mineral extraction. Some of the pits have already been backfilled, but at least one contains deleterious material and this was pointed out in the comments made on the previous (and now withdrawn) draft local plan. As the site extends to 130 acres and will affect a much wider area should development be permitted, it would be much better to consider it as a number of smaller parcels of land, some of which might be suitable for different types of development. Another consideration is that mineral extraction is ongoing and the pits have many years' life in front of them, so some of the site will not be available for development until after the time horizon of this Local Plan. The proposals offered as part of the last local plan were unworkable and would have resulted in severe disruption to the local communities and end up as a new medium sized town with limited facilities and no defined centre, just a mess of housing estates and employment sites along a feeder road that was billed as a new bypass for Platt and Borough Green. Because the site is offered to avoid the restitution costs of making good the quarries, it does not mean that TMBC should use it to create a new town. Any development on this site needs to be in keeping with its surroundings and not overstress the infrastructure which has already passed breaking point. The site also contains areas which are in Flood Zone 3b where the risk of flooding was 1 in 20 years, but is now likely to be more frequent due to climate change. this category is the 'functional flood zone' where has to flow or be stored during time of heavy rainfall, so they are the areas where flooding is most likely and longest lasting. They are also the areas where surface water drainage may require pumps and the water table is close to the surface so a hole dug will quickly fill with water. The benefits and drawbacks listed in the interim sustainability report apply to different areas of the site and are meaningless in the context of such a large site, leading to the conclusion that it should be broken up into smaller parcels of land for</p>	<p>Noted.</p>

		the appraisal so that the positives and negatives relate to specific areas within the overall site.	
42776289	Annex 1	<p>On behalf of our client, CEMEX UK Properties Ltd, please find enclosed representations to Tonbridge & Malling Borough Council's (hereafter referred to as 'the Council') Regulation 18 Local Plan (the 'Local Plan').CEMEX supports the decision to bring forward a new Local Plan as the importance of creating a Plan-led approach to planning for development cannot be understated given the Council's adopted Local Plan predates the National Planning Policy Framework ('NPPF'). A new Local Plan is therefore required to ensure the future needs of residents and businesses across the Borough can be met through the sustainable development of sites. These representations are consistent with those made to the previous iteration of the Local Plan that was withdrawn on 13 July 2021 and included submissions to the Regulation 18 (The Way Forward) in November 2016 and the Regulation 19 draft in November 2018. As part of the initial stage of the emerging Local Plan, the three sites as set out below were also submitted to the Council's first Call for Sites exercise in February 2022.CEMEX is a global building materials company and leading supplier of cement, ready-mixed concrete and aggregates. In the UK, CEMEX owns sites and land that have ceased to be in operational uses and where appropriate, these are now promoted for alternative uses some of which are in Aylesford and the extent of their ownership is shown on the plan below and is split into three sites:Site A – extends to approximately 8.2ha;Site B – extends to approximately 9.7ha; and Site C – extends to approximately 0.6ha.To note-- the plan showing the location of the sites are included within the submission sent to the Council. DEVELOPMENT POTENTIAL As part of the adopted Development Plan, the area around Eccles was designated as within the Bushey Wood Area of Opportunity-- Core Strategy Policy CP16 and this stated:"Land at Bushey Wood is identified as an Area of Opportunity containing land with potential for meeting residential needs in the post 2021 period, or earlier if there is any significant shortfall in strategic housing provision. Land will only be released for housing development within the Area of Opportunity through the preparation of an Area Action Plan. In the meantime, development will not be proposed in the LDF or otherwise permitted within this area which might prejudice its long-term development potential." In consideration of the position set by the Core Strategy, the withdrawn Local Plan had continued with land at Eccles/Bushey Wood forming part of the preferred spatial approach for development and within the associated evidence base, CEMEX's landholding (as set out above) were included as part of the Strategic Land Availability Assessment ('SLAA') reference 199 – Bushey Wood. This Report concluded that Bushey Wood was:"located in a sustainable location, with good access to services. The site is a mixture of greenfield and previously developed land, and any development should seek to maximise PDL opportunities. The majority of the site is identified as an Area of Opportunity in the adopted development plan for residential development post 2021, and therefore the principle of development in this location is already established. The scale of the site would</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Mitigation is not taken into consideration in the 'policy-off' appraisals of the sites contained within Chapter 5 and Annex 1 of the Interim SA Report. This means that each reasonable alternative development site option is appraised on its physical constraints only. This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>With regard to the respondents comments on SA objective 1: health and wellbeing, housing provision is dealt with separately under SA objective 14: housing. Although the respondent has said that development will incorporate areas of public open space, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p> <p>With regard to SA objective 2: services and facilities, sites 59766 and 59763 are recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band and therefore receives a significant negative effect against this objective.</p> <p>With regard to SA objective 3: education, site 59766 receives an uncertain minor negative effect for the reasons outlined in the proforma. Although the respondent has said that financial contributions would be made to mitigate any likely impact of the site in respect of education provision, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, sites 59766 and 59763 receive uncertain significant negative effects as they form part of a Regionally Important Geological Site (Aylesford Pit) and are within close proximity of a locally designated site (Eccles Old Pits Local Wildlife Site). Although the respondent has said that the sites would deliver at least a 10% net gain in biodiversity, these are 'policy-off' appraisals that do not take into consideration mitigation. With regard to SA objective 6: landscape, sites 59766 and 59763 are recorded as uncertain significant negative because they are not located within or on the edge of a settlement. The uncertainty is due to the fact the actual effect will depend on the final design, scale and layout of development. Although the respondent has said that there would be a robust landscaping strategy, these are 'policy-off' appraisals that do not take into consideration mitigation.</p> <p>With regard to SA objective 7: historic environment, these are 'policy-off' appraisals that do not take into consideration mitigation. Sites 59766 and 59763 receive uncertain significant negative effects in relation to this objective because they contains and are located within</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>enable a range of infrastructure, open space, and affordable housing to be provided on-site to meet a range of local plan and sustainability appraisal objectives over the medium to long term, as well as potential for further development beyond this plan period". As set out in previous representations and repeated through the 2022 Call for Sites, in consideration that each of the sites are deliverable in that they are available (single landowner), suitable (conclusions of previous Sustainability Appraisal/SLAA) and achievable (realistic prospect that housing will be delivered within five years), it is considered that they should be allocated in the emerging Local Plan/form part of the strategic extension to Eccles. Further, with the current planning application (22/00113/OAEA) which includes land that would adjoin Sites B and C, in order for the Council to maximise the delivery of housing at sustainable locations (as confirmed through the previous evidence base), we suggest both sites (B and C) should be allocated in the emerging Local Plan. The Sites are assessed under references 59766 (Site A), 59763 (Site B) and 59768 (Site C) and there are some parts of the Interim Sustainability Appraisal Site Assessments that we agree and support, whilst others we consider incorrect. Our comments on the relevant objectives (that we do not agree with) are outlined below. Site A: 59766 SA Objective 1: To improve human health and well-being The proposal would facilitate improved health and well-being by providing much needed housing, and in particular affordable housing which helps to reduce deprivation and social inequalities. As set out within these representations, the Site was also within a previously assessed 'Area of Opportunity' and concluded to be sustainable by the Council (as part of the evidence base of the last Local Plan. In terms of the development of the Site, it would include areas of public open space in accordance with planning policy. It is also relevant to note that should the planning application (22/00113/OAEA) be approved, there would be opportunities for residents to use the associated areas (alongside the development of Site A providing contributions to enhance further and/or deliver additional services/facilities in the local area). There would also be opportunities to improve connections to a wider network of green spaces to promote healthy lifestyles through connecting people with nature and promoting high standards of Green Infrastructure. We therefore suggest the Site is scored '++' (significant positive effect likely) rather than + (minor positive effect likely). SA Objective 2: To improve equality and access to community facilities and services Given the Council's assessment in respect of SA Objective 1 and our subsequent re-assessment, we suggest the Site is scored '+' (minor positive effect likely) rather than - (significant negative effect likely). SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society. The necessary financial contributions would be made to mitigate any likely impact of the Site in respect of education provision. We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (-?) Uncertain minor negative. SA Objective 5: To protect and enhance biodiversity and geodiversity In accordance with the emerging Local Plan alongside the legislation within the</p>	<p>close proximity of numerous heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, site 59766 receives an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. Further to this, the site partially overlaps a water body in Bushey Wood and therefore development of the site could have an adverse effect on water quality, although this is uncertain. Site 59763 also receives an uncertain significant effect as it is within an area with a 1 in 30 year risk of surface water flooding. The site does not contain a water body or watercourse, but partially falls within Source Protection Zone 3. Although the respondent has said that the scheme could include SuDS and other mitigation, these are 'policy-off' appraisals that do not take into consideration mitigation. With regard to SA objective 10: climate change mitigation, although the respondent has said that there could be opportunities to deliver a new bus service, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Environment Act, the development of the Site would need to deliver at least a 10% net gain in biodiversity. As part of bringing forward the biodiversity net gain strategy/plan, in accordance with the NPPF (paragraph 180), it would also be necessary to apply the avoidance strategy. This will ensure biodiversity and geodiversity is protected and enhanced. We therefore suggest the Site is scored '++' (significant positive effect likely) rather than (--?) Uncertain significant negative. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Whilst the character of the Site would change (development of a greenfield site), with a robust landscaping strategy and careful layout, it is suggested that the long-term impact would be minimal/negligible. We therefore suggest the Site is scored '-' (minor negative effect) rather than (--?) Uncertain significant negative. SA Objective 7:To protect and enhance the cultural heritage resource Ensuring the setting of the Romano-British villa, Anglo-Saxon cemetery and associated remains at Eccles would not be harmed would form a key component of the layout of the Site. It is suggested with the intervening Bushey Wood alongside additional mitigation that would be incorporated into the development, the heritage asset would not be affected. We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (--?) Uncertain significant negative. SA Objective 8:To protect and enhance the quality of water features and resources None of the Site is within Flood Zone 3, rather, the entirety is within Flood Zone 1 – the area with the lowest probability of flooding. The area to the west also benefits from flood defences. As part of the development of the Site, a strategy would be developed that ensured the surrounding area would not be affected. This could include SUDs and other mitigation on-site. We therefore suggest the Site is scored '0' (Negligible effect likely) rather than (--) Significant negative/ (--?) Uncertain significant negative. In light of the above, we consider the Interim Sustainability Assessment Report scores for the Objectives as listed above should be higher than that set out within the assessment. We therefore request the Interim Sustainability Appraisal for Site A is reviewed by the Council and amended in accordance with the above. Site B: 59763 SA Objective 1: To improve human health and well-being. The proposal would facilitate improved health and well-being by providing much needed housing, and in particular affordable housing which helps to reduce deprivation and social inequalities. As set out within these representations, the Site was also within a previously assessed 'Area of Opportunity' and concluded to be sustainable by the Council (through the previous Local Plan).In terms of the development of the Site, it would include areas of public open space in accordance with planning policy. It is also relevant to note that should the planning application (22/00113/OAEA) be approved, there would be opportunities for residents to use the associated areas (alongside the development of Site A providing contributions to enhance further and/or deliver additional services/facilities in the local area). There would also be opportunities to improve connections to a wider network of green spaces to promote healthy lifestyles through connecting people with nature and promoting high standards of</p>

		<p>Green Infrastructure. We therefore suggest the Site is scored ‘++’ (significant positive effect likely) rather than + (minor positive effect likely).SA Objective 2: To improve equality and access to community facilities and services. Given the Council’s assessment in respect of SA Objective 1 and our subsequent re-assessment, we suggest the Site is scored ‘+’ (minor positive effect likely) rather than – (significant negative effect likely). SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society. The necessary financial contributions would be made to mitigate any likely impact of the Site in respect of education provision. We therefore suggest the Site is scored ‘0’ (Negligible effect likely) rather than (-?) Uncertain minor negative. SA Objective 5:To protect and enhance biodiversity and geodiversity. In accordance with the emerging Local Plan alongside the legislation within the Environment Act, the development of the Site would need to deliver at least a 10% net gain in biodiversity. We therefore suggest the Site is scored ‘++’ (significant positive effect likely) rather than (--?) Uncertain significant negative. SA Objective 6:To protect and enhance the borough’s landscape and townscape character and quality. Whilst the character of the Site would change (development of a greenfield site), with a robust landscaping strategy and careful layout, it is suggested that the long-term impact would be minimal/negligible. We also suggest that should the planning application (22/00113/OAEA) to the north be permitted, the development of the Site (which would adjoin the Site to the north) would be seen in the context of Eccles/the existing built form. We therefore suggest the Site is scored ‘-’ (minor negative effect) rather than (--?) Uncertain significant negative. SA Objective 7:To protect and enhance the cultural heritage resource. Ensuring the setting of the Romano-British villa, Anglo-Saxon cemetery and associated remains at Eccles would not be harmed would form a key component of the layout of the Site. It is suggested with the intervening Bushey Wood to the northwest alongside additional mitigation that would be incorporated into the development, the heritage asset would not be affected. We therefore suggest the Site is scored ‘0’ (Negligible effect likely) rather than (--?) Uncertain significant negative. SA Objective 8:To protect and enhance the quality of water features and resources. None of the Site is within Flood Zone 3, rather, the entirety is within Flood Zone 1 – the area with the lowest probability of flooding. As part of the development of the Site, a strategy would be developed that ensured the surrounding area would not be affected. This could include SUDs and other mitigation on-site. We therefore suggest the Site is scored ‘0’ (Negligible effect likely) rather than (--) Significant negative/ (--?) Uncertain significant negative.SA Objective 10:To reduce greenhouse gas emissions so as to minimise climate change. Whilst the Site is more than 800m from a railway station and 400m from a bus stop, with the critical mass that may come forward (in this area), there could be opportunities (in discussions with the local bus provider) to deliver a new bus service. We therefore suggest that the Site is scored ‘?’ (Likely effect uncertain) rather than (-).In light of the above, we consider the Interim Sustainability Assessment Report scores for the</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		Objectives as listed above should be higher than that set out within the assessment. We therefore request the Interim Sustainability Appraisal for Site B is reviewed by the Council and amended in accordance with the above. Site C: 59768 Given the size and proximity of Site C, we have not provided a re-assessment.	
42786433	Annex 1	<p>Response to Site Proposal Number 59811 – land surrounding Oxon Hoath estate, Hadlow. I strongly object to the above site being included in the TMBC Local Plan for the reasons given below: This site sits within established Green Belt Land. Paragraph 140 of the NPPF states: “Once established Green belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified”. It goes on to say that “the policy making authority should be able to demonstrate that it has examined fully all other reasonable options” these include: “suitable brownfield sites” and “other locations well served by public transport” etc. This site sits firmly in a rural area, on an isolated site away from any existing dwellings, surrounded by country lanes, no public transport and within the Green Belt. Furthermore, the Report on Urban Capacity Study undertaken by Urban Intelligence for TMBC in July 2022 has gone some way in identifying potential sites for TMBC to reach the housing requirement within the borough by 2040. This states that TMBC is 71% covered with Green Belt Land. This study has identified sites within the existing urban areas and rural service centres, most importantly looking at suitability, capacity and density optimisation in the most accessible locations. They have identified a number of potential sites. Page 3 states “No sites were identified in the rural service centres of Hildenborough and Hadlow”. Page 29 Summarises findings for Hadlow – Point “7.1-- No sites identified by Hadlow”. They did however find other potential sites in the borough. Therefore site 59811 has not been recommended in a hugely detailed study, undertaken by a company paid by TMBC, with the expertise required to advise them on urban capacity and viability analysis. The 5 purposes of Green Belt designation are: To restrict unrestricted urban sprawl, Prevent coalescence of neighbouring settlements, Safeguarding the countryside, Protect the setting and character of historic towns, Assist or encourage urban regeneration. As stated above by Urban Intelligence there are far more suitable sites within the TMBC local area requiring urban regeneration and which are far better served by public transport and access routes than site 59811. Accessibility – this site is served by narrow, winding and at times, single track lanes to all sides. There is no public transport provided by TMBC to any area near the site. In fact local bus services are currently being reduced to both Hadlow (over 1 mile away to the nearest corner of this site) on the east and Dunks Green/Plaxtol to the West. Traffic congestion is already a problem on the A26 through Hadlow, as is road safety for the local residents, primary school and secondary school children and staff. This small village and local area cannot support any additional traffic that dwellings on the surrounding areas would generate – particularly due to the lack of public transport and inadequate infrastructure. As Stated in the SA Objective 2: Significant Negative: The site is placed within the Poor Accessibility Band. Which</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to the capacity of GP surgeries and schools, this is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The map of site 59811 is solely used to show where it's located within the borough and so does not show any assets or constraints.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>is an understatement – cars, lorries and buses cannot pass each other with clear passage on any of the surrounding roads. Utilities – local houses recently received letters from Southern Water stating that Kent is a stressed area and all houses, particularly those to the North of site 58911 regularly experience significant water supply issues. The site currently has electricity to only two dwellings and no mains gas supply. To significantly enhance the utilities supplied to this site would cause largescale disruption to the surrounding landscape and communities, putting pressure on already limited services and having huge environmental impact. Impact on Environment – the land identified in site 58911 currently sits to the west of Hadlow and contains open rural land, rivers, woods and wildlife habitats. There are frequent sightings of owls, buzzards, bats and badgers. To disturb badgers and bats is a criminal offence. The site also includes ancient trees and rivers providing sanctuary for local wildlife. Trees and green spaces are integral to combatting the climate crisis and should be preserved as much as possible, they release oxygen and help to combat pollution. The loss of the trees on this site, were a development be allowed, will expose local residents to increased pollution levels, not least adding to the already increased pollution levels due to traffic. As stated in SA Objective 5: To Protect and enhance Biodiversity & Geodiversity: Significant Negative – the site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Local amenities – we understand the local Doctors surgery and schools are at capacity. They cannot accommodate any more residents in the local area of Hadlow or the surrounding villages. As stated in SA Objective 3: Minor Negative – The site is more than 800m from an existing secondary school and a primary school. There are no bus services going anywhere near this site, nor public footpaths into the village of Hadlow from this site. Children would have to walk over a mile to school along the roads with no pavements.194oesn't194y194yt Heritage Building – The map of site 59811 does not mark the situation of the Grade II* Listed Mansion House of the Oxon Hoath estate and 16th Century Grade II* Listed Dower house. These are buildings in total of over 30,000 sq ft with historic parkland and a Georgian walled garden. The gardens are Grade II* listed and extend to 74 acres. The gardens contain the only surviving unaltered parterre gardens in England today. As stated in SA Objective 7: To protect and enhance the cultural heritage resource – Significant negative: the site is located within 250m of a heritage asset. A considerable understatement! As per the Stage 2 Green Belt Assessment review undertaken by ARUP for TMBC in July 2022, TMBC must demonstrate strategic level exceptional circumstance to justify the release of Green Belt Land as well as exceptional circumstances for the release of specific sites. This must be linked with the Local Plan Strategy, the reasonable alternatives for delivering growth (as assessed through the Sustainability Appraisal) as well as the findings from the Green Belt Reviews and site assessment. Page 15 of ARUP's report – Figure 3.3 shows the majority of Site 59811 consisting of Parks and Gardens sitting within the Green Belt. With Ancient and Semi Natural Woodland to the North and East. They go on to state on</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Page 16 – “The location within the Green Belt, combined with the tightly drawn boundaries, minimises the potential for the settlements to accommodate growth over the long-term”. SA Objective 8: To protect and enhance the quality of water features and resource – significant negative. The site is either entirely or significantly within Flood Zone 3. The site also contains a water body or water course or falls within or partially within Source Protection Zone 1. In summary, we believe that this rural parcel of Green Belt land that contains a significant Listed Grade II* heritage asset and listed parklands as well as ancient woodland, with very poor access, utility provision and amenities is not suitable for TMBC to consider as a site within the local development plan.</p>	
42798497	Annex 1	<p>SITE ID 59641. I have written my comments in bold following the existing comments contained in Annex 1SA Objective 1: To improve human health and well-being Minor positive (+)The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). There is a huge park nearby so this is not required for human health at all. Indeed, It is located 2km from a train station and the road has no pedestrian area and a 40mph speed limit with blind corners, so is very unsafe for people to walk along to the site. There is no parking. This is therefore a Significant negative to the stated objective. SA Objective 2: To improve equality and access to community facilities and services Significant negative (-) The site is placed within the Poor Accessibility Band. Agreed as Significant negative SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society Uncertain minor negative (-?)All the existing secondary schools in the that area are over 800m and are Boy single sex until 6th form, so any Schooling for secondary aged Girls will not be catered for. Also there are no public footpaths to this site as stated above, so the services can not be accessed safely on foot. The nearest train station is 2000m away and the road people would walk down has a 40mph speed limit and multiple blind corners. This should therefore be a Significant negative. SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough Negligible (0)/Negligible (0)The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. This site has Green belt boundaries to the North, South and West and to the East is a Conservation area, so has a Significant negative in this objective.SA Objective 5: To protect and enhance biodiversity and geodiversity Uncertain minor negative (-?). The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial. This site is within 250m of a Green flag country park where light pollution and lack of mains sewage can cause a major impact. It is currently used for keeping horses that add biodiversity to the area, as they do not live</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, the SA acknowledged that the site is within 800m of an area of open space.</p> <p>With regard to SA objective 3: education, the SA records the site as not falling within 800m of a secondary school or a primary school.</p> <p>With regard to the landscape, site 59641 is already recorded as having a significant negative effect in relation to SA objective 6: landscape. All adverse effects against the landscape objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect when they are not located near any settlements. Although the respondent has raised the point that the site is located on the edge of a hamlet, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for this site is therefore correct. However, in the next iteration of the SA Report we will add this limitation to the 'Difficulties and Data Limitations' sections of the report. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 9: soils, it is correct that the effect is recorded as uncertain because the uncertainty acknowledges the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classified as high quality). Please refer to the Agricultural Land Classification for further information on this.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>elsewhere in the area and they attract many other species that only live in horse-grazed areas, so has a Significant negative to this Objective. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--)The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The local plan says the site is not near a rural settlement. This is incorrect, as it is adjacent to the Lower Haysden hamlet which is a Conservation area, is Greenbelt and used as a rural asset, so development would have a Significant Negative on this objective. SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative (--)The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. This is an open flat area that is catagorised as Flood zone. There is no uncertainty of the Development of 29 houses in this area will have a Significant negative on this Objective. SA Objective 8: To protect and enhance the quality of water features and resources Significant negative (--)Uncertain significant negative (--)The site is either entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. The site contains a water body or water course or falls within or partially within Source Protection Zone 1. However, these effects are uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. There is no mains sewage supplied to this area and adjacent Hamlet and even with the use of modern sewage treatment plants, attempting to mitigate the effect of 29 houses, using this area to discharge treated sewage and the added issue of a expected flood of these facilities every 30 years mean it is not uncertain that it will have a Significant negative on this objective. SA Objective 9: To conserve and enhance soil resources and guard against land contamination Uncertain significant negative (--)The site is greenfield land and contains a significant proportion (25%) of Grade 3 agricultural land. The uncertainty acknowledges that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). Making this uncertain due to not knowing if this is Grade 3a or 3b is incorrect. Development of any grade 3 agricultural land is a Significant negative to this objective.SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Negligible (0)The site is more than 2000m from a railway station and more than 400m from a bus stop but has a cycle path within 400m. The Cycle path is a rural exercise route leading to Penshurst Place. It does not give access to public amenities. Without footpaths it means transport to the amenities of Tonbridge can only be by car. The road people would walk down has a 40mph speed limit and multiple blind corners, so making it a Significant negative to the objective.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42801377	Annex 1	<p>SITE ID 59641. I have written my comments in bold following the existing comments contained in Annex 1SA Objective 1: To improve human health and well-being Minor positive (+). The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both).This site is currently used as a Livery area. Consisting of Stabling,Paddock and Manege area. There are no other facilities providing this in the locality. removal of this from a rural location would make this a197oesn't197y197yt negative to the stated objective. SA Objective 2: To improve equality and access to community facilities and services Significant negative (--). The site is placed within the Poor Accessibility Band. Agreed as Significant negative. SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society Uncertain minor negative (-?). The site is more than 800m of an existing secondary school and a primary school. However, uncertainty exists as the effects will depend on there being capacity available at those facilities to accommodate new pupils. It is also noted that the provision of new residential development could stimulate197oesn't197y197y197yn of new schools and/or school places, however this cannot be assumed at this stage and is therefore uncertain. there are no public footpaths to any of the schools so the services cannot be accessed safely on foot. This should therefore be a Significant negative.SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough Negligible(0)/Negligible (0). The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. This site has Green belt boundaries to the North,South and West and to the east is a Conservation area, so has a Significant negative in this objective. SA Objective 5: To protect and enhance biodiversity and geodiversity Uncertain minor negative (-?) The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial. This site is within 250m of a Green flag country park where light pollution and lack of mains sewage can cause a major impact. It is currently used for keeping horses that add biodiversity to the area, as they do not live elsewhere in the area and they attract all sorts of other species, that only live in horse grazed areas, so has a Significant negative to this Objective. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--?) The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The local plan says the site is not near a rural settlement. This is incorrect, as it is adjacent to the Lower Haysden hamlet which is a Conservation area,</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report. All effects are correct.</p> <p>With regard to SA objective 3: education, this objective solely looks at distance to schools and not the presence of Public Rights of Way. The SA is too high-level to give consideration to specific Public Rights of Way.</p> <p>SA objective 4 relates to economic growth, not the Green Belt. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site has been appraised in line with the site assessment criteria. It receives a minor negative effect because it is between 250m and 1km of two locally designated sites (Haysden Local Nature Reserve and River Medway Local Wildlife Site) and an area of Ancient Woodland. The effect is recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>With regard to the landscape, site 59641 is already recorded as having a significant negative effect in relation to SA objective 6: landscape. All adverse effects against the landscape objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect when they are not located near any settlements. Although the respondent has raised the point that the site is located on the edge of a hamlet, sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for this site is therefore correct. However, in the next iteration of the SA Report we will add this limitation to the 'Difficulties and Data Limitations' section of the report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the site falling within or partially within Source Protection Zones 2 and 3, in addition to the fact the extent to which water quality is affected</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>is Greenbelt and used as a rural asset, so development would have a Significant Negative on this objective. SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative (--?). The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets. This is an open flat area that is catagorised as Flood zone. There is no uncertainty of the Development of 29 houses in this area will have a Significant negative on this Objective. SA Objective 8: To protect and enhance the quality of water features and resources Significant negative (--)/Uncertain significant negative (--?) The site is either entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding. The site contains a waterbody or water course or falls within or partially within Source Protection Zone 1.However, these effects are uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. There is no mains sewage supplied to this area and adjacent Hamlet and even with the use of modern sewage treatment plants, attempting to mitigate the effect of 29 houses, using this area to discharge treated sewage and the added issue of a expected flood of these facilities every 30 years mean it is not uncertain that it will have a Significant negative on this objective. SA Objective 9: To conserve and enhance soil resources and guard against land contamination Uncertain significant negative (--?). The site is greenfield land and contains a significant proportion (25%) of Grade 3 agricultural land. The uncertainty acknowledges that the Grade 3 agricultural land may be either Grade3a (high quality) or 3b (not classed as high quality). Making this uncertain due to not knowing if this is Grade 3a or 3b is incorrect. Development of any grade 3 agricultural land is a Significant negative to this objective.SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Negligible (0. The site is more than 800m from a railway station and more than 400m from a bus stop but has a cycle path within 400m. The Cycle path is a rural exercise route leading to Penshurst place. It does not give access to public amenities. Without footpaths it means transport to the amenities of Tonbridge can only be by car, so making it a Significant negative to th198oesn'tctive.</p>	<p>depends on construction techniques and the use of SuDS within the design.</p> <p>With regard to SA objective 9: soils, it is correct that the effect is recorded as uncertain because the uncertainty acknowledges the fact that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classified as high quality). Please refer to the Agricultural Land Classification for further information on this.</p> <p>With regard to SA objective 10: climate change mitigation, the site has been appraised in line with the site assessment criteria. It is recorded as having a negligible effect as it is more than 800m from a railway station and more than 400m from a bus stop, but has a cycle path within 400m. The respondents comments regarding the cycle path are noted.</p>
42802177	Annex 1	<p>Given the inconsistent numbering, it is difficult to assess the combined impact on the village of Hildenborough of the 23 sites listed for development. It would appear that there is the belief that there is the potential for at least 2,120 homes, covering 268 hectares of mostly green belt land; this is more than 1% of the whole of Tonbridge and Malling. The B245, and other local services and infrastructure, cannot easily be scaled up to support this scale of additional development. The assessment criteria for the individual sites seems inconsistent, and it seems off to equally weight the criteria which is the implicit methodology. It would seem evident that ALL of the Hildenborough sites fail to deliver key sustainability objectives (as defined in the SA framework): SA Objective 1-- To improve human health and well-being; SA Objective 2-- To improve equality and access to community</p>	<p>All sites are considered reasonable alternative development site options. All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59669 is not assessed in the SA as having a significant positive effect in relation to SA objective 1: health and wellbeing. It is recorded as having a mixed uncertain significant negative and minor positive effect. However, in the next iteration of the SA Report this will be amended to a minor positive effect only. The uncertain significant</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>facilities and services; SA Objective 4-- To encourage sustainable economic growth, business development, and economic inclusion across the borough; SA Objective 5-- To protect and enhance biodiversity and geodiversity; SA Objective 6-- To protect and enhance the borough's landscape and townscape character and quality. The Sustainability Appraisal Report correctly identifies 4 out of 23 Hildenborough sites as being less sustainable than others as they are expected to have significant negative effects across at least six different SA Objectives. Given Hildenborough's unique situation, and dearth of services, it is suggested that more sites should be considered similarly as reflected in recent planning reports. As an example: It is unclear why Site 59669 is assessed to have a 'significantly positive' impact on SA Objective 1; Site 59679 should be assessed to be in a Poor Accessibility Band (as Site 59669); Planning permission was refused for site 59669 in Oct 21 (TM/21/02831/FL, TM/21/02834/LB). The 'employment development' benefits were shown to be minimal, at best.</p>	<p>negative effect was as a result of the site containing an area of open space. However, the site does not contain an open space, just overlaps one. The GIS analysis will be refined so that sites overlapping open spaces will not be recorded as containing open spaces. The site receives a minor positive effect because it is within 800m of an existing area of open space and walking paths.</p> <p>In the Urban Capacity Study (July 2022), site 59679 is recorded as falling within the Good Accessibility Band whereas site 59669 is recorded as falling within the Poor Accessibility Band. This information has fed into the SA.</p>
25406913	Annex 1	<p>Within Annex 1: Reasonable alternative development site options of the Sustainability Appraisal there are some important factual inaccuracies which skew the assessment of FECL submitted sites. We set out below the corrected facts. Site 59825 Land north of Back Lane, Shipbourne (5 Acre Field)SA states: "The Site is within an area of open space or currently accommodates a sports facility and this may be lost as a result of development" Correction: There is no public access to this site, it is private land owned by the Fairlawne Estate. There are no public footpaths crossing the site nor are there any sports facilities to be lost. SA states: "The Site includes employment development smaller than 5ha in size." Correction: This is not applicable given only residential development is proposed and there are no existing employment uses on the site. Site 59823Oast Lane, Tonbridge SA states: "The Site is located in the Fair Accessibility Band".Correction: The site should be within the Very Good or Excellent accessibility band. The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within 1km of an existing bus stop and within walking distance to a number of services and facilities including a convenience store, school and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site's position on the edge of Tonbridge and the broad range of services and facilities in the Town, the site must logically be placed in a higher accessibility zone. The SA states: "The Site includes employment development smaller than 5ha in size." Correction: The site is only proposed for housing and supporting infrastructure. It does not include employment development. The SA states: "The site contains an existing green infrastructure asset that could be lost as a result of new development". Correction: The site contains no green infrastructure asset, adjoins the built-up edge of Tonbridge, is not a designated open space and has no public access. SA states: "The Site is either entirely</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 1: health and wellbeing, site 59825 is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an existing open space (Shipbourne Common) and so the GIS analysis identified the site as containing an open space. The GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA Report, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>Sites 59825, 59823 and 59821 have been appraised as mixed use sites. The positive effects these sites are expected to have in relation to SA objective 4: economic growth are as a result of the fact these sites would include employment development.</p> <p>Following discussions with Tonbridge and Malling Borough Council, site 59825 will be reappraised as a residential site.</p> <p>Sites 59823 and 59821 are recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. Site 59804 is recorded as falling within the Good Accessibility Band and site 59801 is recorded as falling within the Poor Accessibility Band. This information has fed into the SA.</p> <p>Site 59823 does contain an existing green infrastructure asset in the form of a line of woodland/thick vegetation to its south east.</p> <p>With regards to SA objective 8: water, sites 59823, 59779 and 59801 receive a mixed significant negative and negligible effect. The significant negative effect is as a result of the sites falling within an</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources. SA states: "The Site is within a Minerals Safeguarding Area". Correction: On the basis of the Kent Minerals and Waste Local Plan 2013-2030 the site is not within any minerals safeguarding area. Site 59821 Oast Lane, Tonbridge SA states: "The Site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development."</p> <p>Correction: The site is not a designated open space, has no public access and does not accommodate a sports facility. SA states: "The Site is placed in the Fair Accessibility Band." Correction: The site should be within the Very Good or Excellent accessibility band. The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within 1km of an existing bus stop and within walking distance to a number of services and facilities including a convenience store, school and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site's position on the edge of Tonbridge and the broad range of services and facilitates in the Town, the site must logically be placed in a higher accessibility zone. SA states: "The site includes employment development more than 5ha in size."</p> <p>Correction: The site is only proposed for housing and supporting infrastructure. It does not include employment development. SA states: "The Site is not located near to any settlements in rural locations." Correction: The statement is nonsensical. The site adjoins the built-up edge of the principal urban area of Tonbridge. A highly sustainable location. SA states: "The Site is either entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources SA states: "The site is within a Minerals Safeguarding Area." Correction: On the basis of the Kent Minerals and Waste Local Plan 2013-2030 the site is not within a minerals safeguarding area (it is in close proximity). Site 59778 Allotment Site, The Street, Plaxtol SA states: "The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development." Correction: The Site does not accommodate outdoor sports facilities; however it does include a private allotment site. The land which accommodates the allotments is wholly owned by the Fairlawne Estate and the allotments could be retained or relocated if required. Site 59779 School Field, Back Lane, Shipbourne SA states:</p>	<p>area with a 1 in 30 year risk of surface water flooding. The negligible effect is as a result of the sites not containing a water body or watercourse or falling within a Source Protection Zone. Sites 59821 and 59804 receive an uncertain significant negative effect. This is because site 59821 falls within an area with a 1 in 30 year risk of surface water flooding and partially falls within Source Protection Zone 2. Site 59804 falls within an area with a 1 in 30 year risk of surface water flooding, in addition to containing a watercourse and slightly overlapping Source Protection Zone 3.</p> <p>Sites 59823, 59821 and 59801 are identified as falling within a Minerals Safeguarding Area. Therefore, they receive an uncertain minor negative effect in relation to SA objective 13: material assets.</p> <p>With regard to SA objective 1: health and wellbeing, site 59821 is also incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an existing open space (Tonbridge Farm Sportsground) and so the GIS analysis identified the site as containing an open space. The GIS analysis will be refined so that sites that slightly overlap an open space will not be picked up as containing that open space. In the next iteration of the SA Report, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 6: landscape and townscape, site 59821 is incorrectly recorded as having a significant negative effect in relation to this objective. In the next iteration of the SA, this effect will be upgraded to a minor negative effect as the site is located on the edge of the settlement of Tonbridge.</p> <p>It is correct that site 59778 receives an uncertain significant negative effect in relation to SA objective 1: health and wellbeing, as it contains an open space in the form of allotments. Although the respondent notes that the land which accommodates the allotments (owned by the Fairlawne Estate) could be retained or relocated, these are 'policy-off' appraisals of the sites that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the SA acknowledges that site 59779 is within 250m of Ancient Woodland through the sentence "The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites". LUC acknowledge that this sentence does not explicitly refer to Ancient Woodland, even though Ancient Woodland was included in the GIS analysis. In the next iteration of the SA, the sentence will be revised to state "The site is within 250m of one or more internationally or nationally designated biodiversity sites, geodiversity sites or Ancient Woodland". The SA will also acknowledge the fact the site contains Shipbourne Common Local Wildlife Site.</p> <p>As outlined in the site assessment criteria in Appendix D of the Interim SA Report, sites receive an uncertain significant negative effect against SA objective 6: landscape and townscape when they are not located near any settlements. Although the respondent has raised the point that the site is located on the edge of Shipbourne,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>"The Site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites." Correction: The edge of the site is located 210m from ancient woodland (at its closest point). No other internationally or nationally designated biodiversity or geodiversity sites have been identified within 250m SA states: "The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces." Correction: The Site is directly adjacent to the built-up part of Shipbourne which has a number of facilities including Shipbourne County Primary School and tennis courts, a village hall and a public house. The site is not a designated open space and no loss would result from its development. SA states: "The site is entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, the site is entirely outside Flood Zone 3 and is wholly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources. Site 59804 West of Tonbridge Strategic Development Area SA states: "The site is within an area of open space or currently accommodates an outdoor sports facility which may be lost as a result of development" Correction: The site is not a designated open space, has no public access and does not accommodate a sports facility. A cricket pitch is east of the site but would be unaffected by the development of the site. SA states: "The site is placed within the Good Accessibility Band." Correction: The Site is on the edge of Tonbridge which is identified as a Regional Hub and one of the most sustainable locations within the District. The site lies within walking distance to a broad range of services and facilities including a convenience store, schools, sports facilities and various cafes and shops. The main SA report indicates that in addition to accessibility to local services, sites have also been assessed on their location, with sites in settlements placing higher in the settlement hierarchy being considered more accessible generally. Given the site's position on the edge of Tonbridge and the broad range of services and facilitates in the Town, the site must logically be placed in a higher accessibility zone. At the very least the Site should be in the 'Very Good' accessibility band. SA states: "The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces." Correction: The site adjoins the built-up edge of Tonbridge, is not a designated open space and has very limited public access. SA states: "The site is entirely or significantly (i.e. >25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding." Correction: On the basis of the Environment Agency's flood map for planning, only a very small part of the site falls within Flood Zone 3 and is predominantly within Flood Zone 1. Therefore, the site should score highly on the basis of SA Objective 8: To protect and enhance the quality of water features and resources. SA states: "The site is within a Minerals Safeguarding Area." Correction: The sub-alluvial deposits safeguarding area covers only a very small section of the site. Site 59801 Land at NW Tonbridge SA states: "The site is placed within the Poor Accessibility Band."</p>	<p>sites adjacent to small hamlets without defined boundaries are defined as being located within the countryside. The effect recorded for the site is therefore correct. In the next iteration of the SA, we will add this limitation to the section entitled 'Difficulties and Data Limitations'.</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not state that site 59779 comprises open space.</p> <p>However, site 59804 does contain an open space, as acknowledged in the SA. Frogbridge Wood is located in its north eastern corner.</p> <p>As only a small percentage of site 59804 overlaps the settlement of Tonbridge, the GIS analysis does not identify it as adjoining the settlement of Tonbridge. In the next iteration of the SA, we will refine the GIS analysis so that sites where there is very little overlap with existing settlements are still recorded as bordering those settlements. However, the effect will remain the same, as the site contains an open space that could be lost as a result of development.</p> <p>With regard to SA objective 7: historic environment, site 59801 is located within 250m of a heritage asset (Horns Lodge), as recorded in the Kent Historic Environment Record.</p> <p>As only a small percentage of site 59801 overlaps the settlement of Tonbridge, the GIS analysis does not identify it as adjoining the settlement of Tonbridge. In the next iteration of the SA, the site will receive an uncertain minor negative effect in relation to SA objective 6: landscape and townscape.</p>

42824737	Annex 1	<p>Site ID 59811 We set below a response to the TMBC assessment of site 59811 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. The site scored very strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 2,362 dwellings, it would make a significant contribution towards local housing supply over the local plan period and could offer a wider mix of housing sizes, types and tenures, including affordable housing. Furthermore, the site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality). It is noted however that there are concerns with regards to the following: The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the entire site as Flood Zone 1. The conclusions drawn against SA Objective 8 are therefore in our view incorrect; The TMBC assessment also states that this site contains a water body, or water course, or falls within or partially within Source Protection Zone 1; however, TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e., incorporation of SUDs, location of development within the site). The site's score should be at worst</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it contains land with a 1 in 30 year risk of surface water flooding. The uncertainty is due to the fact the site contains some water bodies but it is uncertain what effect development might have on these in terms of water quality.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage and 9: soils, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. However, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>It is noted that there may be an opportunity for mineral extraction prior to development.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>therefore 'Negligible' in relation to Objective 8. The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on four SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character), 7 (cultural heritage) and 9 (soil resources/ground contamination). However, as recognised in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objective 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects. These issues could therefore be overcome or addressed in the scheme development; It is noted that the TMBC assessment does not establish whether this site is Grade 3a (high quality) or 3b (not classed as high quality) and so further assessment would be required (SA Objective 9); This site is also within a Mineral Safeguarding Area (SA Objective 13)203oesn'ts are 'uncertain minor negative' at this stage. Given the uncertainty around the effects on these SA Objectives. However, it is recognised by TMBC that there may be an opportunity for mineral extraction in advance of development; It is noted that the site scored negatively in relation to SA Objective 2 (accessibility to community facilities and services), SA Objective 3 (educational attainment) and SA Objective 10 (reduction of GHG emissions) due to its distance from community facilities, schools and public transport. While the site currently falls within the 'Poor Accessibility Band', residential development of this scale would be expected to incorporate the provision of new community facilities, services and transport infrastructure. On this basis, the site should not be omitted from the local plan preparation process at this stage based on these objectives. In conclusion, this site has a clear advantage in being able to make a significant contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. The conclusions drawn in relation to SA Objective 8 are in our view incorrect. Against the other objectives we note six of the nine negative SA Objective scores are considered to be 'uncertain' at this time or it is recognised that a future scheme development could address the concerns raised. Given the significant potential of this site, it would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.</p>	
42824737	Annex 1	<p>Site ID 59806 We set out below a response to the TMBC assessment of site 59806 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. TMBC has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that the site scored very strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 3,289 dwellings, it would make a significant contribution towards local housing supply over the local plan period and could offer a wider mix of housing sizes, types and tenures, including affordable housing. The site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality).There are concerns with regards to several conclusions of the</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. 		<p>TMBC assessment as follows: The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the majority of the site is flood zone 1, with only the southernmost part within flood zone 3 (SA Objective 8). Development could therefore be directed to areas of low flood risk in northern parts of the site; The TMBC assessment states that the site contains a water body, or water course, or falls within or partially within Source Protection Zone 1; however, TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e., incorporation of SUDs, location of development within the site). The site's score should be at worst therefore 'Negligible' in relation to Objective 8. The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects; The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; While the site contains a significant proportion (25%) of Grade 1 and/or Grade 2 agricultural land (SA Objective 9), a development of this size could be concentrated on land of lowest agricultural value; Whilst the site is considered to be within an area of open space (SA Objective 1), this could also be integrated into a residential scheme of this scale; The site scored negatively in relation to SA Objective 2 (accessibility to community facilities and services), SA Objective 3 (educational attainment) and SA Objective 10 (reduction of GHG emissions) due to its distance from community facilities, schools and public transport. While the site currently falls within the 'Poor Accessibility Band', residential development of this scale could incorporate the provision of new community facilities, services and transport infrastructure. On this basis, the site should not be omitted from the local plan preparation process at this stage in relation to these particular criteria. In conclusion, the site would make a significant contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. Furthermore, six of the nine negative SA Objective scores are uncertain at this time. It would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.</p>	<p>noted that development within the site could be directed towards areas of low flood risk. However, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis. The same applies with regards to the Agricultural Land Classification and open space.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage and 13: material assets and waste, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation.</p>
42824737	Annex 1	<p>Site ID 59747. We set out below a response to the TMBC assessment of site 59747 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. TMBC has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site scored strongly in relation to SA Objective 14 (i.e., the assessment concluded that a</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. 		<p>significant positive effect was likely in relation to housing supply). Given the site could provide circa. 210 dwellings, it would make a positive contribution towards local housing supply over the local plan period and could offer a mix of housing sizes, types and tenures, including affordable housing. The site is not within 100m of an AQMA and is not within a Mineral Safeguarding Area, so would have a negligible effect on SA Objective 12 (air quality) and SA Objective 13 (mineral safeguarding area) respectively. It is noted however that there are concerns with regards to the following: The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the entire site as Flood Zone 1. The conclusions drawn against SA Objective 8 are therefore incorrect in our view; The TMBC assessment also states that this site contains a water body, or water course, or falls within or partially within Source Protection Zone 1 (likely at the eastern edge of the site); however, TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e., incorporation of SUDs, location of development within the site). The site's score should be at worst therefore 'Negligible' in relation Objective 8. The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on four SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character), 7 (cultural heritage) and 9 (soil resources/ground contamination). However, as recognised in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects. These issues could therefore be overcome or addressed in the scheme development; It is noted that the TMBC assessment does not establish whether this site is Grade 3a (high quality) or 3b (not classed as high quality) and so further assessment would be required (SA Objective 9); and It is noted that the site scored negatively in relation to SA Objective 2 (accessibility to community facilities and services), SA Objective 3 (educational attainment) and SA Objective 10 (reduction of GHG emissions) due to its distance from community facilities, schools and public transport. While the site currently falls within the 'Poor Accessibility Band', residential development at this site could incorporate the provision of new services and transport infrastructure. On this basis, the site should not be omitted from the local plan preparation process at this stage in relation to these criteria. In conclusion, the site would make a positive contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. Furthermore, six of the nine negative SA Objective scores are uncertain at this time. The uncertainty is due to the fact the site overlaps a watercourse along its north western edge and it is therefore uncertain what effect development might have on the watercourse in terms of water quality. These are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage and 9: soils, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42824737	Annex 1	<p>Site ID 59749. We set out below a response to the TMBC assessment of site 59749 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. TMBC has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site scored very strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 828 dwellings, it would make a significant contribution towards local housing supply over the local plan period and could offer a wider mix of housing sizes, types and tenures, including affordable housing. The site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality). The site is within 800m of Mereworth primary school (SA Objective 3). There are concerns with regards to several conclusions of the TMBC assessment as follows: The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the entire site as Flood Zone 1. The conclusions drawn against SA Objective 8 are therefore incorrect. The TMBC assessment also states that this site does not contain a water body, or water course, or falls within or partially within Source Protection Zone 1. The site's score should be at worst therefore 'Negligible' in relation to this objective. The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects; The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; While the site contains a significant proportion (25%) of Grade 1 and/or Grade 2 agricultural land (SA Objective 9), a development of this size could be concentrated on land of lowest agricultural value; It is noted that the site scored negatively in relation to SA Objective 2 (accessibility to community facilities and services) and SA Objective 10 (reduction of GHG emissions) due to its distance from community facilities and public transport. While the site currently falls in the 'Poor Accessibility Band', residential development of this scale would be expected to incorporate the provision of new community facilities, services and transport infrastructure. On this basis, the site should not be omitted from the local plan preparation process at this stage. In conclusion, the site would make a significant contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. Furthermore, 50% of the negative SA Objective scores are uncertain at this time and/or could be addressed through the scheme development. It would therefore be inappropriate to omit the site</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 9: soils and 13: material assets and waste, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. 		from the Local Plan site selection process at such an early stage of plan preparation.	
42824737	Annex 1	<p>Site ID 59750. We set out below a response to the TMBC assessment of site 59750 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. TMBC has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site scored strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 380 dwellings, it would make a positive contribution towards local housing supply over the local plan period and could offer a mix of housing sizes, types and tenures, including affordable housing. The site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality). The site is located near to the village of Mereworth. There are concerns with regards to several conclusions of the TMBC assessment as follows: The TMBC assessment concludes that the site would result in a minor negative effect on SA Objective 2 (access to community facilities/services). However, the site is in the 'Fair Accessibility Band' because it is within 400m of a bus stop (SA Objective 10), 800m of Mereworth Primary School (SA Objective 3) and 800m of a type of healthcare facility or outdoor space (SA Objective 1). The site is within 1km of several key facilities that a residential development of this scale could benefit from. Therefore, the site's score should be at worst be 'Negligible' in relation to these objectives. Whilst the site is considered to be within an area of open space (SA Objective 1), this could be integrated into a residential scheme of this scale; The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on four SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character), 7 (cultural heritage) and 9 (soil resources/ground contamination). However, as recognised in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objective 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects. These issues could therefore be overcome or addressed in the scheme development; It is noted that the TMBC assessment does not establish whether this site is Grade 3a (high quality) or 3b (not classed as high quality) and so further assessment would be required (SA Objective 9); This site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Given the uncertainty around the effects on these SA Objectives. However, it is recognised that there may be an opportunity for mineral extraction in advance of development; and The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the majority of the site as flood zone 1, with only the southernmost part within flood zone 3 (SA Objective 8). Development could therefore be directed to areas of low flood risk in northern parts of the site; The</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59750 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. This information has fed into the SA.</p> <p>With regard to SA objective 1: health and wellbeing, the site was recorded as containing an open space, even though it just overlaps it. In the next iteration of the SA Report, we will refine the GIS analysis so that where there is a slight overlap between a site and an open space, the site is not recorded as containing that open space. Subsequently, the site will receive a minor positive effect only in relation to this objective.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage and 9: soils, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. However, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis. The same applies in relation to Minerals Safeguarding Areas.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it contains land with a 1 in 30 year risk of surface water flooding. The uncertainty is due to the fact the site contains a watercourse to its south and it is therefore uncertain what effect development might have on the watercourse in terms of water quality.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>TMBC assessment states that the site contains a water body, or water course, or falls within or partially within Source Protection Zone 1; however, TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e., incorporation of SUDs, location of development within the site). The site's score should be at worst therefore 'Negligible' in relation to Objective 8. In conclusion, the site would make a positive contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. Against the other objectives we note six of the seven negative SA Objective scores are considered to be 'uncertain' at this time or it is recognised that a future scheme development could address the concerns raised. It would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.</p>	
42824737	Annex 1	<p>Site ID 59752 We set below a response to the TMBC assessment of site 59752 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that the site scored very strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 1,390 dwellings, it would make a significant contribution towards local housing supply over the local plan period and could offer a wider mix of housing sizes, types and tenures, including affordable housing. Furthermore, the site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality). There are concerns with regards to several conclusions of the TMBC assessment as follows: The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the entire site as Flood Zone 1. The conclusions drawn against SA Objective 8 are therefore incorrect; The TMBC assessment also states that this site contains a water body, or water course, or falls within or partially within Source Protection Zone 1; however, TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e., incorporation of SUDs, location of development within the site). The site's score should be at worst therefore 'Negligible' in relation to Objective 8; The TMBC assessment concludes that the site would result in a minor negative effect on SA Objective 2 (access to community facilities/services). However, the site is in the 'Fair Accessibility Band' because it is within 400m of a bus stop (SA Objective 10), 800m of Mereworth Primary School (SA Objective 3) and 800m of a type of healthcare facility or outdoor space (SA Objective 1). The site is within 1km of several key facilities that a residential development of this scale could benefit from. Therefore, the site's score should be at worst therefore 'Negligible' in relation to these objectives; The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on two SA Objectives: 5 (biodiversity/geodiversity) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report,</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it contains land with a 1 in 30 year risk of surface water flooding. The uncertainty is due to the fact the site contains a water body in its south western corner and it is therefore uncertain what effect development might have on the water body in terms of water quality. These are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>Site 59752 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. This information has fed into the SA.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 9: soils and 13: material assets and waste, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>effects in relation to SA Objectives 5 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects; The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; While the site contains a significant proportion (25%) of Grade 1 and/or Grade 2 agricultural land (SA Objective 9), a development of this size could be concentrated on land of lowest agricultural value; and The TMBC assessment concludes that development of the site would result in an 'uncertain minor negative' effect on SA Objective 6 (landscape and townscape character) as the site is on the edge of a settlement; however, TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e., the design, scale and layout of development, which may help mitigate any adverse effects). The site's score should be at worst therefore 'Negligible' in relation to Objective 6. In conclusion, this site has a clear advantage in being able to make a significant contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. The conclusions drawn in relation to SA Objective 8 are in our view incorrect. Against the other objectives we note four of the seven negative SA Objective scores are considered to be 'uncertain' at this time or it is recognised that a future scheme development could address the concerns raised. The site is adjacent to the southern edge of Kings Hill and so could form a sustainable urban extension to the existing settlement. Given the significant potential therefore of this site it would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.</p>	
42824737	Annex 1	<p>Site ID 59754 We set below a response to the TMBC assessment of site 59754 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site scored strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 125 dwellings, it would make a positive contribution towards local housing supply over the local plan period and could offer a mix of housing sizes, types and tenures, including affordable housing. The site is not within 100m of an AQMA and is entirely within Flood Zone 1 (does not contain a water body, watercourse, or fall within a source protection zone). Therefore, it is noted that would be a negligible effect on SA Objective 12 (air quality) and SA Objective 8 (water features/resources) respectively. It is noted however that there are concerns with regards to the following: The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5,</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 9: soils and 13: material assets and waste, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. However, these are 'policy-off' appraisals that do not take into consideration mitigation. 		within 800m of a type of healthcare facility or outdoor space (SA Objective 1). The site is within 1km of key facilities and public transport that a residential development of this scale could benefit from, and it would also be expected to make a contribution to these services potentially on-site. Therefore, the site's score should be at worst be 'Negligible'. In conclusion, the site would contribute positively to local housing supply over the local plan period and could offer a mix of housing sizes, types and tenures. Against the other objectives we note five of seven negative effects are 'uncertain' at this time and/or it is recognised that a future scheme development could address the concerns raised. It would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.	
42824737	Annex 1	<p>Site ID 59761 We set below a response to the TMBC assessment of site 59761 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site scored positively in relation to SA Objective 14 (i.e., the assessment concluded that a positive effect was likely in relation to housing supply). The site could provide circa. 86 dwellings which would make a positive contribution towards local housing supply over the local plan period. The site is not within 100m of an AQMA and is entirely within Flood Zone 1 (and does not contain a water body, watercourse, or fall within a source protection zone). Therefore, it would have a negligible impact of SA Objective 12 (air quality) and SA Objective 8 (water features/resources) respectively. There are concerns with regards to several conclusions of the TMBC assessment as follows: The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects; The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on SA Objective 6 (landscape and townscape character) as the site is not located near an existing settlement. However, we understand that the site is adjacent to the southwestern edge of Kings Hill. The site's score should be at worst therefore 'Negligible'; The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; The TMBC assessment concludes that development of the site would result in a minor negative effect on SA Objective 9 (soil resources/contamination). The site contains a less than significant proportion (25%) of Grade 1, 2 or 3 agricultural land; therefore, the site's score should be at worst 'Negligible'; and The TMBC assessment concludes that the site would result in a minor negative effect on SA</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 9: soils and 13: material assets and waste, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. However, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all site options are appraised on a consistent basis.</p> <p>Site 59761 is recorded as having an uncertain significant negative effect in relation to SA objective 6: landscape because it contains an open space (Kate Reed Wood) that could potentially be lost as a result of development, although this is uncertain.</p> <p>Site 59761 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. 		Objective 2 (access to community facilities/services). However, the site is in the 'Fair Accessibility Band' because it is within 400m of a bus stop (SA Objective 10), 800m of Kings Hill school (SA Objective 3) and 800m of a type of healthcare facility or outdoor space (SA Objective 1). The site is within 1km of several key facilities that a residential development of this scale could benefit from. Any development on site would also be expected to contribute to existing and new services. Therefore, the site's score should be at worst therefore 'Negligible'. In conclusion, the site would make a positive contribution to local housing supply over the local plan period, against the other objectives we note of four of six negative SA Objective scores are considered to be 'uncertain' at this time and/or it is recognised that a216oesn're scheme development could address the concerns raised. It would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.	
42824737	Annex 1	<p>Site ID 59797 We set below a response to the TMBC assessment of site 59797 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. The site currently operates as a golf course. We note that this site scored very strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 1,228 dwellings, it would make a significant contribution towards local housing supply over the local plan period and could offer a wider mix of housing sizes, types and tenures, including affordable housing. Furthermore, the site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality). The site includes areas of green space that could be incorporated into a residential scheme of this size. There are concerns with regards to several conclusions of the TMBC assessment as follows: The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects; The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on SA Objective 6 (landscape and townscape character) as the site is not located near an existing settlement. However, the site is adjacent to the southern edge of Kings Hill. The site's score should be at worst therefore 'Negligible'. The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; The TMBC assessment in relation to Objective 8 states that 25% of the site is at high risk from flooding (Flood Zone 3, 1 in 30 year risk of surface water flooding). However, we understand that the Environment Agency's mapping system identifies the entire</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage and 9: soils, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. However, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>Site 59797 is recorded as having an uncertain significant negative effect in relation to SA objective 6: landscape because it contains an open space (Kings Hill Golf Course) that could potentially be lost as a result of development, although this is uncertain.</p> <p>With regard to SA objective 8: water, the site receives a significant negative effect because it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>Site 59797 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. This information has fed into the SA.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>site as Flood Zone 1. The conclusions drawn against SA Objective 8 are therefore incorrect. The TMBC assessment also states that this site does not contain a water body, or water course, or fall within or partially within Source Protection Zone. The site's score should be at worst therefore 'Negligible' in relation to this objective; While the site contains a significant proportion (25%) of Grade 1 and/or Grade 2 agricultural land (SA Objective 9), the development could be concentrated on land of lowest agricultural value; The TMBC assessment concludes that the site would result in a minor negative effect on SA Objective 2 (access to community facilities/services). However, the site is in the 'Fair Accessibility Band' because it is within 400m of a bus stop (SA Objective 10), 800m of Kings Hill school (SA Objective 3) and 800m of a type of healthcare facility or outdoor space (SA Objective 1). The site is within 1km of several key facilities that a residential development of could benefit from. Therefore, the site's score should be at worst 'Negligible'. Furthermore, residential development of this scale would be expected to incorporate the provision of new community facilities, services and transport infrastructure or contribute to off-site existing/proposed facilities. On this basis, the site should not be omitted from the local plan preparation process at this stage. In conclusion, this site has a clear advantage in being able to make a significant contribution to local housing supply over the local plan period, offering a mix of housing sizes, types and tenures. The conclusions drawn in relation to SA Objective 8 are in our view incorrect. Against the other objectives we note four of seven negative SA Objective scores are considered to be 'uncertain' at this time and/or it is recognised that a future scheme development could address the concerns raised. The site is in close proximity to existing services and public transport facilities. Therefore, given the significant potential of this site, it would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.</p>	
42824737	Annex 1	<p>Site ID 59799 We set below a response to the TMBC assessment of site 59799 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality). There are concerns with regards to several conclusions of the TMBC assessment as follows: The TMBC assessment concludes that development of the site has a potential residential yield of less than 100. However, it is important to make provision for a wide range of larger and smaller sites and therefore the ability to deliver less than 100 dwellings should not rule this site out; The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59799 is still expected to have a positive effect in relation to SA objective 14: housing, albeit minor. In order to distinguish between large and small sites, a significant positive effect is given to sites providing 100 dwellings or more. A minor positive effect is given to sites providing fewer than 100 dwellings.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape, 7: heritage, 9: soils and 13: material assets and waste, it is correct that some of the adverse effects are uncertain, as they may be overcome through mitigation. However, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		to mitigate against harmful effects; The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; While the site contains a significant proportion (25%) of Grade 1 and/or Grade 2 agricultural land (SA Objective 9), the development could be concentrated on land of lowest agricultural value; and The TMBC assessment concludes that the site would result in a significant negative effect on SA Objective 2 (access to community facilities/services). While the site is in the Poor Accessibility Band, it is within 400m of a bus stop (SA Objective 10) and within 800m of a type of healthcare facility or outdoor space (SA Objective 1). The site is within 1km of key facilities and public transport that a residential development of this scale could benefit from, and any development would be expected to contribute to off-site facilities. Therefore, the site's score should be at worst be 'Negligible'. In conclusion, the site has the potential to contribute positively to housing supply over the local plan period as part of a mix of larger and smaller sites. Against the other SA objectives, we note five of eight negative SA Objective scores are considered to be 'uncertain' at this time and/or it is recognised that a future scheme development could address the concerns raised. It would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.	Site 59799 is recorded in the Urban Capacity Study (July 2022) as falling within the Poor Accessibility Band. This information has fed into the SA.
42824737	Annex 1	Site ID 59800 We set below a response to the TMBC assessment of site 59800 in Appendix D, Annex 1 of TMBC's Interim Sustainability Appraisal. The Council has assessed this site against 14 Sustainability Appraisal (SA) Objectives. We note that this site scored strongly in relation to SA Objective 14 (i.e., the assessment concluded that a significant positive effect was likely in relation to housing supply). Given the site could provide circa. 275 dwellings, it would make a positive contribution towards local housing supply over the local plan period and could offer a mix of housing sizes, types and tenures, including affordable housing. The site is not within 100m of an AQMA so would have a negligible effect on SA Objective 12 (air quality).It is noted however that there are concerns with regards to the following: While the site falls entirely within Flood Zone 1, it contains a water body, or water course, or falls within or partially within Source Protection Zone 1 (likely at the eastern edge of the site). TMBC recognises that the effects are uncertain because they would be dependent on the final development (i.e.218oesn't218y218yn of SUDs, location of development within the site). The site's score should be at worst therefore 'Negligible' in relation to SA Objective 8 (water features/resources); The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. 		<p>extension which could benefit from existing key facilities (within 1km). Any development would also potentially make on-site provision given the potential scale of development; The site includes areas of green space that could be incorporated into a residential scheme of this size. Therefore, the site's score should be at worst 'Negligible'; The TMBC assessment concludes that development of the site would result in an 'uncertain significant negative' effect on three SA Objectives: 5 (biodiversity/geodiversity), 6 (landscape and townscape character) and 7 (cultural heritage). However, as stated in Chapter 5 of the Interim Sustainability Report, effects in relation to SA Objectives 5, 6 and 7 are uncertain because this would largely be dependent on the design, scale and layout of forthcoming development at the site. Furthermore, additional measures could be incorporated within a new development to mitigate against harmful effects; The site is also within a Mineral Safeguarding Area (SA Objective 13), but effects are 'uncertain minor negative' at this stage. Again, the TMBC assessment recognises the potential for prior mineral extraction which would address this constraint; and While the site contains a significant proportion (25%) of Grade 1 and/or Grade 2 agricultural land (SA Objective 9), the development could be concentrated on land of lowest agricultural value; In conclusion, the site would contribute positively to local housing supply over the local plan period and could offer a mix of housing sizes, types and tenures. Against the other objectives we note four of six negative SA Objective scores are considered to be 'uncertain' at this time and/or it is recognised that a future scheme development could address the concerns raised. It would therefore be inappropriate to omit the site from the Local Plan site selection process at such an early stage of plan preparation.</p>	
42069697	Annex 1	<p>Site Identification Number: 59709 (Land at Dark Hill Farm, Borough Green) Berkeley has some concerns with the ISAR scorings given to this site as explained below. SA Objective 2: The outcome of objective 2 is accepted. Berkeley strongly believes that access to community facilities and services will be improved post development of the site. Two primary schools are located less than 1km from the site, in addition to a secondary school being located approximately 1.8km from the land at Dark Hill Farm. SA Objective 5: Berkeley would ask the council to reconsider the assessment of objective 5 (to protect and enhance biodiversity and geodiversity) as uncertain significant negative. The site's definition as a green infrastructure asset is questionable given the limited public access to it. While Berkeley appreciates the site lies within close proximity to a Local Wildlife Site, it is not within 250m of one or more internationally or nationally designated sites. Development will be unlikely to cause disruption to the Local Wildlife Site. Berkeley endeavours to achieve 10% net-biodiversity gain on all projects and the land at Dark Hill Farm is no exception. There is an opportunity as part of the development to retain, enhance and create areas of green space on site and will do so with the upmost respect for the current landscape setting. It is incorrect to assume that development will worsen the surrounding natural environment and not enhance it. SA Objective 6: Berkeley disagrees with regard to scoring the site with an uncertain significant</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report.</p> <p>The site receives an uncertain significant negative effect against SA objective 5: biodiversity and geodiversity. This is due to the fact the site is within 250m of Bourne Valley Woods Local Wildlife Site and Ancient Woodland, and contains green infrastructure assets (thick vegetation).</p> <p>Although development of this site offers the opportunity to achieve biodiversity net gain, these are 'policy-off' appraisals that do not take into consideration mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is located within the North Downs AONB.</p> <p>With regard to SA objective 7: heritage, the site is recorded as containing Neolithic finds, in addition to falling within 250m of a number of heritage assts. Therefore, it receives a significant negative</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>negative for objective 6 – to protect and enhance the borough’s landscape and townscape character and quality. Greater certainty about the impacts of development on the landscape is provided by landscape assessment work undertake by Murdoch Wickham Associates for Berkeley. The analysis explains that the land comprises paddocks with areas of scrub and derelict farm buildings. The characteristics of the site are not typical of the wooded, traditional farmed landscape associated with the Greensand Ridge within the Kent Downs AONB. Residential development on the western fringes of Borough Green is visible in views to the site and other urbanising influences including traffic noise associated mainly with the A25 and the nearby residential development in the former quarry site to the south west further detract from the site’s contribution to the AONB. Overall, the site has a relatively high degree of visual enclosure, in particular the fields north of the footpath, which runs across the centre of the site. The northern hedge provides an effective screen between the site and the A25. There are potential views to the land from the west in the vicinity of Oldbury Hill, but this is a densely wooded area, and no viewpoints were identified. The site does not share the dominant characteristics of the Kent Downs AONB. The site serves a much lower function in comparison to the wider area and the land contributes little to the AONB designation. It is concluded that the development of the Dark Hill Farm site would have a negligible impact on the AONB.SA Objective 7: the scoring the site with an uncertain significant negative for objective 7 due to the site’s proximity (being within 250m) to a heritage asset requires further analysis. The site does not contain any designated or non-designated heritage assets. Furthermore, there are no listed buildings directly adjacent to the site. The Borough Green conservation area is located on the eastern side of the town and as such would not be impacted. The site is located approximately 135m from the closest heritage asset in Borough Green, with further Grade II listed buildings, found an additional 20m eastward and still within the urban confines of Borough Green. Ightham Court, a Grade II* listed building (Registered Park and Gardens designation) is located approximately 750m from the site north-westward. There is limited or no intervisibility between the site and the nearby heritage assets. The land at Dark Hill Farm will have a negligible impact on any of the surrounding heritage assets and it is incorrect to score the site with an uncertain significant negative, purely based on proximity.SA Objective 8-- The SA assesses the site, in line with objective 8 criteria, to have a ‘significant negative’ impact on enhancing the quality of water features and resources. The assessment states the site to be either entirely or significantly (i.e. 25%) within Flood Zone 3 and/or within an area with a 1 in 30-year risk of surface water flooding. While a proportion of the western boundary is part of Flood Zone 3, it is not in excess of 25% of the site. In fact, much less than 25% of the site resides in Flood Zone 3 as this only affects a small area on the western site boundary. Surface water flooding is also determined to affect more than 25% of the site, alongside the land being associated with a 1 in 30-year risk of surface water flooding. It is evident that only a small proportion of the</p>	<p>effect in relation to this objective. The effect is recorded as uncertain, as the actual effect will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertain significant negative effect is as a result of the site containing land with a 1 in 30 year risk of surface water flooding. Further to this, there is some overlap with a watercourse in the north west of the site and therefore it is uncertain what effect development might have on the watercourse in terms of water quality. Although the respondent has said that flooding will be dealt with appropriately through respecting existing surface water flows and incorporating mitigation measures such as SuDS, this is a 'policy-off' appraisal that does not take into consideration mitigation. Each reasonable alternative development site option has been appraised on a 'policy-off' basis, which means that it has been appraised on its physical constraints only. This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via a policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>northern parcel is prone to surface water flooding. Surface water flooding will be dealt with appropriately through respecting existing surface water flows and incorporating mitigation measures (SuDS) within the design proposal. Overall, whilst there is some flood risk on site, which is accepted, this has the potential to be avoided or suitably mitigated. This means that the impact would be negligible.SA Objective 9-- The SA assessment of objective 9 ranks the site as an uncertain significant negative. An agricultural land classification survey will need to be undertaken to determine whether the Option Land is Grade 3a (best and most versatile) or Grade 3b (not best and most versatile). However, either way this should not prejudice the assessment of suitability, as the site is not currently in productive agricultural use and realistically is not of a size of which it could function efficiently as a piece of agricultural land to be commercially farmed.</p>	
24927329	Annex 1	<p>"[59826, 59847, 59819, 59832, 59784, 59820, 59791, 59792, 59790] - SA TABLES SAVED UNDER REF</p> <p>R1630 _221103_Martin Friend (Vincent and Gorbing) Trenport Investments Limited</p> <p>Comments have already been made above regarding the assessment of the strategic options in the Sustainability Appraisal. Some of our general concerns with the SA are also reflected in our comments on the SA of individual sites. We accept that this is an interim document and, moreover, it presents a very 'high level' analysis; there is no weighting between the different SA objectives and the number of "?" notations indicates that there is a considerable degree of uncertainty in much of the assessment.</p> <p>60. In respect of the site assessments, we note that these are also 'high level' and do not take account of any mitigation that the sites assessed can provide, whether this is environmental (BNG or landscape enhancement for example) or in the provision of on-site community infrastructure or transport improvements. This is particularly so for the Trenport's sites at Eccles (formerly Bushey Wood.</p> <p>61. Trenport's comments on the SA site assessments are attached as Annex 1 to this statement."</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>The strategic policy options have been appraised on the basis that they would have a wide range of effects across the SA objectives. However, it is recognised that there is considerable uncertainty depending on the eventual location of housing development. As such, a number of the effects are recorded as uncertain.</p> <p>Quantum Option 2 receives more negative effects than Quantum Option 1 because as explained in the report, delivering growth beyond assessed needs has more potential to cause capacity issues at existing healthcare facilities, services and facilities, and schools. However, the Interim SA Report also acknowledges that the extent of new growth in the borough has the potential to provide sufficient critical mass to support delivery of new essential services and facilities, cultural and leisure facilities and education and training facilities. Both Quantum Options are expected to have a significant positive effect in relation to SA objective 14: housing. The significant positive effect for Quantum Option 2 is recorded as uncertain, as the level of housing delivery would be in excess of what the local housing markets have supported over the past decade and so there is a question mark around its deliverability.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The respondent is correct to note that the site appraisals contained within Annex 1 of the Interim SA Report have been undertaken on a 'policy-off' basis, which means that consideration has not been given to mitigation (e.g. provision of new services and facilities, Biodiversity Net Gain, landscaping, surface water management and contributions to bus services). Instead, the appraisals are based on the physical</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>constraints of each site only, so as to ensure all sites are appraised in a consistent manner.</p> <p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>Sites 59826, 59791 and 59792 receive uncertain significant negative effects (as part of mixed effects) in relation to SA objective 1: health and wellbeing, as they contain open space that could be lost as a result of development, although this is uncertain. As mentioned already, these are 'policy-off' appraisals and so consideration is not given to mitigation. If the sites are allocated at a later stage in the plan-making process and policy wording provided, mitigation will be taken into account through 'policy-on' appraisals of the sites.</p> <p>Sites 59832 and 59784 are incorrectly recorded as containing an open space. The reason these sites are recorded as containing open space is that they slightly overlaps an open space and so the GIS analysis identified the sites as containing open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the sites will receive significant positive effects only in relation to SA objective 1.</p> <p>Although site 59790 comprises brownfield land, actual construction of the site if it were to be allocated could have an adverse effect on biodiversity and geodiversity, due to its proximity to these assets. Therefore, the uncertain significant negative effect this site is expected to have in relation to SA objective 5: biodiversity and geodiversity is appropriate and in line with the site assessment criteria.</p> <p>The SA has correctly sought to identify all reasonable alternative development site options that contain green infrastructure assets and this is reflected in the appraisal of these sites. Although, sites 59819, 59832 and 59784 are incorrectly recorded as containing green infrastructure assets as they slightly overlap at least one green infrastructure asset. In the next iteration of the SA, the proformas for these sites will be updated to reflect the fact they do not contain green infrastructure assets.</p> <p>With regard to SA objective 7: heritage, site 59790 is in fact within close proximity to numerous heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, site 59826 is correctly recorded as having an uncertain significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding, in addition to some water bodies.</p> <p>With regard to SA objective 14: housing, sites appraised for mixed use receive some uncertainty, as it is unknown how much of the site will</p>

			be used for residential development as opposed to other uses. Further to this, we have responded to the estimated yield provided by TMBC, which was generated using a methodology agreed by the Council and applied to all sites.
42781249	Annex 1	<p>"Site 59488 High Street car park</p> <p>Residential</p> <p>High Street car park 16 houses</p> <p>my comments on the use of this site for house building are</p> <p>to maintain the economic viability of the town West Malling needs to retain all existing car park spaces. It has two little as it is with many people parking on double yellow lines. This will lead to indiscriminate parking on residential roads already overburdened. Loss of parking will be disastrous for the shops specially Tesco. Many older people live in the town centre and these shops and services are their lifeline. visitors will go elsewhere</p> <p>Ryarsh lane car park</p> <p>site 59447</p> <p>residential</p> <p>Ryarsh Lane car park 14 houses</p> <p>my comments on the use of this car park for housing are this car park provides the only dedicated parking for town business and retail premises. West Malling needs more parking space not less. Car parking is vital for the economic viability of the town. It has a number of restaurants and pubs which attract visitors and residents at all hours of the day. With little car parking pay spaces people are increasingly parking on double yellow lines and blocking roads. There is a long list of permits with many residents without car garage space. There is no alternative town centre site.</p> <p>St Leonard St site 59594 residential St. Leonards street 35 houses my comments on the use of this site for house building are:</p>	<p>The respondent's comment on car parking spaces relates more specifically to the Local Plan than it does the SA.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA acknowledges that site 59594 is within close proximity of heritage assets and so the site receives an uncertain significant negative effect in relation to SA objective 7: heritage. Site 59592 is recorded as comprising brownfield land and so received a significant positive effect in relation to SA objective 9: soil. The SA is high-level and so does not give consideration to site-specific access points.</p> <p>The SA records site 59602 as greenfield land that contains a significant proportion of Grade 1 and/or 2 agricultural land, and site 59603 as comprising brownfield land. The SA is too high-level to consider traffic congestion and busy road junctions, and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. With regard to sites 59619, 59620, 59621 and 59622, consideration is given in the SA to the Agricultural Land Classification under SA objective 9: soil. All four sites receive a significant negative effect in relation to SA objective 9, as they contain a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>Site 59645 receives an uncertain significant negative effect in relation to SA objective 9: soil, as it is greenfield and contains a significant proportion of Grade 3 agricultural land. The uncertainty acknowledges that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). It is also receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is located within 250m of a heritage asset. The effect is recorded as uncertain as the actual effect will depend on factors such as the design of development and whether there are sight lines between the development site and nearby heritage assets.</p> <p>The SA also acknowledges that sites 59716, 59714, 59807, 59860, 59814, 59740 and 59854 are within close proximity of heritage assets, with the sites each receiving an uncertain significant negative effect in relation to SA objective 7: heritage, as they are located within 250m of a heritage asset. Sites 59716, 59699 and 59854 receive a significant negative effect against SA objective 9: soil, as they are greenfield and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It's imperative to retain this green belt land and also it is partly within the conservation area. It will also lead to loss of agricultural land. It will be detrimental to the historical setting of St. Leonards tower and morning place. Access to the site to both St. Leonards street and Teston Road will be problematical as it is a busy area with teston road being especially in our land. The present access to part of the site is a narrow angled road onto St. Leonards street which is potentially dangerous and not in anyway suited to an increase in traffic.</p> <p>St. Leonards St the Crest site 59602 59603 mixed-use the Crest opposite Orwell spike mix use includes 19 houses</p> <p>my comments on the use of this site for house building are:</p> <p>I object to developing this green belt land and the loss of agricultural land. It will also increase the traffic in this area already more so because of the development opposite. It is near to a busy roundabout of which heavy lorries come and go to blaise farm quarry.</p> <p>Norman Road site 59619 residential Norman road 30 houses this site totally includes 59620 59621 and 59622</p> <p>My comments on the use of this site for house building are:</p> <p>This is green belt land and it has repeatedly been refused on appeal. It involves lots of agricultural land. There is a height restriction between Sandy Lane railway bridge. Fatherwell Rd has quite lane status and traffic is restricted on West Street. Norman road is very narrow at that point with focus and car sharing one lane.</p> <p>Site 59620 residential Norman road seven houses my comments on the use of this side for house building are the same as the above for Norman Road</p> <p>site 59621 59622 residential Norman road 20 house, 7 houses</p> <p>my comments for the use of this site for house building are the same as the above for Norman Road.</p> <p>Offham Road site 59645 residential Offham adjacent to number 139 42 houses</p>	<p>contain a significant proportion of Grade 1 and/or 2 agricultural land. Site 59714 receives an uncertain significant negative effect against SA objective 9, as it is greenfield and contains a significant proportion of Grade 3a or 3b agricultural land.</p> <p>Sites 59699 and 59740 already receive significant negative effects in relation to SA objective 8: water, as they contain land with a 1 in 30 year risk of surface water flooding. The SA also acknowledges the presence of water bodies within site 59740.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Previously refused by tmhc.</p> <p>My comments on the east of this site for house building are:</p> <p>This is protected green belt land it would also involve loss of agricultural land. It would cause harm to the setting and views in the conservation area. It would also cause harm to the setting of the locally historical duces manner and St Mary's Church. Traffic is restricted in the often road leading onto narrow West Street.</p> <p>Often Road</p> <p>site 59716 residential</p> <p>Offhamoften road to Mallings place grounds 28 houses</p> <p>My comments on the use of this site for house building are:</p> <p>These sites are on protected green belt land and is in a conservation area. They should be granted permission we will lose precious agricultural land. It would cause harm to setting up St. Leonards tower an morning place. Access to the sites would present major traffic problems on to the narrowing road into the heart of West morning. Parking is already allowed on both sides of the road nearer to West St resulting in a single lane.</p> <p>Offham road Manor Farm</p> <p>site 59714 residential Manor Farm Offham Road 69 houses</p> <p>My comments on the use of this site for house building are: this is green belt land and this development would detract from visual amenity of the rural landscape. This is rural land in the conservation area. This would harm the setting and views of deuces manner in Saint Mary's church like a historical buildings. We would also suffer the loss of agricultural land to this beautiful rural landscape. Traffic would be on to the restricted often road and into last West Street and the restricted access to the High Street at the very narrow junction.</p> <p>London Road 59658 59670 residential</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>London Road 19 houses 17 houses</p> <p>My comments on this of this site for house building are: this is a green belt site and should be protected. As there is already an improved application for a 79 bed care home I believe it would be an overdevelopment of this green belt side.</p> <p>Ofham/Ewell 59699</p> <p>site 59699 mixed-use Ewell Ave/Offham road mixed-use</p> <p>My comments on the use of this site for mixed-use housing and other uses are this is farmland in the green belt granting of planning permission would result in the loss of the best and most versatile agricultural land. The traffic from this developed site with significant impact on the town as it would lead directly to join the often restricted off and West Street. Access might also be on to other smaller roads in the area IE father well road which will be dangerous as they are single lane and narrow. Drainage in this area I terrible with flooding frequently after rainfall.</p> <p>Station approach 59807 site 59807 residential station approach 34 houses</p> <p>My comments on the use of this site for housing are:</p> <p>an appeal full this site was refused in 22 (gladman). Nothing has changed to make this site this make this a viable site. It was deemed detrimental to the setting of historical West Malling Abbey Eden from oast houses and West Malling station. It is also valuable agricultural land.</p> <p>Station approach Eden farm 59860 sites 59860 residential</p> <p>station road/ Eden farm lane 41 houses</p> <p>My comments on the use of this land for house building are:</p> <p>This would cause harm to the setting of Westmoreland Abbey a scheduled ancient monument. It would also cause harm to the setting of the conservation area and cause loss of valuable agricultural land. Access in and out of the site would also be on station approach which</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>is one end joins Lucks Hill with the primary school directly opposite. It would cause traffic chaos leading directly to swan street and the High Street all on narrow roads.</p> <p>Bypass 59814 site 59814 59740 triangular failed off West Malling bypass my comments on the use of this land for housing or other uses. This site is very close to station approach access an early application which was rejected 59807. It is also detrimental to the setting of historical West Malling Abbey and station. It would entail a loss of agricultural land.</p> <p>Broadwater farm 59740 site mix used Broadwater farm mix useful stop site of current planning application with area West of bypass removed. my comments on the use of this land for 900 houses are: land at significant harm for loss of conservation areas of new barns Broadwater farm and Mill Street. There would be harm to the aquifer for streams into word east Malling. It would cause harm to non listed heritage assets quiet lane and the road network. There would be need for two access roads through the countryside and it would entail significant loss of agricultural land.</p> <p>Lux hill/station north 59854 residential Lucks Hill station North 20 houses</p> <p>My comments on the use of this land for house building are:</p> <p>This is opposite a rejected development. It was approved by tmbc for a car park which has now lapsed. And appeal is awaited up for on the refusal by tmbc for a care home. This development would cause harm to the setting of West Malling Abbey it is in the a conservation area and would entail loss of agricultural land. Lucks Hill narrows at this point and with a primary school opposite would cause major traffic disruption in the area and leading directly onto swan street and the nearby designated quiet lane."</p>	
43485921	Annex 1	[SITE REF: 59740 - BROADWATER FARM] - [SEE 'COPIES FOR LUC' FOLDER]	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>This is a 'policy-off' appraisal and so the site is appraised on its physical merits only. This ensures all reasonable alternative development site options are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>In the SA, all reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report. The respondent has provided their own SA of this site. However, their appraisal is not in line with the site assessment criteria.</p> <p>It is important to note that the SA is one of many factors that feed into the plan-making process.</p> <p>With regard to SA objective 1: health and wellbeing, the site is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1. This is because in accordance with the site assessment criteria, it is within 800m of open space and walking paths. Therefore if the site were to be developed, residents would have access to open space and walking paths. With regard to the respondent's point on uncertainty, if a site is recorded as containing a designated open space it receives some uncertainty, as it is unknown whether the open space will be lost or not, or integrated into development. With regard to healthcare facilities, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites. However, if a site is allocated in the Local Plan via policy containing mitigation measures then it will be appraised on a 'policy-on' basis against the sub-objectives.</p> <p>With regard to SA objective 2: services and facilities, site 59740 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>With regard to SA objective 4: economic growth, all mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59740 is 5ha or more, it receives a significant positive effect in relation to this objective. The fact it is also within 800m of a train station also contributes to this significant positive effect.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlement of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. The SA is too high-level to give consideration to individual planning applications for sites, as this would result in not all sites being appraised on a consistent basis. The historic environment, including Conservation Areas, is considered separately under SA objective 7: heritage.</p> <p>The SA acknowledges the heritage assets within 250m of the site (including within the site). For this reason, the site receives a significant negative effect in relation to SA objective 7: heritage. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the fact the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>The SA acknowledges the fact the site is greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land. For this reason, the site receives a significant negative effect in relation to SA objective 9: soil.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour. The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, the minor negative effect is recorded as uncertain as although the site is within a Minerals Safeguarding Area, the actual effect will depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p> <p>The respondent has not provided a reason as to why they consider the uncertain minor positive effect against SA objective 14: housing unreasonable. Site 59740 is proposed for a mix of uses but it is unknown what percentage of the site will be provided for housing, hence the uncertainty.</p>
45357665	Annex 1	<p>"[59779]</p> <p>Site in Green Belt, proposed 38 houses, traffic, opposite primary school, with direct access to fast A227 main road.</p> <p>[59827]</p> <p>Site in Green Belt, proposed 82 house, traffic on narrow country lanes with no village shop, GP surgery or bus service.</p> <p>[59825]</p> <p>Site in Green Belt, backing on to cottage gardens and contributing to danger on country lanes with no speed limit. "</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA is too high-level to consider traffic congestion and road width, and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA gives consideration to the proximity of sites to services and facilities, including GP surgeries as set out under SA objective 1: health and wellbeing. The Urban Capacity Study (July 2022) was used to inform appraisals under SA objective 2: services and facilities, giving consideration to access to amenities.</p>
42726913	Annex 1	"I'm in the process of completing a response to the Regulation 18 Local Plan but I am confused after reading the Site Assessment Criterias and Objectives in the Interim Sustainability Appraisal Report.	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>All reasonable alternative development site options are appraised against the site assessment criteria contained in Appendix D of the Interim SA Report. With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It seems to me that the basis for the objectives are specific and factual. As such it is not possible to take issue with them. To take an example, Objective 1 (page 250) provides examples relating just to that Objective, for "Significant Positive", "Minor Positive" and Minor Negative" findings. Each of the assessments which provide one or other of these responses, is a fact which cannot be challenged. Is the Site within 800m of an existing healthcare facility and an existing area of open space/walking and cycle path/play area/sports facility? If yes, the site would seem to automatically get a "Significant Positive (++) notwithstanding that the existing healthcare facility may be at full capacity. Is this an issue which would be dealt with at planning stage?</p> <p>Likewise, the accessibility assessment fails to take any account of the additional use of vehicles and the added congestion which will occur, for example, along the A26, through Hadlow and into Tonbridge and the fact that the country lanes will undoubtedly take substantially more vehicles when people find it quicker to use them rather than sit in a queue.</p> <p>I would have thought that these issues need to be considered now at a time when sites for development are being identified. I am unable to find any reference as to how these issues effect the Objectives and I don't wish to burden your Planning Department with comments and loads of paper that is not required.</p> <p>Can you clarify, please, what you wish me to comment upon? Does it go to such things as potential pollution, traffic flow and preservation of wildlife outside nationally recognised areas?"</p>	<p>objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>The SA is too high-level to consider impacts on the road network and traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p>
43487265	Annex 1	<p>"[59592]</p> <p>Further to the additional call for sites announced recently, and the assessment of the above site, we set out below some further comments to assist on your review.</p> <p>Objective 3 – we can confirm that any future planning proposals would properly address any contributions required.</p>	<p>These are 'policy-off' appraisals that do not take into consideration mitigation (e.g. financial contributions), rather they are based on the physical constraints of each site. This ensures all sites are appraised in a consistent manner. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59592 has been appraised in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 5 and 8 – there is a dilapidated pond on site which is dry much of the year and self seeded trees.</p> <p>The promoter of the site would be willing as part of a development scheme to enhance these in order to demonstrate some bio-diversity net gain.</p> <p>Objective 9 – notwithstanding the Grade, the site is too small to be of any viable agricultural use and so its loss would have no effect.</p> <p>Objective 14 – it is important to note that NPPF does encourage small sites as these can be delivered fairly quickly and so provide a social benefit because of this."</p>	
43635649	Annex 1	<p>"[59740]</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Given that local residents will be subject to additional light, air, noise and water pollution from any new development adjacent to their currently rural properties, it is unlikely that this will improve their quality of life.</p> <p>The whole of the Broadwater Farm area with its bridleways and footpaths provides a green outdoor space for local residents and visitors alike - a valuable local amenity, much used by dog walkers, horse riders, people taking their exercise, and as a route for walking or cycling across countryside between communities.</p> <p>Science increasingly is providing evidence that nature and outdoor spaces impact positively on mental and physical well-being. The Lockdowns have brought this need very much into focus, with a growing change seen in public attitudes to the natural world.</p> <p>It is significant and encouraging that recognising the pressing need, some local authorities already have been finding imaginative ways to purchase tracts of land where conservation landscapes are under threat from being overwhelmed by development.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p>	<p>Site 59740 has been appraised in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 1: health and wellbeing looks at the proximity of sites to healthcare facilities and open space, in addition to walking and cycling paths, play areas and sports facilities. It would not be possible at this early stage in the plan-making process to explore the effects of light and noise pollution on existing homes. Consideration has been given to air pollution under SA objective 12: air pollution, which looks at the proximity of sites to Air Quality Management Areas (AQMA), as if they are within close proximity of an AQMA they could exacerbate existing air quality issues. Consideration has also been given to water quality under SA objective 8: water, which acknowledges whether a site contains a water body or watercourse, or falls within a Source Protection Zone, and so its development could have an adverse effect on water quality. The SA acknowledges in the proforma for site 59740 that it contains a water body and therefore could be vulnerable to pollution as a result of development.</p> <p>SA objective 2: services and facilities related to accessibility to amenities, rather than the capacity of existing services and facilities, car parking and public transport. Access to schools is dealt with separately under SA objective 3: education. The SA is too high-level to consider access to car parking.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Site 59740 is already recorded a receiving a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All negative</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Existing community facilities and services are already under pressure, leading to inadequately staffed health facilities, over-subscribed schools and cut-backs in public transport – all of which suffer from spiralling costs.</p> <p>It is hard to envisage how a large new development can hope to improve this, and unless huge resources are committed to building and running new facilities, both existing and new communities will be insufficiently provided for.</p> <p>Given that new developments tend to attract new people to the area, it is debatable how this benefits local people.</p> <p>Parking in West Malling is already a nightmare – new people wanting to visit established local shops and hostelrys may delight the businesses, but will surely add to the frustrations of accessing these facilities.</p> <p>In terms of encouraging walking, cycling and public transport – the station may be in walking or cycling distance for some of the development, but there will still be a need to travel by car to other facilities at greater distances.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Whilst governments discuss measures for reducing our impact on our environment, the proposed planning disrupts and destroys established ecosystems in orchards, fields, and conservation areas.</p> <p>The “New Barns and Broadwater Farm” Conservation Area is vital in preserving and supporting a variety of habitats for wildlife to survive and prosper, many of which contain species which are “at risk”.(See SA 6 response below for definition of this area).</p> <p>Some Important Wildlife in this area :</p> <p>* Larks nesting and singing in the Broadwater fields</p> <p>* Buzzards hunting</p>	<p>effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>SA objective 6 relates to the landscape and townscape, not the historic environment. The historic environment is dealt with separately under SA objective 7: heritage. Site 59740 receives a significant negative effect in relation to SA objective 7. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59740 already receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding and contains a water body.</p> <p>Site 59740 already receives a significant negative effect in relation to SA objective 9: soil, as it is a greenfield site that contains a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 12: air quality, site 59740 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p>

		<p>(i) Maidstone Road, St Marys Platt – SA Ref: 59632</p> <p>4.4 The Council has considered this promotion site within its SA and Rydon has reviewed the findings of that SA process. A critique of the SA findings is set out in the table below:</p> <p>Table 3 – Critique of SA Findings in Respect of SA Ref: 59632</p> <p>SA Objective</p> <p>SA Finding</p> <p>Rydon Critique</p> <p>SA Objective 1 – To improve human health and well-being</p> <p>Minor positive (+)</p> <p>Agreed.</p> <p>SA Objective 2 – To improve equality and access to community facilities and services</p> <p>Minor negative (-)</p> <p>The Council has not produced its accessibility evidence to underpin this score.</p> <p>It is noted that 87 of the sites the Council has assessed have been given this score.</p> <p>The SA describes a somewhat arbitrary process of assessment including ranking sites higher that are in or adjacent to settlements higher in the settlement hierarchy without regard to their actual accessibility. The Council already confirms in relation to SA Objective 1 that this site is accessible to certain key facilities. This score should therefore be amended to Positive (+)</p> <p>SA Objective 3 – To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor positive (+?)</p> <p>The reason given for the uncertainty of the effect here is that there will need to be capacity available at the nearby schools to accommodate new pupils. It is now well established that contributions from new residential development are provided specifically to fund additional capacity at local schools. The County Education Authority then has a Statutory duty to make that capacity available. The question of whether capacity will exist is therefore not uncertain. This score should therefore be amended to Positive (+)</p> <p>SA Objective 4 – To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)</p> <p>Whilst it is acknowledged that housing does not directly deliver new employment unless forming part of a mixed use development it is also widely accepted that new housing has a positive beneficial effect in terms of the local economy, both in the short-term during the</p>	<p>accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. SA objective 1: health and wellbeing instead looks at the proximity of sites to healthcare facilities and open space, in addition to walking and cycling paths, play areas and sports facilities.</p> <p>The SA has not ranked sites that are higher in the settlement hierarchy, as the respondent has suggested. However, sites within and close to settlements higher up the hierarchy are likely to have better access to services and facilities than sites elsewhere. Chapter 4 of the Interim SA Report contains the SA of TMBC's Spatial Options.</p> <p>With regard to SA objective 3: education, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. financial contributions). This ensures all sites are appraised to a consistent level of detail. If a site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities rather than access to employment opportunities. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the SA correctly identifies the site as falling between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, and within 250m of a locally designated site. Specifically, the site is between 250m and 1km of numerous areas of Ancient Woodland. There is no reference in the SA to the site containing a green infrastructure asset. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location and therefore receives an uncertain significant negative effect in relation to this objective. This is due to the fact the GIS analysis identified some sites as not located near any settlements when they are in fact on the edge of a settlement, as there was no percentage overlap with the settlement boundaries. In the next iteration of the SA, this site will be recorded as falling on the edge of a settlement and so will receive an uncertain minor negative effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>construction process and in the longer-term through household spend that helps sustain local business.</p> <p>This score should therefore be amended to Positive (+)</p> <p>SA Objective 5 – To protect and enhance biodiversity and geodiversity</p> <p>Uncertain minor negative (-?)</p> <p>The conclusion in the SA is entirely without foundation. As the Council confirms there is no certainty that any effect exists. The site does not comprise either an internationally or nationally designated site nor indeed a locally designed site. Reference is made to the site containing an existing green infrastructure asset but again this is made without any justification. In Rydon's view the site is relatively unconstrained in terms of biodiversity and it is usual that mitigation measures will be included as part of any planning application in due course following detailed site-specific surveys.</p> <p>This score should therefore be amended to likely effect uncertain (?)</p> <p>SA Objective 6 – To protect and enhance the borough's landscape and townscape character and quality</p> <p>Uncertain significant negative (--?)</p> <p>The site is not a designated open space and is located adjacent to an established and sustainable settlement. There is no basis for the Council's conclusion that there may be a significant negative effect here. An appropriately designed residential scheme could be achieved that has a positive townscape effect. The illustrative masterplan attached at Appendix 1 clearly demonstrates how this could be achieved.</p> <p>This score should there be amended to Positive (+)</p> <p>SA Objective 7 – To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>Again the Council has no evidence to support this conclusion. The presence of a heritage asset within 250m of this site does not in any way indicate that development will give rise to a significant negative effect.</p> <p>Whether there is an effect or not will depend on the nature of the heritage asset and the assessment of its significance. Even then harm may not arise or harm that does arise could be mitigated. It is not possible therefore for the Council to reach the conclusion that it has.</p> <p>By contrast Rydon's heritage consultant Orion has undertaken an assessment of the impact of development on the site would have on heritage assets (see Appendix 1).</p> <p>That assessment confirms that it is unlikely development on the site would have any negative effects. This score should be amended to Negligible (0).</p>	<p>SA utilises a precautionary approach. As such, there is potential for a site within close proximity to a heritage asset to have a significant negative effect on SA objective 7: heritage. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets. This is a 'policy-off' appraisal and so consideration is not given to mitigation. Documents submitted by site promoters are not considered in the SA, so as to ensure all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 8: water, the site receives a mixed uncertain minor negative and negligible effect as although it is not within Flood Zones 2 or 3, it falls within Source Protection Zone 3 and so there is potential that development could affect water quality.</p> <p>With regard to SA objective 9: soil, the site has been appraised in line with the site assessment criteria. Although the respondent states that the site is too small to operate viably for agriculture, it could form part of a larger site for agriculture. Regardless of this, the Agricultural Land Classification still applies when land is not actively being used for agricultural purposes.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 13: material assets and waste, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". Site 59632 is still expected to have a positive effect in relation to this objective, albeit minor.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 8 – To protect and enhance the quality of water features and resources</p> <p>Negligible (0)/Uncertain minor negative (-?)</p> <p>This site is within FZ1 on the Environment Agency Flood Risk Mapping.</p> <p>The proximity of the site to a Source Protection Zone is unlikely to give rise to any significant effects. Rydon therefore agrees with the Council's scoring.</p> <p>SA Objective 9 – To conserve and enhance soil resources and guard against land contamination</p> <p>Uncertain significant negative (--?)</p> <p>The approach taken here by the Council is overly simplistic. The presence of Grade 3 agricultural land is only one part of considering the impact of development on the land. It must also be important to consider the scale of the site as a viable parcel of agricultural land. The site is too small to operate viably for agricultural, which is evidenced by the fact that it is currently unused scrub. The impact of its loss is therefore reduced. The land is unmanaged scrubland and has not been in productive agricultural use for over 20 years. The impact of the loss of the site for development is therefore further reduced.</p> <p>This score should be amended to Negligible (0).</p> <p>SA Objective 10 – To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Minor Positive (+)</p> <p>The site is well related to the settlement that it adjoins. There is no justification given for only scoring this as a minor positive effect. The score should be amended to Significant Positive (++)</p> <p>SA Objective 11 – To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>Agreed.</p> <p>SA Objective 12 – To protect and improve air quality</p> <p>Negligible (0)</p> <p>Agreed.</p> <p>SA Objective 13 – To protect material assets and minimise waste</p> <p>Uncertain minor negative (-?)</p> <p>Whilst the site may be within a minerals safeguarding area its size and location, enclosed by the railway line to the north, the A25 to the south, Maidstone Road to the east and Platt Church of England School to the West renders it unviable for mineral extraction. The</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response																																																																											
		<p>development of the site would not therefore give rise to any negative impact in terms of minerals.</p> <p>The score should be amended to Negligible (0).</p> <p>SA Objective 14 – To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Minor positive (+)</p> <p>The Council's justification for only awarding a minor positive effect here is totally flawed.</p> <p>Sites smaller than 100 dwellings frequently deliver a range of dwelling types and sizes including affordable housing. Additionally sites of this size are not dependent on strategic scale infrastructure and can deliver housing quickly, which given the Council's poor track record and consequent housing need is of vital importance. This score should therefore be amended to Significant positive (++)</p> <p>4.5 On the basis of the above critique an updated SA assessment for the site is set out in the table below:</p> <p>Table 4 – Updated SA Assessment for Maidstone Road, St Marys Platt – Site Ref: 59632</p> <table><tr><td></td><td>SA1</td><td>SA2</td><td>SA3</td><td>SA4</td><td>SA5</td><td>SA6</td><td>SA7</td><td>SA8</td><td>SA9</td><td>SA10</td><td>SA11</td><td>SA12</td><td>SA13</td><td>SA14</td></tr><tr><td>TMBC</td><td>+</td><td>-</td><td>+</td><td>0</td><td>-?</td><td>--?</td><td>--?</td><td>-?/0</td><td>--?</td><td>+</td><td>0</td><td>0</td><td>-</td><td></td></tr><tr><td>?</td><td>+</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Rydon</td><td>+</td><td>+</td><td>+</td><td>+</td><td>?</td><td>+</td><td>0</td><td>-</td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>?/0</td><td>0</td><td>++</td><td>0</td><td>0</td><td>0</td><td>++</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr></table> <p>4.6 The promotion site therefore scores far more highly when properly assessed against the SA than the assessment conclusions drawn by the Council."</p>		SA1	SA2	SA3	SA4	SA5	SA6	SA7	SA8	SA9	SA10	SA11	SA12	SA13	SA14	TMBC	+	-	+	0	-?	--?	--?	-?/0	--?	+	0	0	-		?	+														Rydon	+	+	+	+	?	+	0	-							?/0	0	++	0	0	0	++

		<p>Minor positive (+)</p> <p>SA Objective 2 – To improve equality and access to community facilities and services</p> <p>Minor negative (-)</p> <p>The Council has not produced its accessibility evidence to underpin this score.</p> <p>It is noted that 87 of the sites the Council has assessed have been given this score. The SA describes a somewhat arbitrary process of assessment including ranking sites higher that are in or adjacent to settlements higher in the settlement hierarchy without regard to their actual accessibility. The Council already confirms</p> <p>in relation to SA Objective 1 that this site is accessible to certain key facilities. The Accessibility Assessment attached at Appendix 2 confirms the site has good access to a wide range of services and facilities. This score should therefore be amended to Positive (+)</p> <p>SA Objective 3 – To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain significant positive (++?)</p> <p>The reason given for the uncertainty of the effect here is that there will need to be accommodate new pupils. It is now well established that contributions from new residential development are provided specifically to fund additional capacity at local schools. The County Education Authority then has a Statutory duty to make that capacity available. The question of whether capacity will exist is therefore not uncertain. This score should therefore be amended to Significant positive (++)</p> <p>SA Objective 4 – To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)</p> <p>Whilst it is acknowledged that housing does not directly deliver new employment unless forming part of a mixed use development it is also widely accepted that new housing has a positive beneficial effect in terms of the local economy, both in the short-term during the construction process and in the longer-term through household spend that helps sustain local business.</p> <p>This score should therefore be amended to Positive (+)</p> <p>SA Objective 5 – To protect and enhance biodiversity and geodiversity</p> <p>Uncertain minor negative (-?)</p> <p>The conclusion in the SA is entirely without foundation. As the Council confirms there is no certainty that any effect exists. The site does not comprise either an internationally or nationally designated site nor indeed a locally designed site. Reference is made to the site containing an existing green infrastructure asset but again this is made without</p>	<p>contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities. The SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the SA correctly identifies the site as falling between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, and/or within 250m of a locally designated site. Specifically, the site is between 250m and 1km of Ancient Woodland. There is no reference in the SA to the site containing a green infrastructure asset. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, the site is correctly recorded as receiving an uncertain significant negative effect, as although it is near a settlement, it is not on the edge of the settlement. This is a 'policy-off' appraisal and so consideration is not given to mitigation. Documents submitted by site promoters are not considered in the SA, so as to ensure all sites are appraised on a consistent basis.</p> <p>SA utilises a precautionary approach. As such, there is potential for a site within close proximity to a heritage asset to have a significant negative effect on SA objective 7: heritage. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets. This is a 'policy-off' appraisal and so consideration is not given to mitigation. Documents submitted by site promoters are not considered in the SA, so as to ensure all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 9: soil, the site has been appraised in line with the site assessment criteria. Although the respondent states that the site is too small to operate viably for agriculture, it could form part of a larger site for agriculture. Regardless of this, the Agricultural Land Classification still applies when land is not actively being used for agricultural purposes.</p> <p>With regard to SA objective 13: material assets and waste, it is acknowledged in the SA that although the site is within a Minerals</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>any justification. In Rydon's view the site is relatively unconstrained in terms of biodiversity and it is usual that mitigation measures will be included as part of any planning application in due course following detailed site-specific surveys.</p> <p>This score should therefore be amended to likely effect uncertain (?)</p> <p>SA Objective 6 – To protect and enhance the borough's landscape and townscape character and quality</p> <p>Uncertain significant negative (--?)</p> <p>The site is not a designated open space and is located adjacent to an established and sustainable settlement. There is no basis for the Council's conclusion that there may be a significant negative effect here. An appropriately designed residential scheme could be achieved that has a positive townscape effect. The illustrative masterplan attached at Appendix 2 clearly demonstrates how this could be achieved.</p> <p>Furthermore the Landscape and Visual Technical Note prepared by Liz Lake Associates and attached at Appendix 2 confirms that there will only be limited effects of change to the LCA locally and no change to the overall perception or character of the LCA as a whole. The Technical Note also confirms that the proposed development will have only limited visibility. This score should there be amended to Positive (+)</p> <p>SA Objective 7 – To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>Again the Council has no evidence to support this conclusion. The presence of a heritage asset within 250m of this site does not in any way indicate that development will give rise to a significant negative effect.</p> <p>Whether there is an effect or not will depend on the nature of the heritage asset and the assessment of its significance. Even then harm may not arise or harm that does arise could be mitigated. It is not possible therefore for the Council to reach the conclusion that it has.</p> <p>By contrast Rydon's heritage consultant Orion has undertaken an assessment of the impact of development on the site would have on heritage assets (see Appendix 2). That assessment confirms that providing the design and layout of any development on the site has regard to the existing limited views of heritage assets the site can come forward without harming the setting of those assets.</p> <p>This score should be amended to Negligible (0).</p> <p>SA Objective 8 – To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p>	<p>Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 in the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings". Site 59698 is still expected to have a positive effect in relation to this objective, albeit minor.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Agreed.</p> <p>SA Objective 9 – To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The approach taken here by the Council is overly simplistic. The presence of Grade 1 or 2 agricultural land is only one part of considering the impact of development on the land. It must also be important to consider the scale of the site as a viable parcel of agricultural land. The site is too small to operate viably for agricultural, which is evidenced by the fact that it is currently unused scrub. The impact of its loss is therefore reduced.</p> <p>This score should be amended to Negligible (0).</p> <p>SA Objective 10 – To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant positive (++)</p> <p>Agreed.</p> <p>SA Objective 11 – To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>Agreed.</p> <p>SA Objective 12 – To protect and improve air quality</p> <p>Negligible (0)</p> <p>Agreed.</p> <p>SA Objective 13 – To protect material assets and minimise waste</p> <p>Uncertain minor negative (-?)</p> <p>Whilst the site may be within a minerals safeguarding area its size and location, enclosed by the railway line to the north, the A25 to the south, Maidstone Road to the east and Platt Church of England School to the West renders it unviable for mineral extraction. The development of the site would not therefore give rise to any negative impact in terms of minerals.</p> <p>The score should be amended to Negligible (0)</p> <p>SA Objective 14 – To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Minor positive (+)</p> <p>The Council's justification for only awarding a minor positive effect here is totally flawed. Sites smaller than 100 dwellings frequently deliver a range of dwelling types and sizes including affordable housing. Additionally sites of this size are not dependent on strategic scale infrastructure and can deliver housing quickly, which given the</p>

43629217	Annex 1	<p>"[59688]</p> <p>Q8. Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report?</p> <p>Gladman have some concerns about the accuracy and robustness of the individual site assessments in Appendix D, specifically Hilden Golf Course.</p> <p>Site 59688- Hilden Golf Course</p> <p>The site existing use is as a golf centre and sports facility. It is triangular in form and enclosed to the south by Stocks Green Road (B207), to the north by a trainline and to the west by Rings Hill. Hildenborough Station is located to the immediate northwest and is operated by Southeastern providing regular services to London Charing Cross, Tunbridge Wells and Hastings. Hildenborough is accessible to the east of the site.</p> <p>The sustainability appraisal has identified a number if uncertain significant negative effects, which we regard as overly negative and require further consideration.</p> <p>SA Objective 5 is rated uncertain significant negative effect due to the potential loss of onsite green. As the site is in use as a golf course, certain landscape features will be manmade, and manicured thus reducing the site's overall biodiversity value. Where tree belts and structural planning exists, these would be retained as part of any development. Given that development would also require a biodiversity net gain to be achieved, the overall result of development would be an increase to the site biodiversity value resulting positive, not negative score.</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, the SA acknowledges the fact the site contains some green infrastructure assets. This is in accordance with the site assessment criteria. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>Additionally, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). This ensures all sites are appraised on a consistent basis. If the site is allocated in the Local Plan via a policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>With regard to SA objective 6: landscape and townscape, the site has been appraised in line with the site assessment criteria. Whether a site comprises greenfield or brownfield land is considered separately under SA objective 9: soil.</p> <p>SA utilises a precautionary approach. As such, there is potential for a site within close proximity to a heritage asset to have an uncertain significant negative effect on SA objective 7: heritage. This is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>With regard to SA objective 8: water, the proforma states that the site is either within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. As the site contains land with a 1 in 30 year risk of surface water flooding, the SA is correct.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 6 is rated as uncertain significant negative effect. The assessment considers development would result in the loss of open space. Whilst loss of greenspace would be an inevitable consequence of development, the use as a golf course means it is not a greenfield site. The site is contained to the north by significant tree belt, and internally benefits from other plantings that would further contain development. We consider the site's assessment should therefore be neutral.</p> <p>SA Objective 7 is rated uncertain significant negative effect as there are Listed Buildings located near to the site. Whilst there are nearby a small number of listed buildings to the south and west, the site clearly has no historical linkage to these buildings. There is also sufficient space available for buffers and offsets to be provided to mitigate any impacts, should this be necessary. Therefore, we consider the effect should be considered uncertain negative to account for the site providing suitable mitigation.</p> <p>SA Objective 8 is rated significant negative / uncertain significant negative. The assessment finds the site is within Flood Zone 3 and/or area with a 1 in 30 year risk of surface water flooding. This is incorrect. This site located wholly within a Flood Zone 1 and is not impacted by surface water flooding.</p> <p>Overall, Gladman consider that the Interim Sustainability Appraisal does not currently operate as a suitable basis for determining the locations of development. The Council will need to consider Green Belt release sites and Gladman consider that the ISA and the Green Belt Review be thoroughly reviewed prior to future consultations."</p>	
43779649	Annex 1	<p>"[Site reference 59709]</p> <p>Sustainability Appraisal</p> <p>It appears from the SA that the site may not have been assessed accurately against all criteria. The site, which measures c.12 ha, is sustainably located on the edge of Borough Green and offers excellent access to local shops, schools and services, including Borough Green and Wrotham Railway Station. We support the outcome of sustainability assessment against objectives 1, 3 and 10. The site's location on the existing settlement boundary will support sustainable access to a range of local amenities.</p> <p>The site is assessed to have an 'uncertain significant negative' impact on local biodiversity and ecology, heritage assets, as well as townscape and landscape quality. Constraints identified include Flood</p>	<p>Site 59709 has been appraised in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site receives a significant negative effect for the reasons outlined in its proforma. Specifically, the site contains green infrastructure assets and is also within 250m of two areas of Ancient Woodland. In the next iteration of the SA Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Zone 3, alongside surface water flooding, although it should be noted these affect only part of the site, not the whole.</p> <p>Our response to the questionnaire includes an analysis of the scoring given to the site against the SA objectives and it is clear from this analysis, that a review of particular scorings is necessary. We therefore kindly request that the site is reassessed against the SA criteria with particular focus being directed towards Objectives 5, 6 and 8."</p>	<p>present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59709 receives an uncertain significant negative effect for the reason outlined in the proforma (its proximity to the AONB). All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regards to SA objective 8: water, the site receives an uncertain significant negative effect for the reasons outlined in the proforma. Specifically, it contains land with a 1 in 30 year risk of surface water flooding, in addition to a watercourse. The uncertainty is due to the fact the site contains a watercourse and falls within Source Protection Zond 2. Therefore, its development could result in adverse effects on water quality, although this is uncertain at this stage of assessment.</p>
24986657	Annex 1	<p>"Sustainability Appraisal.</p> <p>1. Treatment of climate change.</p> <p>Chapter 3 of the SA clearly outlines the importance of addressing Climate Change, indicates what is expected of a Local Plan in this regard, and what the implications are of not addressing this issue. The SA understands the relationship of all the objectives to achieving a holistic approach to adaptation and mitigation. The SA rightly indicates how important strong LP development management policies are for reducing the carbon footprint of the Borough and resisting any increase. However scoring the strategic and spatial options in any depth is impossible without an up to date evidence base and detailed topic paper.</p> <p>The Borough has adopted a Climate Change Strategy. The local plans must reflect the aspirations and targets of this strategy. Parishes are producing their own strategies as encouraged and are supporting the Borough's own targets. The only way these targets can be met are if this Local plan reflects the need to build to zero carbon standards and take every opportunity to produce renewable energy either as part of development or off site to provide new infrastructures and district heating. Nothing has been done in producing an evidence base that identifies opportunities. Other Local authorities have and are grasping this 'nettle'. They are requiring building standards higher than building regulations. This Local Plan is to take us to 2040 it must be clear that the Borough will not accept new development that does not meet the highest standards. The opportunities for producing renewable energy should be properly investigated as this could be a major influence in where new development could be the most sustainable. The SA does</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>The SA contains references to TMBC's Climate Change Strategy in Appendices B (Review of Relevant Plans, Policies and Programmes) and C (Baseline Information).</p> <p>Appendix C provides the baseline information for Tonbridge and Malling. The purpose of the baseline information is to identify the key sustainability issues affecting the borough (outlined in Chapter 3). These are then used to develop the SA framework against which the Local Plan is assessed (the SA framework can be found in Chapter 4 of the Interim SA Report). There is an entire section in the baseline information dedicated to climate change, containing information from numerous internal and external sources.</p> <p>The baseline information summarised in Appendix C has helped inform the appraisal of the Local Plan, including the strategic and spatial options, and reasonable alternative development site options.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. For this reason, it is not the purpose of the SA to inform an 'exceptional circumstances study'. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>not have this evidence base from which to test the strategic and spatial options and individual sites.</p> <p>Where are the current areas creating the biggest footprint? What would each choice of option have on them? Could it reduce it? Would it exacerbate it? Which are the locations where there are opportunities for increases in green infrastructure, biodiversity and natural solutions? Where are the opportunities for providing sources of renewable energy and district heating to both new and existing development? Which areas can cope with more development due to existing infrastructure capacity (Electricity and gas grid, waterbodies and different geology (for ground source), road network capacity, water and sewerage capacity). Which is more carbon costly- to upgrade existing infrastructures or build new? Huge areas need investigation before there can be full understanding of the impact of any chosen option on the carbon footprint in the Borough.</p> <p>Without a climate evidence base the SA is flawed.</p> <p>2. The Green Belt – lack of evidence base</p> <p>The SA of individual sites should have screened out sites in the Green Belt to determine what is available outside the Green Belt and how that impacts on emerging alternative spatial options. This would then have informed the 'exceptional circumstances study'.</p> <p>A joint Green Belt study across the 3 Boroughs involved in the 2 HMAs needs to have been undertaken to determine which areas of the Green Belt are most important, and which are least important when judged against the 5 purposes of the Green Belt as set out in the current NPPF. This should have been done with Tunbridge Wells and Sevenoaks at least before they submitted/submit their LPs and was called for by consultees at the previous T&M LP examination. This has not yet been done and without it is impossible to properly identify areas that could be released and qualify as 'exceptional circumstances'."</p>	
42380353	Annex 1	<p>"* Comments on Annex 1</p> <p>The Green Belt is not a constraint that is screened for in this iteration of the assessment of sites. It should have been seen as a constraint that needed to be applied in order to indicate the amount land available for development outside the Green Belt. This should have been done to justify the need for 'exceptional circumstances. (There should also have been a Green Belt study to indicate the most vulnerable areas of the Green Belt in relation to its 5 functions as part of evidence base.)</p> <p>AONB should also have been screened out. There is much more land outside the AONB in the Borough than there is of land outside the Green Belt. There are therefore no exceptional circumstances that</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. For this reason, it is not the purpose of the SA to inform 'exceptional circumstances'. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), and this may include sites located within the AONB.</p> <p>The SA is too high-level to consider busy road junctions and so the Council will commission additional evidence on matters including traffic. The SA is also too high-level to give consideration to the gas network, electricity grid, pipelines and the sewage network, but these are things that will instead be considered at planning application stage if the sites are allocated.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>would justify releasing land from the AONB for development. No land should be allocated in the AONB.</p> <p>Comments on individual sites 59779, 59825 and 59827:</p> <p>Common to all three sites:</p> <ul style="list-style-type: none"> * The junctions at both ends of Back Lane are dangerous and Back Lane experiences speeding traffic since the road is used as a cut through to from the A228/A26- to A227 and cross country to the A21 * The bus stop mentioned in relation to site 59779 is only used at school times and provides no better service than to the other two sites in terms of accessibility to the current school bus route. * All three are unsustainable and undeliverable unless huge changes are made to the current policies covering conservation and enhancement of this AONB Village in the GB. * The village is not on the gas network so the current electricity grid would need upgrading to sustain any new developments in these sites. * The pipes for providing water supply are inadequate for new development * Sewerage and land drainage is also under pressure and overflows are already experienced as mentioned on site 59827. * Any one of these sites would have a huge impact on the character and landscape of this small village which has no services other than the small primary School, already oversubscribed. * 59827 has been identified in the Para 5.41 of the Sustainability Appraisal as being a least sustainable site option for allocation, the other 2 have not been so identified. All three should have been identified as 'a least sustainable site option for allocation'. <p>Site 59779:</p> <ul style="list-style-type: none"> * Green Belt and the Kent Downs AONB, edge of Shipbourne Conservation Area. * Poor drainage on southern boundary. 	<p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. With regard to the AONB, all three sites receive a significant negative effect in relation to SA objective 6: landscape and townscape, due to the fact they are within 500m of the AONB. The SA also acknowledges that the three sites are not within close proximity to a large settlement and are instead in rural locations.</p> <p>SA objective 8: water deals with flooding and water quality, acknowledging that sites 59779 and 59827 are at risk of surface water flooding. The SA does not acknowledge a watercourse on the southern edge of site 59827, as it is in fact beyond the site boundary.</p> <p>With regard to schools (SA objective 3: education), the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>Paragraph 5.41 in the Interim SA Report correctly identifies the least sustainable site options.</p> <p>With regard to site 59779, the SA acknowledges that the site is within 250m of heritage assets (which includes Shipbourne Conservation Area), against SA objective 7: heritage.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>* Access onto Back Lane in close proximity to main access to Shipbourne Primary school. Danger to school children and congestion at pick up and drop off times.</p> <p>* Dangerous junction of Back Lane with the A227.</p> <p>* Bus stop on the A227 currently only provides a school service.</p> <p>* There is an active covenant on this land restricting development. It is therefore undeliverable.</p> <p>Site 59825:</p> <p>* Green Belt, Kent Downs AONB, within the Shipbourne Conservation Area.</p> <p>* Very open site.</p> <p>* Dangerous access onto narrow Upper Green Road, or onto Back Lane.</p> <p>* Proposed mixed development on this site is questionable. There is no identifiable need for social housing in Shipbourne.</p> <p>Site 59827:</p> <p>* Green Belt, Kent Downs AONB and the edge of the Conservation area.</p> <p>* Open site</p> <p>* There are land drainage issues on this site and a watercourse runs along the southern boundary.</p> <p>* There are already issues with sewer overflow across the site.</p> <p>* Dangerous access onto Back Lane or narrow Reeds Lane and dangerous junctions at either end of Back Lane</p> <p>"</p>	
44309601	Annex 1	<p>"[59424]</p> <p>59424 Clearheart Lane</p> <p>SA Objective 1: To improve human health and well-being</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Negative (-)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is oversubscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Negative (-)</p> <p>The local environment has limited community facilities. The community centre is inadequate for the current population and further competition would result in decreased availability for existing service users. The sports park is largely football (a new rugby pitch has been built, but not used significantly to-date, raising concerns about its viability) with four tennis courts, two of which have been permanently assigned to a single tennis club, limiting availability for ad-hoc hirers. The status of facilities, all being leased from one of the parties developing the site, means that there is potentially no long-term benefit to the community of the significant S.106 investments raising further concerns about long-term viability.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils. KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being reassigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p>	<p>facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>The site assessment criteria for SA objective 2: services and facilities consider the accessibility band that each site has been placed within in the Urban Capacity Study (July 2022), as this provides an indication of the overall accessibility of a site in relation to access to services and site location. Site 59424 falls within the Good Accessibility Band and therefore receives a negligible effect in relation to SA objective 2.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, he site is incorrectly recorded as being within a settlement when it is on the edge of a settlement. This is as a result of the GIS analysis identifying a high percentage overlap between the site and settlement boundaries. In the next iteration of the SA, this site will receive an uncertain minor negative effect in relation to this objective.</p> <p>With regard to SA objectives 7: heritage and 8: water, respondent has not expressed any disagreement over the effects given.</p> <p>SA objective 9: soil considers whether a site is greenfield or brownfield, in addition to the Agricultural Land Classification. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. Priority Habitats are not</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost because of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>The site is a major wildlife corridor joining the woods of Warren Wood and Cattering Wood. Loss of this important</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Negative (-)</p> <p>This site is located outside a settlement. The boundaries of the settlement were sold off separately by MOD to protect the surrounding countryside and concentrate development on the brownfield land.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (-)</p> <p>The site is greenfield land that contains a less than significant proportion (<25%) of Grade 1, 2 or 3 agricultural land. The area is registered by DEFRA as 'Priority Habitat Inventory - Deciduous Woodland (England)'. Site contains Ancient Woodland and TPO protected trees.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Major negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available.</p>	<p>specifically considered in the SA but almost all Priority Habitats in the Borough are covered by the green infrastructure assets layer under SA5. The site receives a minor negative effect in relation to SA objective 9 because it comprises greenfield land and contains less than a significant proportion of Grade 1, 2 or 3 agricultural land.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59424 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negative (-)</p> <p>The Site is an area of woodland surrounding the existing development. This provides a green lung for the area, and helps prevent some of the worst excesses of temperature on hot days; it is well documented that trees have a cooling effect on the environment and that is evidenced when walking around Kings Hill on a hot day in Summer, where a walker will experience a wall of heat when reentering the village from the surrounding woodland.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negative (-)</p> <p>The site is not within 100m of an AQMA. However, the secondary access has been determined to be via the Teston Road, for which the primary access to the trunk road network is likely to be through Wateringbury. The addition of houses with access along the Wateringbury Road is likely to increase the number of vehicles turning right at the A26 / Red Hill traffic lights, which will significantly impact the throughput of the junction and the increase in pollution in that area. In addition, the main access road would be through a quiet residential cul-de-sac which already has significant parking problems, resulting in potential issues with access.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area. These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Uncertain positive (+)</p> <p>The site is initially expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, this would be at the expense of destruction of Ancient Woodland, and mature trees that are subject to TPO; previous estimates of housing densities for this site are below 100 dwellings and hence the value is uncertain.</p>	
44309601	Annex 1	"[59531]	With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59531 Tower View SE</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--?)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path / play area/ sports facility (but not both). However, the existing healthcare facility is massively over-subscribed.</p> <p>The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost because of development. The site is within an area of open space or currently accommodates an outdoor sports facility and this use may be lost as a result of development. Only by reducing the use would there be any chance of reducing the impact, and that would immediately put into question the viability of this site.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>Although the site is placed within the Very Good Accessibility Band, the requirement to provide access to the core Kings Hill Road network would result in significant disruption to that road network impacting on large numbers of the existing population.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor positive (+?)</p> <p>The site is within 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being more than an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)/Negligible (0)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village,</p>	<p>of a matter for plan-making and the Infrastructure Delivery Plan (IDP). As development of sites 59531 and 59534 may result in the loss of open space, both sites receive an uncertain significant negative effect in relation to this objective (as part of a mixed effect).</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, both sites have been appraised in accordance with the site assessment criteria and it is correct that it receives a minor positive effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, both sites are already recorded as having minor negative effects. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 8: water, site 59534 receives a mixed minor negative and negligible effect because although it does not contain a water body or watercourse or fall within a Source Protection Zone, it contains land with a 1 in 100 year risk of surface water flooding.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service</p>

		<p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negligible (0)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Negative (-)</p> <p>The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites or is within 250m of a locally designated site. The site is an existing green infrastructure asset that would be lost as a result of new development.</p> <p>.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Uncertain significant negative (--?)</p> <p>The site would result in the loss of a designated conservation area. Such building would radically change the nature of the area in a detrimental way.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site contains a heritage asset. The value of this asset would be essentially lost, even if the asset itself could be maintained, by building residential dwellings around it.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p>	<p>result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59544 is recorded as having a negligible effect as it is located within a settlement. Biodiversity and geodiversity sites are dealt with separately under SA objective 5: biodiversity and geodiversity.</p> <p>With regard to SA objective 7: heritage, the boundary of site 59544 has been drawn so as to avoid the heritage asset at its centre. However, the SA still record the site as having a significant negative effect as it is within 250m of this heritage asset. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, site 59544 receives a mixed minor negative and negligible effect because although it does not contain a water body or watercourse or fall within a Source Protection Zone, it contains land with a 1 in 100 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soil, the site receives a minor negative effect because it comprises greenfield land and contains less than a significant proportion of Grade 1, 2 or 3 agricultural land. Biodiversity is dealt with separately under SA objective 5, which gives consideration to locally designated sites.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objectives 11: climate change adaptation and 13: material assets and waste, respondent has not expressed any disagreement over the effect given.</p> <p>With regard to SA objective 12: air quality, site 59544 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, site 59544 has been appraised in line with the site assessment criteria. As it has the potential to provide fewer than 100 dwellings, it receives a minor positive effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Negative (-)</p> <p>The site is a conservation area that contains a less than significant proportion (<25%) of Grade 1, 2 or 3 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant Negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>The site is not within 100m of an AQMA However, the conservation area currently contributes to the improvement of air quality in the area.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Negligible (0)</p> <p>The site is expected to provide only a few dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would, and the infrastructure requirements would likely make</p>

Therefore, site 59634 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>Also, the KCC Strategic plans for cycle connectivity included a cycle route directly through the middle of this site, and this would be lost if the development proceeded.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. However, access would either need to be via the quiet lanes to the North of Kings Hill, or through the public open space that is currently used for soak-aways for the Kings Hill road network potentially resulting in more frequent flooding of the roads on Kings Hill.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites.</p> <p>The site contains an existing green infrastructure asset that would be lost as a result of new development; much of the site is Ancient Woodland, and is bordered by more ancient woodland to the West. In addition, the site provides a wildlife corridor from the Warren Wood</p>	<p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relate more specifically to the Local Plan than they do the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59634 is recorded as having a significant negative effect. This is due to the fact it contains some Ancient Woodland and green infrastructure assets. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59634 is recorded as having a minor negative effect as it is located on the edge of a settlement. The effect is uncertain, as the actual effect is dependent on the final design, scale and layout of development. The SA gives all sites that are within 500m of the AONB a significant negative (--) effect, in recognition of the potential for development outside of, but near to the AONB, to have an effect. Site 59634 is not within 500m of the AONB. The SA is a desk-based, strategic assessment and it is therefore not possible or proportionate for the SA to identify which sites are actually visible from an AONB. All sites have been appraised consistently using the same buffer distance.</p> <p>With regard to SA objective 7: heritage, 8: water, 13: material assets and waste, respondent has not expressed any disagreement over the effects given for the site.</p> <p>With regard to SA objective 9: soil, site 59634 receives a significant positive effect as it comprises brownfield land.</p> <p>With regard to SA objective 10: climate change mitigation, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>nature park and the ancient woodland to the North of Amber Lane through Warren Wood Ancient Woodland to Coalpit Wood Ancient Woodland. The effect of development would be devastating to the biodiversity in the area.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The site would be visible from the AONB of the North Downs and from points along the North Downs Way public footpath, reducing the character of the views. In addition, the development of the site would significantly and detrimentally change the vista from existing dwellings along the North edge of Kings Hill and many other dwellings with visibility in that direction.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--) / Negligible (0)</p> <p>The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>Much of the site is Ancient Woodland. Most of the rest of the site is Grade 2 agricultural land.</p> <p>Although there was a small historic single storage location in its centre, that does not provide any justification for considering the site as a whole as brownfield.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live on Kings Hill, residents are very dependent on car use.</p>	<p>Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas for both sites that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59634 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, site 59634 has been appraised in line with the site assessment criteria. As it has the potential to provide 100 dwellings or more, it received a significant positive effect. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Significant negative (--)</p> <p>The destruction of a significant area of ancient woodland would reduce the capacity of the area to absorb Carbon Dioxide from the air. Even if the trees were replaced, it would be several decades before the level of absorption would reach the level provided by the trees that are there at present..</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Uncertain Negative (-?)</p> <p>The site is not within 100m of an AQMA. However, any access to the North would be via quiet lanes, and road traffic would impact on the safety and air quality of those lanes for recreational users.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Uncertain minor positive (+?)</p> <p>Although the site is expected to comprise 100 dwellings or more, that would be dependent on the destruction of a significant area of ancient woodland. If the ancient woodland was avoided, the number of dwellings would be much less than 100, and there would be restrictions in the mix of sizes, types and tenures."</p>	
44309601	Annex 1	<p>"[59655]</p> <p>59655 Teston Road</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Negative (-)</p> <p>Although the site is within 800m of either an exitsing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is over-subscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). Site 59655 has been appraised in accordance with the site assessment criteria.</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network and flooding. Flooding is considered separately under SA objective 8: water. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, site 59655 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor positive effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Negative (-)</p> <p>The site is in a poor accessibility band. The primary access is via the Teston Road and either via Wateringbury Road through East Malling or Red Hill via the Wateringbury traffic lights, both of which have traffic issues.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost because of new development. The site is greenfield in a Green Belt area.</p> <p>The site provides an open wildlife corridor joining the woods of Warren Wood and Cattering Wood.</p> <p>Loss of this important link would result in the deterioration of both sites.</p>	<p>to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relate more specifically to the Local Plan than they do the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59655 is recorded as having a significant negative effect. This is due to the fact it contains some Ancient Woodland and green infrastructure assets. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59655 is incorrectly recorded as having an uncertain minor negative effect in relation to this objective, as it is not on the edge of a settlement but just outside of a settlement. In the next iteration of the SA Report, the site will have an uncertain significant negative effect. The effect is uncertain, as the actual effect is dependent on the final design, scale and layout of development.</p> <p>With regard to SA objective 7: heritage, 8: water, 13: material assets and waste, respondent has not expressed any disagreement over the effects given for the site.</p> <p>With regard to SA objective 9: soil, site 59655 receives a significant negative effect, as it is greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>With regard to SA objective 10: climate change mitigation, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality.</p>

			with the spatial strategy, it may still be considered a reasonable alternative.
44309601	Annex 1	<p>"[59761]</p> <p>59761 Kate Reed Wood</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path / play area/ sports facility (but not both).</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. However, the A228 at that point is very narrow for a trunk road, and any access via it is likely to impact on safety on that road; linking in via the A26 may be considered, but the immediate effect on the AQMA at the Wateringbury traffic lights would need to be considered. The distance to service centres also needs to be determined; West Malling is at capacity and would not cope with such additional load, and Kings Hill only has a limited scope of services.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being more than an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village,</p>	<p>With regard to SA objective 1: health and wellbeing, site 59761 receives a mixed uncertain significant negative and minor positive effect. The uncertain significant negative effect is due to the fact the site contains open space, which could be lost as a result of development although this is uncertain.</p> <p>SA objective 2: services and facilities relates to accessibility, rather than the road network. AQMA's are dealt with separately under SA objective 12: air quality. Therefore, site 59761 has been appraised in accordance with the site assessment criteria and it is correct that it receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relate more specifically to the Local Plan than they do the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, sites 59761 is recorded as having a significant negative effect. This is due to the fact it contains some Ancient Woodland and green infrastructure assets. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59761 is recorded as having a significant negative effect because although it is located on the edge of a settlement, it contains open space that could be lost as a result of development.</p> <p>Site 59761 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. However, it is not within 250m of Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. This includes ancient woodland at least some of which that would be lost by such a development.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The impact on the view from the South would be disastrous. The impact on the A228 would be disastrous, with country views replaced by urban sprawl for a significant distance.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Significant negative (--)</p> <p>The site is located within 250m of a heritage asset. The change of vista associated with such a development would be disastrous. For example, Mereworth Castle would lose its setting.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--)</p> <p>The site is either entirely or significantly (i.e. $\geq 25\%$) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The site contains a water body or water course or falls within or partially within Source</p> <p>Protection Zone 1.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land in greenbelt and contains a significant proportion ($\geq 25\%$) of Grade 1 and/or 2 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant negative (--)</p>	<p>are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59761 receives a negligible effect in relation to SA objective 8: water, as it is at risk of flooding or contains a water body or watercourse, or falls within a Source Protection Zone.</p> <p>With regard to SA objective 9: soil, site 59761 receives a minor negative effect, as it is greenfield land and contains a less than significant proportion of Grade 1, 2 or 3 agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p> <p>With regard to SA objective 10: climate change mitigation, the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59761 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect in relation to this objective.</p> <p>With regard to SA objective 13: material assets and waste, respondent has not expressed any disagreement over the effect given.</p> <p>With regard to SA objective 14: housing, site 59761 has been appraised in line with the site assessment criteria. As it has the potential to provide fewer than 100 dwellings, it receives a minor positive effect. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live in the area, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Significant negative (--)</p> <p>The site contains ancient woodland; removal of that resource would impact on carbon capture; even replacing the trees would take several decades to reach the level of absorption of the current woodland</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Significant negative (--)</p> <p>The site is not within 100m of an AQMA. However, being on the A26, the impact on the AQMA at the traffic lights in the centre of Wateringbury is likely to be significant.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures</p> <p>Significant positive (++)</p> <p>The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, working around the ancient woodland and other wooded areas may reduce the benefit unless other more inappropriate approaches were taken to increase dwelling densities."</p>	
44309601	Annex 1	<p>"[59448, 59449, 59450]</p> <p>Small site, no comment"</p>	Noted.
44309601	Annex 1	<p>"[59630]</p> <p>59630 Fields North or Amber Lane</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--)</p>	<p>With regard to SA objective 1: health and wellbeing, site 59630 receives a mixed uncertain significant negative and minor positive effect. The uncertain significant negative effects are due to the fact it contains open space, which could be lost as a result of development although this is uncertain.</p> <p>SA objective 2: services and facilities relates to accessibility, rather than the road network. AQMAs are dealt with separately under SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path / play area/ sports facility (but not both).</p> <p>The site is within an area of open space that was originally provided by one of the parties developing the site, in-line with the description of the Site for the Phase 2 submission as agreed by the inspector. However, the site has been withdrawn by one of the parties developing the site, much to the disgust of the residents, with a fence, which is regularly vandalised, even though it was registered as an Area of Community Value. Indeed, the only planned access is via Warren Woods Nature Park, with the planned removal of trees, even though one of the parties developing the site has agreed a maintenance plan for the area, which would clearly be invalidated by turning some of the woods into a road.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Poor Accessibility Band. The access would be via Amber Lane which is not wide enough to support the number of dwellings that would make the site economically viable.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being more than an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p>	<p>objective 12: air quality. Therefore, site 59630 has also been appraised correctly in that it receives a significant negative effect in relation to this objective. In terms of access to the site, the SA is too high-level to give consideration to site-specific access points. This is something that will instead be determined at planning application stage, if the site is allocated.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comments regarding safeguarded employment land relate more specifically to the Local Plan than they do the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59630 is recorded as having a significant negative effect. This is due to the fact it contains a green infrastructure asset and is adjacent to some Ancient Woodland. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, sites 59761 and 59630 are recorded as having significant negative effects because although they are located on the edge of a settlement, both contain open space that could be lost as a result of development.</p> <p>Site 59761 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. However, it is not within 250m of Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Sites 59761 and 59630 receive negligible effects in relation to SA objective 8: water, as neither is at risk of flooding or contains a water body or watercourse, or falls within a Source Protection Zone.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost because of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>The site is a major wildlife corridor joining the woods of Warren Wood and Hoath Wood. Loss of this important link would result in the deterioration of both sites.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. On appeal, the inspector rejected the appeal including the impact on the vista. The development would be out of character with the rest of Kings Hill and clearly not part of that development, being separated from it by an area of ancient woodland.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse or fall within a Source Protection Zone.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land that is Grade 2 agricultural land. The area is designated by DEFRA as: Priority Habitat Inventory - Traditional Orchards (England) and, although one of the parties developing the site dug up all the apple trees, one of the options they suggested to the inspector at the Phase 2 planning appeal was that the area could be used as an orchard.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant negative (--)</p>	<p>With regard to SA objective 9: soil, both sites receive a minor negative effect, as they are greenfield land and contain a less than significant proportion of Grade 1, 2 or 3 agricultural land. Most of site 59630 is classified as Non Agricultural, with a smaller proportion of the site classed as Grade 2 agricultural land. The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough. In terms of site 59630 containing a green infrastructure asset, this is dealt with separately under SA objective 5.</p> <p>With regard to SA objective 10: climate change mitigation, the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, sites 59761 and 59630 have been appraised in line with the site assessment criteria. As neither is within 100m of an AQMA, both receive a negligible effect in relation to this objective.</p> <p>With regard to SA objective13: material assets and waste, respondent has not expressed any disagreement over the effect given.</p> <p>With regard to SA objective 14: housing, sites 59761 and 59630 have been appraised in line with the site assessment criteria. As both sites have the potential to provide fewer than 100 dwellings, they receive minor positive effects. Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland.</p> <p>With regard to SA objectives 7: heritage and 13: material assets and waste, respondent has not expressed any disagreement over the effects given for site 59630.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. 		<p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. The location was identified by one of the parties developing the site in the Kings Hill Phase 2 submission as public open space with good connectivity to the public footpath network, and on appeal, the inspector agreed to the development on the basis that the development was in line with the descriptions provided for the use of Heath Farm.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Negligible (0)/Uncertain Negative (-?)</p> <p>The site is either entirely or largely (>=75%) within Flood Zone 1.</p> <p>The site does not contain a water body or watercourse but falls within or partially within Source Protection Zones 2 and 3. However, these effects are uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land and contains a significant proportion (>=25%) of Grade 1 and/or 2 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Negative (-)</p> <p>The site is more than 800m from a railway station and more than 400m from a bus stop and cycle route.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>The site is not within 100m of an AQMA.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Significant positive (++)</p> <p>The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs.</p>	
44309601	Annex 1	<p>"[59636]</p> <p>Travel to Kings Hill centre or West Malling village (assuming parking spaces are available) would result in a significant round-trip distance, so even though the site is physically next to built-up areas, it is not strategically connected to it, and nearby roads are designated as quiet lanes; development would impact on their intended use."</p>	As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.
44309601	Annex 1	<p>"[59673]</p> <p>Small site, no comment"</p>	Noted.
44309601	Annex 1	<p>"[59698, 59715, 59726]</p> <p>Travel to Kings Hill centre or West Malling village (assuming parking spaces are available) would result in a significant round-trip distance, so even though the site is physically close to built-up areas, it is not strategically connected to it, and nearby roads are designated as quiet lanes; development would impact on their intended use."</p>	As stated in the 'Difficulties and Data Limitations' section of the SA, distances in the appraisal were measured as straight-line distances from the edge of a site option to existing services and facilities. Therefore, actual walking distances could be greater.
44309601	Annex 1	"[59740]	With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>59740 Broadwater Farm</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Significant negative (--)</p> <p>Although the site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility, the existing healthcare facility is over-subscribed with roughly twice as many patients registered as is recommended under guidelines. The addition of further residents who would need to be dependent on this facility would be that the level of service would not be acceptable to either the new or existing residents.</p> <p>The site would be over the KCC strategic cycle route and hence prevent implementation, resulting on a negative impact on the wellbeing of existing residents of Kings Hill.</p> <p>The site currently provides countryside for Kings Hill residents. The withdrawal of open space within Heath Farm by one of the parties developing the site has restricted the available options for Kings Hill residents, and further restrictions should be avoided.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Negative (-)</p> <p>The site is placed within the Fair Accessibility Band. Travel to Kings Hill centre or West Malling village (assuming parking spaces are available) would result in a round-trip distance of around 5 miles, so even though the site is physically next to Kings Hill, it is not strategically connected to it.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Significant negative (--)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on the site, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health. Adding a further stop for students in this site would further increase journey times increasing the issues.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p>	<p>The site is incorrectly recorded as containing an open space. The reason the site is recorded as containing an open space is that it slightly overlaps an open space (Heath Farm Country Park) and so the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the GIS analysis will be refined so that sites that slightly overlap an open space are not picked up as containing that open space. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1.</p> <p>With regard to SA objective 2: services and facilities, site 59740 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlement of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. Proof would need to be provided if consideration was to be given to amelioration of the impact of development</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect is uncertain as it may be possible to conserve or even enhance the asset through the design and layout of the new development.</p> <p>As determined in the previous Local Development Framework, the site is a major wildlife corridor joining the East Malling Heath and beyond to West Malling and beyond. Loss of this important link would result in the deterioration of wildlife in the overall area.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located next to several small villages, and its implementation would result in a complete change from a rural area with villages to a continuous urban sprawl from Maidstone to West Malling and beyond. This would be a complete change of the character of the whole area from villages in a rural environment to urban sprawl and should be avoided. In addition, the value of conservation areas in the site would be largely lost.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Significant negative (--)</p> <p>The site is located within 250m of a heritage asset. These would be severely reduced in value by development. These include the Cwylfa, the searchlight and generator buildings from the second world war, and land anchors for the previous hop fields as noted in the deeds for the area.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--)</p> <p>The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The site contains a water body or water course or falls within or partially within Source Protection Zone 1. However, these effects are uncertain as effects resulting from proximity to Source Protection</p>	<p>Site 59740 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the fact the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater". This SA objective does not look at impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p> <p>With regard to SA objectives 9: soil, 11: climate change adaptation, 13: material assets and waste and 14: housing, respondent has not expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Zones and water bodies are uncertain at this stage. The water from the site drains into an area where it is extracted, and pollution from development would impact on the quality of the extracted water</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land and contains a significant proportion (>=25%) of Grade 1 and/or 2 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Negative (-)</p> <p>Most of the site, including the areas where the developer previously indicated that the dwellings would be built, is more than 800m of a railway station. There are multiple areas of concern regarding how the site could be effectively linked into the road system without impacting on quiet lanes and further work is required before this site should be considered for progressing further with regards to viability.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>The site is not within 100m of an AQMA. However, the major road networks: the A20 and M20 are both subject to AQMA and additional traffic from this development would impact significantly on those links.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures</p>

		TBC"	
44309601	Annex 1	<p>"[59624, 59654, 59664, 59700, 59722, 59723, 59728, 59729]</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further"</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. If a site is not consistent with the spatial strategy, it may still be considered a reasonable alternative.</p>
44309601	Annex 1	<p>"[59797]</p> <p>59797 West part of Kings Hill Golf Course</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path / play area/ sports facility (but not both).</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. However, the A228 at that point is very narrow for a trunk road, and any access via it is likely to impact on safety on that road; linking in via the A26 may be considered, but the immediate effect on the AQMA at the Wateringbury traffic lights would need to be taken into account. The distance to service centres also needs to be determined; West Malling is at capacity and would not cope with such additional load, and Kings Hill only has a limited scope of services.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is within 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour,</p>	<p>Site 59797 receives a mixed uncertain significant negative and minor positive effect in relation to SA objective 1: health and wellbeing because it contains an area of open space that could be lost as a result of development, although this is uncertain. The site is also within 800m of an open space and walking path.</p> <p>With regard to SA objective 2: services and facilities, site 59797 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective. The SA is too high-level to consider road width. Air Quality Management Areas (AQMAs) are considered separately under SA objective 12: air quality. As site 59797 is not within 100m of an AQMA, it receives a negligible effect. In terms of distance to service centres, the SA utilises the Urban Capacity Study, which considers distance to service centres. The capacity of service centres is not considered and would be difficult to quantify.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59797 is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on</p>

		<p>meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. This includes ancient woodland at least some of which that would be lost by such a development.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The impact on the view from the South would be disastrous. The impact on the A228 would be disastrous, with country views replaced by urban sprawl for a significant distance.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Significant negative (--)</p> <p>The site is located within 250m of a heritage asset. The change of vista associated with such a development would be disastrous. For example, Mereworth Castle would lose its setting.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--)</p> <p>The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The site contains a water body or water course or falls within or partially within Source Protection Zone 1.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p>	<p>biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59797 is recorded as having an uncertain significant negative effect as it contains an open space that could be lost as a result of development, although this is uncertain.</p> <p>Site 59797 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. However, it is not within 250m of Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 10: climate change mitigation, the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10". Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59797 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect in relation to this objective.</p> <p>With regard to SA objectives 8: water, 9: soil, 13: material assets and waste and 14: housing, respondent has not expressed any disagreement over the effects given for site 59797.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The site is greenfield land in greenbelt and contains a significant proportion ($\geq 25\%$) of Grade 1 and/or 2 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live in the area, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Significant negative (--)</p> <p>The site contains ancient woodland; removal of that resource would impact on carbon capture; even replacing the trees would take several decades to reach the level of absorption of the current woodland</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Significant negative (--)</p> <p>The site is not within 100m of an AQMA. However, being on the A26, the impact on the AQMA at the traffic lights in the centre of Wateringbury is likely to be significant.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Significant positive (++)</p> <p>The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, working around the ancient woodland and other wooded areas may reduce the benefit unless other more inappropriate approaches were taken to increase dwelling densities."</p>

Existing pupils in Kings Hill often have journey times to or from school being in excess of an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. If a site is not consistent with the spatial strategy, it may still be considered a reasonable alternative.</p> <p>Site 59800 receives an uncertain significant negative effect in relation to SA objective 1: health and wellbeing because it contains an area of open space that could be lost as a result of development, although this is uncertain. This is mixed with a minor positive effect, because despite the site containing an open space, it is within 800m of other areas of open space and a walking path.</p> <p>Site 59800 is placed in the Poor Accessibility Band, not the Fair Accessibility Band. For this reason, it receives a significant negative effect in relation to SA objective 2: services and facilities. The SA is too high-level to consider road width. Air Quality Management Areas (AQMA) are considered separately under SA objective 12: air quality. In terms of distance to service centres, the SA utilises the Urban Capacity Study, which considers distance to service centres. The capacity of service centres is not considered and would be difficult to quantify.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59800 is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59800 is recorded as having an uncertain significant negative effect as it</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. This includes ancient woodland at least some of which that would be lost by such a development.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The impact on the view from the South would be disastrous. The impact on the A228 would be disastrous, with country views replaced by urban sprawl for a significant distance.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Significant negative (--)</p> <p>The site is located within 250m of a heritage asset. The change of vista associated with such a development would be disastrous. For example, Mereworth Castle would lose its setting.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--)</p> <p>The site is either entirely or significantly (i.e. $\geq 25\%$) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.</p> <p>The site contains a water body or water course or falls within or partially within Source Protection Zone 1.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The site is greenfield land in greenbelt and contains a significant proportion ($\geq 25\%$) of Grade 1 and/or 2 agricultural land.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant negative (--)</p> <p>The site is more than 800m from a railway station and although it is within 400m of a bus stop, there are restricted bus services available. For example, there are no mid-to-late evening buses, which means that to live in the area, residents are very dependent on car use.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p>	<p>contains an open space that could be lost as a result of development, although this is uncertain. There is also uncertainty as the actual effect will depend on the final design, scale and layout of development.</p> <p>Site 59800 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. However, it is not within 250m of Mereworth Castle. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, site 59800 receives an uncertain significant negative effect. The uncertainty is as result of the fact the effect resulting from proximity to water bodies is uncertain at this stage.</p> <p>With regard to SA objective 10: climate change mitigation, site 59800 receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>Biodiversity is dealt with separately under SA objective 5, which gives consideration to Ancient Woodland. It is noted, however, that the presence of trees aids climate change mitigation through the absorption of carbon dioxide.</p> <p>With regard to SA objective 12: air quality, site 59800 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect in relation to this objective.</p> <p>With regard to SA objectives 9: soil, 13: material assets and waste and 14: housing, respondent has not expressed any disagreement over the effects given for site 59800.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Significant negative (--)</p> <p>The site contains ancient woodland; removal of that resource would impact on carbon capture; even replacing the trees would take several decades to reach the level of absorption of the current woodland</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Significant negative (--)</p> <p>The site is not within 100m of an AQMA. However, being on the A26, the impact on the AQMA at the traffic lights in the centre of Wateringbury is likely to be significant.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain Negative (-?)</p> <p>The site is within a Minerals Safeguarding Area. The site is within a Minerals Safeguarding Area.</p> <p>These effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Significant positive (++)</p> <p>The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, working around the ancient woodland and other wooded areas may reduce the benefit unless other more inappropriate approaches were taken to increase dwelling densities."</p>	
44309601	Annex 1	<p>"[59802]</p> <p>59802 Vineyard South of Hollandbury Park</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)</p> <p>The site is within 800m of either an existing healthcare facility or an existing area of open space/walking and cycle path / play area/ sports facility (but not both).</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Significant negative (--)</p> <p>The site is placed within the Fair Accessibility Band. However, the A228 at that point is very narrow for a trunk road, and any access via it is likely to impact on safety on that road; linking in via the A26 may be considered, but the immediate effect on the AQMA at the</p>	<p>Site 59802 is placed in the Poor Accessibility Band, not the Fair Accessibility Band. For this reason, the site receives a significant negative effect in relation to SA objective 2: services and facilities .The SA is too high-level to consider road width. Air Quality Management Areas (AQMA) are considered separately under SA objective 12: air quality. In terms of distance to service centres, the SA utilises the Urban Capacity Study, which considers distance to service centres. The capacity of service centres is not considered and would be difficult to quantify.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Wateringbury traffic lights would need to be taken into account. The distance to service centres also needs to be determined; West Malling is at capacity and would not cope with such additional load, and Kings Hill only has a limited scope of services.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Negative (-)</p> <p>The site is withing 800m of an existing secondary school or a primary school (but not both).</p> <p>However, there are issues with capacity available at those facilities to accommodate new pupils.</p> <p>KCC has been presented with an opportunity for a new school to be built on another site in the area, but have indicated that it would not be cost-effective, and this leads to the assumption that it would not be built or manned, which demonstrates that the availability of secondary schools in the area is an issue. Existing pupils in Kings Hill often have journey times to or from school being more than an hour, meaning that they spend over two hours a day travelling, which is not sustainable in terms of mental health.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Negative (-)</p> <p>The pressure to build houses in Kings Hill has resulted in safeguarded employment land being re-assigned to residential building. This has upset the balance that was intended for Kings Hill as a garden village, and additional housing without additional opportunities for employment will further impact the sustainability of the village.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Significant negative (--)</p> <p>The site is within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites. While proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. This includes ancient woodland at least some of which that would be lost by such a development.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>Significant negative (--)</p> <p>The site is located beyond the edge of a settlement. The impact on the view from the South would be disastrous. The impact on the A228 would be disastrous, with country views replaced by urban sprawl for a significant distance.</p>	<p>With regard to SA objective 4: economic growth, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities. The respondent's comment regarding safeguarded employment land relates more specifically to the Local Plan than it does the SA.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59802 is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59800 is recorded as having an uncertain significant negative effect as it contains an open space that could be lost as a result of development, although this is uncertain. There is also uncertainty as the actual effect will depend on the final design, scale and layout of development. Site 59802 is incorrectly recorded as having an uncertain significant negative effect, when it is located on the edge of a settlement. In the next iteration of the SA Report, it will receive an uncertain minor negative effect in relation to SA6.</p> <p>Site 59802 receives a significant negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, site 59802 receives an uncertain significant negative effect. The uncertainty is as result of the fact the effect resulting from proximity to water bodies are uncertain at this stage.</p> <p>With regard to SA objective 10: climate change mitigation, sites 59800 and 59802 receive minor positive effect as although they are more than 800m from a railway station, they are within 400m of a bus stop. For SA10, the site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the</p>

As it is not within 100m of an AQMA, it receives a negligible effect in relation to this objective.</p> <p>With regard to SA objectives 1: health and wellbeing, 9: soil, 13: material assets and waste and 14: housing, respondent has not expressed any disagreement over the effects given for site 59802.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>minerals extraction, and it may be possible for prior extraction to occur before a site is developed.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Significant positive (++)</p> <p>The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. However, working around the ancient woodland and other wooded areas may reduce the benefit unless other more inappropriate approaches were taken to increase dwelling densities."</p>	
44309601	Annex 1	<p>"[59803, 59845]</p> <p>It is noted that, being in the green belt and without appropriate access to a service centre, these sites are NOT consistent with ANY of the spatial strategy options and should not be considered further"</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. If a site is not consistent with the spatial strategy, it may still be considered a reasonable alternative.</p>
44309601	Annex 1	<p>"[59441]</p> <p>Kings Hill are concerned that additional traffic onto the A228 in the vicinity of the M20 roundabout would impact on traffic flows in the area causing problems for access to/from Kings Hill to the North."</p>	<p>The SA is too high-level to consider additional traffic on the A228 and busy road junctions, and so the Council will commission additional evidence on matters including traffic.</p>
44309601	Annex 1	<p>"[59442, 59443, 59445, 59456]</p> <p>Kings Hill have concerns that additional traffic onto the A228 in the vicinity of the M20 roundabout would impact on traffic flows in the area causing problems for access to/from Kings Hill to the North."</p>	<p>The SA is too high-level to consider additional traffic on the A228 and busy road junctions, and so the Council will commission additional evidence on matters including traffic</p>
44309601	Annex 1	<p>"[59447, 59488, 59594, 59602, 59603, 59619, 59620, 59621, 59622, 59645, 59699, 59714, 59716]</p> <p>West Malling is the primary local service centre, and is already at capacity with regards to parking, with frequently 'circling' the car park to get a space when it becomes available. Any significant number of additional dwellings in the area will result in overloading of the infrastructure at the centre of West Malling, making Kings Hill unsustainable if it cannot access an appropriate local service centre."</p>	<p>The SA is too high-level to give consideration to the availability of car parking spaces.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
44309601	Annex 1	<p>"[59658, 59672]</p> <p>The A20 is approaching (or, in some areas, exceeding) capacity. Adding further access roads is contrary to policy SQ8, especially given the closeness of other roads in the area, such as Town Hill to West Malling and the Birling Road, and the presence of Parkfoot garage nearby. The impact of such development could impact on the safety and throughput of the A20."</p>	The SA is too high-level to consider these issues, and so the Council will commission additional evidence on matters including traffic.
44309601	Annex 1	<p>"[59733]</p> <p>Access to this Site would be via King Hill, at a junction close to a very busy roundabout. KHPC consider that this would impact on road throughput and safety, especially with cars coming off the roundabout at speed, having to stop for cars waiting to turn right into the proposed site."</p>	The SA is too high-level to consider these issues, and so the Council will commission additional evidence on matters including traffic.
44350945	Annex 1	<p>"[59694] - Copy Table 2 saved in folder named R161_221103_Steve Harding (AXIS) FCC Environment</p> <p>2.0 SITE ID 59694 – RESPONSE TO SUSTAINABILITY APPRAISAL</p> <p>2.1.1 AXIS has reviewed the appraisal of the Site, undertaken as part of the SA process, which is included in Annex 1 of the SA. There are concerns that the performance of the Site against certain SA objectives have been appraised in a simplistic manner without further interrogation, or in the absence of current, publicly available information. There has been extensive assessment work undertaken as part of previous consenting regimes, much of which is in the public domain1.</p> <p>2.1.2 Commentary against the scoring of the SA objectives has been provided below in Table 1, which is followed by our own assessment of how the Site should have been scored, taking this scoring into account. We feel that when this information is given due regard, the opportunity that this site affords is clear.</p> <p>2.1.3 Table 2 provides a visual summary of how the two appraisal processes compare.</p> <p>"</p>	<p>SA objective 3: education explores the proximity of sites to schools. As site 59694 is proposed for employment uses, SA objective 3 is not relevant. Although there is potential for employment sites to offer opportunities for work experience and apprenticeships, this cannot be guaranteed.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, due to the proximity of the site to an area of Ancient Woodland and the fact it contains green infrastructure assets, it receives a significant negative effect. The effect is uncertain as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). This ensures all sites are appraised on a consistent basis. If the site is allocated in the Local Plan via policy containing site-specific mitigation measures, it will be appraised on a 'policy-on' basis. The SA does not utilise Natural England's SSSI Impact Risk Zones.</p> <p>As the site is located within a settlement, it receives a negligible effect in relation to SA objective 6: landscape and townscape. Sites do not tend to receive positive effects against landscape objectives as SA utilises a precautionary approach and it is likely that any change to the baseline would have adverse effects.</p> <p>With regard to SA objective 7: heritage, the SA utilises Kent's Historic Environment Record. Site 59694 is located within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>Site 59694 receives an uncertain significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. The uncertainty is due to the fact effects resulting from Source Protection Zones are uncertain. Again, this is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>Site 59694 comprises Grade 2 agricultural land. Therefore, it is correct that it receives a significant negative effect in relation to SA objective</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>9: soil. The fact the site is not connected to any current agricultural use does not change the fact it comprises agricultural land.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>Site 59694 receives an uncertain minor negative effect in relation to SA objective 13: material assets and waste as it is within a Minerals Safeguarding Area. Although the site promoter states that the site has already undergone aggregate abstraction, this level of information is not available for most of the sites. So as to ensure consistency, all sites within a Minerals Safeguarding Area are recorded as having an uncertain minor negative effect in relation to this objective.</p> <p>SA objective 14: housing specifically relates to the delivery of housing. As the location of employment sites will not influence housing delivery, this objective is not relevant. However, the proforma incorrectly states 'TBC' under this objective. In the next iteration of the SA Report, it will state "The location of employment sites is not considered likely to affect this objective".</p>
42006241	Annex 1	<p>"[59713 & 59715] Appendix 3 of Rep.</p> <p>Comments on Appendix 1 of SA saved in LUC folder</p> <p>No. R01687 "</p>	<p>Sites 59713 and 59715 have been appraised on a 'policy-off' basis, which means they have been appraised on their physical constraints only with no consideration given to mitigation. This ensures all sites are appraised on a consistent basis. If the sites are allocated in the Local Plan via policy containing mitigation measures, they will be appraised on a 'policy-on' basis.</p> <p>The respondent has undertaken their own SA of the two sites. However, their assessment is not in line with the site assessment criteria and takes into consideration mitigation (e.g. contributions towards healthcare facilities and schools).</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022), as explained in Appendix D of the Interim SA Report. The SA acknowledges under SA objective 10: climate change mitigation that both sites are within 800m of a railway station and therefore both receive a significant positive effect in relation to SA objective 10.</p> <p>With regard to SA objective 3: education, the distance covered by catchment areas differs between schools. Although someone may be located within the catchment area of a school, they may not be able to easily access the school, hence the SA uses a distance of 800m.</p> <p>With regard to SA objective 4: economic growth, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities. Although it is noted that Esquire Developments is an SME, this is an appraisal of the site and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>does not take into consideration who is promoting (or developing) the site.</p> <p>SA utilises a precautionary approach and as explained above, these are 'policy-off' appraisals that do not take into consideration mitigation. With regard to SA objective 5: biodiversity and geodiversity, site 59713 receives a significant negative effect, as it is within 250m of Ancient Woodland. In the next iteration of the SA Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). The uncertainty acknowledges the fact there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>Site 59715 is incorrectly recorded as having a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. This is due to the fact it is located adjacent to a green infrastructure asset, which overlaps the site. In the next iteration of the SA, the proforma for the site will be updated and it will receive a minor negative effect, as it is within 1km of an Ancient Woodland and Local Wildlife Site (Oaken Wood, Barming). The appraisal does not take into consideration mitigation, which includes Biodiversity Net Gain.</p> <p>Sites 59713 receives an uncertain significant negative effect against SA objective 6: landscape and townscape, as it is not located inside or on the edge of a settlement, but is instead not near any settlements. The proforma states that the site is not located near any settlements and/or would result in the loss of designated open spaces. In this instance, the site would not result in the loss of designated open space. Site 59715 is incorrectly recorded as having an uncertain significant negative effect against this objective, when it should receive an uncertain minor negative effect as it is on the edge of a settlement. In the next iteration, the proforma for the site will be updated so that it receives an uncertain minor negative effect in relation to SA6.</p> <p>Site 59713 has been correctly appraised against SA objective 7: heritage, as it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. Site 59715 is also within 250m of numerous heritage assets and although the respondent states that the proposals would entirely preserve the significant of these heritage assets, this is a 'policy-off' appraisal that does not take into consideration mitigation.</p> <p>Site 59713 receives a significant negative effect in relation to SA objective 8: water, as it slightly overlaps some land with a 1 in 30 year risk of surface water flooding. We note that the overlap is very small. Site 59715 receives an uncertain minor negative effect as it falls within Source Protection Zone 3 but it is uncertain what effect this could have on water quality.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Site 59713 receives a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 2 agricultural land. The Agricultural Land Classification still applies when a site is not actively being used for agricultural purposes.</p> <p>With regard to SA objective 10: climate change mitigation, the sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise sites. However, if a site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised taking into account the sub-objectives.</p> <p>With regard to SA objective 11: climate change adaptation, again this is a 'policy-off' appraisal and so consideration is not given to mitigation. All sites receive a negligible effect in relation to this objective for the reasons provided in the site assessment criteria in Appendix D of the Interim SA Report.</p> <p>With regard to SA objective 13: material assets and waste, the SA at this stage does not take into consideration the supply of various minerals. This is because information like this may not be available for other sites and so they would not all be appraised on a consistent basis.</p> <p>With regard to SA objective 14: housing, as already mentioned the site assessment criteria are used to appraise sites, not the sub-objectives. Site 59713 receives a minor positive effect as it will deliver fewer than 100 dwellings.</p>
44462081	Annex 1	<p>"[59828]</p> <p>4.1 The Consultation identifies a range of sites (as made known through the call for sites exercise, Urban Capacity Study and withdrawn Local Plan draft allocations), which comprises the available land to accommodate future development through the emerging Local Plan. This includes the Site (No. 59828) on land to the north of Pratling Street, Aylesford, adjacent to Forstal Business Park.</p> <p>4.2 The Interim SA provides an assessment of each identified site against its 'sustainability appraisal objectives'. Given the number of sites this exercise necessarily has had to be high level, unable to take account of more detailed site-specific information available. This includes the Interim SA's assessment of the Site (No. 59828), where without reference to the current planning application it unjustifiably scores down the sustainable merits of how development should come forwards.</p> <p>4.3 A number of methodology issues are also raised, particularly in respect of the use of the accessibility scoring approach in the Council's Urban Capacity Study for employment sites. As the Urban Capacity Study deals only with options for accommodating housing growth in urban areas, its accessibility scoring approach does likewise; it does not consider the locational requirements of larger employment</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>SA should not and does not take into consideration current planning applications, as this would mean that some sites are appraised using more detail than others when they should all be appraised to a consistent level of detail.</p> <p>Consideration is given to the Urban Capacity Study (July 2022) under SA objective 2: services and facilities. The site assessment criteria consider the accessibility band that each site has been placed within in the Urban Capacity Study, as this provides an indication of the overall accessibility of a site in relation to access to services and site location. Although the Urban Capacity Study considers options for accommodating housing growth, the location of employment sites to community facilities and services is still considered relevant as people may make use of those facilities and services near to their workplaces around working hours. Site 59828 falls within the Poor Accessibility Band and therefore receives a significant negative effect in relation to SA objective 2.</p> <p>As outlined in Appendix D of the Interim SA Report (Site Assessment Criteria), consideration is given to walking distances considered desirable, acceptable and the preferred maximum.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>development that is much less likely to be accommodated within existing settlement confines.</p> <p>4.4 For example the methodology does not reflect the sustainable locational benefits of employment development being adjacent to existing urban area, where positive scoring is only achieved for sites within settlement confines; and it places equal importance to employment sites being accessible to community facilities and services, as to residential development, despite most trips to school and other facilities by families take place from home.</p> <p>4.5 Further, the Interim SA's methodology for accessibility presents a binary position on minimal walking distances, failing to take account that there are accepted 'preferred' and 'maximum' distances beyond what is most desirable.</p> <p>4.6 To assist the Council, these representations provide an updated assessment of the Site compared to the Interim SA's scoring at Appendix A. This comparative scoring exercise identifies the following:</p> <ul style="list-style-type: none"> □ that the Site on the edge of the settlement confines is a sustainable location for commercial development, accessible by sustainable forms of transport, with no objection from Kent County Council Highways & Transportation; □ as employment development would offer training skills and opportunities, such as work experience and apprenticeships, it is incorrect to consider employment sites would have no impact on the objective to improve "levels of educational attainment and skills and training development for all age groups and all sectors of society"; □ there is detailed understanding of Site's ecology, with no objection from either the Biodiversity Officer at Kent County Council or Natural England; □ as the Site is located adjacent to a larger urban area and business park (which forms part of the Medway Gap, including Aylesford as identified in the Urban Capacity Study), the Interim SA is incorrect in considering the Site to be 'not located near any settlements'; □ the heritage impact of the proposed development on the Site is known, with a limited impact at the lowest end of the less than substantial scale; □ the drainage and water management of development on the Site is sufficiently resolved, with agreement from the Lead Local Flood Authority at Kent County Council that: it has been demonstrated that the proposals within this report, as shown by the illustrative masterplan, are compliant with NPPF, PPG and local planning policy, taking predicted climate change allowances into account. It is therefore considered that on implementation of this strategy, the development will remain safe from flood risk and can be suitably drained for the development lifetime <p>4.7 Overall, the scoring of the Interim SA significantly underscore the sustainability of the Site, as summarised in Table 1 (referenced from the comparative exercise at Appendix A).</p>	<p>The SA is too high-level to consider the suitability of sites in terms of neighbouring uses.</p> <p>The location of employment sites is not considered likely to affect SA objective 3: education. This is because although some employment sites offer opportunities for work experience and apprenticeships, others do not and so it cannot be guaranteed that educational opportunities will be provided by new employment development.</p> <p>It is correct that the site is not identified as being located within or adjacent to any settlements, as it is not located near any settlements in a rural location.</p> <p>SA utilises a precautionary approach and therefore if a site is located within close proximity of a heritage asset, it has the potential to result in a significant negative effect. All effects against SA objective 7: heritage are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. drainage and water management). Therefore, it is correct that the site receives negative effects in relation to SA objective 8: water. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Table 1: SA Objectives – Comparative Scoring [SEE FILE SAVED IN LUC FOLDER]</p> <p>R1700 _221103_Andrew Somerville Ramac Holdings</p> <p>4.8 As Table 1 demonstrates employment development on the Site should score significantly better for objectives 2, 3, 4, 5, 6, 7, 8, 9 & 10. Therefore the summary position presented in the Interim SA (paragraph 5.41) that the Site less sustainable than other options is unjustified and does not present a sound evidence base for the emerging Local Plan.</p> <p>4.9 It is noted that this revised scoring is now more consistent with how the Council considered the Site in its Strategic Land Availability Assessment (March 2018) – as a sustainable location adjacent to the confines of Aylesford Village and Aylesford Forstal, suitable for employment / commercial uses.</p>	
44417409	Annex 1	<p>"No we do not agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report. In fact we have serious concerns about the accuracy and robustness of the findings of the SA when it comes to a number of sites in and around Hadlow. Starting with the land east of Carpenters Lane/ north of The Paddock, Hadlow, site reference 59776 we would advise as follows:</p> <p>JAA table 5 – Overview of the SA scoring of site 59776</p> <p>*image*</p> <p>*image*</p> <p>*image*</p> <p>*image*</p> <p>*image*</p> <p>8.2 Given the above we would suggest the sites scoring is revised as below:</p> <p>*image*</p>	<p>Paragraph 3.55 in the Interim SA Report identifies one of eleven key sustainability issues facing Tonbridge and Malling Borough. These key sustainability issues (identified using the baseline information) have been used to develop a set of SA objectives, which provide a framework against which the effects of the Local Plan will be assessed.</p> <p>The site assessment criteria outlined in Appendix D of the Interim SA Report are developed using the SA objectives, and are also reliant on what information the local planning authority has available. The SA is a desk-based strategic assessment and it would not be possible of proportionate for the SA to explore tranquillity.</p> <p>With regard to SA objective 1: health and wellbeing, justification text was not provided due to an error. In the next iteration of the SA Report, justification for the effect against SA objective 1 will be provided. The site is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. In the next iteration of the SA, the site will receive a significant positive effect only in relation to SA1.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. open space provision). This ensures all sites are appraised on a consistent basis. If the site were to be allocated via Local Plan policy containing mitigation measures, it would be appraised on a 'policy-on' basis.</p> <p>The appraisal against SA objective 2: health and wellbeing has been informed by the Urban Capacity Study (July 2022). As the site falls within the Fair Accessibility Band, it receives a minor negative effect in</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>8.3 We would, in terms of objective 6 (landscape), also like to make the following general observations.</p> <p>a) Paragraph 3.55 of the SA states: “The key sustainability issue affecting landscape character and quality within the borough is the pressure of new development within the AONBs and their setting, and the effects this has on the preservation of the key landscape characteristics. This in turn effects levels of tranquillity, particularly in the rural areas of the borough.” There is a tension between this statement and the assessment methodology for Objective 6 as there is no analysis on the physical or perceived relationship with the AONB and therefore tranquillity. Due to this the landscape analysis does not address the key sustainability issue affecting landscape character within the Borough.</p> <p>b) Paragraph 3.56 of the SA states: “The new Local Plan offers an opportunity to ensure that sensitive landscapes are protected and enhanced as appropriate and that development is designed to take account of the variation in character and sensitivity across the borough, through the inclusion of up to date policies which reflect the most recent evidence.” This statement is welcomed and considered to be positively prepared. Site 59776 is not a sensitive landscape due to it being a paddock and its location adjacent to existing residential land uses in Hadlow. Yet, this basic analysis of Site 59776 and other SA sites is not accounted for in the Objective 6 methodology as there is no analysis of landscape features and associated scoring in relation to their landscape sensitivity. Due to this, Site 59776 has scored the same as an area of arable fields, woodlands, and streams, which are highly representative of the rural landscape in comparison to the paddocks within Site 59776 which have a settlement fringe character. Therefore, the omission of an analysis of landscape sensitivity from the methodology is a fundamental flaw of the SA in respect of Objective 6.</p> <p>c) The Sub Objectives to objective 6 are identified as:</p> <ul style="list-style-type: none"> - To protect and enhance landscape character and quality - To protect and enhance townscape character and quality - Protect and enhance the integrity and quality of the borough’s urban and rural landscapes, maintain local distinctives and sense of place - To protect and enhance AONBs within the borough and their settings. <p>Whilst these sub-objectives are welcomed, there is no analysis or inter-relationship between them and the SA conclusions. This is reiterated by the statement in paragraph 5.22 of the SA (see below). Given Site 59776’s location adjacent to Hadlow, its land use as a paddock and its geographic distance from the AONB, it accords positively with these sub-objectives, yet this is not translated into the suggested SA scoring.</p>	<p>relation to this objective. This is in accordance with the site assessment criteria. SA objective 2 does not cover homelessness and so the sub-objective "To tackle homelessness more effectively" will be moved to underneath SA objective 14: housing. Although, it is noted above that the sub-objectives are used when appraising policies, not sites. Access to public transport is considered separately under SA objective 10: climate change mitigation.</p> <p>Site 59776 is incorrectly recorded as containing green infrastructure assets, as it overlaps some green infrastructure assets in its vicinity. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect, as it is within 1km of an area of Ancient Woodland. All negative effects against SA objective 5 are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>SA objective 6: landscape and townscape looks at the effect development of each reasonable alternative development site option may have on the landscape and townscape. The fact site 59776 is a paddock does not relate to the effect its development might have on the landscape.</p> <p>Site 59776 is, however, incorrectly recorded as having a significant negative effect in relation to this objective. In the next iteration of the SA, the effect will be upgraded to a minor negative effect, as the site is located on the edge of the settlement of Hadlow. All negative effects against SA objective 6: landscape and townscape are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p> <p>Whether a site comprises brownfield or greenfield land is considered separately under SA objective 9: soils.</p> <p>Site 59776 receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. This is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised on a consistent basis.</p> <p>With regard to SA objective 8: water, the proforma for site 59776 states that it is entirely or significantly within Flood Zone 3 <i>and/or</i> within an area with a 1 in 30 year risk of surface water flooding. In this instance, the site contains land with a 1 in 30 year risk of surface water flooding in its south eastern corner and so the significant negative effect against this objective is correct. Again, this is a 'policy-</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>d) Paragraph 5.22 of the SA states “However, all negative effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale, and layout of development, which may help mitigate any adverse effects. If any sites with potential significant negative effects are taken forwards for allocation in the Local Plan, it is recommended that mitigation requirements are built into the associated site allocation policies.” This statement negates the entire premise of Objective 6 being included within the SA. Given the stated sub-objectives (above) a greater analysis should have been undertaken to ascertain the potential differences between the SA sites and provide an effective and justified evidence base. There inherently must be SA sites which would be more suitable than others and therefore score positively, rather than the premises for the SA assessment being entirely negative.</p> <p>e) Appendix D.21 of the SA States “All development could have some effect on the landscape depending on the character and sensitivity of the surrounding area. Site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. However, the actual effect on landscapes and townscapes will also depend on the design, scale, and layout of development, which may help mitigate any adverse effects. Therefore, all negative effects are recorded as uncertain.</p> <ul style="list-style-type: none"> - Sites that are located within a settlement will have a negligible (0) effect - Sites located on the edge of a settlement will have an uncertain minor negative (-?) effect; and - All sites not located near any settlements in rural locations, and/or would result in the loss of designated open spaces will have an uncertain significant negative (--?) effect.” <p>This is a positive statement, as development on greenfield land will change the landscape character via a new land use and potentially alter vegetation patterns and landform. It is also justified to suggest that site options adjacent to existing urban edges could be more easily integrated and that the actual effect on the landscape will depend on the design. However, the SA is not sound as its analysis fails to correctly identify the spatial relationship between SA sites and the existing settlement patterns. Due to this, locations such as Site 59776 are assessed as not being on the edge of a settlement, when Site 59776 is clearly adjacent to Hadlow and situated within the wider settlement pattern. This failure to effectively analyse the existing settlement pattern and the respective SA locations results in the SA Objective 6 scoring being fundamentally flawed.</p> <p>f) Appendix D.22 of the SA states: “In addition, proximity to the Kent Downs and High Weald AONB’s can provide an indication of the potential for development to have adverse impacts on those designated landscapes.</p> <ul style="list-style-type: none"> - Sites that are within 500m of the AONB could have a significant negative (- -?) effect.” The Kent Downs AONB is 1.7km to the north- 	<p>off’ appraisal and so consideration is not given to mitigation. If the site were to be allocated via Local Plan policy containing mitigation measures, it would be appraised on a ‘policy-on’ basis.</p> <p>With regard to SA objective 10: climate change mitigation, a distance of 400m was considered appropriate walking distance to a bus stop. The site is not within close proximity of a railway station. Therefore, the site correctly receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 13: material assets and waste, it is acknowledged in the SA that although the site is within a Minerals Safeguarding Area, the effect is uncertain and it will depend on factors such as whether sites would in fact offer viable opportunities for minerals extraction.</p> <p>With regard to SA objectives 3: education, 4: economic growth, 9: soil, 11: climate change adaptation, 12: air quality and 14: housing, respondent has not expressed any disagreement over the effects given for site 59776.</p> <p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent. If a site is not consistent with the spatial strategy, it may still be considered a reasonable alternative.</p> <p>Site 59846 has been appraised in line with the site assessment criteria and therefore receives a minor positive effect in relation to SA objective 1: health and wellbeing. The SA is too high-level to give consideration to barriers to pedestrian movement.</p> <p>Site 59846 does not contain Ancient Woodland but is within close proximity of Ancient Woodland. It correctly receives an uncertain significant negative effect as it contains green infrastructure assets, in addition to falling within is within 250m of areas of Ancient Woodland. In the next iteration of the SA Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). The presence of waterbodies is dealt with separately under SA objective 8: water. The SA correctly acknowledges site 59846 as containing water bodies.</p> <p>Site 59811 contains Ancient Woodland, in addition to green infrastructure assets. Therefore, it correctly receives an uncertain significant negative effect in relation to SA objective 5. The SA correctly acknowledges site 59811 as containing water bodies under SA objective 8.</p> <p>SA objective 6: landscape and townscape does not give consideration to green infrastructure and vegetation cover, which is instead considered under SA objective 5: biodiversity and geodiversity. As mentioned already, the assessment of site 59776 will be corrected to reflect the fact it is located on the edge of a settlement.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>west of site 59766. Therefore, the Site's stated significant negative score cannot be justified on this criterion.</p> <p>8.4 Turning to other sites in Hadlow, we have the following comments:</p> <p>59601 - South of the High Street</p> <p>Objective 6 Given this sites key role in the existing green infrastructure its development is likely to have a high landscape impact, such that its score as Uncertain Minor Negative (-?) should in our opinion be changed to Significant Negative Effects Likely</p> <p>Objective 8 Given this sites location within flood zones 2/ 3 its score as Significant Negative (--)/Uncertain Significant Negative (--?) should in our opinion be reviewed. We would also suggest that it would fail the sequential test as there are other suitable sites within Flood Zone 1 in Hadlow.</p> <p>59859 - West of Carpenters Lane</p> <p>Objective 8 Given this sites location within flood zones 2/ 3 its score as Significant Negative (--)/Uncertain Significant Negative (--?) should in our opinion be reviewed. We would also suggest that it would fail the sequential test as there are other suitable sites within Flood Zone 1 in Hadlow.</p> <p>59806 - North of Hadlow – between A26 and A228</p> <p>Objective 5 Given the fact this site contains areas of ancient woodland within and adjacent to it, as well as a series of hedgerows and ponds within it, the fact it scores the same as site 59776 i.e. Uncertain Significant Negative (--?) is surprising. As set out in table JAA 5 above we believe the scoring of site 59776 should be altered, if however it is not we believe site 59806's score should be amended to Significant Negative.</p> <p>Objective 6 This site is in our opinion more sensitive in landscape terms than site 59776 due to the existing vegetation cover and green infrastructure, as well as its rural location. Yet it obtains the same score of 'Uncertain Significant Negative (--?)' its score cannot in our opinion be comparable. It must be more adverse than site 59776 which is adjacent to Hadlow and is not representative of the wider rural character. We would suggest this sites score is reduced to Significant Negative.</p> <p>59846 - West of Maidstone Road and north of Grove Close</p>	<p>All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development. Furthermore, this is a 'policy-off' appraisal and so consideration is not given to mitigation. This ensures all sites are appraised to a consistent level of detail.</p> <p>The sequential test is a separate assessment process to the SA and will be used at a later stage in the plan-making process to help inform the SA. All sites have been correctly appraised against SA objective 8: water, in line with the site assessment criteria.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 1 Whilst this site is said to be within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area/ sports facility (but not both), we would question how accessible this is given the sites location on the A26, and its score as Minor Positive. This would in our opinion be Negligible.</p> <p>Objective 5 Given the fact this site is 'within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites' and has ancient woodland along its northern edge and to the east beyond Maidstone Road, and also contains a series of waterbodies to the south the fact it scores the same as site 59776 i.e. Uncertain Significant Negative (--?) is somewhat surprising. As set out in table JAA 5 above we believe the scoring of site 59776 should be altered, if however it is not we believe site 59846's score should be amended to Significant Negative.</p> <p>Objective 6 This site is in our opinion more sensitive in landscape terms than site 59776 due to its being highly representative of the rural landscape. Yet it obtains the same score of 'Uncertain Significant Negative (--?)'. Its score cannot in our opinion be comparable. Its landscape impact must be greater than site 59776 which is adjacent to Hadlow and is not representative of the wider rural character. We would suggest this sites score is reduced to Significant Negative.</p> <p>59811 - North of Hadlow – North of Common Lane/ east of Carpenters Lane.</p> <p>Objective 5 Given the fact this site is 'within 250m of one or more internationally or nationally designated biodiversity or geodiversity sites' and contains a couple of small, fragmented areas of woodland within/ adjacent it, one of which is ancient; and large ponds are also present, the fact it scores the same as site 59776 i.e. Uncertain Significant Negative (--?) is surprising. As set out in table JAA5 above we believe the scoring of site 59776 should be altered, if however it is not we believe site 59811's score should be amended to Significant Negative.</p> <p>Objective 6 This site is in our opinion more sensitive in landscape terms than site 59776 due to its being highly representative of the rural landscape Yet it obtains the same score of 'Uncertain Significant Negative (--?)'. Its score cannot in our opinion be comparable. Its landscape impact must be greater than site 59776 which is adjacent to Hadlow and is not representative of the wider rural character. We would suggest this sites score is reduced to Significant Negative.</p> <p>8.5 Having regard to the above it is clear that there are some fundamental flaws in the SA assessment and scoring process and that the document needs a detailed review before the Council look to start allocating sites and progress to Reg 19."</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
44471521	Annex 1	<p>"Site 59773.</p> <p>Comments on the Appendix 1 of the SA</p> <p>See file R1659.</p> <p>"</p>	<p>Site 59773 has been appraised in line with the site assessment criteria as outlined in Appendix D of the Interim SA Report. In accordance with the site assessment criteria, the site receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of open space and walking paths.</p> <p>SA objective 2: services and facilities has been informed by the Urban Capacity Study (July 2022). The SA acknowledges in the site assessment criteria under SA objective 2 "The location of residential sites, as well as mixed use sites incorporating residential development, could affect this objective by influencing people's ability to access existing services and facilities, although it is noted that larger scale development could potentially incorporate the provision of new services" [emphasis added].</p> <p>With regard to SA objective 3: education, this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. contributions towards education provision). This ensures all sites are appraised on a consistent basis. All effects against this objective are recorded as uncertain due to uncertainty regarding school capacity.</p> <p>With regard to SA objective 4: economic growth, residential sites are recorded as having a negligible effect in relation to this objective as their location will not directly influence sustainable economic growth or the delivery of employment opportunities. Although it is noted that an SME would undertake the construction work, this is an appraisal of the site and does not take into consideration who is developing the site.</p> <p>With regard to SA objectives 5: biodiversity and geodiversity, 6: landscape and townscape and 7: heritage, again this is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain and landscaping). If the site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-on' basis.</p>
25369441	Annex 1	<p>"Pro Vision are instructed by Cooper Estates Strategic Land Limited ("CESL Ltd" or "CESL") in relation to Land North of Hadlow (Site 59842 within the recent Regulation 18 Consultation).</p> <p>I am writing to you in relation to the Regulation 18 Local Plan Consultation, its evidence base and the current Call for Sites. This letter covers two matters:</p> <p>(i) Our full assessment related to Question 8 and the Interim Sustainability Appraisal ("SA"); and</p> <p>(ii) our Call for Sites submission in respect of Site 59842).</p> <p>Please note that we have also completed and submitted a full response to the Regulation 18 Consultation using the online portal system. Our response number to the consultation document is</p>	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>Sites 59647, 59842, 59635 and 59686 all receive different effects in relation to SA objective 8: water. The sentence "The site is either entirely or significantly (i.e. $\geq 25\%$) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding" [emphasis added] is used for both sites 59647 and 59842. This is correct, as both sites contain land with a 1 in 30 year risk of surface water flooding. Therefore, both sites receive a significant negative effect. The respondent has not acknowledged the fact that there is an additional sentence in each proforma for each of these two sites. In the case of site 59647, the proforma also states "The site does not contain a water body or watercourse or fall within a Source Protection Zone." In</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>#1126502 and our Comment ID number to the Interim SA Annex 1 document is #297. The online system does not enable a full response to be provided in relation to Question 8 or the Interim SA. There is no mechanism to attach our suggested charts which illustrate how we consider the SA should be used.</p> <p>We therefore ask that the Council consider the following additional points in relations to our client's Land at Maidstone Road, Hadlow (Site Reference 59842).</p> <p>(i) Interim SA</p> <p>In our response to the Interim Sustainability Appraisal Annex 1 (Comment ID #297) and Question 8 of the Regulation 18 Consultation (responses number #1126502) we have set out our response to the individual site assessments for a number of sites within Hadlow.</p> <p>We have identified inconsistencies of approach to a number of sites at Hadlow within the Regulation 18 SA. These inconsistencies relate to sites 59647, 59635 and 59853 (and the duplicate of the latter, 59857). These inconsistencies are detailed within CESL's Regulation 18 response #297. However, as explained above, the online comment system does not enable the inclusion of our summary assessments. We consider these are helpful to fully understand the changes we are proposing.</p> <p>The effect of correcting the Site Assessment as discussed in comment #297 would be to amend the individual site assessments proforma as follows:</p> <p>Site 59647</p> <p>There is a discrepancy within this objective between the assessment for Site 59647 and that for Sites 59842, compared with those for Sites 59635 and 59686.</p> <p>Both sites 59647 and 59842 retain the same wording: "The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding."</p>	<p>the case of site 59842, the proforma also states "The site contains a water body or water course or falls within or partially within Source Protection Zone 1. However, these effects are uncertain as effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage". Therefore, the significant negative effect for site 59647 is mixed with a negligible effect as the site does not contain a watercourse or fall within a Source Protection Zone, and the significant negative effect for site 59842 is mixed with an uncertain significant negative effect as the site contains a water body or watercourse, or falls within Source Protection Zone 1. Further to this, it is important to note that these are 'policy-off' appraisals and so consideration is not given to mitigation.</p> <p>Site 59635 receives a negligible effect overall in relation to SA objective 8: water, as unlike sites 59647 and 59842, it does not contain land with a 1 in 30 year risk of surface water flooding. As is the case with site 59647, it also does not contain a water body or watercourse, or fall within a Source Protection Zone.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, sites 59635 and 59853 are correctly assessed as having an uncertain negligible effect. This is because both sites are more than 1km from any internationally or nationally designated biodiversity or geodiversity site, and are over 250m from a locally designated site. Due to an error, justification test was not provided for the effect these sites are expected to have against SA objective 5. In the next iteration of the SA Report, the justification text will be provided.</p> <p>Sites 59647 and 59686 correct receive uncertain minor negative effects in relation to SA objective 5, as they are both between 250m and 1km of an area of Ancient Woodland. In the next iteration of the SA Report, the proformas for these two sites will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report).</p> <p>Site 59842 is correctly assessed as having an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains green infrastructure assets, in addition to falling within 250m and 1km of an area of Ancient Woodland. The SA does not give consideration to TPOs.</p> <p>With regard to SA objective 2: services and facilities, site 59842 is recorded in the Urban Capacity Study as falling within the Fair Accessibility Band and therefore receives a minor negative effect against this objective. This is in accordance with the site assessment. In the next iteration of the SA Report, a percentage symbol will be added to D.1: Accessibility bandings to make it clear that this is based on percentages.</p> <p>Site 59842 contains a heritage asset and is within 250m of numerous other heritage assets, as recorded in the Kent Historic Environment Record. It is therefore correct that the site receives an uncertain significant negative effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site 59647 is assessed as “Neutral” (0). As this same “Neutral” (0) categorisation has been applied to Site 59635 and Site 59686, but those sites are in Flood Zones 1 and 2 respectively, the assessments for both Sites 59842 and 59647 are incorrect, and should be “Minor Negative” (-).</p> <p>SA Objective 8 should be amended to “Minor Negative” (-):</p> <p>*image*</p> <p>Site 59635</p> <p>There is a discrepancy within this objective between the assessment for Site 59635 and that for Sites 59647 and 59686. All 3 sites are between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site”.</p> <p>Nonetheless, Site 59635 is assessed as “Neutral” (0) while Sites 59647 and 59686 are “Minor Negative” (-).</p> <p>There is no justification for a difference between SA conclusions for Site 59635, compared to those for Sites 59647 and 59686, and this SA objective score for Site 59635 should therefore be amended to “Minor Negative” (-).</p> <p>SA Objective 5 should be amended to “Minor Negative” (-):</p> <p>*image*</p> <p>Sites 59853 and 59857</p> <p>There is a discrepancy within this objective “To protect and enhance biodiversity and geodiversity” between the assessment for Site 59853 and that for Sites 59647 and 59686. All 3 sites are between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site”.</p>	<p>Site 59842 receives an uncertain significant negative effect in relation to SA objective 9: soil whereas sites 59647, 59635 and 59686 receive significant negative effects. This is because site 59842 contains a significant proportion of Grade 3 agricultural land but it is unknown whether it is Grade 3a (high quality) or Grade 3b (not classed as high quality) agricultural land, hence the uncertainty. Sites 59647, 59635 and 59686 on the other hand contain a significant proportion of Grade 1 and/or 2 agricultural land. Grades 1, 2 and 3a are considered best and most versatile agricultural land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Nonetheless, Site 59853 is assessed as “Neutral” (0) while Sites 59647 and 59686 are “Minor Negative” (-).</p> <p>There is no justification for a difference between SA conclusions for Site 59853, compared to those for Sites 59647 and 59686, and this SA objective score for Site 59853 should therefore be amended to “Minor Negative” (-).</p> <p>SA Objective 5 should be amended to “Minor Negative” (-):</p> <p>*image*</p> <p>Site 59842 – Land north of Maidstone Road</p> <p>In addition, we have identified inconsistencies relating to a number of SA scores for site 59842 compared with other sites, as well as inaccurate/misleading assessments for the wider site. In particular the results of SA Objectives 2, 7 and 9 are demonstrably incorrect.</p> <p>• SA Objective 2</p> <p>This requires reference to Appendix D of the SA which provides insight as to Accessibility Bandings (in Table D.1). This refers to the methodology “devised by TMBC” and “explained in detail in the Urban Capacity Study” (UCS) [FN1 - SA Appendix D, para D.4]. This explanation occurs on pg15-18 of the UCS and indicates a maximum possible score for any site of 17 points, with UCS Table 5 providing the same bandings as SA Table D.1. The latter omits to explain that the banding is based on percentages, however.</p> <p>It is clear from this that any site scoring 3.6 points or more [FN2 - 21% of 17] would be of “Fair” accessibility, while any achieving 7.0 points or more [FN3 - 41% of 17] would be “Good” and any exceeding 10.4pts or more [FN4 - 61% of 17] would be “Very Good”.</p> <p>Hadlow is a Rural Service Centre in the draft plan, thus all sites at that settlement start from a base of 4 points (by reference to UCS Table 4).</p> <p>We refer you to the promotion document for site 59842. WSP, appointed by the promoter, confirm that the site is within 700 metres of Hadlow village centre, a walking distance of less than 10 minutes. The centre has a range of facilities, including (within 800m walking distance):</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>*image*</p> <p>The score for site 59842 exceeds that required for ""Good Accessibility". Accordingly, the SA Objective result for Site 59842 should be at least the same as that for 59647, 59635 and 59686, which are all assessed at this level and are "Neutral" (0).</p> <p>However, there is also a bus stop immediately outside the site on Maidstone Road (1pt) from which 3-4 services/hr operate through the week. This frequency constitutes a ""Very Good"" service, within the context of UCS Table 4a (for a further 1.6 pts).</p> <p>Overall, this assessment indicates Site 59842 would score at least 11.1 pts or 65.3% of the available 17 points. This would place it, comfortably, in the ""Very Good"" Accessibility range, by reference to TMBC's own scoring methodology.</p> <p>Other sites with ""Very Good"" Accessibility include withdrawn allocations LP25d (SA Site 59391) and LP25e (SA Site 59392), with these sites afforded a ""Minor Positive"" (+) assessment.</p> <p>This SA objective score for Site 59842 should therefore be amended to ""Minor Positive"" (+).</p> <ul style="list-style-type: none"> • SA Objective 5 <p>There is a discrepancy within this objective between the assessment for Site 59842 and that for Sites 59647 and 59686. All 3 sites retain the same wording: "The site is between 250m and 1km of one or more internationally or nationally designated biodiversity or geodiversity sites, or is within 250m of a locally designated site";</p> <p>Nonetheless, Site 59842 is assessed as "Significant Negative" (--) while Sites 59647 and 59686 are "Minor Negative" (-).</p> <p>If this derives from the presence of a Tree Preservation Order [FN5 - TPO 83/10082/TPO, issued 1983] across site 59842 it is clear from even a cursory review of the plan within the TPO, relative to an aerial photograph, that the A1 area within the TPO is wholly unreflective of the position on the ground. There is no justification for a difference between SA conclusions for Site 59842, compare to those for Sites 59647 and 59686, and this SA objective score for Site 59842 should therefore be amended to "Minor Negative" (-).</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>• SA Objective 7</p> <p>This objective has been misapplied in relation to Site 59842. The site has been assessed as “Uncertain Significant Negative” (--) due to being located within 250m of a heritage asset.</p> <p>This assessment fails to acknowledge that there is only a single, Grade II Listed Building within 250m of the site. That building is James House [FN6 - https://historicengland.org.uk/listing/the-list/list-entry/1070455?section=official-list-entry], which lies on the opposite side of Maidstone Road approximately 230m away from the proposed entrance to the Site. James House is wholly obscured by intervening built form and vegetation.</p> <p>In contrast, Sites 59647 and 59635 have at least 45 Listed Buildings within 250m, including the Grade 1 Hadlow Tower and several Grade II* listed buildings. Furthermore, both these sites, together with 59686 and 59853, are demonstrably wholly visible from the top of Hadlow Tower[FN7 - By reference to photographs that are publicly available from TripAdvisor, taken during the period when the Tower served as a holiday let.]. Accordingly, these 4 Sites must be within the setting of this notable structure.</p> <p>This SA objective score for Site 59842 should therefore be amended to “Neutral” (0)</p> <p>• SA Objective 8</p> <p>There is a discrepancy within this objective between the assessment for Site 59842 and that for Site 59647 compared with those for Sites 59635 and 59686.</p> <p>Both sites 59842 and 59647 retain the same wording: “The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding.”</p> <p>Nonetheless, Site 59842 is assessed as “Significant Negative” (--) while Site 59647 is assessed as “Neutral” (0). As this same “Neutral” (0) categorisation has been applied to Site 59635</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>and Site 59686 but those sites are in Flood Zones 1 and 2 respectively, the assessments for both Sites 59842 and 59647 are incorrect, and should be "Minor Negative" (-).</p> <p>In the case Site 59842, it is clear from efforts deriving from the promotion to TMBC that the watercourse running through the site does not represent a significant constraint to delivery, and would not preclude allocation.</p> <p>This SA objective score for Site 59842 should therefore be amended to "Minor Negative" (-).</p> <ul style="list-style-type: none"> • SA Objective 9 <p>This objective has been misapplied in relation to Site 59842. The site has been assessed as "Uncertain Significant Negative" (--?) as it is greenfield land and contains a significant proportion (>=25%) of Grade 3 agricultural land.</p> <p>However, this same categorisation has been applied to Sites 59647, 59635 and Site 59686, yet all these include higher grade agricultural land (Grade 1 & 2). It is unreasonable for the assessment to 59842 to be more onerous in this regard, and this SA objective score for Site 59842 should be amended to "Minor Negative" (-).</p> <p>We therefore consider that the corrected SA for the entire 59842 site should be amended as follows:</p> <p>*image*</p> <p>In conclusion, the clear inconsistencies within the SA identified above should be addressed"</p>	
42807617	Annex 1	<p>"[59714]</p> <p>Comments made on Appendix 1 of SA</p> <p>Please see R1694."</p>	<p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). Therefore, the minor negative effect it receives in relation to SA objective 2 is correct.</p> <p>The site's proximity to healthcare facilities and open space is considered separately under SA objective 1: health and wellbeing. The site receives a significant positive effect against this objective, as it is within 800m of an existing healthcare facility, open space and walking paths. In the next iteration of the SA Report, this will be amended as the healthcare facility the site was recorded as being within 800m of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>no longer exists. Therefore, in the next iteration of the SA Report, the site will receive a minor positive effect against SA objective 1.</p> <p>The site's proximity to schools is considered separately under SA objective 3: education whereby the site receives a minor positive effect as it is within 800m of a primary school (West Malling Church of England Primary School). All effects against this objective are uncertain, as school capacity is unknown.</p> <p>The site's proximity to public transport is considered separately under SA objective 10: climate change mitigation whereby the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59714 receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is located on the edge of a settlement and so development may be more easily integrated into existing built development. All adverse effects against this objective are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects. Consideration cannot be given to the Landscape Appraisal submitted by the site promoter, as all sites must be appraised on a consistent basis and information like this is not available for other sites. The same applies in relation to SA objective 7: heritage and the Heritage Statement submitted by the promoter.</p> <p>Site 59714 contains green infrastructure assets in the form of trees and thick vegetation, which could be lost as a result of development. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value". The site also receives a significant negative effect due to the fact it is adjacent to a Local Wildlife Site (St Mary's Churchyard, West Malling).</p> <p>As noted by the respondent, site 59714 contains a small area of land with a 1 in 30 year risk of surface water flooding. As SA utilises a precautionary approach, the significant negative effect is correct. The effect is recorded as uncertain, as the effects of new development on this objective will depend to some extent on its design and whether it incorporates Sustainable Drainage Systems (SuDS). Although the respondent makes reference to SuDS, this is a 'policy-off' appraisal and so mitigation is not taken into consideration.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively being used for agricultural purposes.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
42807617	Annex 1	<p>"[59808]</p> <p>Comments made on Appendix 1 of SA with Questionnaire.</p> <p>Please see R1694"</p>	<p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). Therefore, the minor negative effect it receives in relation to SA objective 2 is correct.</p> <p>The site's proximity to healthcare facilities and open space is considered separately under SA objective 1: health and wellbeing. The site receives a significant positive effect against this objective, as it is within 800m of an existing healthcare facility, open space and walking paths.</p> <p>The site's proximity to schools is considered separately under SA objective 3: education whereby the site receives a minor positive effect as it is within 800m of at least one primary school (Stocks Green Primary School and Hildenborough Church of England Primary School). All effects against this objective are uncertain, as school capacity is unknown.</p> <p>The site's proximity to public transport is considered separately under SA objective 10: climate change mitigation whereby the site receives a minor positive effect as although it is more than 800m from a railway station, it is within 400m of a bus stop.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Site 59808 receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is located on the edge of a settlement and so development may be more easily integrated into existing built development. All adverse effects against this objective are recorded as uncertain, as the actual effect on landscapes and townscapes will also depend on the design, scale and layout of development, which may help mitigate any adverse effects. Consideration cannot be given to the Landscape, Visual and Green Belt Technical Note submitted by the site promoter, as all sites must be appraised on a consistent basis and information like this is not available for other sites. The same applies in relation to SA objective 7: heritage and the Archaeological Statement and Built Heritage Statement submitted by the promoter.</p> <p>Site 59808 receives an uncertain significant negative effect in relation to SA objective 8: water, as it contains a waterbody and land with a 1 in 30 year risk of surface water flooding. The uncertainty is due to the fact the water body could be vulnerable to pollution during construction, and is also dependent on construction techniques used and Sustainable Drainage Systems (SuDS). Although the respondent makes reference to SuDS, this is a 'policy-off' appraisal and so mitigation is not taken into consideration. The site does not fall within a Source Protection Zone.</p> <p>Site 59808 contains green infrastructure assets in the form of trees and thick vegetation, which could be lost as a result of development. In the next iteration of the SA Report, the following sentence will be</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value". The site also receives a significant negative effect due to the fact it is adjacent to an Ancient Woodland and within 250m of other areas of Ancient Woodland.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively being used for agricultural purposes.</p>
44546305	Annex 1	<p>"[59874]</p> <p>Interim Sustainability Appraisal Report [comments]</p> <p>Kitewood's site to the west of Hays Road in Snodland is identified as site no. 59874 in the list of sites at Table 9 of the Tonbridge and Malling Borough Local Plan Regulation 18 Draft.</p> <p>The site is accessible by car, being located close to the junction of Hays Road and Malling Road. It is also accessible by public transport (by bus, by train) and by pedestrians and cyclists.</p> <p>The site is close to existing employment opportunities and also lies adjacent to residential uses on the opposite side of Hays Road.</p> <p>www.carneysweeney.co.uk</p> <p>The new occupiers of development on the site would benefit from existing social infrastructure and services in Snodland. Contributions are also able to be made to expand any of this infrastructure, as appropriate.</p> <p>The site study document that is submitted with this response to the Regulation 18 consultation shows the physical features on and immediately adjoining the site. From this, it is clear that development can be provided on the site outside Flood Zone 3 (which is to the south), without impact on the AONB (the site is well screened from the wider landscape) and can provide biodiversity improvements on the undeveloped areas of and boundaries to the site.</p> <p>The site is no longer farmed and no important agricultural land would be lost upon the site's development. The site is currently used for grazing horses and is therefore likely to have low ecological value.</p> <p>If the site contains a viable quantity of minerals, these could be extracted as part of the development process, and therefore is not a reason for the site being left undeveloped or to restrict its allocation.</p>	<p>Site 59874 has been appraised in line with the site assessment criteria, as outlined in Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>The site has been appraised on a 'policy-off' basis and so consideration is not given mitigation (e.g. financial contributions). Documents submitted by site promoters are not considered in the SA, so as to ensure all sites are appraised on a consistent basis. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Indeed, extraction prior to development is acceptable within the Council's previously adopted Policy DM5 on mineral resources.</p> <p>The site can provide a range of housing types, mix and tenures together with employment use, in order to deliver a truly inclusive mixed development.</p> <p>The fact that the site can deliver both employment and housing development is also an important sustainability factor, that should be taken account to in the sustainability appraisal.</p> <p>As a result of the above, Kitewood's site at Snodland performs very well from a sustainability perspective."</p>	
44634145	Annex 1	<p>"[Reference to Site 59608 - Ismays Road]</p> <p>Representation to the Tonbridge and Malling Borough Council (TMBC) Regulation 18 Local Plan and Interim Sustainability Appraisal</p> <p>Please find below our representation to the TMBC Regulation 18 Local Plan consultation. This representation objects to the proposed allocation of Land to east of Ismays Road, Ivy Hatch (Site 59608) for residential development.</p> <p>Context</p> <p>The National Planning Policy Framework (NPPF) provides the overarching framework used for preparing Local Plans based on the Government's aims for the planning system, the purpose of which is to contribute to the achievement of sustainable development. It sets out in paragraph 8 that sustainable development has three interdependent objectives that need to be pursued in mutually supportive ways:</p> <p>an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure;</p> <p>a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and</p>	<p>Chapter 4 of the Interim SA Report provides an appraisal of Spatial Options.</p> <p>Site 59608 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an area of open space (Scathes Wood) and a walking path. This is in accordance with the site assessment criteria.</p> <p>The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. The promoter of this site has not declared that it contains an existing business.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>future needs and support communities' health, social and cultural well-being; and</p> <p>an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy.</p> <p>So that sustainable development is pursued in a positive way, at the heart of the NPPF is a presumption in favour of sustainable development. Paragraph 11 states that for plan-making this means that all plans should promote a sustainable pattern of development that seeks to meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects.</p> <p>The Regulation 18 Local Plan sets out how the hierarchy of settlements should be used to guide decisions on where development should be focussed. It acknowledges that settlements at the top of the hierarchy (Urban Areas), are most likely to provide opportunities for sustainable development because they contain a variety of services, are well connected by public transport and offer opportunities for active travel. They also contain opportunities for making use of previously developed land. Beyond the Urban Areas are Rural Service Centres and Other Rural Settlements. At the bottom of the hierarchy are Rural Areas within the open countryside and where development should be restricted.</p> <p>The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social, environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report is also subject to the Regulation 18 consultation.</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability</p>	<p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. The site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA, this limitation will be added to the 'Difficulties and Data Limitations' section of the SA. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW) that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility, or recreational opportunities such as children's play areas or sports facilities.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of this Site would not represent sustainable development through actively reducing health inequalities, improving access to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons we submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p> <p>The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.'</p> <p>It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>accessibility jobs. It would be in direct conflict with the objective to encourage sustainable economic growth, business development and economic inclusion across the borough. We submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.'</p> <p>This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs.</p> <p>Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan. In our view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape.</p> <p>The Site is highly visible in views from the adjacent PRoW and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1). We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land.</p> <p>None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p> <p>The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.'</p> <p>The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them.</p> <p>We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination.</p> <p>The SA states: 'The site is located on brownfield land.'</p> <p>The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section 336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nursery grounds. Agricultural uses are exempt from the definition of previously developed land in Annex 2 of the NPPF. Annex 2 defines</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>'brownfield land' with reference to 'previously developed land'. The Site cannot therefore be classified brownfield land for the purposes of the NPPF.</p> <p>With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p> <p>The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'</p> <p>The Site is located approximately 350m from bus stops on Ightham Road via a PRoW adjacent to the site. The PRoW is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physical infrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday.</p> <p>The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location.</p> <p>With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>In recognition of this we submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.'</p> <p>The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures that would meet local housing need.</p> <p>Conclusion</p> <p>The Site is located outside of any settlement boundary and within a Rural Area in part of the countryside designated as Green Belt. The Site is in existing agricultural use. It is not brownfield or previously developed land and therefore its allocation for residential development would, by definition, be inappropriate. The Site is also located within the AONB and allocation of the Site would result in significant negative effects to a landscape of scenic beauty which the Government affords the highest status of protection to.</p> <p>The Site is poorly accessible and not located near to schools, facilities or amenities that are important for health and well-being. As existing, the Site contributes to employment and economic growth which would be lost. The Site is sensitively located within an Archaeological Priority Area and near to designated heritage assets of national importance. The Site is also located over a Source Protection Zone and effects on water features and resources are unknown. The Site is not served by public transport and would not encourage walking or cycling. Occupiers of any future development would be dependent on use of a private car which would be in direct conflict with objectives to reduce greenhouse gas emissions and minimise climate change.</p> <p>In summary, the NPPF requires plans to provide a positive vision for the future of each area; a framework for addressing housing needs</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>and other economic, social and environmental priorities; and a platform for local people to share their surroundings. It requires plans to be prepared with the objective of contributing to the achievement of sustainable development.</p> <p>We consider that the Interim Sustainability Review Report contains errors and that the Site has been incorrectly scored in relation to a number of the Sustainability Objectives. In our view, allocation of this Site would in fact result in a greater number of negative effects, many of which would be significant in scale. Allocation of the Site would fail to comply with the economic, social or environmental objectives required to achieve sustainable development in the plan-making process. It would not be consistent with the emerging spatial strategy or in any way contribute to the core aim of achieving sustainable development in the borough and we request that the Site is not allocated in the emerging Local Plan.</p> <p>National Planning Policy Framework (publishing.service.gov.uk) (https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1005759/NPPF_July_2021.pdf)</p> <p>Tonbridge and Malling Local Plan (tmhc.gov.uk) (https://www.tmhc.gov.uk/downloads/file/2219/interim-sustainability-appraisal-report)</p> <p>The-Kent-Downs-AONB-Management-Plan-2021-2026-Adopted.pdf (kentdowns.org.uk) (https://kentdowns.org.uk/wp-content/uploads/2021/11/The-Kent-Downs-AONB-Management-Plan-2021-2026-Adopted.pdf)"</p>	
44459553	Annex 1	<p>"Land at Maidstone Road, Hadlow, comprising three parcels: Sites [59637], [59638] and [59637] - [SEE 'COPIES FOR LUC' FOLDER]</p> <p>As an overall approach, there are concerns that the ISA has not assessed the site in sufficiently granular detail, but rather has looked at matters at too broad a level. A number of the areas of disagreement below would be addressed through a more detailed review. Moreover, as set out in the PPG it is a requirement of the SA process that "measures envisaged to prevent, reduce and, as fully as possible, offset" any impacts are considered. The SA has not, at this point, undertaken this and must do to inform the Reg 19 LP. Fernham Homes welcomes the opportunity to discuss with TMBC Members and Offices the mitigation measures that would be incorporated into any scheme to inform this (necessary) judgement.</p> <p>At present it is very difficult to ascertain the relationship between the individual sites which have been considered. Fernham Homes has previously requested that TMBC publish an (interactive) map showing</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>Site 59637 is incorrectly recorded as containing a green infrastructure asset, as it overlaps a green infrastructure asset. This is as a result of the GIS analysis. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to SA objective 5: biodiversity and geodiversity, as it is within 1km of Ancient Woodland. Site 59638 is expected to have an uncertain significant negative effect against SA5, as it contains a green infrastructure asset. These are 'policy-off' appraisals and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). If the sites are allocated in the Local Plan via policy that contains mitigation measures, they will be appraised on a 'policy-on' basis.</p> <p>With regard to SA objective 6: landscape and townscape, site 59638 is incorrectly recorded as not located near any settlements in a rural location, when it is in fact on the edge of a settlement. This is due to</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the location of the sites relative to one another. Fernham Homes wishes to reiterate this request.</p> <p>Need for SA of single site</p> <p>As detailed in the Introduction to this representation, it is of fundamental importance that the single site (comprising the combined parcels 59637, 59638 and 59637) is SA'd as a single site. It should also be considered in the HELAA as a single site.</p> <p>Comments on assessments of individual parcels</p> <p>The “uncertain significant negative” for parcels 59637 and 59638 against ISA Objective 5 “to protect and enhance biodiversity and geodiversity” is not understood. The commentary states that the site contains an “existing green infrastructure asset that could be lost as a result of new development”. The site is open field at present. Its redevelopment for housing will realise the delivery of biodiversity net gain (BNG) – i.e. betterment. At most the site should be scored as “uncertain minor negative”, if not negligible.</p> <p>Similarly, in relation to ISA Objective 6 “to protect and enhance the borough’s landscape and townscape character and quality” for 59637 and 59638 is not agreed with. These parcels are located adjacent to the settlement of Hadlow or in very close proximity to it, and are well screened by existing vegetated boundaries. Again – this would be apparent from a detailed assessment of the site. Fernham Homes consider that these should be assessed as “uncertain minor negative”.</p> <p>ISA Objective 8 “to protect and enhance the quality of water features and resources” is appraised as “significant negative/negligible” for 59637 and 59638 These are unsound appraisals, and again reflects the fact that the parcels have not been assessed in sufficient detail. The single site (i.e. all three parcels) is entirely in Flood Zone 1, as documented by the current Environment Agency (EA) mapping. The strategic flood risk assessment (SFRA) has not yet been completed and accordingly there is no publicly available information on surface water flooding. Accordingly at this time and until the production of the SFRA these assessments (including for parcel 59686) should be amended to be solely negligible.</p> <p>ISA Objective 9 relates to “conserve and enhance soil resources and guard against land contamination”. Whilst the land may be Grade 3, it is divorced from any wider holding and its loss will not have a significant impact on usable soil resources that will have a material impact on agricultural operations. Therefore, Fernham Homes considers that it should be appraised as “uncertain minor negative” for all three parcels.</p>	<p>the fact the GIS analysis identified no percentage overlap between the site and settlement boundary. In the next iteration of the SA Report, this site will receive an uncertain minor negative effect in relation to SA6. Site 59637 is correctly recorded as being located outside of a settlement, because although it is close to the settlement, it does not border it as site 59638 does.</p> <p>With regard to SA objective 8: water, the proforma for each site states "The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding" [emphasis added]. Sites 59637 and 59638 both receive significant negative effects as they contain land with a 1 in 30 year risk of surface water flooding. This information is available from the Environment Agency. Site 50637 also receives a negligible effect in relation to this objective, as it does not contain a water body or watercourse, or fall within a Source Protection Zone. Site 59638, on the other hand, does contain a water body.</p> <p>The sites receive significant negative effects in relation to SA objective 9: soil, as they comprise greenfield land and contain a significant proportion of Grade 1 and/or 2 agricultural land. This is in accordance with the site assessment criteria.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		In short, it is essential that sites are properly appraised on a detailed and qualitative basis to ensure that decisions are made on credible information. Future appraisal – including that of Land at Maidstone Road, Hadlow as a single site - needs to take into account mitigations. At present it appears that the ISA assessments have been made on the basis of a high level and formulaic basis, and are missing key human judgement."	
44459553	Annex 1	<p>"Land at Goldings Yard, Stocks Green Road, Hilden Park: Site [59615] [SEE 'COPIES FOR LUC' FOLDER]</p> <p>As an overall approach, there are concerns that the ISA has not assessed the site in sufficiently granular detail, but rather has looked at matters at too broad a level. A number of the areas of disagreement below would be addressed through a more detailed review.</p> <p>Moreover, as set out in the PPG it is a requirement of the SA process that “measures envisaged to prevent, reduce and, as fully as possible, offset” any impacts are considered.</p> <p>The SA has not, at this point, undertaken this and must do to inform the Reg 19 LP. Fernham Homes welcomes the opportunity to discuss with TMBC Members and Offices the mitigation measures that would be incorporated into any scheme to inform this (necessary) judgement.</p> <p>At present it is very difficult to ascertain the relationship between the individual sites which have been considered. Fernham Homes has previously requested that TMBC publish an (interactive) map showing the location of the sites relative to one another. Fernham Homes wishes to reiterate this request.</p> <p>The “uncertain significant negative” against ISA Objective 5 “to protect and enhance biodiversity and geodiversity” is not understood. The commentary states that the site contains an “existing green infrastructure asset that could be lost as a result of new development”. The site is a field used for grazing livestock/horses. It is accordingly of relatively low ecological value at present, and its redevelopment for housing will realise the delivery of biodiversity net gain (BNG) – i.e. betterment. At most the site should be scored as “uncertain minor negative”, if not negligible.</p> <p>Similarly, in relation to ISA Objective 6 “to protect and enhance the borough’s landscape and townscape character and quality” is not agreed with. The site is located near to settlements: Tonbridge (Hilden Park) and Hildenborough. Again – this would be apparent from a detailed assessment of the site. Indeed, the site adjacent (to the east –</p>	<p>SA is a high-level tool used to identify the likely sustainability effects of a Local Plan. It is one of many factors that feed into the plan-making process.</p> <p>Site 59615 is incorrectly recorded as containing a green infrastructure asset, due to the fact it overlaps a green infrastructure asset to the south west. In the next iteration of the SA Report, the site will receive an uncertain minor negative effect as it is within 1km of some areas of Ancient Woodland. This is a 'policy-off' appraisal and so consideration is not given to mitigation (e.g. Biodiversity Net Gain). If the site is allocated in the Local Plan via a policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59615 receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is not adjacent or within a settlement.</p> <p>SA utilises a precautionary approach and therefore if a site is located within close proximity of a heritage asset (as recorded in the Kent Historic Environment Record), it has the potential to result in a significant negative effect. All effects against SA objective 7: heritage are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the proforma for site 59615 states "The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding" [emphasis added]. Site 59615 receives a significant negative effect, as it contains land with a 1 in 30 year risk of surface water flooding. This is mixed with a negligible effect, as the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 9: soil, as it comprises greenfield land and contains a significant proportion of Grade 3 agricultural land. The uncertainty acknowledges that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality).</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>TMBC reference 59692) was proposed to be allocated in the January 2019 LP. Fernham Homes consider that this should be assessed as “uncertain minor negative”.</p> <p>Whilst the position of the site relative to the Grade II Listed bridge on Stocks Green Road is noted, this does not justify an “uncertain significant negative” assessment. Rather, the bridge is located some 180m from the site at its closest, with two intervening dwellings – and accordingly the impact on setting will be (at most) limited. Land on the opposite side of Stocks Green Road has been identified as a historic park and garden by Kent County Council (KCC). It is not designated as such by Historic England, and accordingly has “no statutory relevance and provides no particular protection”. Therefore, Fernham Homes consider that ISA Objective 7 (to protect and enhance the cultural heritage resource” should be assessed as “uncertain minor negative” or “negligible”.</p> <p>ISA Objective 8 “to protect and enhance the quality of water features and resources” is appraised as “significant negative/negligible”. This is an unsound appraisal, and again reflects the fact that the site has not been assessed in sufficient detail. The site is entirely in Flood Zone 1, as documented by the Strategic Flood Risk Assessment (SFRA) (2016) which informed the January 2019 LP, and the current Environment Agency (EA) mapping. Appendix E of the SFRA indicates that a fraction of the site (in the north western corner) is subject to a single surface water flow. This will not affect the suitability of the site for development. Accordingly this assessment should be amended to be solely negligible.</p> <p>*image*</p> <p>Figure 1: extract from EA flood map for planning website</p> <p>*image*</p> <p>Figure 2: extract from Appendix E of TMBC Level 1 SFRA (2016) Surface Water Flood Risk</p> <p>ISA Objective 9 relates to “conserve and enhance soil resources and guard against land contamination”. Whilst the land may be Grade 3, it is divorced from any wider holding and its loss will not have a significant impact on usable soil resources that will have a material impact on agricultural operations. Therefore, Fernham Homes considers that it should be appraised as “uncertain minor negative”.</p>

		<p>In short, it is essential that sites are properly appraised on a detailed and qualitative basis to ensure that decisions are made on credible information. Future appraisal needs to take into account mitigations. At present it appears that the ISA assessments have been made on the basis of a high level and formulaic basis, and are missing key human judgement."</p>	
44514401	Annex 1	<p>"Site [59707] - Land south of Kemsing Road and West of Borough Green Road, Wrotham - [SEE 'COPIES TO LUC' FOLDER]</p> <p>In relation to Site 59707 (Land south of Kemsing Road and West of Borough Green Road, Wrotham), the appraisal considers there to be a minor negative score against SA Objective 2 (To improve equality and access to community facilities and services). However, the Site is well-connected to the shops and services in the village, as well as the Village Hall and recreation ground, which can be enhanced if required.</p> <p>In respect of encouraging sustainable economic growth and business development (SA Objective 4), Site 59707 (Land south of Kemsing Road and West of Borough Green Road, Wrotham), scores Negligible (0) / Negligible (0). The commentary states "the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities". This development of this Site will inevitably support local business and bring investment to the area. Furthermore, whilst not long term, there is clearly significant employment creation through the construction phase of the development, which will have a benefit to the area.</p> <p>SA Objective 5 (to protect and enhance biodiversity and geodiversity) scores Site 59707 (Land south of Kemsing Road and West of Borough Green Road, Wrotham) uncertain minor negative (-?); however concludes that appropriate mitigation may even result in beneficial effects. To this end, it is considered at worst there should be a minor positive score, as the development proposal would be required to deliver a net gain through the Environment Act 2021.</p> <p>Similarly SA Objectives 6 and 7 (landscape and townscape character and quality / protect and enhance the cultural heritage resource) score Site 59707 (Land south of Kemsing Road and West of Borough Green Road, Wrotham) uncertain significant negative (--?). However, without knowledge of a layout or mitigation, it is considered a 'significant' score is speculative. A concept plan has been produced and provided with the recent Call for Sites submission, which should, in our view, ensures no harm to heritage assets or the landscape.</p>	<p>Site 59707 receives a minor negative effect in relation to SA objective 2: services and facilities, as it is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. This is in accordance with the site assessment criteria.</p> <p>SA objective 4: economic growth relates to the delivery of employment opportunities and therefore the SA correctly acknowledges that "The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities".</p> <p>With regard to SA objective 5: biodiversity and geodiversity, this is a 'policy-off' appraisal and so consideration is not given to mitigation. The site has therefore been correctly appraised in line with the site assessment criteria.</p> <p>With regard to SA objective 6, site 59707 is incorrectly recorded as not located near any settlements in a rural location, when it is on the edge of a settlement. This is due to the fact the GIS analysis identified no percentage overlap with the settlement boundaries. The effect for site 59707 will not be upgraded, however, as it is within the AONB and so should continue to receive an uncertain significant negative effect.</p> <p>SA utilises a precautionary approach and therefore if a site is located within close proximity of a heritage asset (as recorded in the Kent Historic Environment Record), it has the potential to result in a significant negative effect. All effects against SA objective 7: heritage are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the proforma for site 59707 states "The site is either entirely or significantly (i.e. >=25%) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding" [emphasis added]. Site 59707 receives a significant negative effect, as it contains land with a 1 in 30 year risk of surface water flooding. This is mixed with a negligible effect, as the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p> <p>Support noted with regards to SA objective 14: housing and the significant positive effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 8 (Water features and resources) claims Site 59707 (Land south of Kemsing Road and West of Borough Green Road, Wrotham) is either entirely or significantly within Flood Zone 3 and or/within an area with a 1 in 30 year risk of surface water flooding and therefore scores Significant negative (--) / Negligible (0) . However, this is incorrect. As shown in the images below, taken from the Flood Map for Planning from the Environment Agency, the Site is not in any flood zone and only partially within an area at medium risk of surface water flooding.</p> <p>*image*</p> <p>*image*</p> <p>We support the significant positive score (++) in respect of SA Objective 14 (to provide a suitable supply of high quality housing) noting that the development of the Site would make a material contribution towards meeting local housing needs in a logical and sustainable rural location."</p>	
42271969	Annex 1	<p>"Site [59669] - Land South of Noble Tree Road - [SEE 'COPIES TO LUC' FOLDER]</p> <p>Consistent with our previous comments, it is somewhat concerning that the consultation is not accompanied by a HELAA, given that the next consultation will concern a Regulation 19 Pre-Submission Draft Local Plan. The Interim SA (at Annex 1) does present an initial summary of the promoted development sites, with Land South of Noble Tree Road being identified with reference 59669, at pages 448 to 450 of the Interim SA.</p> <p>However, the SA does not appear to have been informed by the evidence submitted via the Call for Sites process. In some instances (as explained overleaf), this has undermined the robustness of the assessment in some areas. Indeed, this is apparent from the prevalence of 'uncertain' scores.</p> <p>Overleaf, we present our assessment of the site-specific analysis for Site Ref. 59669. Where the level of constraint has been overstated or misunderstood in the Interim SA, a revised score is presented as appropriate.</p> <p>*image*</p>	<p>Site 59669 is incorrectly recorded as containing an open space and so receives an uncertain significant negative effect (as part of a mixed effect) against SA objective 1: health and wellbeing. This is due to the fact the site overlaps an existing open space and therefore the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the site will receive a minor positive effect only in relation to this objective.</p> <p>With regard to SA objective 2: services and facilities, the site receives a significant negative effect, as it falls within the Poor Accessibility Band in the Urban Capacity Study (July 2022). Therefore, it correctly receives a significant negative effect which is in accordance with the site assessment criteria outlined in Appendix D of the Interim SA Report.</p> <p>With regard to SA objective 3: education, all sites that are recorded as falling within close proximity of a school receive uncertainty, as school capacity is unknown. Site 59669 receives an uncertain minor positive effect as it is within 800m of Hildenborough Church of England Primary School but there is uncertainty as the effect will depend on there being capacity at the school to accommodate new pupils.</p> <p>Although the respondent states that there is potential to include a care home within the proposal, this is a 'policy-off' appraisal and so consideration is not given to additional information such as this – particularly as it would mean the sites had not all been appraised on a consistent basis. There is also no guarantee that a care home would be provided.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>*image*</p> <p>*image*</p> <p>*image*"</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, the site contains an area of Ancient Woodland, in addition to being within 250m of other areas of Ancient Woodland. This is a 'policy-off' appraisal and so consideration is not given to mitigation as the respondent has suggested. If the site were to be allocated in the Local Plan via policy containing mitigation measures, it would be appraised on a 'policy-on' basis.</p> <p>With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect as it is not located near any settlements. If it were located on the edge of a settlement, it could be more easily integrated into existing built development. It would not result in the loss of designated open space.</p> <p>With regard to SA objective 7: heritage, the SA does not utilise independent historic appraisals that have been undertaken and submitted by site promoters, as this would mean that the sites are not appraised on a consistent basis. The site receives an uncertain significant negative effect as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect because it is within an area with a 1 in 30 year risk of surface water flooding. As stated in the proforma "The site is either entirely or significantly (i.e. $\geq 25\%$) within Flood Zone 3 and/or within an area with a 1 in 30 year risk of surface water flooding" [emphasis added].</p> <p>With regard to SA objective 9: soil, the site has been appraised in line with the site assessment criteria.</p> <p>With regard to SA objective 13: material assets and waste, the respondent has stated that mineral extraction may be viable prior to residential development, subject to further assessment. The uncertain minor negative effect the site receives in relation to this objective is correct, as the SA acknowledges that for sites within Minerals Safeguarding Areas, it is unknown whether sites would offer viable opportunities for minerals extraction or not.</p> <p>Support noted with regards to SA objectives 10: climate change mitigation, 11: climate change adaptation and 12: housing.</p>

42687457	Annex 1	<p>"I am writing to OBJECT most strongly to the proposal to build on the site at Darkhill Farm plan number 59709</p> <p>I am a resident.</p> <p>My objections to the proposals are as follows:</p> <p>Objective 1 mentions that it is within 800m of an existing healthcare facility.</p> <p>There is only one medical centre in the area - Borough Green Medical Practice. This surgery serves not only Ightham, but Borough Green, Wrotham and many of the outer villages such as Stansted and Fairseat. The practice already has in excess of 15,000 patients and last year there were over 96, 000 appointments on top of flu jab clinics and Covid injection clinics.</p> <p>It is already stretched to the limit and cannot sustain any more growth in the area.</p> <p>Objective 2.</p> <p>The site is placed within the Good Accessibility Band as there is access to the A25. However, public transport facilities are limited.</p> <p>Objective 3</p> <p>The site is not well placed for secondary schools in the area. Whilst there is a primary school, this is already at capacity. Whilst new developments can stimulate the provision of more education facilities, this cannot be relied upon.</p> <p>Objective 4</p> <p>The location of this site will not directly influence sustainable economic growth or the delivery of noticeable employment opportunities in the area.</p> <p>Objective 5</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The Urban Capacity Study (July 2022) was used to inform the assessments against SA objective 2: services and facilities. Public transport facilities are dealt with separately under SA objective 10: climate change mitigation.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report state "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils. New residential development could stimulate the provision of new schools/school places, particularly larger sites, but this cannot be assumed at this stage" [emphasis added].</p> <p>With regard to SA objective 8: water, these are 'policy-off' appraisals and so consideration is not given to mitigation. If the sites are allocated in the Local Plan via policy that contains mitigation measures, they will be appraised on a 'policy-on' basis.</p> <p>With regard to the respondent's comment on the Green Belt, the Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for each site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, sites 59770, 59871 and 59720 have been appraised in line with the site assessment criteria. As these sites are not within 100m of an AQMA, they receive a negligible effect. Site 59709 is located within 100m of an AQMA and so receives a significant negative effect in relation to this objective.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may</p>

Whilst there is a primary school, this is already at capacity. Whilst new developments can stimulate the provision of more education facilities,</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>this cannot be relied upon. There is absolutely no provision for the increased number of children at either Ightham or Borough Green primary schools. There is only one local secondary school and that too is already at capacity.</p> <p>Objective 4</p> <p>The location of this site will not directly influence sustainable economic growth or the delivery of noticeable employment opportunities in the area as they are residential sites.</p> <p>Objective 5</p> <p>The site contains an existing green infrastructure asset that could be lost as a result of new development. The effect would be adverse, as it would not be possible to conserve this.</p> <p>Objective 6</p> <p>The site is within 500m of the AONB of the area. It is not located near any settlements and would result in the loss of designated open spaces.</p> <p>Objective 7</p> <p>The site is located within 250m of a heritage asset. Development would impact adversely upon this.</p> <p>Objective 8</p> <p>The site is either entirely or largely ($\geq 75\%$) within Flood Zone 1, but falls partially within zones 2 and 3. There are no provisions to deal with this</p> <p>Objective 9</p> <p>The site is a greenfield site, and contains a significant proportion of agricultural land which needs to be preserved. It is also surrounded by GREEN BELT. It should therefore be conserved as such.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 10</p> <p>Any development will lead to more greenhouse gas emissions, not less.</p> <p>Objective 11</p> <p>The location of this development will not affect an objective to improve climate change.</p> <p>Objective 12</p> <p>The site is not within 100m of an AQMA. (Air Quality Management Area) so this objective could not be measured.</p> <p>Objective 13.</p> <p>The site is within a minerals safeguarding area and as such should be preserved.</p> <p>Objective 14</p> <p>The proposals for the development of these two sites will provide 230 houses. Whilst the sites alone might therefore be classed as suitable for providing housing of a suitable mix of type and tenure, the local infrastructure of schools, roads, medical facilities and drainage are completely unable to support a development of this size.</p> <p>The A25 is already a major bottle neck in the area for all through traffic from the M26 to and from Sevenoaks. A development of this size will only further add to the congestion and pollution in the area.</p> <p>I object most strongly to PLANS 59720 and 59871</p> <p>"</p>	
44719265	Annex 1	"[59608]	Chapter 4 of the Interim SA Report provides an appraisal of Spatial Options.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>I'd like to register my objection to the allocation of ANY new houses on the proposed Ismays Road site at the nursery as part of the local plan.</p> <p>Please find the details of why this development is entirely inappropriate below.</p> <p>I would also like to add that I believe planning permission was only granted for the existing house on the grounds of the nursery built by Tom the owner, on the basis that it was necessary to have accommodation there for the business to be viable.</p> <p>Should houses be built the business would not be a going concern.</p> <p>It seems like a "creep creep" approach to building in an AONB, with pound signs in his eyes, making a packet and selling up, leaving the rest of us to deal with the unpleasantness of our semi-rural home becoming a mini housing estate.</p> <p>Regards,</p> <p>Laura Clout</p> <p>-----</p> <p>Representation to the Tonbridge and MallingBorough Council (TMBC) Regulation 18 Local Plan and Interim Sustainability Appraisal</p> <p>Please find below our representation to the TMBC Regulation 18 Local Plan consultation. This representation objects to the proposed allocation of Land to east of Ismays Road, Ivy Hatch (Site 59608) for residential development.</p> <p>Context</p> <p>The National Planning Policy Framework (NPPF)provides the overarching framework used for preparing Local Plans based on the Government's aims for the planning system, the purpose of which is to contribute to the achievement of sustainable development. It sets out in paragraph 8 that sustainable development has three</p>	<p>Site 59608 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an area of open space (Scathes Wood) and a walking path. This is in accordance with the site assessment criteria.</p> <p>The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration o the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. The promoter of this site has not declared that it contains an existing business.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. The site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA, this limitation will be added to the 'Difficulties and Data Limitations' section of the SA. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>interdependent objectives that need to be pursued in mutually supportive ways:</p> <p>* a) an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure;</p> <p>* b) a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and</p> <p>* c) an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy.</p> <p>So that sustainable development is pursued in a positive way, at the heart of the NPPF is a presumption in favour of sustainable development. Paragraph 11 states that for plan-making this means that all plans should promote a sustainable pattern of development that seeks to meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects.</p> <p>The Regulation 18 Local Plan sets out how the hierarchy of settlements should be used to guide decisions on where development should be focussed. It acknowledges that settlements at the top of the hierarchy (Urban Areas), are most likely to provide opportunities for sustainable development because they contain a variety of services, are well connected by public transport and offer opportunities for active travel. They also contain opportunities for making use of previously developed land. Beyond the Urban Areas are Rural Service Centres and Other Rural Settlements. At the bottom of the hierarchy are Rural Areas within the open countryside and where development should be restricted.</p> <p>The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social,</p>	<p>as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report is also subject to the Regulation 18 consultation.</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW)that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility, or recreational opportunities such as children's play areas or sports facilities.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of thisSite would not represent sustainable development through actively reducing health inequalities, improvingaccess to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons we submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.'</p> <p>It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical accessibility jobs. It would be in direct conflict with the objective to encourage sustainable economic growth, business development and economic inclusion across the borough. We submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.'</p> <p>This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs.</p> <p>Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan. In our view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape.</p> <p>The Site is highly visible in views from the adjacent PRow and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1). We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development.</p> <p>It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land.</p> <p>None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p> <p>The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.'</p> <p>The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them.</p> <p>We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination.</p> <p>The SA states: 'The site is located on brownfield land.'</p> <p>The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nurserygrounds. Agricultural uses are exempt from the definition of previously developed land in Annex 2 of the NPPF. Annex 2 defines 'brownfield land' with reference to 'previously developed land'. The Site cannot therefore be classified brownfield land for the purposes of the NPPF.</p> <p>With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p> <p>The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'</p> <p>The Site is located approximately 350m from bus stops on Ightham Road via a PRoW adjacent to the site. The PRoW is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physicalinfrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location.</p> <p>With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location.</p> <p>In recognition of this we submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.'</p> <p>The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures that would meet local housing need.</p> <p>Conclusion</p> <p>The Site is located outside of any settlement boundary and within a Rural Area in part of the countryside designated as Green Belt. The Site is in existing agricultural use. It is not brownfield or previously developed land and therefore its allocation for residential development would, by definition, be inappropriate. The Site is also located within the AONB and allocation of the Site would result in significant negative effects to a landscape of scenic beauty which the Government affords the highest status of protection to.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Site is poorly accessible and not located near to schools, facilities or amenities that are important for health and well-being. As existing, the Site contributes to employment and economic growth which would be lost. The Site is sensitively located within an Archaeological Priority Area and near to designated heritage assets of national importance. The Site is also located over a Source Protection Zone and effects on water features and resources are unknown. The Site is not served by public transport and would not encourage walking or cycling. Occupiers of any future development would be dependent on use of a private car which would be in direct conflict with objectives to reduce greenhouse gas emissions and minimise climate change.</p> <p>In summary, the NPPF requires plans to provide a positive vision for the future of each area; a framework for addressing housing needs and other economic, social and environmental priorities; and a platform for local people to share their surroundings. It requires plans to be prepared with the objective of contributing to the achievement of sustainable development.</p> <p>We consider that the Interim Sustainability Review Report contains errors and that the Site has been incorrectly scored in relation to a number of the Sustainability Objectives. In our view, allocation of this Site would in fact result in a greater number of negative effects, many of which would be significant in scale. Allocation of the Site would fail to comply with the economic, social or environmental objectives required to achieve sustainable development in the plan-making process. It would not be consistent with the emerging spatial strategy or in any way contribute to the core aim of achieving sustainable development in the borough and we request that the Site is not allocated in the emerging Local Plan."</p>	
42821345	Annex 1	Site [59830] - Borough Green Gardens - [SEE "COPIES FOR LUC" FOLDER]	<p>With regard to the SA framework, the respondent has referred to the sub-objective "To promote the use of more sustainable modes of transport" as incorrectly being located under SA objective 11: climate change adaptation when it should be under SA objective 10: climate change mitigation. However, it is under SA objective 10 in the Interim SA Report.</p> <p>The respondent has requested a map showing the proposed strategic options and reasonable alternative development site options. In the next iteration of the SA Report, a map showing the reasonable alternative development site options will be provided. Mapping tends to be provided by councils for different strategic options.</p> <p>The Interim SA Report does not contain an appraisal of cumulative effects due to the high-level nature of the Regulation 18 Local Plan. As TMBC were consulting on issues and options, not policies and allocations, it would not have been possible or proportionate to explore the cumulative effects of the Plan.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>There is a lot of crossover between the SA objectives but this is not something the SA is required to explore. The SA objectives (i.e. the SA framework) were established via the review of plans, policies and programmes (Appendix B) and the key sustainability issues (paragraphs 3.52 to 3.92) identified by the baseline review (Appendix C).</p> <p>The SA has provided an appraisal of all reasonable alternative options and will continue to do so.</p> <p>The respondent has provided a detailed table regarding the SA's compliance.</p> <ul style="list-style-type: none"> ■ It is not necessary for the SA to provide an infographic or table showing the timeline and key dates specific to the stages of the Local Plan and SA, rather it is the role of the Local Development Scheme to provide this information. ■ The quality of Figure 3.1 will be improved. ■ It would not be appropriate or proportionate to provide even further detail on existing policies, sustainability issues and mitigation within surrounding and neighbouring local authorities. Appendix B of the Interim SA Report provides enough detail on this currently. ■ You can view how we have addressed each comment on the SA Scoping Report in Appendix A of the Interim SA Report. It is not usual practice to show what has changed in each iteration of the SA, as there are often many changes throughout the plan-making process. ■ With regard to the changing policy context, this is addressed under paragraphs 1.11 and 3.4 of the Interim SA Report. As there is a lot of uncertainty over these changes, further detail is not available. ■ It is not within the scope of the SA to explain how all international, national and sub-national plans and agendas will work holistically to achieve sustainable growth. ■ With regard to the baseline information, it is not usual practice to show what has changed in each iteration of the SA, as there are often many changes throughout the plan-making process. ■ In Chapter 3 of the Interim SA Report the heading 'Likely Evolution of the Issue without the Local Plan' is used throughout, under each key sustainability issue identified. In line with the SEA Regulations, the SA correctly explores what will happen without the Local Plan. Further detail will be added to the sentence regarding the historic environment, in addition to references to vehicle technologies where relevant. ■ 'Do nothing' options result in negligible effects against all SA objectives, as they do not change the existing baseline. ■ A sub-objective regarding net zero has been added under SA objective 10: climate change mitigation. SA objective 10 explores

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>climate change mitigation whereas SA objective 11 explores climate change adaptation. Climate change mitigation relates to the reduction of CO₂ emissions whereas climate change adaptation relates to adapting to the effects of climate change (e.g. extreme weather events).</p> <ul style="list-style-type: none"> ■ LUC was commissioned to undertake SA of the Local Plan, not HRA. The HRA is a separate, standalone document to the SA that will inform the SA at later stages in the plan-making process. ■ As mentioned already, the Interim SA Report does not contain a cumulative effects section due to the high-level nature of the Regulation 18 Local Plan. ■ The reasonable alternative development site options were appraised using the site assessment criteria outlined in Appendix D of the Interim SA Report, not the SA objectives and sub-objectives, which the policies are appraised against. ■ In the next iteration of the SA, consideration will be given to short, medium and long-term effects, and permanent and temporary effects. This will be in the cumulative effects section which as explained already, was not provided in the Interim SA Report as there were no policies and allocations to clearly identify the overall effects of the Plan, just options. ■ The site appraisals are 'policy-off' not 'policy-on', as consideration has not yet been given to mitigation. This ensures all sites are initially appraised on a consistent basis. If a site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-on' basis. <p>The Interim SA Report does not contain an appraisal of cumulative effects due to the high-level nature of the Regulation 18 Local Plan. As TMBC were consulting on issues and options, not policies and allocations, it would not have been possible or proportionate to explore the cumulative effects of the Plan.</p> <p>It is important to note that the SA is one of many factors that feed into the plan-making process. The appraisals in Annex 1 of the Interim SA Report have been undertaken on a 'policy-off' basis, which means that the sites have been appraised on their physical constraints only. This ensures they are all appraised to a consistent level of detail. If sites are allocated in the Local Plan via policy that contains mitigation measures, the sites will be appraised on a 'policy-on' basis (i.e. taking into consideration mitigation).</p> <p>The respondent has provided their own appraisal of site 59830. As mentioned already, this is a 'policy-off' appraisal and so consideration is not given to mitigation at this stage.</p> <p>With regard to SA objective 1: health and wellbeing, site 59830 is incorrectly recorded as containing an open space and so receives an uncertain significant negative effect (as part of a mixed effect) against this objective. This is due to the fact the site overlaps an existing open space and therefore the GIS analysis identified the site as containing an open space. In the next iteration of the SA Report, the site will</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>receive a significant positive effect only in relation to this objective. Air Quality Management Areas (AQMAs) are considered separately under SA objective 12: air quality.</p> <p>With regard to SA objective 2: services and facilities, this is a 'policy-off' appraisal and so consideration is not given to things like the provision of Local Centres and community infrastructure. The site receives a negligible effect, as it falls within the Good Accessibility Band in the Urban Capacity Study (July 2022). Therefore, it correctly receives a negligible effect which is in accordance with the site assessment criteria outlined in Appendix D of the Interim SA Report.</p> <p>The minor positive effect against SA objective 3: education is recorded as uncertain because the actual effect will also depend on whether there is capacity at nearby schools to accommodate new pupils.</p> <p>With regard to SA objective 4: economic growth, the site receives a significant positive effect because it is over 5ha and within 800m of a railway station. The effect is not recorded as uncertain as the respondent suggests.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59830 receives an uncertain significant negative effect as in addition to containing green infrastructure assets, it contains Ancient Woodland. In the next iteration of the SA Report, the proforma will clearly distinguish between internationally and nationally designated sites, and Ancient Woodland (Ancient Woodland is currently covered under international and national biodiversity and geodiversity sites).</p> <p>With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is on the edge of a settlement. However, it will still receive an uncertain significant negative effect in the next iteration of the SA Report, as it is within 500m of the AONB. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development.</p> <p>With regard to SA objective 7: heritage, the SA does not utilise independent historic appraisals that have been undertaken and submitted by site promoters, as this would mean that the sites are not appraised on a consistent basis. The site receives an uncertain significant negative effect as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, the site receives a significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding. The site is also located in Source Protection 3 but this is not the reason for its significant negative effect. Again this is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively used for agriculture. Contamination is different to the Agricultural Land Classification. It is correct that the site receives an uncertain significant negative effect in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. The SA correctly identifies the site as falling within 800m of a railway station.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, 59830 receives a negligible effect as it is not within 100m of an Air Quality Management Area (AQMA).</p> <p>With regard to SA objective 13: material assets and waste, the SA at this stage does not take into consideration mitigation and so even if the site will be extracted prior to development, the effect should remain as it is. This is because information like this may not be available for other sites and so they would not all be appraised on a consistent basis.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p>
44819617	Annex 1	Site [59822] - [COPY OF REPRESENTATION IN "COPIES TO LUC" FOLDER]	<p>With regard to the SA framework, the respondent has referred to the sub-objective "To promote the use of more sustainable modes of transport" as incorrectly being located under SA objective 11: climate change adaptation when it should be under SA objective 10: climate change mitigation. However, it is under SA objective 10 in the Interim SA Report.</p> <p>The respondent has requested a map showing the proposed strategic options and reasonable alternative development site options. In the next iteration of the SA Report, a map showing the reasonable alternative development site options will be provided. Mapping tends to be provided by councils for different strategic options.</p> <p>The Interim SA Report does not contain an appraisal of cumulative effects due to the high-level nature of the Regulation 18 Local Plan. As TMBC were consulting on issues and options, not policies and allocations, it would not have been possible or proportionate to explore the cumulative effects of the Plan.</p> <p>There is a lot of crossover between the SA objectives but this is not something the SA is required to explore. The SA objectives (i.e. the SA framework) were established via the review of plans, policies and</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>programmes (Appendix B) and the key sustainability issues (paragraphs 3.52 to 3.92) identified by the baseline review (Appendix C).</p> <p>The SA has provided an appraisal of all reasonable alternative options and will continue to do so.</p> <p>The respondent has provided a detailed table regarding the SA's compliance.</p> <ul style="list-style-type: none"> ■ It is not necessary for the SA to provide an infographic or table showing the timeline and key dates specific to the stages of the Local Plan and SA, rather it is the role of the Local Development Scheme to provide this information. ■ The quality of Figure 3.1 will be improved. ■ It would not be appropriate or proportionate to provide even further detail on existing policies, sustainability issues and mitigation within surrounding and neighbouring local authorities. Appendix B of the Interim SA Report provides enough detail on this currently. ■ You can view how we have addressed each comment on the SA Scoping Report in Appendix A of the Interim SA Report. It is not usual practice to show what has changed in each iteration of the SA, as there are often many changes throughout the plan-making process. ■ With regard to the changing policy context, this is addressed under paragraphs 1.11 and 3.4 of the Interim SA Report. As there is a lot of uncertainty over these changes, further detail is not available. ■ It is not within the scope of the SA to explain how all international, national and sub-national plans and agendas will work holistically to achieve sustainable growth. ■ With regard to the baseline information, it is not usual practice to show what has changed in each iteration of the SA, as there are often many changes throughout the plan-making process. ■ In Chapter 3 of the Interim SA Report the heading 'Likely Evolution of the Issue without the Local Plan' is used throughout, under each key sustainability issue identified. In line with the SEA Regulations, the SA correctly explores what will happen without the Local Plan. Further detail will be added to the sentence regarding the historic environment, in addition to references to vehicle technologies where relevant. ■ 'Do nothing' options result in negligible effects against all SA objectives, as they do not change the existing baseline. ■ A sub-objective regarding net zero has been added under SA objective 10: climate change mitigation. SA objective 10 explores climate change mitigation whereas SA objective 11 explores climate change adaptation. Climate change mitigation relates to the reduction of CO2 emissions whereas climate change

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>adaptation relates to adapting to the effects of climate change (e.g. extreme weather events).</p> <ul style="list-style-type: none"> ■ LUC was commissioned to undertake SA of the Local Plan, not HRA. The HRA is a separate, standalone document to the SA that will inform the SA at later stages in the plan-making process. ■ As mentioned already, the Interim SA Report does not contain a cumulative effects section due to the high-level nature of the Regulation 18 Local Plan. ■ The reasonable alternative development site options were appraised using the site assessment criteria outlined in Appendix D of the Interim SA Report, not the SA objectives and sub-objectives, which the policies are appraised against. ■ In the next iteration of the SA, consideration will be given to short, medium and long-term effects, and permanent and temporary effects. This will be in the cumulative effects section which as explained already, was not provided in the Interim SA Report as there were no policies and allocations to clearly identify the overall effects of the Plan, just options. ■ The site appraisals are 'policy-off' not 'policy-on', as consideration has not yet been given to mitigation. This ensures all sites are initially appraised on a consistent basis. If a site is allocated in the Local Plan via policy containing mitigation measures, it will be appraised on a 'policy-on' basis. <p>The Interim SA Report does not contain an appraisal of cumulative effects due to the high-level nature of the Regulation 18 Local Plan. As TMBC were consulting on issues and options, not policies and allocations, it would not have been possible or proportionate to explore the cumulative effects of the Plan.</p> <p>It is important to note that the SA is one of many factors that feed into the plan-making process. The appraisals in Annex 1 of the Interim SA Report have been undertaken on a 'policy-off' basis, which means that the sites have been appraised on their physical constraints only. This ensures they are all appraised to a consistent level of detail. If sites are allocated in the Local Plan via policy that contains mitigation measures, the sites will be appraised on a 'policy-on' basis (i.e. taking into consideration mitigation).</p> <p>The respondent has provided their own appraisal of site 59822. As mentioned already, this is a 'policy-off' appraisal and so consideration is not given to mitigation at this stage.</p> <p>With regard to SA objective 1: health and wellbeing, Air Quality Management Areas (AQMA) are considered separately under SA objective 12: air quality.</p> <p>With regard to SA objective 2: services and facilities, the site receives a minor negative effect, as it falls within the Fair Accessibility Band in the Urban Capacity Study (July 2022). Therefore, it correctly receives a minor negative effect which is in accordance with the site assessment criteria outlined in Appendix D of the Interim SA Report.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>The minor positive effect against SA objective 3: education is recorded as uncertain because the actual effect will also depend on whether there is capacity at nearby schools to accommodate new pupils.</p> <p>With regard to SA objective 4: economic growth, the site receives a minor positive effect instead of a significant positive effect because it is smaller than 5ha. This is in accordance with the site assessment criteria, which distinguishes between smaller and larger employment and mixed-use sites.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59822 receives an uncertain significant negative effect as in addition to containing green infrastructure assets (thick trees and vegetation), it is within 250m of some areas of Ancient Woodland. In the next iteration of the SA Report, the proforma will clearly distinguish between internationally and nationally designated sites, and Ancient Woodland (Ancient Woodland is currently covered under international and national biodiversity and geodiversity sites).</p> <p>With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is on the edge of a settlement. In the next iteration of the SA, the site will receive an uncertain minor negative effect against this objective.</p> <p>With regard to SA objective 7: heritage, the SA does not utilise independent historic appraisals that have been undertaken and submitted by site promoters, as this would mean that the sites are not appraised on a consistent basis. The site receives an uncertain significant negative effect as it is within 250m of heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>With regard to SA objective 8: water, the site receives a significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding. The site is also located in Source Protection 3 but this is not the reason for its significant negative effect. Again this is a 'policy-off' appraisal and so consideration is not given to mitigation.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively used for agriculture. Contamination is different to the Agricultural Land Classification. It is correct that the site receives an uncertain significant negative effect in relation to this objective.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. The SA correctly identifies the site as falling within 400m of a bus stop but not 800m of a railway station.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, 59822 receives a negligible effect as it is not within 100m of an Air Quality Management Area (AQMA).</p> <p>With regard to SA objective 13: material assets and waste, the SA at this stage does not take into consideration mitigation and so even if the site will be extracted prior to development, the effect should remain as it is. This is because information like this may not be available for other sites and so they would not all be appraised on a consistent basis.</p> <p>With regard to SA objective 14: housing, all mixed-use sites are expected to have significant positive or minor positive effects in relation to this objective, depending on their size. If a site provides 100 dwellings or more, it receives a significant positive effect and if it provides fewer than 100 dwellings, it receives a minor positive effect. All positive effects against this objective are recorded as uncertain for mixed-use sites, as it is uncertain how much of each site will be used for residential development as opposed to other uses.</p>
42716737	Annex 1	<p>"Comments on proposed Hadlow sites</p> <p>59601 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 8: To protect and enhance the quality of water features and resources Negligible (0) Should be uncertain minor negative (-?). The site, along with other sites north of the A26, helps absorb flood water at times of run-off from the fields down from West Peckham parish. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+) Should be minor negative (-). There is no footpath or cycle path linking to Hadlow village and the A26 is a fast road and dangerous for pedestrians at that point. The likelihood of any residents using any form of transport other than private car is negligible. And due to the lack of parking space in the village, residents of any developments on this site would be more likely to use shops further afield with consequent increase in car use.</p> <p>59637 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Significant positive (++)/Uncertain significant negative (--?) Disagree with the possible rating of (++) Should be negligible (0)/Uncertain significant negative (--?) Any development on the site would have a negative effect for existing users of the footpath on their enjoyment of the countryside. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--?) Should be significant negative (--). The site is Green Belt with a well-used footpath running across it. For visitors to the Cemetery next to the site, it would adversely impact cherished views across the existing</p>	<p>Site 59601 is recorded as having an uncertain significant negative effect in relation to SA objective 8: water, not a negligible effect. The SA acknowledges in the proforma for the site that it is within Flood Zone 3 and contains land with a 1 in 30 year risk of surface water flooding. A watercourse also runs along the western edge of the site.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>Site 59637 receives a significant positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an existing healthcare facility, open space and walking path. With regard to SA objective 6: landscape and townscape, the site is already recorded as having a significant negative effect in relation to this objective. All effects are recorded as uncertain against this objective, as the actual effects will depend on the design, scale and layout of development, which will be determined at planning application stage.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain, as the actual effects will depend</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>countryside to the Grade II listed Hadlow Tower. SA Objective 7: To protect and enhance the cultural heritage resource Uncertain significant negative (--?). Should be significant negative (--), the site affects the setting of the cemetery next to it, with its Grade II listed war memorial. SA Objective 8: To protect and enhance the quality of water features and resources. Significant negative (-)/Negligible (0). Should be just Significant negative (-). The site is prone to flooding and run-off from any development could affect the health of the nearby pond. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor positive (+). Should be minor negative (-). There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>59638 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being Significant positive (++) The junction of the access road with the A26 is dangerous due to visibility and the speed of traffic using the A26. SA Objective 5: To protect and enhance biodiversity and geodiversity Uncertain significant negative (-?) Should be significant negative (--): the location of the site next to the pond would impact the quality of the water in the pond and the wildlife that use it. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--?) Should be significant negative (--): The site is Green Belt. Any development would adversely impact the rural setting of the pond, currently with trees and field behind it. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+) Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>59647 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Significant positive (++). Should be Uncertain minor positive (+?): the Hadlow medical centre is over-subscribed with no room for expansion. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain minor negative (-?) Should be significant negative (--): The site is Green Belt. Traffic from any development of that size would cause unacceptable congestion on Court Lane and at the narrow junction with the A26. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor positive (+) Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>59659 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Significant positive (++). Should be Uncertain minor positive (+?): the Hadlow medical centre is over-</p>	<p>on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Site 59637 receives a significant negative effect in relation to SA objective 8: water as it contains land with a 1 in 30 year risk of surface water flooding. The significant negative effect is mixed with a negligible effect, so as to acknowledge the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>SA objective 1: health and wellbeing looks at accessibility to healthcare facilities and things like open space, not the impacts of traffic congestion and dangerous roads and junctions. The significant positive effects sites 59638, 59776 and 59853 are expected to have in relation to SA objective 1: health and wellbeing, and the minor positive effects sites 59811, 59747, 59806 and 59846 are expected to have are correct and in line with the site assessment criteria. The location of site 59638 near a pond is addressed separately under SA objective 8: water. The SA acknowledges that the site contains a water body and so receives an uncertain significant negative effect in relation to this objective, as the water body could be vulnerable to pollution as a result of development. As mentioned already, SA objective 10: climate change mitigation looks at access to public transport but we note that climate change mitigation is dependent on numerous factors</p> <p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>As mentioned already, Green Belt is a policy designation and not an environmental or sustainability designation and so consideration is not given to the Green Belt in SA.</p> <p>With regard to SA objective 9: soil and site 59853, TMBC informed LUC that this site comprises brownfield land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>subscribed with no room for expansion. The junction of the proposed access road with the A26 is dangerous. SA Objective 2: To improve equality and access to community facilities and services SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain minor negative (-?) Should be minor negative (-) The site is Green Belt. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+) Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>59686 Same site as 59659 above Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Significant positive (++). Should be Uncertain minor positive (+?): the Hadlow medical centre is over-subscribed with no room for expansion. The junction of the proposed access road with the A26 is dangerous. SA Objective 2: To improve equality and access to community facilities and services SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain minor negative (-?) Should be minor negative (-) The site is Green Belt. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+) Should be minor negative (-): There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>59776 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being Significant positive (++)/Uncertain significant negative (--?) Should be significant negative (--): Carpenters Lane is unsuitable for the amount of traffic that would be generated by the development: this would impact the well-being of local residents. The junction with the A26 would be dangerous with the increased traffic turning on to the main road. The local medical centre is over-subscribed with no room for expansion. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--?). Should be significant negative (--). The site is Green Belt. Any development would adversely impact the setting of Williams Field, the main open space in the village. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative (-). Should be significant negative. Minor negative(-)/significant negative (--) depending on the exit points from the development. There is no infrastructure to allow safe cycling around Hadlow and between the village and Tonbridge.</p> <p>59811 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Minor positive (+). Should be</p>	<p>With regard to SA objective 10: climate change mitigation, sites 59811, 59747, 59806 and 59846 are correctly recorded as not being within close proximity of a railway station or bus stop and so in line with the site assessment criteria, receive minor negative effects in relation to this objective.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>significant negative (--) due to the adverse effect on the well-being of Hadlow residents from a large amount of increased traffic. Hadlow is the nearest large village and is where much of the traffic from the site would access the A.26. This would most likely lead to much-increased congestion in Carpenters Lane and at the junction with the A26 which already sees queues of traffic exiting onto the main road. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality Uncertain significant negative (--) Should be Significant negative (--). The site is Green Belt. It forms part of the parkland of historic Oxenhoath estate and is crossed with footpaths affording sweeping views across the countryside to the Grade II listed Hadlow Tower and beyond. SA Objective 7: To protect and enhance the cultural heritage resource. Uncertain significant negative (--?). Should be Significant negative (--). The site almost completely surrounds the historic grade II listed Oxenhoath and its gardens and parkland. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative (-). Should be significant negative (--). No nearby public transport and no cycle paths to allow safe cycling means that all road journeys will be by car.</p> <p>59853 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being Significant positive (++). Should be Uncertain significant negative (--?): The increase in traffic from the site and the congestion caused would have an adverse effect on the well-being of residents of Court Lane. Neither Court Lane nor Victoria Road are suitable to take a large amount of increased traffic. It would also cause congestion and long delays at the narrow junction with the A26. There is inadequate infrastructure to enable safe walking from the site to Hadlow to access village facilities, although a footpath could be added as part of a development. However, the distance from the village centre would lead many residents to use their cars rather than walk. There is no infrastructure to allow safe cycling around Hadlow and further to Tonbridge. Hadlow medical centre is over-subscribed with no room for expansion SA Objective 9: To conserve and enhance soil resources and guard against land contamination. Significant positive (++). Should be minor negative (-). Only about 50% of the site is brownfield. The rest is grass with some under agricultural cultivation. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change Minor positive (+). Should be minor negative: most of the site is more than 400m from a bus stop.</p> <p>Nearby sites</p> <p>59747 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Minor positive (+) Should be Significant negative (--): The size of the development would adversely impact the well-being of Hadlow residents as traffic from the development would increase congestion through the village centre.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>No medical facilities nearby; Hadlow Medical Centre is the nearest, but is fully subscribed with no room for expansion. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative (-) Should be significant negative (--). No nearby bus stop and no cycle paths to allow safe cycling means that all road journeys will be by car.</p> <p>59806 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Minor positive (+) Should be Significant negative (--): The huge scale of the development would adversely impact the well-being of Hadlow residents as traffic from the development would increase congestion through the village centre. No medical facilities nearby; Hadlow Medical Centre is the nearest, but is fully subscribed with no room for expansion, so there would need to be purpose-built medical facilities within the development. SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality. Uncertain significant negative (--?) Should be Significant negative (--): there would be a large loss of Green Belt, including woodland SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative (-) Should be significant negative (--). No nearby bus stop and no cycle paths along the A26 and A228 to allow safe cycling means that all road journeys will be by car.</p> <p>59846 Agree with TMBC's assessment of the effects of any prospective development on this site except for the following: SA Objective 1: To improve human health and well-being. Minor positive (+) Should be Significant negative (--): The size of the development would adversely impact the well-being of Hadlow residents as traffic from the development would increase congestion through the village centre. No medical facilities nearby; Hadlow Medical Centre is the nearest, but is fully subscribed with no room for expansion. SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change. Minor negative (-) Should be significant negative (--). No nearby bus stop and no cycle paths to allow safe cycling means that all road journeys will be by car. The following sites are between Tonbridge and the boundary of Hadlow parish and could reduce the "separation" of Hadlow from the larger urban area:"</p>	
42719937	Annex 1	<p>"[59432]</p> <p>SA Objective 1: to improve human health and well-being</p> <p>The local healthcare facility is oversaturated with patients which indicates that we are overwhelmed with residents in this area so building houses on this site would not improve human health and well-being. It would take away the beautiful green space that local</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The SA acknowledges that the site contains Willow Mead open space that could be lost as a result of development and so for this reason site 59432 receives an uncertain significant negative effect (as part of a mixed effect) in relation to this objective.</p> <p>With regard to SA objective 2: services and facilities, site 59432 is recorded in the Urban Capacity Study (July 2022) as falling within the</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>children and families use which contribute to well-being. Other features such as a cycle path/play area/sports facility may be lost to a new development.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>This site is placed within a very good accessibility to community facilities and services, but our community is oversaturated, and a new development would result in more people needing to use the facilities.</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and sectors of society.</p> <p>Although the proposed site is within 800m of an existing primary school, capacity is limited as it is one form entry. Therefore, levels of educational attainment and skills and training development for all age groups and sectors of society would not be improved.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p> <p>As TMBC states, the location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>The site is within 250m of one or more nationally designated biodiversity sites.</p>	<p>Very Good Accessibility Band and therefore receives a minor positive effect in relation to this objective. This objective does not consider the capacity of existing services and facilities.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, site 59432 is recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>Site 59432 is recorded as having an uncertain significant negative effect in relation to SA objective 6: landscape and townscape as it contains open space that could be lost as a result of development, although this is uncertain. All adverse effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>Site 59432 receives a minor negative effect in relation to SA objective 7: heritage, due to its proximity to numerous heritage assets. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect as it contains land with a 1 in 30 year risk of surface water flooding in addition to falling within Source Protection Zone 3.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Building houses here will not protect and enhance biodiversity and geodiversity. There is currently a project in progress on this green space where the County Council is finding ways to get trees to grow with the aim of maximizing benefits for people, wildlife, and the climate. This project is funded by Defra and running in partnership with Natural England, Tonbridge and Malling Borough Council and Medway Valley Countryside Partnership. If new houses were built within this area, they would block out natural light, cause extra pollution and noise which would not encourage wildlife and trees to grow or the project would have to be removed altogether to accommodate extra houses. There is wildlife that inhabits the field & surrounding habitats which would be lost.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>New buildings would result in the loss of a beautiful open space and no matter what the design and would not fit in with existing housing. Developing this site would not enhance the borough's landscape and townscape character and quality.</p> <p>SA Objective 7: To protect and enhance the cultural heritage</p> <p>New buildings, no matter what the design, would not fit in with existing 1980s housing. There would probably not be lines of sight between the development site and nearby heritage assets which your objective states 'is 250m-1km away'.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>As stated in TMBC's Objective 8, 'the site will be within Flood Zone 3 and in an/or within an area with a 1 to 30 risk of flooding'. There is a water inlet/outlet that leads to the lake opposite which will be right next to the site giving a higher potential for flooding.</p>	<p>services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59432 is not within 100m of an AQMA.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>With regard to SA objectives 4: economic growth, 9: soil and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>As stated by TMBC 'The site is greenfield land and contains a significant proportion of grade 3 agricultural land'. If new houses are built how will the soil resources be conserved and enhanced, and the land be guarded against contamination?</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimize climate change.</p> <p>Greenhouse gas emissions will increase and not be reduced. Leybourne is situated between the A20 and M20 and air quality is questionable. Although there is a train station close by, people will still use their cars to commute to the station. People may drive to work locally or further afield as they are in easy reach of M20 and M26.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimize its impact</p> <p>As TMBC stated in Objective 11 'sustainable modes of transport' See comments in Objective 10 as linked to this.</p> <p>SA Objective 12:</p> <p>TMBC states that the site is not within 100m of an AQMA' even so, air quality will definitely decrease if more houses are built and more cars are used.</p> <p>SA Objective 13: To protect material assets and minimise waste.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>TMBC states that the site is within a 'Minerals Safeguarding Area' how will material assets and waste be minimised and protected if new houses are built?</p> <p>SA Objective 14: To provide a suitable supply of high-quality housing including an appropriate mix of sizes, types and tenures</p> <p>As TMBC have quoted 'This site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer a wider mix of housing. This site will not provide as wider mix of housing or make as greater contribution towards housing needs as a larger site would'.</p> <p>We invite you to visit our home (bordering this site) to verify that these objections are valid.</p> <p>Therefore, we strongly request that Tonbridge & Malling Borough Council to reconsider the development of this site."</p>	
45000225	Annex 1	<p>"[59740]</p> <p>Dear Sir</p> <p>With reference to the consultation on Regulation 18 Local Plan I would like to make the following comments regarding Q8 Site 59740 outlined in the Tonbridge and Malling Local Plan, Interim Sustainability Appraisal Report, July 2022. In addition I would like to fully endorse and support the information compiled and submitted by the Broadwater Action Group in response to Regulation 18 Local Plan, Consultation Document, September 2022. I would also encourage TMBC to take into account the 1500 objections to the Berkeley Homes Planning Application 21/02719/OAEA related to this site.</p> <p>Sustainability Assessment (SA) Objectives</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Minor positive (+)/Uncertain significant negative (--?)</p> <p>The suggested site has seen increased use by walkers, riders and cyclists since the Covid 19 pandemic. Local people and visitors have found solace in the natural habitat in this area. They are able to enjoy existing footpaths, bridleways and the agricultural landscape that is a</p>	<p>Site 59740 has been appraised in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>SA objective 1: health and wellbeing looks at the proximity of sites to healthcare facilities and open space, in addition to walking and cycling paths, play areas and sports facilities. Site 59740 receives a minor positive effect in relation to SA objective 1: health and wellbeing, due to its proximity to open space and walking paths</p> <p>SA objective 2: services and facilities related to accessibility to amenities, rather than housing delivery. The site assessment criteria for SA objective 2 consider the accessibility band that each site has been placed within in the Urban Capacity Study (July 2022), as this provides an indication of the overall accessibility of a site in relation to access to services and site location. Site 59740 falls within the Fair Accessibility Band and therefore receives a minor negative effect in relation to SA objective 2.</p> <p>SA objective 3: education looks at the proximity of sites to primary and secondary state schools, so as to give an indication on whether education is easily accessible or not.</p> <p>With regard to SA objective 4: economic growth, all mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59740 is 5ha or more, it receives a significant positive effect in</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>particular feature of this area of Kent. The development of this site would contrive natural surroundings increasing pollution in all its forms thus negatively impacting the health and wellbeing of existing and future residents.</p> <p>There are already a number of sporting and fitness facilities and opportunities in the area that enhance health and fitness.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>Minor negative (-)</p> <p>There is no evidence that the housing stock produced in the area in recent years has provided truly affordable housing for local residents. The cost of housing currently only provides for people who have a substantial deposit and monthly income to cover high mortgage costs. This is likely to be migrants from the more expensive London and Greater London conurbation.</p> <p>Data covering the ME19 area as of 12th July 2022 shows the following:</p> <p>'Average asking price: £516,433</p> <p>Average rental per week: £322'</p> <p>(https://property.xyz/uk/kent/west-malling)</p> <p>It is unlikely that access to community facilities would be improved if a greater concentration of housing was implemented on this site. There is already pressure on infrastructure in the area. I would draw attention to information provided to TMBC by BAG regarding the Berkeley Homes application 21/02719/OAEA Broadwater Farm and their research regarding the concentration of development in the locality:</p> <p>'... the increase in housing in the immediate vicinity of West Malling; that is within a 1 mile radius, the number of dwellings has increased by 3695. Tonbridge and Malling Borough Council covers a 93 square mile area, of which the area surrounding West Malling(including Kings Hill and Leybourne Grange) accounts for 1% of the geographical space of the borough. However, this very small area has absorbed roughly 58% of the number of new dwellings and the associated increase in</p>	<p>relation to this objective. The fact it is also within 800m of a train station also contributes to this significant positive effect. The Agricultural Land Classification is considered separately under SA objective 9: soil.</p> <p>Site 59740 is already recorded as having a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>SA objective 6 relates to the landscape and townscape, not the historic environment. The historic environment is dealt with separately under SA objective 7: heritage. Site 59740 receives a significant negative effect in relation to SA objective 7. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>Flood risk is dealt with under SA objective 8: water, not SA objective 11: climate change mitigation. Site 59740 already receives an uncertain significant negative effect in relation to SA objective 8: water, due to the fact it is at risk of flooding.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 12: air quality, site 59740 has been appraised in line with the site assessment criteria. As it is not within 100m of an AQMA, it receives a negligible effect.</p> <p>With regard to SA objective 14: housing, sites appraised for mixed use receive some uncertainty, as it is unknown how much of the site will be used for residential development as opposed to other uses. We have responded to the estimated yield provided by TMBC, which was generated using a methodology agreed by the Council and applied to all sites.</p> <p>With regard to SA objectives 9: soil and 13: material assets and waste, respondent has not expressed any disagreement over the effects given.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>demand on local services; destruction of natural habitat and green spaces that this entails'. (BAG 2022)</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>Uncertain minor positive (+?)</p> <p>Evidence from KCC data suggests that many residents on new developments e.g. Kings Hill do not use local schools, particularly at secondary level, but prefer to send their children to private schools out of the area. This has a knock on effect on the infrastructure and whilst the educational attainment of these children may be improved it would not be because of educational provision provided by this site. The negative effects of pollution and congestion at peak times would outweigh any possible advantages.</p> <p>Improvements in education and training would be better served in other areas of the borough. There is currently demand for places in primary and secondary education in ME19. Increasing housing stock with no guarantee of extra school places would be ill advised.</p> <p>New developments tend to attract a younger demographic so advantages for 'all sectors of society' would be disproportionate.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p> <p>Significant positive (++)/Significant positive (++)</p> <p>The combination of high business rates, increase in home working and a shrinking workforce are forcing a more creative attitude to the world of work. The provision of excess business units at Kings Hill led to change of use in some plots that were designated for business developmet. The current use of the prime agricultural land on this site should be embraced and enhanced to ensure its full potential is achieved. The current political situation worldwide has only highlighted the need for food and energy sustainability closer to home. This site could provide both if managed properly.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>Uncertain significant negative (--?)</p> <p>This suggested site is rich in biodiversity particularly across the New Barns/Broadwater Farm and Well Street conservation areas. Species e.g. badgers, solitary bees, great crested newts, bats and dormouse populations, to mention but a few, would be severely effected should this area be developed. Migratory and indigenous birds would also suffer if their natural nesting and stopping off habitats were changed by air, light and noise pollution.</p> <p>Insects populations that contribute to pollination and feed many animals would decrease and would result in a contribution to global warming.</p> <p>High grade agricultural land would be lost in a time when there are calls for food self-sufficiency.</p> <p>I draw your attention to the following:</p> <p>‘Medway Gap and Vicinity survey carried out by ADAS Resource Planning Group in 1991 as part of the then Local Plan formulation. This reports that 71% of land at Eden Farm, West Malling, is grade 1 and some 50% of land at Broadwater farm is grade 1 and 2 with 70% being above grade 3, contributing significantly to the quality of the apples harvested there. In addition to the soil quality, there remains an abundance of water within two principal aquifers (underground watercourses) very close to the surface and hence the name Broadwater. Proposals to develop this land would be contrary to Chapter 4.2.1 of the Reg 18 Local Plan which specifically requires protection of high-quality agricultural land.’ (BAG)</p> <p>SA Objective 6: To protect and enhance the borough’s landscape and townscape character and quality</p> <p>Uncertain significant negative (--?)</p> <p>The New Barns/Broadwater Farm Conservation Area’s, designated in 1993, listed buildings, historic Cwylly and ancient rural lanes create an unique landscape that would be severely if not irreparably damaged should any part of this site be cut across by modern development. The status of the Conservation Area was designated as such because of the importance of the views into, out of and across the area. The</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>vista would be severely diminished should this site be included in the local plan. Development of this site would impact the individual character of the small hamlets of New Barns, Springetts Hill and Well Street which are a unique feature of this rural community.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>Uncertain significant negative (--?)</p> <p>The significant number of listed buildings, ancient sunken lanes, Conservation Areas, Cwylla etc are recognised as contributing to a valuable cultural heritage. Any development across this area would be detrimental to this heritage and should be avoided.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>Significant negative (--)/Uncertain significant negative (--?)</p> <p>It is important that the natural water features in this area are retained in order to feed the ancient Cwylla and maintain the high quality agricultural land in the area. See SA Objective 5.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>Significant negative (--)</p> <p>The high quality agricultural land (49% Grade 1 & 2, 51% Grade 3) in this area should be protected. Any development on this site would risk contamination of this valuable land. As mentioned earlier the maximization of this land to serve the need for food and energy should be paramount.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>Significant positive (++)</p> <p>It is a nonsense to assume that because there is a railway station nearby that fewer people would use cars. The reality of the Kings Hill</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>development and the surrounding estates is that more people are transported by car to the station than walk or cycle.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p> <p>Negligible (0)</p> <p>Any development on the Broadwater site would exacerbate the risk of flooding give that the water table is particularly high in the area. Flooding often occurs at various points along Broadwater Road and Well Street. Recent increases in heavy rain could result in adverse consequences.</p> <p>'The NPPF also promotes planning for adaptation, in respect of flood risk, biodiversity and water supply, to build in resilience and avoid increased vulnerability to property and people. The expectation is that plans should take a proactive approach to addressing these matters.'</p> <p>(Local_Plan_R18_Final)</p> <p>There is no guarantee that this recommendation would be fulfilled by developers.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Negligible (0)</p> <p>Any development on this site would unquestionably reduce air quality. There is no doubt that there is a move towards zero emissions but the reality is that this will be at a date far into the future. Increased traffic within Kings Hill, along the A228 and within the ME19 postcode are testament to a reduction in air quality. The concentration of housing development within the area and close by has undoubtable had a negative impact too.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>Uncertain minor negative (-?)</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Given that 'The site is within a Minerals Safeguarding Area' (Local_Plan_R18_Final) no unnecessary development of the area should be considered.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>Uncertain minor positive (+?)</p> <p>To reiterate the previous data it seems highly unlikely that this objective would be met.</p> <p>'Data covering the ME19 area as of 12th July 2022 shows the following:</p> <p>Average asking price: £516,433</p> <p>Average rental per week: £322'</p> <p>(https://property.xyz/uk/kent/west-malling)."</p>	
45009345	Annex 1	<p>"[59761]</p> <p>Human health and well-being will be affected by the removal of existing walkways, in particular the Kate Reed Wood site (ID 59761). This is a very popular walkway for residents as it offers a pleasant countryside alternative to the roadside for walkers.</p> <p>SA Objective report lists 7 negatives and 4 positives, this shows that the negative benefits of developing this site strongly outweigh the positive."</p>	<p>Site 59761 has been appraised in line with the site assessment criteria, as outlined in Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>Site 59761 receives a mixed uncertain significant negative and minor positive effect in relation to SA objective 1: health and wellbeing, as it contains open space which could be lost as a result of development although this is uncertain.</p>
44719265	Annex 1	<p>"[59608]</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of</p>	<p>Site 59608 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an area of open space (Scathes Wood) and a walking path. This is in accordance with the site assessment criteria.</p> <p>The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. The promoter of this site has not declared that it contains an existing business.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW)that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility, or recreational opportunities such as children's play areas or sports facilities.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of thisSite would not represent sustainable development through actively reducing health inequalities, improvingaccess to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons we submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p> <p>The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.'</p> <p>It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical accessibility jobs. It would be in direct conflict with the objective to</p>	<p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. The site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA, this limitation will be added to the 'Difficulties and Data Limitations' section of the SA. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>encourage sustainable economic growth, business development and economic inclusion across the borough. We submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects.'</p> <p>This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs.</p> <p>Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan. In our view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape.</p> <p>The Site is highly visible in views from the adjacent PRoW and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1). We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land.</p> <p>None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p> <p>The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.'</p> <p>The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them.</p> <p>We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination.</p> <p>The SA states: 'The site is located on brownfield land.'</p> <p>The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section 336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nurserygrounds. Agricultural uses are exempt from the definition of previously developed land in Annex 2 of the NPPF. Annex 2 defines 'brownfield land' with reference to 'previously developed land'. The</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site cannot therefore be classified brownfield land for the purposes of the NPPF.</p> <p>With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p> <p>The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'</p> <p>The Site is located approximately 350m from bus stops on Ightham Road via a PRow adjacent to the site. The PRow is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physical infrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday.</p> <p>The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location.</p> <p>With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location.</p>

		<p>In recognition of this we submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.'</p> <p>The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures that would meet local housing need.</p> <p>Conclusion</p> <p>The Site is located outside of any settlement boundary and within a Rural Area in part of the countryside designated as Green Belt. The Site is in existing agricultural use. It is not brownfield or previously developed land and therefore its allocation for residential development would, by definition, be inappropriate. The Site is also located within the AONB and allocation of the Site would result in significant negative effects to a landscape of scenic beauty which the Government affords the highest status of protection to.</p> <p>The Site is poorly accessible and not located near to schools, facilities or amenities that are important for health and well-being. As existing, the Site contributes to employment and economic growth which would be lost. The Site is sensitively located within an Archaeological Priority Area and near to designated heritage assets of national importance. The Site is also located over a Source Protection Zone and effects on water features and resources are unknown. The Site is not served by public transport and would not encourage walking or cycling. Occupiers of any future development would be dependent on use of a private car which would be in direct conflict with objectives to reduce greenhouse gas emissions and minimise climate change.</p> <p>In summary, the NPPF requires plans to provide a positive vision for the future of each area; a framework for addressing housing needs</p>

		<p>and other economic, social and environmental priorities; and a platform for local people to share their surroundings. It requires plans to be prepared with the objective of contributing to the achievement of sustainable development.</p> <p>We consider that the Interim Sustainability Review Report contains errors and that the Site has been incorrectly scored in relation to a number of the Sustainability Objectives. In our view, allocation of this Site would in fact result in a greater number of negative effects, many of which would be significant in scale. Allocation of the Site would fail to comply with the economic, social or environmental objectives required to achieve sustainable development in the plan-making process. It would not be consistent with the emerging spatial strategy or in any way contribute to the core aim of achieving sustainable development in the borough and we request that the Site is not allocated in the emerging Local Plan."</p>	
45097473	Annex 1	<p>"Dark Hill Farm 59709 – I object to the development of this site for the following reasons:</p> <p>SA objectives 1 and 3</p> <p>* There is no capacity for this in schools or local GP surgeries.</p> <p>SA objective 2</p> <p>* Traffic is unsustainable as it is - the roads cannot cope with extra. Notwithstanding I also understand that buses are to be cut from the village. If this continues, I will have no choice but to drive my children to school and if this site goes ahead they face much longer car journeys.</p> <p>SA objective 5</p> <p>* This site is in the Kent Downs AONB and MGB. The development of this site would have a negative effect on the biodiversity of both of these designated areas.</p> <p>SA objective 6</p> <p>* This development will have a detrimental effect on the local character and distinctiveness of the historic village of Ightham.</p>	<p>With regard to SA objective 1: health and wellbeing, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 2: services and facilities relates to accessibility, rather than impacts on the road network. The SA is too high-level to consider specific road networks and the Council will commission additional evidence on matters including traffic and air quality. Therefore, the site has been appraised in accordance with the site assessment criteria and it is correct that it receives a negligible effect in relation to this objective.</p> <p>The Kent Downs AONB is considered under SA objective 6: landscape and townscape, not SA objective 5 which relates to biodiversity and geodiversity. Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p>

45219585	Annex 1	<p>"[59608]</p> <p>The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social, environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report[1] (#_ftn1) [2] is also subject to the Regulation 18 consultation.</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW) that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility,</p>	<p>Site 59608 receives a minor positive effect in relation to SA objective 1: health and wellbeing, as it is within 800m of an area of open space (Scathes Wood) and a walking path. This is in accordance with the site assessment criteria.</p> <p>The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration o the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. The promoter of this site has not declared that it contains an existing business.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 6: landscape and townscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. The site assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA, this limitation will be added to the 'Difficulties and Data Limitations' section of the SA. Bus</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>or recreational opportunities such as children's play areas or sports facilities.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of this Site would not represent sustainable development through actively reducing health inequalities, improving access to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons I submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p> <p>The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.'</p> <p>It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical accessibility jobs. It would be in direct conflict with the objective to encourage sustainable economic growth, business development and economic inclusion across the borough. I submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design,</p>	<p>service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>scale and layout of development, which may help mitigate any adverse effects.'</p> <p>This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs.</p> <p>Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan[2] (#_ftn2) [3]. In my view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape.</p> <p>The Site is highly visible in views from the adjacent PRoW and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1). I submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development.</p> <p>It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land.</p> <p>None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.'</p> <p>The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them.</p> <p>I submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination.</p> <p>The SA states: 'The site is located on brownfield land.'</p> <p>The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section 336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nursery grounds. Agricultural uses are exempt from the definition of previously developed land in Annex 2 of the NPPF. Annex 2 defines 'brownfield land' with reference to 'previously developed land'. The Site cannot therefore be classified brownfield land for the purposes of the NPPF.</p> <p>With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p> <p>The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The Site is located approximately 350m from bus stops on Ightham Road via a PRoW adjacent to the site. The PRoW is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physical infrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday.</p> <p>The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location.</p> <p>With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location.</p> <p>In recognition of this I submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.'</p> <p>The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures that would meet local housing need.</p> <p>Conclusion</p> <p>The Site is located outside of any settlement boundary and within a Rural Area in part of the countryside designated as Green Belt. The Site is in existing agricultural use. It is not brownfield or previously developed land and therefore its allocation for residential development would, by definition, be inappropriate. The Site is also located within the AONB and allocation of the Site would result in significant negative effects to a landscape of scenic beauty which the Government affords the highest status of protection to.</p> <p>The Site is poorly accessible and not located near to schools, facilities or amenities that are important for health and well-being. As existing, the Site contributes to employment and economic growth which would be lost. The Site is sensitively located within an Archaeological Priority Area and near to designated heritage assets of national importance. The Site is also located over a Source Protection Zone and effects on water features and resources are unknown. The Site is not served by public transport and would not encourage walking or cycling. Occupiers of any future development would be dependent on use of a private car which would be in direct conflict with objectives to reduce greenhouse gas emissions and minimise climate change.</p> <p>In summary, the NPPF requires plans to provide a positive vision for the future of each area; a framework for addressing housing needs and other economic, social and environmental priorities; and a platform for local people to share their surroundings. It requires plans to be prepared with the objective of contributing to the achievement of sustainable development.</p> <p>I consider that the Interim Sustainability Review Report contains errors and that the Site has been incorrectly scored in relation to a number of the Sustainability Objectives. In my view, allocation of this Site would in fact result in a greater number of negative effects, many of which would be significant in scale. Allocation of the Site would fail to comply with the economic, social or environmental objectives required to achieve sustainable development in the plan-making process. It would not be consistent with the emerging spatial strategy or in any way contribute to the core aim of achieving sustainable development in the borough and I request that the Site is not allocated in the emerging Local Plan.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>(#_ftnref1)</p> <p>(#_ftnref2) "</p>	
45373697	Annex 1	<p>"SITE 59699 is grade 1 agricultural land and has been used as such for decades and should NOT be included in the Local Plan.</p> <p>There is a wide range of wildlife that inhabit the surrounding woodlands such as deer, bats, pheasants, and foxes.</p> <p>The site also slopes down towards the houses on Ewell Avenue so there would be a massive concern regarding flooding.</p> <p>You mention that there is a healthcare facility within 400m of this location which is not true....out healthcare provisions are already at breaking point since the closure of the surgery in West Malling High Street, causing us to have to drive to either Kings Hill (2.25km) or Leybourne (2.10km), where getting an appointment is like extremely difficult because of pressure caused by the number of patients that use the facilities.</p> <p>You also mention that there are bus stops and cycle paths. We have no cycle paths, and the nearest bus stop is either in the village which is 600m or Manor Park which is much further as there is no direct route to it.</p> <p>Access to the site would be via narrow country lanes which would cause increased traffic leading to a potential accident hotspot. There are big parts of Offham Road that do not have footpaths, the same with Fartherwell Road.</p> <p>This site has also had previous planning permission refused. There are a tree protection orders in place, in fact you refused a planning request just this year to 'top' the canapes of the scotch pines and oak trees!</p> <p>Also, this site was not submitted as part of the previous plan as it was not viable, so why has that changed! This site is also close to a conservation area and any development here would have a detrimental effect."</p>	<p>The purpose of SA is to assess all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>Site 59699 is recorded as having a significant negative effect in relation to SA objective 5: biodiversity and geodiversity as in addition to containing green infrastructure assets, it is also within close proximity with other biodiversity assets. All negative effects against SA objective 5 are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However this GP surgery is now closed. In the next iteration of the SA Report, the proformas for the sites affected will be updated.</p> <p>The SA states under SA objective 1: health and wellbeing that the site is within 800m of "an existing area of open space/ walking and cycle path/ play area/ sports facility" but this does not necessarily mean that it is within close proximity of all of these facilities, just one of them – hence the '/'. Likewise, the SA states under SA objective 4: economic growth that the site is within 400m of "a bus stop and/or cycle path" [emphasis added]. The site is within close proximity of bus stops, located along St Leonard's Street.</p> <p>The SA is too high-level to consider road width and traffic congestion, and so the Council will commission additional evidence on matters including traffic. The SA does not give consideration to previous planning applications or TPOs.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
45440929	Annex 1	<p>"4. The findings of the individual site assessments as they relate to land north of Church Road, East Peckham</p> <p>4.1 The Interim Sustainability Appraisal considers a number of sites that have been put forward as potential development opportunities; this includes the Hallam land at East Peckham (reference: 59813). The following paragraphs provide Hallam's more detailed commentary relative to the various Sustainability Objectives.</p> <p>4.2 To reaffirm Hallam are of the opinion that the Site offers an opportunity to deliver a sustainable landscape-led residential development for between 220 – 250 dwellings, alongside improved community facilities and a generous green infrastructure strategy that will deliver biodiversity net gain, new parkland and recreational opportunities.</p> <p>SA Objective 1: To improve human health and well-being</p> <p>4.3 Hallam propose a comprehensive landscape led approach to its development as described in its previous Vision Document. A generous Green Infrastructure Strategy is proposed which includes the placement of a countryside park that expands on the existing offering of the recreation ground. In order to reflect the rural character of the Site, the park will create a transition from the traditional character of the recreation ground to the south and the countryside character to the north. An opportunity exists to enhance connectivity and improve play facilities within the existing recreation ground. A new community orchard could be created in the south-western corner of the Site. A community orchard responds to the existing landscape character, but also provides a new asset with the opportunity for use by local residents, the primary school and activities by groups at the church or village hall. These are measures that can contribute to improving human health and well-being. (scoring positive)</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p> <p>4.4 Reflecting its status as a Rural Service Centre, East Peckham has a range of services and facilities. The proposed development is well-related to the primary school, Holy Trinity Church, the Village Hall (inclusive of Scalliwags Pre-School (2 – 5 years)), the convenience store, library, post office and pharmacy; most are adjacent the Site and all of which are within 1.5km of the Site. Future residents will be able to access these facilities by walking and cycling. Bus services are also adjacent to the Site (On Church Lane) with services to Tonbridge, Tunbridge Wells and Maidstone. Areas of employment and Beltring Railway Station are located to the south-east of the village. Residents</p>	<p>This is a 'policy-off' appraisal and so the site is appraised on its physical merits only, with no consideration given to mitigation (e.g. a landscape-led approach and provision of green infrastructure) and supporting documents submitted by site promoters. This ensures all reasonable alternative development site options are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>Site 59813 receives a minor negative effect in relation to SA objective 2: services and facilities, as it falls within the Fair Accessibility Band. This is in accordance with the site assessment criteria. The site's proximity to schools is considered under SA objective 3: education, whilst the site's proximity to bus stops is considered under SA objective 10: climate change mitigation.</p> <p>With regard to SA objective 3: education, the SA acknowledges the site's proximity to an existing school and for this reason it receives a minor positive effect. The site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 4: economic growth considers whether development will directly influence sustainable economic growth. If a site contains an existing business that could be lost as a result of residential development, it receives a minor negative effect. All mixed use and employment site options are expected to have positive effects on this objective, as they provide opportunities for new jobs.</p> <p>Site 59813 is incorrectly recorded as having a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. In the next iteration of the SA, the site will receive a minor negative effect, as it does not contain a green infrastructure asset, and is within 250m and 1km of some Local Wildlife Sites and areas of Ancient Woodland. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure.</p> <p>Site 59813 receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. As mentioned already, this is a 'policy-off' appraisal and consideration is not given to supporting documents (e.g. a Historic Environment Desk-Based Assessment) submitted by site promoters.</p> <p>With regard to SA objective 8: water, the site contains land with a 1 in 30 year risk of surface water flooding. For this reason, it receives a significant negative effect in relation to this objective. The effect is</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>of the new housing proposed will have convenient access to these facilities and services. (scoring minor positive)</p> <p>SA Objective 3: To improve levels of educational attainment and skills training development for all age group and all sectors of society</p> <p>4.5 The Site is adjacent to a primary school and a pre-school. New residential development will generate new pupils that will support the school and the pre-school and take advantage of available school spaces and if required provide funding for improvements to the school. (scoring minor positive)</p> <p>SA Objective 4: To encourage sustainable economic growth, business development and economic inclusion across the borough</p> <p>4.6 The Site is close to existing employment located to the south of East Peckham and would provide labour supply to support the local economy. New employment would be created during the construction phase and future residents will increase local expenditure. (scoring minor positive)</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>4.7 The main body of the Site is arable land considered to be of low conservation value. Hedgerows on the Site comprise at least 80% native species and are therefore habitats of principal importance. There are some ditches offer wetland habitat for potential wildlife species. There are mature trees on the perimeter boundaries and a number of mature trees scattered across the Site but none of these are protected by a Tree Preservation Order (TPO). All existing habitats of value should be retained and enhanced. The development will seek to achieve a minimum 10% Biodiversity Net Gain across the Site. The Site is not subject to any statutory environmental or ecological designations. The proposed development would contribute positively to the protection and enhancement of biodiversity. (scoring minor positive)</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>4.8 The 'landscape led' scheme would respond to existing assets and sensitivities, maximising the value of the Site to deliver development appropriate to its context and for the benefit of the existing and future communities. Considerations include the maintenance of separation between existing settlements, the retention and enhancement of landscape features and character to positively shape the development. The inclusion of multifunctional and connected green infrastructure, offering ecological, water management and amenity benefits to the Site and wider setting is an important consideration. The proposed land uses are consistent with patterns</p>	<p>mixed with a negligible effect, as the site does not contain a water body or watercourse, or fall within a Source Protection Zone.</p> <p>With regard to SA objective 9: soil, the site has been appraised in line with the site assessment criteria. This is a 'policy-off' appraisal and so consideration is not given to the fact the site promoter states that a soils management plan would mitigate any adverse effects on this objective.</p> <p>With regard to SA objective 10: climate change mitigation, the SA is limited in how it can assess climate change mitigation as this is dependent on numerous factors. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proforma for this site that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p> <p>With regard to SA objective 12: air quality, the proforma acknowledges that the site is not within 100m of an Air Quality Management Area. For this reason, it receives a negligible effect in relation to this objective.</p> <p>With regard to SA objective 13: material assets and waste, the SA acknowledges that the site does not fall within a Minerals Safeguarding Area.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>and character of the wider landscape. (scoring negligible/minor positive)</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>4.9 Hallam has prepared a Historic Environment Desk-Based Assessment which demonstrates that the majority of nearby heritage assets are located away from the Site and are largely separated visually by intervening development, topography and vegetation. Whilst some of the Site may be visible from some vantage points along Hale Street and Bush Lane, this would only represent a low degree of harm to the assets' wider settings.</p> <p>4.10 The density and height of proposed buildings in the west near the churchyard boundary will need to be sympathetic to this setting albeit this can be adequately mitigated with appropriate design and placement of land uses (for example orchards or allotments), screening and planting. This effect is considered to equate to less than substantial harm as per National Planning Policy Framework (2021) ("NPPF") paragraphs 199-202 and the level of harm is low within the less than substantial range. Notwithstanding, this harm should be weighed against the significant public benefits of the scheme. (scoring minor negative)</p> <p>4.11 The Desk-Based Assessment confirms there is limited potential post-medieval archaeological features within the Site, and it recommends that no further archaeological evaluation is undertaken.</p> <p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>4.12 The entire Site lies within Flood Zone 1; being an area of Low Probability of flooding, outside both the 1 in 100 (1% AEP) and 1 in 1,000 (0.1% AEP) year flood events. Mapping provided by the EA identifies that the majority of the Site has a very low to high risk of surface water flooding. Given the baseline Site characteristics and further mitigating measures to be implemented, residual flood risk from an overland flow mechanism is considered to be a low probability. Positive drainage systems will further reduce the risk of flooding within the built development. Sustainable Urban Drainage will have the potential to employ source control measures to control peak discharges to no greater than the baseline conditions. Coupled with the storm water control benefits, the use of SuDS can also provide betterment on water quality. (scoring minor positive)</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against contamination</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>4.13 Whilst the Site includes agricultural land that would in part be lost, a soils management plan would mitigate this to an extent. (scoring minor negative)</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>4.14 All new development will contribute to greenhouse gas emissions. New development at East Peckham will have the advantage of being accessible to local facilities, local employment and public transport services such that a range of modes of travel are available that will assist in reducing Carbon Dioxide emission associated with vehicular travel. New housing will be built to at least standards prescribed in the Government's Building Regulations which are being improved in order to achieve a greater level of energy efficiency and reduce domestic source emissions. (scoring minor negative)</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its Impact</p> <p>4.15 Climate change predictions indicate increased incidence of extreme precipitation; increased incidence of extreme temperature, increased storm events including high winds and rising sea levels and coastal storm surges. The River Medway and its tributaries has an extensive area of flood risk which precludes new development in large areas of land to the east and south of East Peckham. Areas to the north of the village are the most suitable for accommodating new development in these terms. Design measures can be incorporated to ensure that surface water drainage are sized adequately to cater for increased rainfall and storm events and new planting and house design can provide shading to reduce the effects of higher temperatures. (scoring minor positive)</p> <p>SA Objective 12: To protect and improve air quality</p> <p>4.16 There are seven declared Air Quality Management Areas (AQMA's) in the Borough, none of which are in the vicinity of East Peckham.[FN 3 - https://uk-air.defra.gov.uk/aqma/local-authorities?la_id=283] Those AQMA's are declared on the basis of Particulate Matter (PM10) and Nitrogen Dioxide (NO2) emissions largely associated with vehicular traffic. It is unlikely that additional development at East Peckham will have any material effect on emissions in those locations. Estimated traffic generation from the proposed development is at a level such that air quality effects in East Peckham are likely to be negligible. (scoring negligible)</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>4.17 The Site does not fall within a Minerals Safeguarding Area. A waste minimisation strategy can be required as part of a planning</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>permission and measures to encourage recycling provided as part of the development. (scoring negligible)</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures</p> <p>4.18 Development at East Peckham would contribute to meeting the housing needs for the Borough and provide opportunities for local housing needs at the village and other smaller nearby villages which are otherwise constrained by the Green Belt.</p> <p>4.19 When comparing the Site score to adjacent land parcels at East Peckham, Site 59789 of circa 7ha is deemed to be a 'Significant Positive (++)' on the basis 'The site is expected to comprise 100 dwellings or more. It is expected that these large sites will be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs.' The same approach would apply to the land north of Church Road which should at least score equivalent.</p> <p>4.20 The Local Housing Needs Assessment identifies a net need of 36 new affordable homes per annum in the rural east sub-region. Over the 15 year plan period this amounts to 540 new affordable homes. East Peckham and is one of only two Rural Service Centres in this sub-region and would be a natural location for meeting a proportion of this need.</p> <p>4.21 The scale of the opportunity north of Church Lane is sufficiently large to provide a range of types and tenures of housing – market housing, affordable housing, first homes. (scoring major positive)</p> <p>Summary</p> <p>4.22 In the following table we have set out the Council's Interim SA against Hallam's assessment for convenience.</p> <p>Sustainability Objective</p> <p>Interim SA</p> <p>Hallam Assessment</p> <p>SA1</p> <p>+/--</p>

		<p>0</p> <p>SA14</p> <p>+?</p> <p>++</p> <p>4.23 The above illustrates that the more detailed analysis set out here returns a more positive scoring with no significant negative effects.</p> <p>Summary</p> <p>Findings of the individual site assessments: We have set out an analysis of the development opportunity north of Church Lane in comparison with the findings of the Interim Sustainability Appraisal. This illustrates that the more detailed analysis set out here returns a more positive scoring with no significant negative effects."</p>	
43485921	Annex 1	<p>"Introduction</p> <p>This paper forms one of two main responses Broadwater Action Group (BAG) is submitting to TMBC as part of our response to the Regulation 18 Local Plan Consultation. The first paper, which has already been submitted, focusses on an assessment of policy related issues relevant to our objective of preventing inappropriate development of land between West Mailing, East Mailing and Kings Hill. This second paper focuses on a critique of the Interim Sustainability Assessment of Site 59740 Broadwater Farm.</p> <p>Executive Summary</p> <p>In summary, this Regulation 18 Consultation response focuses on responding to Question 8 for Site 59740 and BAG believes there is sufficient compelling evidence to exclude this site from going forward for development in the next draft of the Local Plan. Each of the fourteen Sustainability Assessment (SA) objectives and their sub-objectives have been reviewed by BAG and in many cases, based on the evidence provided in the Interim Sustainability Appraisal Annex 1 and what is known about the site , BAG does not agree with the initial assessments given by TMBC. BAG has offered its own assessment of each of the SA objectives including appropriate supporting evidence as necessary.</p>	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.</p> <p>The SA does acknowledge the heritage assets within 250m of the site (including within the site). For this reason, the site receives a significant negative effect in relation to SA objective 7: heritage. All effects against SA objective 7 are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The SA also acknowledges the fact the site is greenfield land and contains a significant proportion of Grade 1 and/or 2 agricultural land. For this reason, the site receives a significant negative effect in relation to SA objective 9: soil. It is not possible to exceed Grade 1 or 2 best and most versatile agricultural land.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Section A below gives a general overview of BAG's assessment of the suitability of the site and Section B gives an assessment of how BAG believes the Broadwater Farm site should be rated against the Sustainability Assessment objections and sub-objectives.</p> <p>Section A Overview of Lack of Site Suitability for Inclusion in Local Plan Going Forward</p> <p>The Broadwater Farm site was included in the previously disallowed and abandoned Local Plan and was, apparently, regarded as a Strategic Site as it was thought to be both available AND deliverable. The former Local Plan also included the expansion of the Green Belt from the west of West Malling to the Watlingbury Road for any land not consumed by 900 homes and related infrastructure.</p> <p>However, it appears that the deliverability aspect of this site was called into question as a totally inappropriate access road was added at a late stage without appropriate consultation. It is also understood that the single Conservation Area of New Barns and Broadwater Farm was originally described as two separate Conservation Areas either side of the site. It is now clear that the New Barns and Broadwater Farm Conservation Area was designated in 1992 for the views across, out of and into this area of quintessential Kentish landscape. Standing in the centre of the public right of way (MR111) in the middle of the Conservation Area, the views to the west are of New Barns Hamlet and its oast complex and to the east, the Broadwater farmstead and oasts are prominent in the landscape with the historic buildings of Well Street visible beyond. To the north rises Springetts Hill with its backdrop of the North Downs clearly visible behind. To the south, there is rolling farmland that hides all but a single roof top in the Kings Hill development. This, and the below, argues that there was, and continues to be, no justification for Broadwater Farm to be included in TMBC's plans as a Strategic Site.</p> <p>There is an outstanding current application (TM/21/02719) being considered for this site and which provides extensive 'information available to TMBC from many sources to draw on when considering whether this site should go forward to the next phase of planning. In addition to the 1,500 valid objections registered by local people, TMBC received many negative responses from the official consultees. The reality is that TMBC are now aware of numerous compelling and diverse valid reasons why this site is not suitable for large scale development. Indeed, certain aspects of the application have proven to be inaccurate (or even disingenuous). In particular, the presence of a KCC-listed ancient monument heritage asset (an Anglo Saxon Cwylle) and a primary aquifer crossing the site at less than 2m below ground level were ignored. The detailed hydrogeology report commissioned by BAG, and presented as Annex A, clearly indicates that any</p>	<p>This is a 'policy-off' appraisal and so the site is appraised on its physical merits only. This ensures all reasonable alternative development site options are appraised to a consistent level of detail. If the site is allocated in the Local Plan via policy that contains mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>In LUC's SA, all reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the sites are expected to have in relation to the SA objectives is provided in the proforma for each site, contained within Annex 1 of the Interim SA Report. The respondent has provided their own SA of this site. However, their appraisal is not in line with the site assessment criteria.</p> <p>With regard to SA objective 1: health and wellbeing, the site is incorrectly recorded as containing an open space and is therefore incorrectly recorded as receiving an uncertain significant negative effect in relation to this objective. In the next iteration of the SA, the site will receive a minor positive effect only in relation to SA objective 1. With regard to the respondent's point on uncertainty, if a site is recorded as containing a designated open space it receives some uncertainty, as it is unknown whether the open space will be lost or not, or integrated into development. With regard to healthcare facilities, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP).</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>With regard to SA objective 2: services and facilities, site 59740 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band and therefore receives a minor negative effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 4: economic growth, all mixed use and employment site options are expected to have positive effects on this objective, due to the nature of the proposed development. Larger sites are expected to have more positive effects than smaller sites, as they will provide more opportunities for the creation of new jobs. As site 59740 is 5ha or more, it receives a significant positive effect in relation to this objective. The fact it is also within 800m of a train station also contributes to this significant positive effect.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>mitigation of the existing water courses to allow building will cause damage to both heritage assets and an important 2 water source rising at Well Street.</p> <p>The soil quality is of the highest agricultural rating, at Grade 1 and 2, on the majority of the site (see Annex B — Agricultura! Land Classification, Medway Gap and Vicinity Local Plan- Land at Eden Farm/ Broadwater Farm West Mailing 1994). In other words, the soil of Broadwater Farm exceeds even the 'best and most versatile' description laid down under the Government classification system.</p> <p>Annex C is a map showing ail the sites included in the Regulation 18 Consultation document together</p> <p>with sites that have already been recently developed or had planning permission granted in the surrounds of Broadwater Farm. From these it is clear that the development of any of the farm would cause coalescence of not just the affected hamlet communities but would lead to coalescence of Kings Hill, West Malling, East Malling, Wateringbury and even Mereworth if 'windfall development' is included.</p> <p>We resist the temptation to mention the effect on highways congestion but this is covered in Annex D Highways Technical Appraisal by Les Henry Associates, another of the independent reports commissioned by BAG which highlights the over-capacity stress the road network which would serve Broadwater Farm is already under.</p> <p>Examination of TMBC planning records reveals that, in recent years, nearly 60% of housing development has occurred on just 1% of the current Tonbridge and Malling Borough and that is all with one mile of West Malling.</p> <p>The Broadwater Action Group feels that Broadwater Farm should now be excluded as a potential development site in the Local Plan and details responding to TMBC's Strategic Appraisal supporting this assertion follow in Section B.</p> <p>Section B Critique of Site Against Sustainability Assessment Objectives and Sub Objectives</p> <p>Using the visual representation scheme of the Interim Sustainability Appraisal (SA), BAG's review of this site would be as follows:</p>	<p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites, cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 6: landscape and townscape, site 59740 is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlements of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>With regard to SA objective 8: water, the site receives an uncertain significant negative effect. The uncertainty is as result of the fact the extent to which water quality is affected depends on construction techniques and the use of SuDS within the design.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59740 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, the minor negative effect is recorded as uncertain as although the site is within a Minerals Safeguarding Area, the actual effect will depend on factors such as whether the site would in fact offer viable opportunities for minerals extraction.</p> <p>The respondent has not provided a reason as to why they consider the uncertain minor positive effect against SA objective 14: housing unreasonable. Site 59740 is proposed for a mix of uses but it is unknown what percentage of the site will e provided for housing, hence the uncertainty.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SEE ORIGINAL SUBMISSION</p> <p>The above assessment is based on extensive research into what is known about the site. TMBC's published sustainability assessment is given below for ease of comparison.</p> <p>SEE ORIGINAL SUBMISSION</p> <p>The colour codes follow those given in the SA as follows:</p> <p>SEE ORIGINAL SUBMISSION</p> <p>In broad terms, even though TMBC's assessment of the site is not favourable on most of the SA objectives, BAG believes that, due to the significant amount of information already known about this site, it should have an even poorer scoring. This leads to a conclusion that as Site 59740 fails to meet the majority of indicators to deem it suitable for sustainable development, it should be 3 excluded from the new Local Plan going forward. Details of BAG's assessment are given below:</p> <p>SA Objective 1: To improve human health and well-being</p> <p>Taking into account an evaluation of what is known about the site, BAG believe the assessment on this Objective should be a "Significant negative", taking the following into account:</p> <p>The SA report suggests that the negative effectives of the loss of open space which would be lost as a result of development are uncertain. These effects are not uncertain as the open countryside and farmland of the site, and the public's access to it, will only be harmed by development. Any development will affect the open vistas and well being benefits of the area. The report mentions that the site is within "800m of an existing healthcare facility or open space". At 112.74 hectares this site is vast, 1.3 km from west to east and just under 2km from north to south and although it may be true that some of the site is within 800m of an existing health care facility, not all of it is and primary health care in the area is known to be under great stress. For example, the allocated space for a GP surgery at Leybourne Grange was eventually re-purposed after laying empty for several years as no GP practice was found to take it on and also, the MP for the area, Tom Tungendhat, even wrote to the West Kent Clinical Commissioning group asking them to confirm their objection to the proposal for 900 +</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>houses on the site due to the lack of primary care security in this part of Kent.</p> <p>Additionally, BAG would support its classification of the site as “Significant negative” with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <p>* To encourage safety by design</p> <p>The very location of the site within the Quiet Lane network and the known existing black spots on the A228 does not encourage “safety by design”. At least 3 people have been knocked down at the pedestrian crossing on the A228 by vehicular traffic.</p> <p>* To promote healthy lifestyles, including equitable access to recreational opportunities such as open space, children’s play areas and the countryside.</p> <p>Any development of this area would harm the promotion of healthy lifestyles for current residents and visitors alike. There is a very well used and inter-connecting network of rural footpaths and Quiet Lanes connecting West Malling, East Malling and Kings Hill. It is currently possible to travel on foot or cycle through countryside, farmland and Quiet Lanes between these settlements.-This important green space, with its rural footpaths, is used for leisure and is enjoyed by those seeking a healthier lifestyle and would be negatively impacted.</p> <p>* To improve access to health and social care services. Given the information presented there is no information presented to support this.</p> <p>* To reduce levels of anti-social behaviour.</p> <p>Residents of Kings Hill and its Parish Council have seen a worrying increase in antisocial behaviour in recent years. Given that any substantial new housing on this site is likely to replicate the essence, at least, of the Kings Hill model, it follows that there could well be an increase in antisocial behaviour, not a reduction.</p> <p>* To promote healthy lifestyles through connecting people with nature and promoting high standards of Green Infrastructure.</p> <p>Developing this site would only impact negatively on the existing green spaces of the site so 2 consequently the connection with nature already enjoyed by those who use the site could only be negatively impacted.</p> <p>SA Objective 2: To improve equality and access to community facilities and services</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>BAG has been unable to verify the definition of a “Fair Accessibility Band” in this instance but would agree that it could be reasonably anticipated that an area which has open access to all at the moment would be negatively impacted by development so also suggests an assessment of “Minor negative”.</p> <p>Additionally, BAG would support its classification of the site as “Minor negative” with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <p>* To tackle homelessness more effectively</p> <p>BAG is unaware of any evidence that a development such as this would tackle homelessness more effectively nor any evidence that the AFFORDIBILITY ISSUE would be addressed for TMBC residents all the time there is such a financial advantage to moving out of London and its suburbs.</p> <p>* To improve access to cultural and leisure facilities</p> <p>There is no evidence that such access would be improved.</p> <p>* To promote the use of more sustainable modes of transport &</p> <p>* To encourage walking, cycling and the use of public transport.</p> <p>The establishment of the communities at Kings Hill, Leybourne Grange etc have proven that road traffic is only getting worse in this area of Kent. The reality is that the most convenient form of transport for people, where they have a choice, is usually their own car and although any new development might “promote” or “encourage” more sustainable ways of moving around and undertaking daily tasks, is there actually any proof that a development such as this would achieve these given the complexities of everyday life for most people?</p> <p>SA Objective 3: To improve levels of educational attainment and skills and training development for all age groups and all sectors of society</p> <p>The SA narrative regarding this site refers to the site being within 800m of a primary or secondary school (not both). However the nearest focal secondary school (The Malling School} in East Malling, is, we understand, oversubscribed. There is no access from the site to the school and as the site is so large, only a small proportion is within half a mile of the school itself.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The narrative for the site states that it 's within 800m of a train station and that 5 Ha have been proposed for business deployment. As the plans for the site have not been published it is not possible to verify whether the 5 Ha deployed for business use are actually within 800m of the station or not.</p> <p>TMBC are encouraged to re-examine the original zonal use plans for Kings Hill and determine the proportion of business use sites for which have been re-allocated for housing as the old airfield site evolved. The outline plan may well include business and other commercial space but the reality is that experience points to the fact that developers can and do apply for change of use from commercial to housing which makes the SA designation against this criterion uncertain.</p> <p>Residents, workers and visitors to Kings Hill will all remember the many years that units in the "town centre" area of Kings Hill around Queen Street lay empty. It is thought that the underuse of these commercial spaces could be directly attributed to high lease costs and not due to lack of interest in the business space. Therefore, although a strong retail and commercial hub for Kings Hill was envisaged at the planning stage, this was not delivered as anticipated and parallels can be read into the potential development of Site 59740.</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> * To diversify employment opportunities * To increase employment opportunities * To encourage economic growth <p>No information has been found in the SA paperwork for this site to support these statements.</p> <p>SA Objective 5: To protect and enhance biodiversity and geodiversity</p> <p>The rich biodiversity of this site has been well documented and TMBC are in possession of information to support this, not least from the responses from Consultees, BAG and others in relation to Berkeley Homes' planning application for Broadwater Farm (TM/21/02719). It is therefore thought that the SA assessment for this site should be "Significant negative" rather than "Uncertain significant negative". Annex E gives the Wildlife Sub-Committee Report BAG submitted regarding this site which supports this assertion, however particular attention is also drawn to Ecological</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Advice Service comments submitted to TMBC in relation to application TM/21/02719 on 21 March 2022.</p> <p>Additionally, BAG would support classification of the site as “Significant negative” with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <p>* To increase biodiversity net gain.</p> <p>This site currently provides a range of rich wildlife habitats, including meadows, orchards, hedgerows and wooded areas.</p> <p>* To protect and enhance habitats and wildlife corridors</p> <p>As the West Kent Badger Group highlighted in their response to TM/21/02719 and given as Appendix F, any development of this site would damage habitats not “protect and enhance”.</p> <p>* To protect and enhance designated sites of nature conservation importance</p> <p>The New Barns & Broadwater Farm Conservation Area would be impacted.</p> <p>* To protect and enhance wildlife especially rare and endangered species.</p> <p>The site as a whole currently provides habitats for both resident and migratory red-listed species.</p> <p>* To provide opportunities for people to access wildlife and open green spaces.</p> <p>Any development would restrict and limit the existing opportunities for people to access wildlife and open green spaces.</p> <p>* To protect and enhance priority species and habitats of conservation importance that contribute to reversing the trend of ecological decline.</p> <p>Development of this area would not protect and enhance priority species (see Wildlife report Annex E).</p> <p>To protect, enhance and expand ecological networks and their interconnectivity.</p> <p>There is no current evidence to support this achievement of this objection, in fact the opposite is apparent.</p> <p>Conservation of biodiversity, including priority habitats and species, under the NERC Act</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>(S41).</p> <p>To protect and enhance sites designated for geodiversity.</p> <p>The Broadwater area is an area of geological interest, highlighted by the area's names such as "Broadwater" and "Well Street", which would neither be protected nor enhanced by development.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality</p> <p>BAG considers the impact of developing this area would not be uncertain but would lead to actual significant harm to the landscape's character and quality. As mentioned previously, the consultation process for application TM/21/02719 elicited a large body of information regarding the negative impact of developing the Broadwater area. The landscape character and quality fs currently derived through its unique mix of natural features (rolling open vistas, the Cwylla which is an historic Anglo Saxon monument) and important historic buildings, many of them both listed and protected by their positions within Conservation Areas. For example the New Barns and Broadwater Farm Conservation Area was designated as such, in part, due to the quality of views into, out of and across the area between the New Barns hamlet and the Broadwater farmstead with substantial oast house complexes at either side, completing a quintessentially Kentish landscape. Any further development in this area would certainly significantly encroach on these features. Any building proposed within view of the Conservation Area would contravene the reason for Conservation Area status being granted in 1993.</p> <p>Additionally, BAG would support classification of the site as "Significantly negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <p>* Protect and enhance the integrity and quality of the borough's urban and rural landscapes, maintaining local distinctiveness and sense of place.</p> <p>BAG believes this sub-objective to be of particular importance for Broadwater as not only is the rural landscape "distinct" it is also unique containing the only listed instance of a "Cwylia" and is encompassed by a network of ancient sunken roads or hollow ways which are designated now as "Quiet Lanes".</p> <p>* To protect and enhance landscape character and quality.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Features are protected currently, development of the area would harm them rather than further enhance or protect them.</p> <p>* To protect and enhance AONBs within the borough and their settings.</p> <p>Although situated to the edge of an AONB rather than within it, further development would harm the setting of the Kent Downs AONB.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource</p> <p>BAG considers the impact of developing this area would not be uncertain but would lead to actual significant harm to its cultural heritage resource. As mentioned previously, the consultation process for application TM/21/02719 elicited a large body of information regarding the negative impact of developing the Broadwater area. The cultural heritage of this corner of Tonbridge and Malling is well documented and currently enjoys various statutory protections through its many listed buildings and Conservation Areas. BAG's Sub-Committee Heritage submission in relation to Planning Application TM/21/02719 (Appendix G) gives more detail.</p> <p>Additionally, BAG would support classification of the site as "Significantly negative" with these comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <p>* To protect and enhance historic landscape/townscape value.</p> <p>With reference to the New Barns and Broadwater Farm Conservation Area in particular, the historic landscape is currently protected. The views across and into and out of this area were particularly important in the Conservation Area designation and the associated visual amenity would undoubtedly be significantly harmed through further development.</p> <p>* To protect and enhance historic buildings and sites.</p> <p>Within this area are numerous listed buildings including The Barracks and Derbies on Well Street, East Malling which are Grade2* listed. This shows they are of particular national historic interest, in this case with strong links to the English Civil war.</p> <p>* Cultural Heritage</p> <p>As referenced above, the cultural significance of the area reflects not only the hop farming heritage which endures through the proliferation of oast buildings across the site, but also goes back to the English Civil War and beyond a thousand years.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>SA Objective 8: To protect and enhance the quality of water features and resources</p> <p>BAG strongly believes that development in this area would have a significant negative effect with regard to this objective. The report on the Hydrogeology of this area is attached as Annex A to provide further details but essentially this shows the existence of aquifers. It is these underground water courses which feed the ancient Cwylla, contribute greatly to the productivity of Broadwater Farm and also give rise to what becomes the Ditton Stream which actually rises at Well Street. Development of this area would cause damage to these water features. The narrative associated with this SA Objective does, of course, highlight the importance of protecting the aquifers as they are within a Source Protection Zone 1 and BAG believes that significant harm would certainly be caused by developing this area for example through certain hydrocarbon pollution and so the designation should be definitive and not “uncertain”.</p> <p>Additionally, BAG would support its classification of the site as “Significant negative” with these .</p> <p>comments on the following sub-objectives:</p> <p>Sub-Objectives</p> <p>* Reduce the risk of flooding to existing communities and ensure no new developments are at risk.</p> <p>BAG is seriously concerned that should any developer attempt the mitigation of flood risk, this would lead to serious harm to the Anglo Saxon Cwylla, which, as has been stated previously, is a KCC listed monument. Mitigation would, additionally, affect the water which has been accessible to the historic properties of Weil Street and Broadwater Road since the area was first populated centuries ago. The water flow to the Ditton Stream would be impacted also. Due to being situated lower in the landscape than the surrounding area, the houses on the west of the New Barns hamlet would be at risk of flooding from any development to the south which interrupts the natural surface water drainage flows.</p> <p>* To protect and enhance ground and surface water quality.</p> <p>The Broadwater area is, as the name confirms, rich in ground and surface water resources, development would not enhance its quality and the best way to ensure its protection would be to keep the area in its current largely undeveloped state.</p> <p>* To protect and enhance water quantity, such as through high standards of water efficiency. The quality of the water which rises in</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Well Street is currently being investigated as a potential source of potable water by the local water authority, development of the area 2 would introduce pollutants which could seriously affect this.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination</p> <p>The SA assessment highlights the greenfield nature of this site and BAG agrees with the determination of “Significant negative” against this SA Objective. As confirmed in the soil report in Annex B more than 49% of land at Broadwater is Grade 1 or Grade 2 with 100% being Grade 3 and above i.e. Best and Most Versatile. The northern part of the site (formerly Eden Farm) was shown to have 90% grade 2 and above.</p> <p>BAG therefore agrees with the assessment of this Site as “Significant negative” and would further added the following comments on the sub-objectives:</p> <p>Sub-Objectives</p> <p>* To protect soil functions and quality.</p> <p>Developing this land would remove actively farmed land so this objective cannot be met.</p> <p>* To reduce the amount of derelict, contaminated, and vacant land.</p> <p>None of the land involved is of this type so this objection is not met.</p> <p>* To encourage development of brownfield land where appropriate.</p> <p>Only a small proportion of the land where the current farm buildings are situated could be classed as brownfield so this objection is largely unmet.</p> <p>* Avoid development of ‘best and most versatile’ soil.</p> <p>Grade 3 soil is designated as “Best and most versatile”, 100% of the soil at Broadwater Farm is at this level or even higher grade so its development should definitely be avoided.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change</p> <p>BAG disagrees that there is evidence to suggest that a 112 hectare development would reduce greenhouse gas emissions and would</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>suggest this Objective should be classified as a “Minor negative” at best.</p> <p>BAG would like to see TMBC undertake a real-world analysis of the travel and domestic hydrocarbon use of Kings Hill. The increase in traffic in to and out of Kings Hill during the twice daily rush hour and the steady flow into and out of the area at other times does not support the assessment of this criteria as “Significant positive”. The only support given for this assessment is that the site is within 800m of a railway station. There is no evidence of whether there would actually be any housing or businesses within this distance of the station as less than, approximately, 30% of the site that is within 800m of West Malling station.</p> <p>As has been commented on previously, developments of the proposed scale of Site 59740 actively encourage people to move from more expensive areas (London) to realise more home for their money, however new residents then typically need to extend their commutes to work. The Assessed Housing Need of 15,741, a thirty percent uplift, could only be fulfilled from people moving into the area and it is difficult to understand how this would or could reduce greenhouse gas emissions given the reality of normal every-day lives.</p> <p>Additionally, BAG would support its classification of the site as “Minor negative” with these comments on the sub-objectives:</p> <p>Sub-Objectives</p> <ul style="list-style-type: none"> * To reduce greenhouse gas emissions. * To increase energy efficiency and require the use of renewable energy sources. * To reduce the use of energy. * To promote the use of more sustainable modes of transport. * To reduce the use of private car. * To encourage walking, cycling and the use of public transport. * Encourage the uptake of ICT. <p>Other than approximately (just) one third of the site being within 800m of a railway station, no other information is given to support an assessment of “Significant positive” against any of these sub-objectives.</p> <p>SA Objective 11: To improve adaptation to climate change so as to minimise its impact</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>BAG is unaware of any information to support or challenge this assessment.</p> <p>SA Objective 12: To protect and improve air quality</p> <p>Although the site is not within 100m of an AQMA, BAG considers that TMBC should consider the establishment of an AQMA for the A228 from the south of Kings Hill through to Leybourne. There are significant traffic build-ups almost every working day and there are many more houses yet to be built in the vicinity which already have permission. It should also be noted that when the Reserved Matters for application TM/18/03034/OAEA were considered at Area 2 Planning Committee earlier this year, a significant concern of the Councillors was the proximity of the proposed playground site to the A228 and the potential risk from pollution. This confirms that TMBC are aware of and are sensitive to air quality issues in the vicinity of the western portion of this site.</p> <p>Additionally, BAG would support its classification of the site as “Minor negative” with these comments on the following sub-objective:</p> <p>Sub-Objectives</p> <p>* To protect and improve local air quality.</p> <p>Given the site is mainly green fields, orchard, hedgerows and trees, it is difficult to see how air quality could be improved by development.</p> <p>SA Objective 13: To protect material assets and minimise waste</p> <p>The vast amount of building sand which would be needed to develop a site of this size would need to be sourced locally, possibly from sites in Ryarsh, Borough Green or other local sites. Therefore although the material assets of Broadwater Farm may not be significantly impacted, materials would still have to be extracted locally having a harmful effect on the material assets elsewhere within Tonbridge and Malling .</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an approximate mix of sizes, types and tenures</p> <p>No new evidence has been provided as to the mix of housing sizes, types and tenures, however based on the known housing mix</p>

		<p>proposed by Berkeley Homes for the land covered by this site, an assessment "Uncertain minor positive" does not seem unreasonable.</p> <p>Annex List</p> <p>Annex A* - Assessment of the Origin of Water Supporting Cwylla Pond Within the New Barns and Broadwater Farm Conservation Area by GWP Associates</p> <p>Annex B - Agricultural Land Classification, Medway Gap and Vicinity Local Plan- Land at Eden Farm/ Broadwater Farm West Malling 1991 :</p> <p>Annex C - Map of potential and ongoing development sites in and around Broadwater and surrounding settlements.</p> <p>Annex D (1,2 & 3)* - Highways Technical Appraisal & Appendices by Les Henry Associates.</p> <p>Annex E* - BAG Wildlife Subcommittee Report :</p> <p>Annex F - West Kent Badger Group</p> <p>Appendix G* - BAG Heritage Subcommittee Report</p> <p>*The documents associated with these Annex were originally submitted to TMBC as response to the consultation regarding Planning Application TM/21/02719 for the development of Broadwater Farm."</p>	
45742881	Annex 1	<p>"Boyer assessment of the council's analysis for site ref. 59852.</p> <p>*image*</p> <p>*image*</p> <p>*image*</p> <p>*image*</p> <p>*image*</p> <p>*image*"</p>	<p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). Therefore, the minor negative effect it receives in relation to SA objective 2 is correct.</p> <p>The site's proximity to healthcare facilities and open space is considered separately under SA objective 1: health and wellbeing. The site receives a significant positive effect against this objective, as it is within 800m of existing healthcare facilities, open space and walking paths.</p> <p>The site's proximity to schools is considered separately under SA objective 3: education whereby the site receives a minor positive effect as it is within 800m of at least one primary school (Palace Wood Primary School and Allington Primary School). All effects against this objective are uncertain, as school capacity is unknown.</p> <p>Site 59852 contains green infrastructure assets and they are in the form of trees and thick vegetation, which could be lost as a result of development. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value". The significant negative effect is recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. It is important to note that this is a 'policy-off' appraisal and so</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>consideration is not given to mitigation (e.g. Biodiversity Net Gain). If the site was allocated in the Local Plan via policy containing mitigation measures, it would be appraised on a 'policy-on' appraisal.</p> <p>Site 59852 receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape, as it is not located inside of or on the edge of a settlement. However, we note that it is within close proximity to Allington in Maidstone, although boundary data was not available for settlements outside of Tonbridge and Malling. In the next iteration of the SA Report, this will be added to the 'Difficulties and Data Limitations' section. This is a 'policy-off' appraisal and so consideration cannot be given to the site promoter's assessment of landscape and visual amenity impacts, as all sites must be appraised on a consistent basis and information like this is not available for other sites. The same applies in relation to SA objective 7: heritage and the Archaeological Statement and Built Heritage Statement submitted by the promoter.</p> <p>The appraisal of site against SA objective 7: heritage is not misplaced, as the site is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. Again, consideration cannot be given to the site promoter's Heritage Impact Assessment, as this level of detail is not available for all sites and they need to be appraised on a consistent basis.</p> <p>With regard to SA objective 8: water, consideration is not given to the supporting documents submitted by the respondent, which includes a flood risk assessment and drainage strategy. This is due to the fact all sites must be appraised on a consistent basis. It is correct for the SA to acknowledge the fact the site contains land with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soil, the Agricultural Land Classification still applies when a site is not actively being pursued for agricultural purposes.</p> <p>With regard to SA objective 13: material assets and waste, the site has been appraised in line with the site assessment criteria, which states "The effects are uncertain as they will largely depend on factors such as whether the sites would in fact offer viable opportunities for minerals extraction, and it may be possible for prior extraction to occur before a site is developed".</p>
43619329	Annex 1	<p>"[site 59647]</p> <p>Comments made on SA objective 8 in Appendix 3</p> <p>Please see</p>	<p>The site assessment criteria against which the site has been appraised are contained within Appendix D of the Interim SA Report.</p> <p>SA objective 2: services and facilities was informed by the Urban Capacity Study (July 2022). As site 59647 is placed within the Good Accessibility Band in the Urban Capacity Study, it receives a negligible effect in relation to SA objective 2. Further detail on how this objective has been informed is provided at the start of Appendix D of the Interim SA Report under the heading 'Assumptions Regarding Accessibility'.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is within 1km of Ancient Woodland. In the next iteration of the SA</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		R1491 _221102_Lauren Sinden Rydon Homes Ltd"	<p>Report, the proforma for this site will be amended to clearly refer to Ancient Woodland (Ancient Woodland is covered by nationally designated sites in the Interim SA Report). The site will continue to receive an uncertain minor negative effect in relation to this objective. This is a 'policy-off' appraisal and so sites are appraised on their physical constraints only with no consideration given to mitigation (e.g. Biodiversity Net Gain). If the site were to be allocated in the Local Plan via policy containing mitigation measures, it would be appraised on a 'policy-on' basis.</p> <p>As just mentioned, this is a 'policy-off' appraisal and so consideration is not given to mitigation. Consideration is therefore also not given to supporting documents submitted by site promoters. This ensures all sites are appraised on a consistent basis. Therefore, the appraisal will not give consideration to the supporting documents submitted by the respondent.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>The site receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding.</p> <p>With regard to SA objective 9: soil, the site contains a significant proportion of Grade 2 (best and most versatile agricultural land). Please refer to the Agricultural Land Classification for further information on this.</p> <p>SA objective 10: climate change mitigation looks at proximity to public transport. As site 59647 is more than 800m from a railway station but within 400m of a bus stop, it receives a minor positive effect in relation to this objective. The proximity of development sites to sustainable transport links is considered a suitable proxy for assessing climate change mitigation, as proximity to sustainable transport links has the potential to affect the extent to which people are able to make use of non-car based modes of transport to access services, facilities and job opportunities, although the actual use of sustainable transport modes will depend on people's behaviour. We note that this is only part of the much bigger picture.</p>
45925409	Annex 1	[SITE REFS: 59740 AND 59777 - SEE 'COPIES FOR LUC' FOLDER]	<p>The impact of the development of site 59740 on the historic environment has been appraised under SA objective 7: heritage in the SA. The site receives an uncertain significant negative effect in relation to this objective, as it is within 250m of heritage assets (including the Conservation Areas), as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>The site is incorrectly recorded as not located near any settlements in a rural location when it adjoins the settlement of Kings Hill. In the next iteration of the SA Report, the proforma for this site will be updated to give an uncertain minor negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects will depend on the final design, scale and layout of development.</p> <p>The SA gives consideration to the Agricultural Land Classification, which informs SA objective 9: soil. Site 5977 receives a significant negative effect in relation to this objective, as it contains a significant proportion of Grade 2 (best and most versatile) agricultural land.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 8: water, as it contains a water body and land with a 1 in 30 year risk of surface water flooding. The effect is uncertain as the effects on water quality are unclear.</p> <p>The SA is too high-level to give consideration to specific road networks and traffic and so the Council will commission additional evidence on matters including traffic.</p> <p>The SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The site assessment criteria for SA objective 1 do, however, acknowledge that "If a number of sites are allocated within close proximity of one another, this could lead to existing healthcare facilities becoming overloaded; however it is also recognised that new development could stimulate the provision of new healthcare facilities although this cannot be assumed at this stage" (paragraph D.6).</p>
45934529	Annex 1	[SEE 'COPIES FOR LUC' FOLDER]	<p>All reasonable alternative development site options have been appraised consistently, in accordance with the site assessment criteria contained within Appendix D of the Interim SA Report. The justification text for the effects the site is expected to have in relation to the SA objectives is provided in the proforma for the site, contained within Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>It is not within the scope of the SA to consider the capacity of rail services. The SA is too high-level to give consideration to the availability of car parking spaces, road width and congestion. To inform plan-making, the Council will commission additional evidence on matters including traffic and air quality.</p> <p>With regard to healthcare facilities, the SA does not take into consideration the capacity of medical centres which is more of a matter for plan-making and the Infrastructure Delivery Plan (IDP). The SA also does not take into consideration the capacity of schools. The site assessment criteria for SA objective 3: education in Appendix D of</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>The SA acknowledges that development of sites 59797 and 59800 would result in the loss of open space, under SA objective 1: health and wellbeing. The sites are expected to have mixed uncertain significant negative and minor positive effects in relation to this objective. The minor positive effects are due to the fact both sites are close to other areas of open space and walking paths.</p> <p>Although not explicitly stated in the proforma, the SA does acknowledge the fact sites 59797 overlaps a Local Wildlife Site (Kings Hill Golf Course, Cattering & Hoath Woods) and areas of Ancient Woodland. In the next iteration of the SA Report, the proforma for the site will be updated to state "The site is within 250m of one or more internationally or nationally designated biodiversity sites, geodiversity sites, or Ancient Woodland, or contains a locally designated site." Although site 59800 does not overlap a Local Wildlife Site, it is located directly adjacent to the Kings Hill Golf Course, Cattering & Hoath Woods Local Wildlife Site and areas of Ancient Wodland.</p> <p>Site 59797 receives a significant negative effect in relation to SA objective 9: soil, as it is greenfield land and contains Grade 1 and 2 agricultural land.</p> <p>With regard to the respondent's 'Example reasons for objections', the SA gives consideration to Ancient Woodland, Local Wildlife Sites and green infrastructure assets, but does not specifically explore Defra's National Forest Inventory (NFI), which is used to monitor woodland and trees within the UK. As the SA is high-level, the NFI is considered too detailed for use in the SA. The SA is also too high-level to consider Tree Protection Orders (TPOs).</p> <p>Consideration is given in the SA to development outside of settlements under SA objective 6: landscape and townscape. If development is not located near any settlements in a rural location, a site is likely to have significant adverse effects in relation to landscape, as development cannot as easily be integrated into existing built development than if it were within or on the edge of a settlement, and therefore has more potential for adverse effects in relation to landscape character. This objective also looks at which sites are within close proximity of an AONB or not.</p> <p>As mentioned already, the SA is too high-level to give consideration to traffic congestion. To inform plan-making, the Council will commission additional evidence on matters including traffic.</p> <p>Historic environment is dealt with under SA objective 7: heritage and if a site is within 250m of a heritage asset as recorded in the Kent Historic Environment Record, it receives an uncertain significant</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>negative effect. All effects against this objective are uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>The Agricultural Land Classification is considered under SA objective 9: soil. If sites comprise Grade 1 or 2 agricultural land, they receive a significant negative effect. If sites comprise Grade 3 agricultural land, they receive an uncertain significant negative effect as the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). The criteria for this objective are considered robust but in the next iteration of the SA Report, will be amended to also take into consideration the Post 1988 Agricultural Land Classification (ALC). The Post 1988 ALC can sometimes provide further information on the quality of agricultural land, but only covers specific areas of the borough.</p> <p>Lastly, loss of public open space is addressed under SA objective 1: health and wellbeing.</p>
45876449	Annex 1	<p>"Site 59737</p> <p>This is greenbelt land, effectively an extension/arm of the Platt Woods ancient woodland retaining the separation of rural settlements.</p> <p>SA Objective 1 – It will be 2400m to existing health centre – SIGNIFICANT NEGATIVE</p> <p>SA Objective 3 – To improve education – this is dubious as there may not be sufficient educational places available – SIGNIFICANT NEGATIVE</p> <p>SA Objective 5 – To protect and enhance bio diversity – This cannot be the case as there are badgers, slow worms and a host of other wildlife, trees (ancient woodland) and plants in this area – SIGNIFICANT NEGATIVE</p> <p>SA Objective 6 – To protect and enhance the boroughs landscape and townscape character and quality – The site is located on the edge of a settlement. It is greenbelt land. The purpose of greenbelt is to prevent merging of settlements. Development of this site would merge the rural settlements of Platt and Wrotham Heath. The former Platt school site has sat demolished and vacant for over a year. This type of brownfield site should be developed prior to the development of greenbelt land which can only be removed from greenbelt in exceptional circumstances. – SIGNIFICANT NEGATIVE</p> <p>SA Objective 7 – heritage asset – this must not be harmed – SIGNIFICANT NEGATIVE</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination – The site is greenfield land and contains a significant proportion of ancient woodland and agricultural land – SIGNIFICANT NEGATIVE</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change - Unless it is a net zero development</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment. The presence of Ancient Woodland is dealt with under SA objective 5: biodiversity and geodiversity.</p> <p>With regard to SA objective 1: health and wellbeing, the proforma for site 59737 states is within 800m of either an existing healthcare facility <i>or</i> an existing area of open space/ walking and cycle path / play area/ sports facility (but not both). As the site is within 800m of open space and walking path, it receives a minor positive effect in relation to this objective.</p> <p>With regard to SA objective 3: education, the site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>With regard to SA objective 5: biodiversity and geodiversity, the site is already recorded as having a significant negative effect. All negative effects are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Therefore, while proximity to designated sites provides an indication of the potential for an adverse effect, uncertainty exists, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. In addition, the potential impacts on biodiversity and geodiversity present on each site, or undesignated habitats and species adjacent to the potential development sites,</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>greenhouse gas emissions will be increased as a result the development process.</p> <p>Increased car use on the very busy Maidstone Rd will also result in increased gas emissions/air quality/noise pollution – SIGNIFICANT NEGATIVE</p> <p>SA Objective 12: To protect and improve air quality Increased car use on the very busy Maidstone Rd will also result in increased gas emissions/air quality/noise pollution – SIGNIFICANT NEGATIVE</p> <p>SA Objective 13: To protect material assets and minimise waste -The site is within a Minerals Safeguarding Area - SIGNIFICANT NEGATIVE"</p>	<p>cannot be determined at this strategic level of assessment. This would be determined once more specific proposals are developed and submitted as part of a planning application.</p> <p>With regard to SA objective 7: heritage, the site is already recorded as having a significant negative effect. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets.</p> <p>With regard to SA objective 9: soil, the site is already recorded as having a significant negative effect. As stated in the proforma for the site, the uncertainty acknowledges that the Grade 3 agricultural land may be either Grade 3a (high quality) or 3b (not classed as high quality). Ancient woodland is considered separately under SA objective 5, as has been taken into consideration in the SA.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. Air quality is considered separately under SA objective 12.</p> <p>With regard to SA objective 12: air quality, sites only receive a significant negative effect when they are within 100m of an Air Quality Management Area (AQMA). Site 59737 is not within 100m of an AQMA.</p> <p>With regard to SA objective 13: material assets and waste, the SA acknowledges the fact the site is located within a Minerals Safeguarding Area. In line with the site assessment criteria, it receives an uncertain minor negative effect as a result of this.</p>
42831585	Annex 1	<p>"Site 59698</p> <p>I would like to submit my objection against site 59698 being allocated in to Local Plan.</p> <p>SA objective 5 - this site would be harmful to local biodiversity given it is a rural area</p> <p>SA objective 6 - it would result in a loss of green space but also prime agricultural land</p> <p>SA objective 7 - the proximity to heritage assets in Broadwater Road and also East Malling. The development is in the line of site of Cobbs Hall.</p> <p>SA objective 9 - it would see the loss of greenfield land which is prime agricultural land</p>	<p>The SA does not allocate sites. The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated).</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.</p> <p>Sites 59698 and 59743 receive a minor negative effect in relation to SA objective 5: biodiversity and geodiversity, as they are located within 250m and 1km of Ancient Woodland. This is in line with the site assessment criteria. All negative effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site 59824</p> <p>I would like to submit my objection against site 59824 being allocated in to Local Plan.</p> <p>SA objective 5 - this site would be harmful to local biodiversity given it is a rural area</p> <p>SA objective 6 - it would result in a loss of green space but also prime agricultural land</p> <p>SA objective 7 - the proximity to heritage assets in Broadwater Road and also East Malling. The development is in the line of site of Cobbs Hall and would also impact the view from Broadwater Road across to Darcys Court including from the footpath from Broadwater Road to East Malling.</p> <p>SA objective 9 - it would see the loss of greenfield land which is prime agricultural land</p> <p>The additional traffic onto Clare Lane would cause further congestion into East Malling as well as exiting Broadwater Road more dangerous than current as it exits into a blind bend.</p> <p>Site 59743</p> <p>I would like to submit my objection against site 59743 being allocated in to Local Plan.</p> <p>SA objective 5 - this site would be harmful to local biodiversity given it is a rural area</p>	<p>Site 59698 would not result in the loss of designated open space, which is considered under SA1: health and wellbeing and SA6: landscape and townscape. Agricultural land is considered separately under SA objective 9.</p> <p>Sites 59824 and 59743 receive a significant negative effect in relation to SA objective 7: heritage, as they are within 250m of numerous heritage assets. All effects against this objective are recorded as uncertain, as the actual effects are dependent on the final design, scale and layout of development, and whether there are lines of sight between the development site and nearby heritage assets. This is a 'policy-off' appraisal and so consideration is not given to mitigation. Documents submitted by site promoters are not considered in the SA, so as to ensure all sites are appraised on a consistent basis.</p> <p>Sites 59698, 59824 and 59743 receive a significant negative effects against SA objective 9: soil in the SA, as they are greenfield and contains a significant proportion of Grade 1 and/or 2 agricultural land.</p> <p>Site 59824 receives an uncertain negligible effect in relation to SA objective 5: biodiversity and geodiversity, as it is more than 1km from any internationally or nationally designated biodiversity or geodiversity sites, and is over 250m from a locally designated site.</p>

		<p>SA objective 6 - it would result in a loss of green space but also prime agricultural land</p> <p>SA objective 7 - the proximity to heritage assets in Broadwater Road and also East Malling.</p> <p>SA objective 9 - it would see the loss of greenfield land which is prime agricultural land</p> <p>"</p>	
46064257	Annex 1	<p>"[59608]</p> <p>The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social, environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report is also subject to the Regulation 18 consultation.</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW) that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. With the exception of the Kent Wildlife Trust's Ivy Hatch wet woodland reserve, which is protected for its biodiversity value, the</p>	<p>The proforma for site 59608 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sport facility (but not both). Specifically, the site is within 800m of an area of open space (Scathes Wood) and a walking path. This is in accordance with the site assessment criteria.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>The site receives a negligible effect in relation to SA objective 4: economic growth, as the location of residential development will not directly influence sustainable economic growth or the delivery of employment opportunities. In the next iteration of the SA Report, however, a minor negative effect will be given to sites proposed for residential development that contain an existing business that could be lost as a result of residential development. The promoter of this site has not declared that it contains an existing business.</p> <p>With regard to SA objective 6: landscape, the site receives an uncertain significant negative effect because it is within 500m of the AONBs. This wording is used for sites that are within the AONBs, as well as within 500m of them.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>With regard to SA objective 7: heritage, all effects against this objective are recorded as uncertain. As stated in the site assessment criteria (Appendix D of the Interim SA Report), "Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development sight and nearby heritage assets".</p> <p>With regard to SA objective 9: soils, the site comprises brownfield land as it contains development in the form of a plant nursery.</p> <p>With regard to SA objective 10: climate change mitigation, the SA acknowledges that the site is within 400m of a bus stop. The site</p>

		<p>Site is not located close to any areas of publically accessible open space. The site is also not located within 800m of a healthcare facility, or recreational opportunities such as children's play areas or sports facilities.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report Appraisal, allocation of thisSite would not represent sustainable development through actively reducing health inequalities, improvingaccess to health and social care services or reducing levels of anti-social behaviour or crime. For these reasons we submit that allocation of the Site would have a negative, and not Minor positive effect on human health and well-being that would not be consistent with delivering sustainable development.</p> <p>SA Objective 4: To encourage sustainable economic growth, business development, and economic inclusion across the borough.</p> <p>The SA states: 'The location of residential sites will not directly influence sustainable economic growth or the delivery of employment opportunities.'</p> <p>It is understood that the Site is in existing use as a plant nursery and no evidence has been submitted to demonstrate the ongoing viability of the business is at risk.</p> <p>With reference to the sub-objectives set out in the Interim Sustainability Report, the allocation of the Site would result in the loss of the business and consequently it would likely increase unemployment and decrease employment opportunities and physical accessibility jobs. It would be in direct conflict with the objective to encourage sustainable economic growth, business development and economic inclusion across the borough. We submit that rather than a Negligible effect the allocation of the Site would result in a Significant negative effect on the objective to encourage sustainable economic growth.</p> <p>SA Objective 6: To protect and enhance the borough's landscape and townscape character and quality.</p> <p>The SA states: 'The site is not located near any settlements in rural locations, and/or would result in the loss of designated open spaces. These effects are uncertain at this stage as the effects on landscapes and townscapes will depend on the design, scale and layout of development, which may help mitigate any adverse effects. The site is within 500m of the AONBs. These effects are uncertain at this stage as</p>	<p>assessment criteria do not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA, this limitation will be added to the 'Difficulties and Data Limitations' section of the SA. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>With regard to SA objective 14: housing, all residential site options are expected to have positive effects on this objective due to the nature of the proposed development. Paragraph D.33 of the Interim SA Report states "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by the Local Plan. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p>

		<p>the effects on landscapes and townscape will depend on the design, scale and layout of development, which may help mitigate any adverse effects.'</p> <p>This is factually incorrect. The Site is located within the Kent Downs Area of Outstanding Natural Beauty (AONB). Its allocation would be in conflict with paragraphs 170, 171 and 172 of the NPPF which provide that planning policies should protect and enhance valued landscapes and allocate land with the least environmental value and that great weight should be given to conserving and enhancing landscape and scenic beauty in AONBs.</p> <p>Within AONB's there is a requirement for development to be limited and that major development should not be permitted except in exceptional circumstances and where public interest can be demonstrated. This is reflected in Policy SD10 of the Kent Downs AONB Management Plan. In our view, the stringent tests set out in the NPPF have not been met. There are no exceptional circumstances, nor would it be in the public interest, given the scale of development proposed and significant harm that would arise to a nationally important and protected landscape.</p> <p>The Site is highly visible in views from the adjacent PRoW and its allocation would be contrary to the emerging spatial strategy in the Local Plan which states that in order to conserve and protect the environmental and heritage assets in the borough, designations including AONBs should be avoided (paragraph 4.2.1).We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect that would not represent sustainable development.</p> <p>It is also relevant that the Site is designated as Green Belt. Section 13 of the NPPF confirms that the Government attaches great importance to Green Belts and the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF is clear that the construction of new buildings are inappropriate in the Green Belt, except in the specific circumstances identified in paragraph 149, including the partial or complete redevelopment of previously developed land.</p> <p>None of the other exceptions would apply. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.</p> <p>SA Objective 7: To protect and enhance the cultural heritage resource.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The SA states: 'The site is located within 250m of a heritage asset. Effects are uncertain at this stage as they will depend on factors such as the design of the development and whether there are lines of sight between the development site and nearby heritage assets.'</p> <p>The Site is located within an Area of Archaeological Potential and within proximity of a number of Grade II listed buildings and the Scheduled Monument at Ightham Mote, which are all identified as of national importance. Irrespective of whether there is a line of sight, any development in this location has the potential to cause significant harm to above and below ground heritage assets which would be in direct conflict with the objective to protect and enhance them.</p> <p>We submit that rather than Uncertain significant negative effect, the allocation of this Site would result in a Significant negative effect on cultural heritage that would represent sustainable development.</p> <p>SA Objective 9: To conserve and enhance soil resources and guard against land contamination.</p> <p>The SA states: 'The site is located on brownfield land.'</p> <p>The Site is in existing use as a plant nursery and falls within the definition of an agricultural use under section336 of the Town and Country Planning Act 1990 (as amended), which expressly includes horticulture, fruit growing, seed growing, market gardens and nurserygrounds. Agricultural uses are exempt from the definition of previously developed land in Annex 2 of the NPPF. Annex 2 defines 'brownfield land' with reference to 'previously developed land'. The Site cannot therefore be classified brownfield land for the purposes of the NPPF.</p> <p>With reference to the sub-objectives in the Interim Sustainability Appraisal, its allocation would not encourage development of brownfield land. There is no evidence that the Site is derelict, contaminated or vacant and so rather than a Significant positive effect, the allocation of this Site would result in a Significant negative effect and would not represent sustainable development.</p> <p>SA Objective 10: To reduce greenhouse gas emissions so as to minimise climate change.</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The SA states: 'The site is more than 800m from a railway station but within 400m of a bus stop.'</p> <p>The Site is located approximately 350m from bus stops on Ightham Road via a PRoW adjacent to the site. The PRoW is narrow, unmade and unlit. Alternatively the bus stops are located over 850m from the Site via road; however there are no pavements and the roads comprise narrow, unlit lanes. Ightham Road is served by a single service; the 222 (operated by Autocar Bus & Coach Services) operates 6 services between Borough Green (over 4km away) and Tonbridge Monday to Saturday (plus a further 2 on schooldays). There are no buses on Sundays. There is no physical bus stop infrastructure on the northbound side of Ightham Road. The Site is also located over 400m from a bus stop on Coach Road. These bus stops also have no physical infrastructure and are served by a single service; the S4 (operated by Go Coach) is timetabled once daily Monday to Friday. There are no buses on Saturday or Sunday.</p> <p>The Site does not have safe access to any bus services that can be used to reliably access services and facilities required on a day to day basis and future occupiers of any development in this location would be reliant on the use of a car. In this respect the Site is not located within a socially or environmentally sustainable location.</p> <p>With reference to the sub-objectives in the Interim Sustainability Review the allocation of this Site would in no way reduce greenhouse gas emissions, would not promote the use of sustainable modes of transport or offer any opportunities to encourage walking or cycling as required by paragraph 105 of the NPPF. It would increase the use of the private car in direct conflict with the objective to minimise climate change and also severely compromise highway safety in this rural location.</p> <p>In recognition of this we submit that rather than Minor positive effect, allocation of the Site would result in Significant negative effects against this objective.</p> <p>SA Objective 14: To provide a suitable supply of high quality housing including an appropriate mix of sizes, types and tenures.</p> <p>The SA states: 'The site is expected to provide fewer than 100 dwellings. It is expected that these smaller sites will not be able to offer as wider mix of housing or making as greater contribution towards local housing needs as larger sites would.'</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		The Site does not comprise previously developed land and it would not be a sustainable location for new housing. By reason of its size and the relevant landscape and heritage constraints, it is also not capable of making any material contribution to the supply of housing in the Borough and would not offer an appropriate mix of housing sizes, types or tenures that would meet local housing need."	
46064513	Annex 1	<p>"[59608]</p> <p>The Regulation 18 Local Plan is required to be subject to a process called Sustainability Appraisal (SA). SA is designed to ensure that the plan preparation process maximises the contribution that a plan makes to sustainable development and minimises any potential adverse impacts. The SA process involves appraising the likely social, environmental and economic effects of the policies and proposals in a plan from the outset of its development. The Interim Sustainability Appraisal Report[2] (#_ftn2) [2] is also subject to the Regulation 18 consultation.</p> <p>Assessment</p> <p>The Site has been subject to the SA process and of the 14 SA objectives, the Site has been scored as having a Minor positive effect on only 3 objectives. It has been scored as having a Significant negative, Uncertain significant negative or Uncertain minor negative effect on 7 objectives. With reference to the Interim Sustainability Appraisal Report and for the reasons set out below the allocation of the Site in the Local Plan would not contribute to sustainable development in the borough.</p> <p>SA Objective 1: To improve human health and well-being.</p> <p>The SA states: 'The site is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path / play area / sports facility (but not both).'</p> <p>The site is located near to Public Rights of Way (PRoW) that give access to the countryside; however this is not uncommon in rural areas and does not make an otherwise isolated rural location suitable for development. 46116737	Annex 1	<p>"[59608]</p> <p>Further, by the council's own assessment - as set out the site 59608 annex in Appendix B, Table 9 - the site does not fulfil the majority of the council's Sustainability Appraisal objectives. Therefore, compared to the available alternative sites mentioned in the Local Plan which wholly or mainly satisfy these important objectives, the site is not at all suitable for development - let alone on the scale proposed.</p> <p>In particular, I note that of the 14 Sustainability Objectives listed in the annex, 10 receive a ranking ranging from negligible to significant negative. Of the remaining four, just one objective is classed as a significant positive and only because the site is located on brownfield land. The remaining three objectives are deemed to give rise to minor positives. Hence, the site clearly does not fulfil the objectives when viewed in the round."</p>	<p>The sub-objectives the respondent refers to are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p>
46121761	Annex 1	<p>"[59424]</p> <p>Site 59424 Residential 164 dwellings woods end of Clearheart Lane</p> <p>This development is rear of Redwell Grove, Bancroft Lane, Hollandbury Park, Cellini Walk, Alderwick Grove, Quindell Place, Clearheart Lane, McArthur Drive, Victory Drive.</p> <p>SA objective 1: It is stated that the site is within 800m of a healthcare facility. We have used Google walking and the distance from Clearheart Lane to the front door of the WMGP Surgery is 1.29 km! The analysis against SA 1 does not demonstrate rigour and calls into question the quality of the overall plan.</p> <p>SA objective 3: We fail to understand how this can be a minor positive when the increase in demand for primary school places is not offset by any guarantee of additional resources for the local schools. Until there is such a guarantee this should be marked as negative.</p> <p>SA objective 6: The addition of a further 164 houses cannot improve the townscape character and quality on its own, there must be commensurate improvement in infrastructure and healthcare to enhance quality of life. Without such improvements it must be a significant negative outcome.</p> <p>SA objective 10: With additional housing comes additional cars which, unless they are all zero emission vehicles, will increase the overall</p>	<p>The proforma for site 59424 states that it is within 800m of either an existing healthcare facility <i>or</i> an existing area of open space/ walking and cycle path / play area / sport facility (but not both). Specifically, the site is within 800m of an area of open space and a walking path. This is in accordance with the site assessment criteria.</p> <p>With regard to SA objective 3: education, the site receives a minor positive effect, as it is within 800m of an existing school. The site assessment criteria in Appendix D of the Interim SA Report acknowledge that "The effects of sites on this objective will depend on the access that they provide to existing educational facilities, although there are uncertainties as the effects will depend on there being capacity at those schools to accommodate new pupils" [emphasis added]. Therefore, all sites that are recorded as falling within close proximity of a school receive some uncertainty, as school capacity is unknown.</p> <p>SA objective 6 relates to the landscape and townscape, not the provision of infrastructure and healthcare. The site is incorrectly recorded as being within a settlement when it is on the edge of a settlement. This is as a result of the GIS analysis identifying a high percentage overlap between the site and settlement boundaries. In the next iteration of the SA, this site will receive an uncertain minor negative effect in relation to this objective.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture. It is also acknowledged that the actual use of sustainable transport modes will depend on people's behaviour.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		green house gas emissions from Kings Hill. The analysis refers solely to the local railway station and that there a bus stops in the vicinity. We assume therefore that the positive benefit identified comes solely from commuters using public transport. But you will be aware that bus services are being cut back and this encourages more use of personal vehicles. Unless there is a clear plan to remove personal vehicles from local roads the impact of the development must be to increase emissions. Of course, the houses will produce other emissions, such as gas boiler exhausts and we do not believe there will be credible alternative heating technologies widely available in the timescale of the local plan. The analysis should be significant negative impact."	
46121761	Annex 1	<p>"[59761]</p> <p>Site 59761 Kate Reed Wood (inc. Lumber Yard) Residential 86 dwellings</p> <p>SA Objective 1: It is stated that the site is within 800m of a healthcare facility or open space for well-being. We have used Google walking and the distance to the front door of the WMGP Surgery is 1.8 km. Due to the proximity of the A228 link between the West Malling by-pass and the A26, there is no nearby open space relevant to this site. Therefore, we think the minor positive assessment is wrong but the significant negative impact is appropriate. Yet again, the analysis against SA 1 does not demonstrate rigour and calls into question the quality of the overall plan.</p> <p>SA Objective 3: There is no school within 800m, the nearest is Kings Hill Primary School at 1,800m according to Google on walking mode. The assessment should be negative to some extent not positive.</p> <p>SA Objective 10/11: We fail to see how this site can have a positive assessment for emissions and impact on climate when the services to/from the local station are being cut-back in the Borough. Residents will be forced to use personal vehicles to reach the railway station and visit local supermarkets/shops.</p> <p>Access to site from north bound A228 will cause very considerable congestion on what is already a busy narrow road linking the West Malling by-pass traffic to the A26. We regularly experience stationary traffic back into Kings Hill from existing traffic loads."</p>	<p>The proforma for site 59761 states that it is within 800m of either an existing healthcare facility <i>or</i> an existing area of open space/ walking and cycle path / play area / sport facility (but not both). Specifically, the site is within 800m of an area of open space (some green corridors) and a walking path.</p> <p>With regard to SA objective 3: education, there is a school within 800m of the site (Kings Hill School Primary and Nursery). For this reason, the site receives an uncertain minor positive effect in relation to this objective.</p> <p>Due to the high-level nature of SA, SA objective 10: climate change mitigation looks at access to public transport, although we note that this is only part of the much bigger picture.</p> <p>With regard to SA objective 11: climate change adaptation, we state in the proformas that "The location of development will not affect the achievement of this objective as effects will depend largely on the detailed proposals for sites and their design, which would be influenced by policies in the new Local Plan and details submitted at the planning application stage. The extent to which the location of development sites would facilitate the use of sustainable modes of transport is considered separately under SA objective 10".</p>
46121761	Annex 1	"[59797]	The proforma for site 59797 states that it is within 800m of either an existing healthcare facility <i>or</i> an existing area of open space/ walking and cycle path / play area / sport facility (but not both). Specifically, the site is within 800m of an area of open space and a walking path.

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Site 59797 West Quarter of Kings Hill Golf Course to A26 Residential 1228 dwellings</p> <p>The distances quoted to healthcare and school facilities are grossly in error. The closest point of the site the WMGP surgery is 1,440m (according to Google walking) not within 800m. It must have a significant negative assessment against the respective SAs."</p>	
46121761	Annex 1	<p>Analysis of sites: The analysis of some development sites against the strategic objectives is noticeable in the cut-and-paste of text that has taken place between sites that are in different locations (e.g. 59740 and 59761). Furthermore, in looking in detail at 59424, 59761 and 59797 we fundamentally disagree with the analysis and give detail on this below. We believe this undermines the overall credibility of the analysis and we expect TMBC acting on our behalf to rigorously audit the process and analysis. We have considered the following evidence source in making our comments: Interim Sustainability Appraisal Report - Annex 1: Reasonable Alternative Development Site Option Proformas (tmbc.gov.uk) (https://www.tmbc.gov.uk/downloads/file/2217/annex-1-reasonable-alternative-development-site-options)</p>	<p>The proformas have been generated using Geographical Information Systems (GIS), with stock sentences used for each site. It is very likely that sites in different locations will have the same stock sentence as they may both, for example, be located within 800m of an open space.</p>
42586401	Annex 1	<p>"[SITE REFS: 59594, 59602, 59603, 59699, 59716, 59733, 59406, 59596, 59648 AND 59649]</p> <p>[SEE 'COPIES FOR LUC' FOLDER - R0477 _221024_George Rothschild file]"</p>	<p>Although some of site 59406 is not within 400m of a bus stop, the SA measures straight-line distances from the edge of a site option, using the smallest distance between a site and existing services and facilities. The SA acknowledges in the 'Difficulties and Limitations' section of the Interim SA Report that "Distances in the appraisal were measured as a straight-line distance from the edge of the site option to existing services and facilities, and therefore actual walking distances could be greater". The site receives a minor positive effect in relation to SA objective 14: housing, as it will provide fewer than 100 dwellings. This is in accordance with the site assessment criteria, which states at paragraph D.33 "The location of site options will not influence the mix of housing that is provided onsite – this will instead be determined by Local Plan policies. However, it is expected that sites of a larger size may be able to offer a wider mix of housing, including affordable housing, as well as making a greater contribution towards local housing needs. A significant positive (++) effect is therefore recorded for residential sites of 100 dwellings or more. A minor positive (+) effect is recorded for site options that would provide fewer than 100 dwellings".</p> <p>Sites 59602 and 59603 are correctly recorded in the SA as falling with 800m of an existing school, specifically a primary school (Valley Invicta Primary School). With regard to SA objective 14: housing, please see first paragraph of our response.</p> <p>The GP surgeries data used to inform the Interim SA Report included West Malling GP surgery. However, as the respondent has noted, this GP surgery is now closed. In the next iteration of the SA Report, the proformas for all sites affected will be updated, including site 59699. As site 59699 is proposed for mixed use development, it receives a</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>positive effect in relation to SA objective 4: economic growth. The effect is significant, due to the fact the site is more than 5ha. As mentioned above, the SA measures straight-line distances from the edge of a site option, using the smallest distance between a site and existing services and facilities. This is acknowledged in the 'Difficulties and Limitations' section of the Interim SA Report. Site 59699 receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape, as it is on the edge of West Malling and therefore development may be more easily integrated into existing built development than if it were in a more rural area. All adverse effects against this objective are recorded as uncertain, as actual effects on landscape and townscape will depend on the design, scale and layout of development, which may help mitigate any adverse effects. SA objective 10: climate change mitigation looks at proximity to public transport, not the effects of an increase in vehicle movements which will be addressed separately in the cumulative effects section of the SA.</p> <p>Due to an error, justification text was not provided for the effect site 59716 is expected to have against SA objective 1: health and wellbeing. In the next iteration of the SA Report, the justification text will be added to the proforma. In accordance with the SA methodology set out in Chapter 2 of the Interim SA Report, sites can have mixed effects. With regard to SA objective 10: climate change mitigation, not all of a site must be within 400m of a bus stop to receive a minor positive effect, and this is acknowledged in the 'Difficulties and Limitations' section of the Interim SA Report. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>TMBC has informed LUC that site 59733 comprises brownfield land. As noted above, the SA utilises straight-line distances and SA objectives 4 and 10 do not take into consideration the frequency of bus services.</p> <p>Site 59406 being located adjacent to other sites does not necessarily mean that it should receive the same effects as those sites. As sites 59406 and 59596 fall within different accessibility bands in the Urban Capacity Study (July 2022), they receive different effects against SA objective 2: services and facilities. Likewise, site 59406 is located within 800m of a primary or secondary school and so receives an uncertain minor positive effect in relation to SA objective 3: education. Site 59648 is not located within 800m of a primary or secondary school and so receives an uncertain minor negative effect in relation to SA objective 3. As mentioned already, the SA utilises straight-line distances but this is acknowledged in the Interim SA Report as a limitation. TMBC has informed LUC that site 59406</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>comprises brownfield land. With regard to SA objective 14: housing, please see first paragraph of our response.</p> <p>With regard to SA objective 3: education, site 59596 receives an uncertain minor positive effect as it is located within 800m of a primary or secondary school. This objective looks at proximity to schools, not the quality of walking paths to and from them. The SA is too high-level to consider these matters. With regard to SA objective 14: housing, please see first paragraph of our response.</p> <p>TMBC has informed LUC that site 59648 comprises brownfield land. With regard to SA objective 14: housing, please see first paragraph of our response.</p> <p>Site 59649 being located adjacent to other sites does not mean that it should receive the same effects as those sites. Site 59649 receives an uncertain minor positive effect in relation to SA objective 3: education, as it is within 800m of a primary or secondary school. Site 59648 on the other hand is located more than 800m of a primary or secondary school and so receives an uncertain minor negative effect. TMBC has informed LUC that site 59649 comprises brownfield land. With regard to SA objective 14: housing, please see first paragraph of our response.</p>
42606657	Annex 1	<p>"Representation on behalf of Berwick Hill Properties Ltd</p> <p>Question 8: Do you agree with the findings of the individual site assessments in Appendix D of the Interim Sustainability Appraisal Report?</p> <p>NOTE: Due to the online consultation having a limit of 6000 characters, it is necessary to provide the representation for Berwick Hill Properties Ltd in respect of question 8 separately (below). The Interim Sustainability Appraisal of the individual sites seeks to go into considerable detail and therefore the following more detailed response is required:</p> <p>Individual site reference number: 59611. The inclusion of this vacant, brownfield, previously developed site, sandwiched between the A20 and M20, as a potential employment site is welcomed. However, its assessment within the Sustainability Appraisal against the following five of the SA Objectives should be reconsidered:</p> <p>SA Objective 4 - An industrial/warehousing allocation on the former Stocks Nightclub and Spring Villas site would contribute towards diversifying employment opportunities, increasing employment, encouraging economic growth, reducing levels of unemployment and improving physical accessibility to jobs. It therefore satisfies all of the sub-objectives of SA4.</p>	<p>SA objective 4: economic growth distinguishes between sites that are more than 5ha in size or smaller than 5ha in size. In line with the site assessment criteria, site 59611 receives a minor positive effect in relation to SA objective 4: economic growth as it will include employment development but which will be smaller than 5ha in size. The site also receives a negligible effect in relation to this objective, but this is as a result of the site not being within 800m of a train station or 400m of a bus stop or cycle path. Although different types of employment development may have different locational requirements, the SA is high-level and so does not look into the different types of employment that may be provided, particularly as this cannot be guaranteed.</p> <p>The sub-objectives are guide questions used when appraising policies, not sites. The site assessment criteria are instead used to appraise the sites.</p> <p>The site receives an uncertain significant negative effect in relation to SA objective 5: biodiversity and geodiversity because it contains a green infrastructure asset in the form of woodland and thick vegetation. In the next iteration of the SA Report, the following sentence will be added to the site assessment criteria: "The green infrastructure assets dataset includes a wide variety of features which may vary in their value".</p> <p>As site 59611 is not located near any settlements in a rural location, there is potential for it to have an adverse effect on landscape. The site is also within 500m of the AONB as so in accordance with the site assessment criteria, should receive an uncertain significant negative.</p> <p>With regard to SA objective 7: heritage, the site is within 250m of numerous heritage assets, as recorded in the Kent Historic</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>The reason given in the Interim Sustainability Appraisal for only attributing a 'minor positive' to the site is because it is not within 800 m of a train station or within 400 m of a bus stop. What the scoring criteria fails to take into account is that there are different types of employment, which have different locational criteria.</p> <p>Whilst it is right for high density office uses to be directed to town centres and to sites in close proximity to public transport nodes, this vacant, scrubland site is being promoted for industrial/warehousing, not offices. The NPPF only seeks to apply such a sequential approach to applications for main town centre uses, such as offices (paragraph 87). It does not apply to industry/warehousing, for which its proximity to the strategic road network, and the motorways in particular, should enable the site to score more highly.</p> <p>The fact that industrial/warehousing units could be accessed on this site without the need for HGVs to travel through towns, where they would cause congestion and potential air quality problems, should be taken into account and should be given just as much, if not more weight, than proximity to public transport. The different characteristics of warehousing is also recognised in the NPPG. Whilst most of the guidance is focused on the big strategic facilities, it states that ""the logistics industry plays a critical role in enabling an efficient, sustainable and effective supply of goods for consumers and businesses, as well as contributing to local employment opportunities, and has distinctive locational requirements that need to be considered"" (my emphasis) paragraph: 031 Reference 2a-031-2019 0722.</p> <p>Currently, the Borough Council is not planning specifically for industry/warehousing and is treating all employment generically. That is not appropriate here. The Council should have regard to its up-to-date Economic Development Needs Study, August 2022. It advises the Council that the largest employment sector in Tunbridge & Malling in 2021 is wholesale and transport. It goes on to identify particular growth opportunities for logistics in the Borough.</p> <p>The Economic Development Needs Study concludes that over the plan period there is a need for 292,940 m² of new industrial and storage/distribution development. This compares to just 53,320 m² of new office space (18% of the total employment requirement). Therefore greater weight should be given to the location requirements for industrial/distribution space, for which this brownfield site (ref: 59611) is ideally suited.</p>	<p>Environment Record. As such, it is correct for the site to receive an uncertain significant negative effect.</p> <p>With regard to SA objective 10: climate change mitigation, although different types of employment development may have different locational requirements, the SA is high-level and so does not look into the different types of employment that may be provided, particularly as this cannot be guaranteed. Due to the high-level nature of SA, SA objective 10 looks at access to public transport, although we note that this is only part of the much bigger picture.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>It is worth noting that the Borough Council has allocated the Invicta Business Park and Marley site immediately opposite, as employment land under Policy E2 and therefore the Council has already recognised that this is an appropriate location for employment development.</p> <p>In the light of the above, the site should therefore be reclassified as having a 'significant positive' (++) in respect of the economic growth objective.</p> <p>SA Objective 5 - The Sustainability Assessment states that the site contains an existing green infrastructure asset that could be lost as a result of new development and therefore under objectives set out under SA5, the site is classified as an ""uncertain significant negative"".</p> <p>Having regard to the criteria, the former Stocks Nightclub and Spring Villas site is previously developed land that is not designated for nature conservation, nor are there any known rare endangered species and the landscaping belt along the M20 would remain unaffected. The site does not provide any public access for people to access wildlife or open green spaces. The main central part of the site, which would be subject to the redevelopment, could not be regarded as a green 'asset'. This is derelict scrub land that is vacant and unutilised, with limited biodiversity value. Through redevelopment, there is an opportunity to enhance the biodiversity value of the site, and therefore far from being an ""uncertain significant negative"", the land offers the opportunity to make a positive contribution. The site should therefore be reclassified as a 'minor positive' (+) in respect of biodiversity in the Sustainability Assessment.</p> <p>SA Objective 6 - The proposal is not within or adjacent to a town and its redevelopment would have no effect on the townscape character and quality of any existing settlement. In terms of its landscape character, a landscape belt along its northern side, and the raised level of the M20, separate the site from the more open character of the land to the north of the motorway. The A20 provides the site's southern boundary, with Invicta Business Park and Morley builders merchants beyond. As such, there is no landscape character of quality to the south that needs to be protected. In any event, mature trees and other planting along the southern boundary of the site, provide a high degree of screening, enabling redevelopment of the site to be largely self-contained visually.</p> <p>It is considered that the Council should be using the opportunity provided by this local plan review, to reconsider the boundaries of the AONB, which, for inexplicable reasons, crosses the M20 and includes this brownfield site, with the southern boundary following the A20 in</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>this location. Under no reasonable assessment could site 59611 be considered to be of outstanding natural beauty. It is requested that an Officer visits the site to assess this for themselves. It is non-sensical for this previously developed site to be left as unutilised scrubland forever, merely because of the AONB designation, which appears erroneous. The site should therefore be reclassified as having a 'negligible' (0) effect on the Borough's townscape and landscape.</p> <p>SA Objective 7 - the site has been classified as having an ""uncertain significant negative"" by virtue of the fact that it is within 250 m of a heritage asset. This heritage asset is the Moat public house, which lies to the south east and is Grade II listed. Once officers have an opportunity to inspect the site, they will recognise that appreciation of this heritage asset is only when viewed from the west, looking east (i.e. redevelopment on the former stocks Nightclub and Spring Villas site would be behind the viewer and have no effect on the appreciation of the heritage asset.</p> <p>In the light of the above, the site should therefore be reclassified as having a 'negligible' (0) effect on the Borough's cultural heritage.</p> <p>SA Objective 10 - again this site is classified negatively by virtue of the fact that it is not within 800 m of a railway station or 400 m from a bus stop. As is set out in the response to SA4, industrial/warehousing development should be considered differently from office and other high density employment uses, which are appropriate to direct them to town centre and other highly accessible locations by public transport. Such locations are better suited to higher density commercial uses and for housing; not for industrial and logistics.</p> <p>Recognition should be given to the highly accessible nature of the site to the strategic road network, including the M20 and M26, which is the most important factor for HGVs, without them needing to travel through congested urban areas. Avoiding such congestion not only helps reduce delays, but also delivers a corresponding reduction in greenhouse gas and other pollutants.</p> <p>It is also worth noting that whilst public transport does not serve the site, it is close to a number of existing settlements, being an 11 minute cycle from Borough Green (which does have a station), a 6 minute cycle from Wrotham, 6 minutes from the High Street in Wrotham Heath and even the High Street in West Malling is only a 20 minute cycle. Officers should also note that there is a pavement that already runs along the northern side of the A20 at its junction with Nepicar Lane to the Little Waitrose, which could be reached in only a 2 minute walk and could therefore cater for lunchtime sandwiches and other</p>	

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>top up, food shopping trips. Such a facility would encourage walking and a reduction in the use of a private car, in line with SA10.</p> <p>Having regard to these factors and recognising the proposed industrial and warehousing use, the site should therefore be reclassified as a 'minor positive' (+) in respect of reducing greenhouse gas emissions in the Sustainability Assessment."</p>	
45947585	Annex 1	[SEE 'COPIES TO LUC FOLDER' - R1514 _221103_Katie & Daniel White]	<p>The SA must give consideration to all reasonable alternative development site options (i.e. sites that could reasonably be considered for allocation but that may not be allocated), which includes all sites listed by the respondent.</p> <p>There is a lack of clear, official guidance on 'reasonableness' criteria, which leaves some room for debate as to exactly what these criteria should be but based on our professional experience and understanding of guidance and case law, we advise a precautionary approach, i.e. if in doubt, assume that a site option is 'reasonable' and subject it to SA. The bar for discounting sites as reasonable alternatives (and therefore not subjecting them to SA) is therefore quite high.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>All reasonable alternative development site options have been appraised in line with the site assessment criteria contained in Appendix D of the Interim SA Report.</p> <p>SA objective 1: health and wellbeing looks at the proximity of sites to healthcare facilities and open space, in addition to walking and cycling paths, play areas and sports facilities. It also looks at whether a site contains open space that could be lost as a result of development. Site 59525 does not just receive a minor positive effect in relation to SA objective 1. It receives a mixed uncertain significant negative and minor positive effect. Specifically, the site is recorded as having an uncertain significant negative effect in relation to this objective, as it contains open space (Westwood Green) that could be lost as a result of development, although this is uncertain. The minor positive effect is due to the fact the site is within 800m of other areas of open space, and walking paths. The site is also recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact it contains land with a 1 in 30 year risk of surface water flooding. It does not fall within Flood Zone 3.</p> <p>The SA is too high-level to give consideration to road width, access to car parking spaces, natural light, water pressure and water meter installation, traffic congestion and fuel pipelines. The Council will commission evidence on matters including traffic.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Annex 1 provides a 'policy-off' appraisal of all reasonable alternative development site options. This means that consideration is not given to mitigation (e.g. Sustainable Drainage Systems). Instead, sites are appraised on their physical constraints only. This ensures all sites are appraised on a consistent basis. If a site is allocated via policy in the Local Plan containing mitigation measures, it will be appraised on a 'policy-on' basis.</p> <p>The SA gives consideration to the proximity of sites to GP surgeries. As sites 59525, 59613, 59616, 59639, 59640, 59646, 59682, 59742, 59747, 59753, 59782, 59789, 59806, 59813, 59837, 59846, 59855 and 59876 are not within 800m of a healthcare facility, they receive a minor positive effect instead of a significant positive effect in relation to SA objective 1: health and wellbeing.</p> <p>The SA also gives consideration to the proximity of sites to public transport. The SA acknowledges under SA objective 10: climate change mitigation that sites 59525, 59613, 59682, 59742, 59782, 59789, 59813, 59837, 59855 and 59876 are not within 800m of a railway station, but are within 400m of a bus stop. Therefore, they correctly receive minor positive effects in relation to this objective. Sites 59616 and 59646 are within 800m of a railway station (Beltring) and so correctly receive significant positive effects in relation to SA objective 10. Sites 59639, 59640, 59747, 59753, 59806, 59846 are not within 800m of a railway station or 400m of a bus stop and so correctly receive minor negative effects against this objective. Whether a railway station is appropriate for commuting is dependent on where a person works.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p> <p>Site 59613 receives a significant positive effect in relation to SA objective 9: soil, as it comprises brownfield land. Many areas of the Green Belt comprise brownfield land. Site 59613 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. SA objective 2: services and facilities utilises this information and therefore site 59613 receives a minor negative effect in relation to the SA objective. Site 59613 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact it contains land with a 1 in 30 year risk of surface water flooding. A large proportion of the site falls within Flood Zone 2 but it is only the edges of the site that fall within Flood Zone 3. Site 59613 receives an uncertain significant negative effect in relation to SA objective 7: heritage, due to the fact it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>This includes Snoll Hatch Conservation Area, in addition to Bullen Corner Conservation Area.</p> <p>Site 59616 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact a significant proportion of the site falls within Flood Zone 3, slightly overlaps land with a 1 in 30 year risk of surface water flooding and is adjacent to a watercourse. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality. It would not be possible at this early stage in the plan-making process to explore the effects of light and noise pollution on existing homes. The site is correctly identified under SA objective 9: soil as comprising Grade 1 or 2 agricultural land.</p> <p>Site 59639 is correctly identified in the SA under SA objective 9: soil, as comprising Grade 1 or 2 agricultural land. The site is not identified as being at risk of flooding, using information provided by the Environment Agency, and so receives a negligible effect in relation to SA objective 8: water.</p> <p>Site 59640 is not identified as being at risk of flooding, using information provided by the Environment Agency, and so receives a negligible effect in relation to SA objective 8: water. The SA correctly identifies the site as comprising Grade 1 or 2 agricultural land under SA objective 9: soil. The site receives an uncertain significant negative effect in relation to SA objective 7: heritage, due to the fact it is within 250m of numerous heritage assets.</p> <p>Site 59646 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact a significant proportion of the site falls within Flood Zone 3, contains land with a 1 in 30 year risk of surface water flooding, borders a watercourse and contains water bodies. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality. It would not be possible at this early stage in the plan-making process to explore the effects of light and noise pollution on existing homes. The site is correctly identified under SA objective 9: soil as comprising Grade 1 or 2 agricultural land.</p> <p>Site 59682 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact it contains land with a 1 in 30 year risk of surface water flooding. As mentioned already, it is too early in the plan-making process to explore light pollution.</p> <p>The SA does not give consideration to the aesthetic value of trees but consideration is given to green infrastructure assets under SA objective 5: biodiversity and geodiversity.</p> <p>Site 59742 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact a significant proportion of the site falls within Flood Zone 3, contains land with a 1 in 30 year risk of surface water flooding and contains a watercourse. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality.</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
			<p>Site 59742 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact it contains land with a 1 in 30 year risk of surface water flooding. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality.</p> <p>Site 59753 correctly receives a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 1 or 2 agricultural land. The site receives a negligible effect in relation to SA objective 8: water, as it is not identified as being at risk of flooding in accordance with information provided by the Environment Agency. Site 59753 receives an uncertain significant negative effect in relation to SA objective 7: heritage, due to the fact it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record.</p> <p>Site 59782 receives a negligible effect in relation to SA objective 8: water, as it is not identified as being at risk of flooding in accordance with information provided by the Environment Agency. The site correctly receives a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 1 or 2 agricultural land.</p> <p>Site 59789 receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality. The site receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. The site is correctly recorded as having a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 1 or 2 agricultural land.</p> <p>Site 59806 receives a significant negative effect in relation to SA objective 8: water, as it contains water bodies, a watercourse and land with a 1 in 30 year risk of surface water flooding. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality. The site receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. The site is correctly recorded as having a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 1 or 2 agricultural land.</p> <p>Site 59813 receives an significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. The site receives an uncertain significant negative effect in relation to SA objective 7: heritage, as it is within 250m of heritage assets. The site receives an uncertain minor negative effect in relation to SA objective 6: landscape and townscape as it is on the edge of a settlement and so development may be more easily integrated into existing built development than if the site were in a more rural area. The site is correctly recorded as having a</p>

			<p>significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 1 or 2 agricultural land.</p> <p>Site 59837 receives a significant negative effect in relation to SA objective 8: water, as it contains land with a 1 in 30 year risk of surface water flooding. A significant proportion of the site falls in Flood Zone 2 with only a small proportion in Flood Zone 3. Site 59837 is recorded in the Urban Capacity Study (July 2022) as falling within the Good Accessibility Band. SA objective 2: services and facilities utilises this information and therefore site 59837 receives a negligible effect in relation to the SA objective. Site 59837 receives an uncertain significant negative effect in relation to SA objective 7: heritage, due to the fact it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. This includes Snoll Hatch Conservation Area, in addition to Bullen Corner Conservation Area.</p> <p>Site 59846 receives a significant negative effect in relation to SA objective 8: water, as it contains a water body and land with a 1 in 30 year risk of surface water flooding. The site does not contain areas within Flood Zone 3. The site is correctly recorded as having a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 3 agricultural land. The effect is recorded as uncertain, as it is unknown whether it comprises Grade 3a (high quality) or Grade 3b (not classed as high quality) agricultural land.</p> <p>Site 59855 is recorded in the SA as having a significant negative effect in relation to SA objective 8: water, due to the fact a significant proportion of the site falls within Flood Zone 3, contains land with a 1 in 30 year risk of surface water flooding and contains a watercourse. The effect is recorded as uncertain as it is unknown at this stage what effect development might have on water quality. Site 59855 receives an uncertain significant negative effect in relation to SA objective 7: heritage, due to the fact it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. The site is correctly recorded as having a significant negative effect in relation to SA objective 9: soil, as it contains a significant proportion of Grade 1 or 2 agricultural land.</p> <p>Site 59876 receives a significant positive effect in relation to SA objective 9: soil, as it comprises brownfield land. Many areas of the Green Belt comprise brownfield land. Site 59876 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. SA objective 2: services and facilities utilises this information and therefore site 59876 receives a minor negative effect in relation to the SA objective. The site receives a significant negative effect in relation to SA objective 8: water, due to the fact a significant proportion of the site falls within Flood Zone 3 and contains land with a 1 in 30 year risk of surface water flooding. Site 59876 receives an uncertain significant negative effect in relation to SA objective 7: heritage, due to the fact it is within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. This includes Snoll Hatch Conservation Area.</p>

25315361	Annex 1	<p>The following sites are classified for the purpose of SA Objective 4 as being within 400m of a bus stop.</p> <p>59702 59666 59826 59790</p> <p>The bus stop is served only by one bus on Tuesday and one on Thursday. This poor level of public transport cannot support regular employment on the designated sites.</p>	<p>SA objective 4: economic growth (for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>
25315361	Annex 1	<p>The following sites have been categorised as being within 800 metres of an existing health care facility.</p> <p>59702, 59790, 59826, 59847</p> <p>This is erroneous because the Phoenix Surgery in Burham and the nursing outpost in Eccles will be moved to Peters Village well before the new Local Plan comes into effect.</p> <p>In fact, once the medical facility is moved to Peters village then it will be inaccessible by public transport given the present bus service. This should be recorded as a significant negative for all sites in Eccles and Burham. For sites which are than 800m from a medical facility, there should be a clear distinction between those where the medical facilities can be reached by public transport and those where it cannot.</p> <p>Given that medical facilities will not be accessible by public transport from Eccles, all sites in Eccles should be categorised as being in the Poor Accessibility Band under SA Objective 2. This covers the sites above plus the following.</p> <p>59702 59666 59826 59790 59841 59768 59831</p> <p>Although there are two buses a week (Tuesdays and Thursdays), these travel from the new surgery to Eccles on the outward journey and from Eccles to the new surgery on the return journey.</p>	<p>Although the Phoenix Surgery is proposed to be moved to Peters Village, the SA reflects what services and facilities are present at the time of assessment.</p> <p>Access to public transport is dealt with separately under SA objective 10: climate change mitigation.</p> <p>SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities.</p>
42096289	Annex 1	<p>Site 59613 Objective 9 states the site is brownfield. Is green belt not brownfield. Objective 2 states fair accessibility. This is incorrect. Accessibility is poor. The only access roads are narrow and regularly flood from the Bourne, Coult and Medway and flash flood from run off from hills to the north and east. The Coult runs directly adjacent to the site and is a main river. The Leigh Barrier does not protect this area nor will any works to raise the height of the barrier. The majority of flooding of this area is travelling downhill on its way to the Medway. Much does not reach the Medway and therefore sits for days in Snoll Hatch for days. The site falls within flood zones 2 and 3. Policy CP10 states within the floodplain development should first seek to make use of areas of no or low risk to flooding before areas of higher risk. Similarly, paragraph 167 of the NPPF sets out that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk. Ground water tables are very high in this area. A recent application for a major development in the village highlighted the unsuitability of soakaways. Site 59613 will need considerable ground build up to achieve the</p>	<p>Site 59613 receives a significant positive effect in relation to SA objective 9: soil, as it comprises brownfield land. Many areas of the Green Belt comprise brownfield land.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Site 59613 is recorded in the Urban Capacity Study (July 2022) as falling within the Fair Accessibility Band. SA objective 2: services and facilities utilises this information and therefore site 59613 receives a minor negative effect in relation to SA objective 2. The SA is too high-level to consider road width.</p> <p>Flood risk is covered under SA objective 8: water. Site 59613 is recorded in the SA as having a significant negative effect in relation to SA objective 8, as it contains land with a 1 in 30 year risk of surface water flooding. A large proportion of the site falls within Flood Zone 2</p>

		<p>minimum clearances at stated in the SuDS Manual. This will have the knock on affect of displacing surface and flood water into existing properties. Any discharge of surface water from this site into surrounding watercourses will create extra flooding downstream. The Pound, Old Rd, Medway Meadows and Branbridges already suffer from severe flooding from the Medway and Bourne. The Coult Stream regularly floods Hale St, Smithers Lane and further into the Clubbs Quarry. TMBC's 2016 Green Belt survey specifically mentions the Snoll Hatch Hamlet and the importance of anti coalescence measures being maintained to keep the Hamlet separate from the main village of East Peckham. Development of site 59613 will directly oppose this long standing anti coalescence policy. The Local Development Framework (para 6.3.35) state East Peckham, Snoll Hatch and Hale St must be kept separate and not filled in by housing. Site 59613 does not fall within a Rural Service Centre and never has. East Peckham lost it's GP practise in 2018 and should also no longer be classed as a Rural Service Centre. It has also lost its two village pubs and more recently it's bakers. Site 59613 is immediately adjacent to Snoll Hatch Character Area, the integrity of which must be preserved. The nearest train station is 2.4km from the site. The roads to it are narrow, without lighting or pavement and regularly flood making it impassable to pedestrian and vehicle. There is no parking at the station. No booking office. No telephone. No toilets. No wheelchair availability. No step free access. No accessible taxis. No impaired mobility set down. No staff. Due to above reasons I consider this site unsuitable.</p>	<p>but it is only the edges of the site that fall within Flood Zone 3. Although there are policies in the existing Local Plan that seek to mitigate flood risk, in addition to settlement coalescence, this SA is providing an appraisal of the emerging Local Plan only.</p> <p>Site 59613 has been appraised against SA objective 6: landscape and townscape, receiving an uncertain minor negative effect due to its location on the edge of East Peckham.</p> <p>The SA acknowledges that sites within and around East Peckham are not within close proximity of a GP surgery.</p> <p>With regard to the historic environment, the SA acknowledges that site 59613 is adjacent to two Conservation Areas (Bullen Corner East Peckham and Snoll Hatch East Peckham). For this reason, it receives a significant negative effect in relation to this objective. All negative effects against this objective are recorded as uncertain, as the actual effects are dependent on the design of development and whether there are lines of sight between it and nearby heritage assets.</p> <p>With regard to the nearest train station, the SA acknowledges that it is more than 800m from the site under SA objective 10: climate change mitigation.</p> <p>The SA is too high-level to consider lighting, pavements, and amenities like toilets.</p>
42096289	Annex 1	<p>Site 59876 Objective 9 states the site is brownfield. It is green belt not brownfield. Objective 2 states fair accessibility. This is incorrect. Accessibility is poor. The only access roads are narrow and regularly flood from the Bourne and Medway and flash flood from run off from hills to the north and east. The Leigh Barrier does not protect this area nor will any works to raise the height of the barrier. The majority of flooding of this area is travelling downhill on its way to the Medway. Much does not reach the Medway and therefore sits for days in Snoll Hatch for days. The site falls within flood zones 2 and 3. Policy CP10 states within the floodplain development should first seek to make use of areas of no or low risk to flooding before areas of higher risk. Similarly, paragraph 155 of the NPPF sets out that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk. Ground water tables are very high in this area. A recent application for a major development in the village (ref 21/03353/FL highlighted the unsuitability of SuDS as there is not enough clearance between maximum groundwater levels and the underside of soakaways. Site 59876 will need considerable ground build up (over 500mm) to achieve the minimum clearances at stated in the SuDS Manual. This will have the knock on affect of displacing surface and flood water into existing properties. Any discharge of surface water from this site into surrounding watercourses will create extra flooding downstream. The Pound, Old Rd, Medway Meadows and Branbridges already suffer from severe flooding from the Medway and Bourne. 42171937	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE – Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE – Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE – Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey,</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>The456roofrma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation</p>

		<p>registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE – Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE – Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE – should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use)SA Objective 1: DISAGREE – Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE – Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE – Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE – Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE – This should be rated as negative Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59693 (Residential) SA Objective 1: DISAGREE – Should be rated as SIGNIFICANT NEGATIVE Site is NOT</p>	<p>will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The457roofrma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The457roofrma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3:</p>

		<p>within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE – Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE SA Objective 5: DISAGREE – Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE – Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE – Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE – This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59721 (Residential) SA Objective 1: DISAGREE – Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE – Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative. SA Objective 4: AGREE SA Objective 5: DISAGREE – Should be rated as definite SIGNIFICANT NEGATIVE Loss of this currently unfarmed land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE – Should be rated as definite SIGNIFICANT NEGATIVE There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE – Should be rated as SIGNIFICANT NEGATIVE Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE – This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on</p>	<p>education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered</p>

Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE – This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE</p>	
42192289	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th460rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus</p>

This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREESA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane, Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59809 Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective</p>	<p>(Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. SA objective 10: climate change mitigation (and SA objective 4: economic growth for mixed use and employment site options) does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE	
42196289	Annex 1	The following sites should NOT form part of the local plan 59716-- ME19 6RF-- This site is a greenfield greenbelt site. St Leonards Tower is at the boundary of the site. It contains high grade agricultural land. It was deemed unviable in the previous local plan and therefore not submitted. Would add pressure to the road infrastructure around west street in west malling and GPs and School facilities. Lack of pedestrian walk ways along Offham Road. Sits outside of the current west malling village envelope. 59699-- ME19 6NN-- This site is a greenfield greenbelt site that contains grade 1 agricultural land. It sits outside of the current village envelope of west malling. The topography of the site would significantly impact the current rural character of the area as the elevation of the site would be visible from Teston Road and from St Leonard's Tower. Neither the road infrastructure through west street and along Offham road nor local GP services and schools could support such a significant development. This site was deemed unviable in the previous local plan and therefore not submitted. 59645-- ME19 6RE-- This site is a greenfield greenbelt site. Planning permission has recently been refused for this site and it was deemed unviable in the previous local plan. 59714-- ME19 6RD-- This site is a greenfield greenbelt site. Development here would add pressure to the road infrastructure along West Street and Offham Road and on GP and School facilities.	<p>The SA recognises sites 59716, 59699 and 59645 as comprising greenfield land under SA objective 9: soil.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessments and uses a different basis for assessment.</p> <p>Sites 59716 and 59699 are recorded in the SA as containing a significant amount of Grade 1 and/or 2 agricultural land, and so receive significant negative effects in relation to SA objective 9. Site 59645 is recorded as containing Grade 3 agricultural land but it is unknown whether it is Grade 3a (high quality) or Grade 3b (not classed as high quality) agricultural land, hence the significant negative effect is recorded as uncertain.</p> <p>The previous Local Plan is not relevant, as it was a different plan and so is not relevant to this SA.</p> <p>The SA is too high-level to consider specific road networks and topography of specific sites. Consideration is given to GP surgeries and schools in the SA though, under SA objectives 2: health and wellbeing and 3: education, respectively.</p> <p>The SA acknowledges that site 59716 is not within or on the edge of a settlement, and so it receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape.</p> <p>Site 59699 is correctly recorded as located on the edge of the settlement of West Malling and so correctly receives an uncertain minor negative effect in relation to SA objective 6.</p>
42260449	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are</p>

		<p>* 59693</p> <p>* 59721</p> <p>* 59805</p> <p>* 59809</p> <p>I object to any development on these sites, for the following reasons:</p> <p>* They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.</p> <p>* They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A); the MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.</p> <p>* The importance of domestic food production has been highlighted by recent food shortages caused by the war in Ukraine.</p> <p>* Local food production is made more important by the effects of climate change.</p> <p>* They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.</p> <p>* Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.</p> <p>* Development will lead to a significant loss of biodiversity.</p> <p>* Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.</p> <p>* Development will put even more stress on the already stretched local health and education services.</p> <p>* 10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.</p> <p>* 11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.</p> <p>Dealing with each site in turn:</p> <p>Site 59685 (Mixed use)</p> <p>SA Objective 1: DISAGREE-- Should be rated as NEGATIVE</p> <p>* Site is NOT within 800m of existing healthcare facility.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: DISAGREE-- Should be rated as NEGATIVE.</p>	<p>not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th465rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA</p>

42273793	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th471rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this</p>

		<p>due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the</p>	<p>instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative</p>

		<p>landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as negative Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59693 (Residential) SA Objective 1: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59721 (Residential) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this currently unfarmed land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is</p>	<p>effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>Th473rooforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly</p>

Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in</p>

		<p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42362881	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th482rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8:</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: AGREESA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as negative Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59693 (Residential) SA Objective 1: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREESA Objective 3: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous</p>	<p>water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>Th483rooforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not</p>

		<p>biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59721 (Residential)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this currently unfarmed land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE - This should be rated as NEGATIVE Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59805 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA</p>	<p>located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from</p>

		<p>wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREEGreen Belt LandThe Interim Sustainability Appraisal makes no reference to whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt?Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge.It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply.** Rather all other options should be considered first.Best Most Valuable Agricultural Land (BMV)There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications.** This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home.The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land.** The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site.</p>	
42401697	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p>

		<p>wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'.</p>

		<p>Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59809 Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE</p>	<p>Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>
42407553	Annex 1	Safe Cycle path from west Malling to Tonbridge town centre and another to Twells. Let's encourage folks out of their cars.	This comment relates more specifically to the Local Plan than it does the SA.
42438113	Annex 1	The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are</p>

		<p>productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- should be rated as NEGATIVE Bus services are</p>	<p>not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th491rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA</p>

Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE· Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect· The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY· The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial</p>	<p>Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th495rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- should be rated as NEGATIVE. Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59690 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE. Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE. Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE. Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE. The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE. Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY. The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as negative. Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59693 (Residential) SA Objective 1: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE. Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. Site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE. Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE. The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE. Water run-off from fields on this site has previously caused serious flooding on the A26 (Hadlow Road</p>	<p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Site 59690 already receives a significant negative effect in relation to SA objective 5: biodiversity and geodiversity. All effects against this objective are recorded as uncertain, as there may be opportunities to promote habitat connectivity if new developments include green infrastructure. Loss of agricultural land is dealt with separately under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59690 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59693 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. 42440705	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:• 59685• 59690• 59693• 59721• 59805• 59809I object</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within</p>

Respondent ID	Section of the Reg 18 Interim SA Report	Comment	LUC Response
		<p>to any development on these sites, for the following reasons:1) They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan.2) They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification.3) The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine.4) Local food production is made more important by the effects of climate change.5) They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated.6) Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane.7) Development will lead to a significant loss of biodiversity.8) Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge.9) Development will put even more stress on the already stretched local health and education services.10) There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase.11) These sites are not easily accessible to local facilities – shops, schools, medical facilities etc.Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE• Site is NOT within 800m of existing healthcare facility.SA Objective 2: AGREE• SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. • The site is NOT within 800m of an existing secondary or primary school.SA Objective 4: AGREE with MINOR POSITIVE• Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE• Loss of this agricultural land WILL significantly diminish biodiversity. • This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE• Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides.SA Objective 7: AGREE• SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE• Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. • The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. When sites are not located near any settlements in a rural location, they receive a significant negative effect in relation to this objective. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59693 correctly</p>

		<p>from fields on this site has previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE. Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59721 (Residential) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE. Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREESA Objective 3: DISAGREE-- Should be rated as NEGATIVE. Site is NOT within 800m of an existing secondary or primary school. Should be rated as neutral or negative. SA Objective 4: AGREESA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE. Loss of this currently unfarmed land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE. There are houses in close proximity to the site. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREESA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE. Water run-off from this site has added to that from adjoining sites and previously caused serious flooding on the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and should be producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE. Bus services are inadequate for current needs and any development would depend on this site highly on the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59805 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE. Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREESA Objective 3: DISAGREE - Should be rated as NEGATIVE. Practical access to most parts of the site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE but should be MINOR POSITIVE. Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE. Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a</p>	<p>receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59721 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>whether or not the sites are within the Green Belt. Paragraph 11(b) and footnote 7 of the NPPF 2021 indicate that sustainable development is development “that protects areas of particular importance”, which (according to footnote 7) includes designated Green Belts. Therefore, why does the Interim Sustainability Appraisal not state whether or not each site is within the Green Belt? Without a proper evaluation of the sites in regard to their Green Belt function it is not possible for residents to consider the full merits of each site and top consider all their characteristics when they respond to the Regulation 18 consultation and before the Regulation 19 proposals emerge. It is also not made clear in the Interim Sustainability Appraisal that the NPPF guidance is that the assumption in the case of Green Belt is still inclined against development unless there are other exceptional circumstances and even if there is not a 5 year land supply. Rather all other options should be considered first. Best Most Valuable Agricultural Land (BMV) There should be a clearer statement in the Interim Sustainability Appraisal against the development of (BMV). I.E. Grade 1. Grade 2 and Grade 3A DEFRA land classifications. This protection must be increasingly relevant given the climate change imperatives, the prevailing world order and the economic necessity of food production at home. The suggestion that that Grade 1 and Grade 2 land is only important if it is 25% or less of the site area is a ridiculous statement and can be overcome by landowners banding together to create a larger site, It also excludes Grade 3A land which is also encapsulated in the definition of BMV Agricultural Land. The Placemaker scoring system (as referenced in the Urban Capacity Study Environmental Layers List) shows that the presence of Grade 1 land leads to the site being clipped. The presence of grade 2 land leads to the deduction of varying balance points depending on the % of such land on a site. Site Specific Comments with regard to BMV SITE 59693: Grade 1 land makes up approximately 20% of the site and grades 1 and 2 together make up approximately 70%. SITE 59721: Grade 2 land makes up at least 50% of the site. SITE 59685: There is some Grade 1 land on the site and grades 1 and 2 make up approximately 25%. SITE 59805: I am very concerned that above sites have been amalgamated with the larger Grange Farm (59690) site to make 1 large site. This has the effect of considerably diluting the % of grade 2 land on the combined site. I contend that “site” 59805 is not a true single site as it is bisected by a road. In theory the further enlarging of sites in this way to reduce the % of grade 2 land on them could enable all grade 2 land to be developed.</p>	
42441857	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA.</p>

		<p>MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages caused by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus</p>

		<p>existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane, Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade 3A land found on this site is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE Site 59809 Mixed use) SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. Although public footpaths cross the site, development would destroy their value. SA Objective 2: AGREE SA Objective 3: AGREE SA Objective 4: AGREE but should be MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. We observe that grade 3A land is also classified as BMV. SA Objective 10: DISAGREE-- This should be rated as NEGATIVE Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE</p>	<p>services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>
42448545	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees: 59685 59690 59693 59721 59805 59809 I object to any development on these sites, for the following reasons: They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives</p>	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p>

		<p>of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. Local food production is made more important by the effects of climate change. They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. Development will lead to a significant loss of biodiversity. Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. Development will put even more stress on the already stretched local health and education services. There will be a significant negative impact on the functioning of town centre due to the expansion of the town boundaries and consequent population increase. These sites are not easily accessible to local facilities – shops, schools, medical facilities etc. Dealing with each site in turn: Site 59685 (Mixed use)SA Objective 1: DISAGREE-- Should be rated as NEGATIVE Site is NOT within 800m of existing healthcare facility. SA Objective 2: AGREE SA Objective 3: DISAGREE-- Should be rated as NEGATIVE. The site is NOT within 800m of an existing secondary or primary school. SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA Objective 9: AGREE STRONGLY The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home market. I would observe that the grade</p>	<p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th508rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59690 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this</p>

SA Objective 4: AGREE with MINOR POSITIVE Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities. SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Loss of this agricultural land WILL significantly diminish biodiversity. This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office, and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows. SA Objective 6: DISAGREE-- Should be rated SIGNIFICANT NEGATIVE Site is in a rural setting, NOT on the edge of a settlement. Development of this site will have a significant negative impact on the landscape when viewed from all sides. SA Objective 7: AGREE SA Objective 8: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE Water run-off from fields on this site has previously caused serious flooding on Cuckoo Lane and the A26 (Hadlow Road East). Loss of absorbent land will exacerbate this effect. The site contains underground springs which regularly bubble-up in periods of prolonged rain, exacerbating the above effect. Corroborating photographic evidence can be supplied on request. SA</p>	<p>Appendix D of the Interim SA Report. The proformas for these sites can be found in Annex 1 of the Interim SA Report.</p> <p>Green Belt is a policy designation and not an environmental or sustainability designation. Therefore, the purposes of Green Belt are not inherently sustainability issues and so not referred to in the SA. SA is a separate assessment process to Green Belt assessment and uses a different basis for assessment.</p> <p>Consideration has been given to Best and Most Versatile Agricultural Land within the SA, under SA objective 9: soil. Consideration has also been given to flood risk, under SA objective 8: water.</p> <p>The SA is too high-level to consider traffic congestion, and so the Council will commission additional evidence on matters including traffic.</p> <p>Biodiversity is covered under SA objective 5: biodiversity and geodiversity, open space is covered under SA objectives 1: health and wellbeing and 6: landscape and townscape, landscape is covered under SA objective 6: landscape and townscape, access to healthcare is covered under SA objective 1: health and wellbeing and schools are covered under SA objective 3: education.</p> <p>Th512rooforma for site 59685 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Access to buses is considered separately under SA objective 10: climate change mitigation. TSA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report, this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the negligible effect reflects the fact the site does not contain a water body or watercourse, or fall within a Source Protection Zone. The site still receives a significant negative effect against this objective (as part of a mixed effect). Site 59685 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		personal motor transport for travel to work and to use local facilities. SA Objectives 11,12,13: AGREE	
42479393	Annex 1	<p>The comments that follow refer to the following sites which are situated to the north of Tonbridge on the land known as Grange Farm and Greentrees:</p> <ul style="list-style-type: none"> * 59685 * 59690 * 59693 * 59721 * 59805 * 59809 <p>I object to any development on these sites, for the following reasons:</p> <ul style="list-style-type: none"> * They form a vital part of the Metropolitan Green Belt, fulfilling all the objectives of MGB as stated in the NPPF. This was a principal reason why they were not included in the previous development plan. * They consist of productive, Best Most Valuable agricultural land (Grades 1,2,3A). The MAFF survey report of April 1991, carried out on behalf of TMBC, confirms this classification. * The importance of domestic food production has been highlighted by the recent food shortages cause by the war in Ukraine. * Local food production is made more important by the effects of climate change. * They are very prone to flooding in wet weather and contain hidden springs which bubble up when the land becomes saturated. * Development on these sites will exacerbate existing peak period traffic congestion on the A26 leading into Tonbridge and other local roads. The situation will be further worsened as a result of the proposed development in Tudeley and Paddock Wood which is part of the Tunbridge Wells B.C. local plan. This will lead to cut-through traffic on local roads, including Hadlow Rd, Cranford Rd, Three Elm Lane, Barchester Way and Higham Lane. * Development will lead to a significant loss of biodiversity. * Development will irrevocably alter the open, semi-rural, low-density character of north Tonbridge. * Development will put even more stress on the already stretched local health and education services. 	<p>Sites 59685, 59690, 59693, 59721, 59805 and 59809 have all been appraised in line with the site assessment criteria contained within Appendix D of the Interim SA Report. With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as not located near any settlements in a rural location and so receives an uncertain significant negative effect in relation to SA objective 6: landscape and townscape. As explained in the site assessment criteria for SA objective 6, site options adjacent to the existing urban edge could be more easily integrated into existing built development, compared to more rural and isolated sites. With regard to SA objective 8: water, the site receives an uncertain minor negative effect as it slightly overlaps some land with a 1 in 100 year risk of surface water flooding. Site 59721 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59805 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing (as part of a mixed effect). With regard to SA objective 3: education, the site receives an uncertain minor positive effect as it is within 800m of a primary school (Woodlands Primary School). The uncertainty reflects the fact it is unknown whether there is capacity within the school to accommodate new pupils. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. With regard to SA objective 6: landscape and townscape, the site is incorrectly recorded as not located near any settlements in a rural location when it is in fact on the edge of a settlement. Therefore in the next iteration of the SA Report, the site will receive an uncertain minor negative effect in relation to this objective. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59805 correctly receives a minor positive effect in</p>

		<p>* Although public footpaths cross the site, development would destroy their value.</p> <p>SA Objective 2: AGREE</p> <p>SA Objective 3: AGREE</p> <p>SA Objective 4: AGREE but should be MINOR POSITIVE</p> <p>* Bus services are inadequate for current needs and any development on this site would depend highly on the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objective 5: DISAGREE-- Should be rated as definite SIGNIFICANT NEGATIVE</p> <p>* Loss of this agricultural land WILL significantly diminish biodiversity.</p> <p>* This has been confirmed by a previous biological survey, registered with Kent and Medway Biological Records Office and indicating that a wide range of wildlife is dependent on the land and its surrounding hedgerows.</p> <p>SA Objective 6: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE</p> <p>* The site IS located next to existing housing of low density and with rural aspect. Development of this site will have a significant negative impact on the landscape and townscape.</p> <p>SA Objective 7: AGREE</p> <p>SA Objective 8: DISAGREE-- Should be rated as SIGNIFICANT NEGATIVE</p> <p>* Water run-off from fields on this site has previously caused serious flooding on Higham Lane and Cuckoo Lane. Loss of absorbent land will exacerbate this effect.</p> <p>SA Objective 9: AGREE STRONGLY</p> <p>* The land is wholly Best, Most Valuable (BMV) agricultural land and is productive farmland, producing crucial food products for the home</p>	<p>relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p> <p>The proforma for site 59809 states that it is within 800m of either an existing healthcare facility or an existing area of open space/ walking and cycle path/ play area/ sports facility (but not both). In this instance, the site is within 800m of open space and walking paths. Therefore, it correctly receives a minor positive effect in relation to SA objective 1: health and wellbeing. Access to buses is considered separately under SA objective 10: climate change mitigation. SA objective 10 does not take into consideration the frequency of bus services, as this is subject to change on a regular basis and is not mapped spatially. In the next iteration of the SA Report this limitation will be added to the section entitled 'Difficulties and Data Limitations'. Bus service frequency is, however, taken into consideration in the Urban Capacity Study (July 2022), which informs SA objective 2: services and facilities. Loss of agricultural land is not covered under SA objective 5: biodiversity and geodiversity, and is instead covered under SA objective 9: soil. The site is correctly identified as located on the edge of a settlement and therefore the uncertain minor negative effect in relation to SA objective 6: landscape and townscape is correct. With regard to SA objective 8: water, the site already receives a significant negative effect in relation to this objective. The uncertainty reflects the fact effects resulting from proximity to Source Protection Zones and water bodies are uncertain at this stage. Site 59809 correctly receives a minor positive effect in relation to SA objective 10: climate change mitigation as it is within 400m of a bus stop.</p>

		<p>* Bus services are inadequate for current needs and any development on this site would therefore require the use of personal motor transport for travel to work and to use local facilities.</p> <p>SA Objectives 11,12,13: AGREE</p>	
42511361	Annex 1	<p>Site ID: 59720</p> <p>I strongly object to this development as the proposed entrance at Fen Pond Road is unsuitable due to the following:</p> <p>a. Fen Pond Road is too narrow and speed that vehicles travel down the road would increase the potential for accidents.</p> <p>b. There is no pavement or walkways to the centre of the village, schools or transport links</p> <p>c. The development of 198 houses could create c400 cars, Fen Pond Road is unsuitable for that volume of vehicles.</p> <p>d. the development area is surrounding by woodland is within an AONB.</p>	<p>The SA is too high-level to consider site-specific access points, road width and pavements. The SA does, however, consider access to public transport under SA objective 10. Site 59720 receives a minor positive effect in relation to SA objective 10: climate change mitigation, as it is within 400m of a bus stop.</p> <p>The SA gives consideration to green infrastructure assets and Ancient Woodland under SA objective 5: biodiversity and geodiversity, and the AONBs under SA objective 6: landscape and townscape. Site 59720 receives a significant negative effect in relation to SA objective 5, as it contains green infrastructure assets in the form of woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. Site 59720 also receives a significant negative effect in relation to SA objective 6, as it is within the AONB. The effect is recorded as uncertain, as the effects on landscape and townscape will depend on the design, scale and layout of development.</p>
42511361	Annex 1	<p>Site ID: 59793</p> <p>I object to the development outlined above.</p> <p>This development does not support my preferred Option 1 in the strategic plan.</p> <p>The development would impact woodland area and is within the boundaries of an AONB so should not be considered.</p>	<p>Site 59793 is recorded in the SA as receiving a significant negative effect in relation to SA objective 5: biodiversity and geodiversity, as it contains a green infrastructure asset in the form of woodland. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects.</p> <p>The site is also recorded in the SA as receiving a significant negative effect in relation to SA objective 6: landscape and townscape, as it is located within the AONB.</p>
42511361	Annex 1	<p>Site ID: 59872 & 59871</p> <p>I strongly object to the two proposed developments above.</p> <p>Both of these developments would enter and exit via Fen Pond Road.</p> <p>Fen Pond Road is too narrow and speed that vehicles travel along the road would increase the potential for accidents.</p> <p>The entrance/exit is close to an historic building Ightham Church and housing would not be appropriate to this location.</p> <p>The development is also in an AONB.</p>	<p>The SA is too high-level to consider road width. The SA does, however, provide an appraisal of the effects development of these two sites would have on the historic environment and landscape. Sites 59872 and 59871 receive uncertain significant negative effects in relation to SA objective 7: heritage, as they are within 250m of numerous heritage assets, as recorded in the Kent Historic Environment Record. All effects against this objective are recorded as uncertain, as appropriate mitigation may avoid adverse effects and may even result in beneficial effects. The two sites also receive uncertain significant negative effects in relation to SA objective 6: landscape and townscape, as they are located within the AONB. The effects against</p>
